> The housing conditions of the industrial workers in India, especially those of the lowest paid staff, are a disgrace to a civilisation. Some of them live in 'slums' provided by private enterprise under insanitary environments and some spend their lives with their families under the shade of trees or on pavements of cities. The accommodation provided to workers by certain employers is a one-room tenement and sometimes, if not often, such tenements house three to four families in each unit. Good housing, therefore, is an indispensable necessity for their health and above all for the efficiency of industry as a whole. While enquiry commissions and committees were appointed by the Government during the last two decades without any substantial results, this Sub-Committee has clinched the issue in a short but interesting report. It dealt with various questions such as the minimum standards required for workers' houses, the manner in which the building fund has to be raised, the basis on which the workers must be required to pay rent, the facilities which the Central and Provincial Governments and local authorities are required to grant for making the scheme a success, etc.
>
> Mr. Giri, proceeding, said that the building of about twenty lakhs of houses, during a period of eight or ten years, at a minimum cost of about Rs. 1,350 per tenement even at the present high cost of materials is quite possible and practicable provided the local authorities co-operate. Of course, the fullest use of large-scale methods of production and the manufacture of standardised parts on a big enough scale, duly programmed to ensure advantages of a mass production, should be provided for. This can only be accomplished if a national building programme is properly planned with a definite time-table.
>
> The scheme now envisaged is based on the creation of a National Housing Board consisting of representatives of the Central and Provincial Governments and those of employers and workers. The Governments, both Central and Provincial, have to pay subsidies in the shape of interest-free loans which are to be redeemed by the building authority in a specified period through a sinking fund. The employers also have to contribute to the fund by paying a certain amount per month per house and the workers have to pay an economic rent not exceeding 10 per cent of their pay. The National Board, while responsible to the Central Government, shall have liberty of action and be responsible for co-ordination of schemes and become the machinery through which materials and supplies will be released.
>
> While condemning one-room tenements, it is felt by the Committee that a house for an industrial worker and his family should comprise at least two rooms, a kitchen, an independent bath room, a lavatory, verandahs, both front and back, and a courtyard and all other modern arrangements with respect to lighting, sanitation and drainage necessary to make the locality healthy. The workers' dwellings must be situated in open spaces and they must look like garden cities with playgrounds, co-operative stores and schools for children. Such colonies should not have more than a certain number of houses.

Mr. Giri believes, as also we do, that the housing scheme envisaged by the Sub-Committee will certainly be an accomplished fact if there is the fullest co-operation among all the parties concerned, namely, the Central Government, Provincial Governments, local bodies, and workers' and employers' organisations.

The Soviet Fourth Five-Year Plan

This year, the Soviet Union is going to shape its post-war economy on the basis of the fourth Five-Year Plan. The precise outlines of this Plan will be made known at the forthcoming Congress of the newly elected Soviets, but the main problems which the plan will seek to solve have already been determined. Recent statements by the members of the Soviet Government and discussions in the Russian Press have thrown some light on the guiding principles of this Plan. In the main, the plan aims at the reconstruction of the devastated areas and at conversion from war to peace. On the administrative level, the process of conversion has been reflected by the abolition, in recent months, of the wartime Commissariats and their replacement by new Economic Departments. For example, the Commissariat for Tank Building has been changed into a Commissariat for Transport Machine Building ; the Commissariat for Ammunition has given place to the Commissariat for Agricultural Machines. A special committee for the Assessment and Distribution of Labour has been formed under the Council of Commissars. The overhaul of the Commissariats shows the importance attached by the Government to industrial building—several new Building Commissariats have come into being. The *Soviet Information Bureau* has published the outlines of the plan.

According to the Fourth Five-Year Plan the Soviet Union's agricultural production is to increase by 1950 to 27 per cent above the 1940 level while the annual grain harvest is to be brought up to 127,000,000 tons. This means that in 1950 the USSR will produce 50 per cent more of grain than was growing in the United States before the war and two and a half times as much as was produced by pre-war Germany, France and Italy taken together.

The aims are great also as regards the yields. For instance, it is planned to ensure increase in grain yields greater than was achieved during the first two Five-Year Plans and much greater than the increase in yields in other countries of Europe after World War I.

In industrial crops, too, an extensive programme has been outlined. Sugar-beet production, for instance, is to be raised to 26,000,000 tons annually by the end of the five year period. When this goal is reached the Soviet Union will grow nearly as much sugar-beet as the total grown in Germany, France and the United States before the war.

By 1950 the USSR plans to produce 3,100,000 tons of raw unginned cotton annually, or only slightly less than the pre-war figures for British India.

As regards flax fibre the Soviet Union's output by the end of the five year period will exceed several times over the total pre-war production of this industrial raw material in all countries of Europe taken together.

In fulfilment of the sweeping tasks in agriculture outlined by the few Five-Year Plan two factors will play the decisive role.

The first of these factors is the possibility of further increasing the productivity of labour, a possibility that is guaranteed by the very nature of the system of collective tillage of soil. It is a well-known fact that, even in the most difficult period of the war when up to 40 per cent of the USSR's cultivated area was occupied by the enemy and collective farms had less able-bodied workers, machines and fertilizers, the country did not experience a serious shortage of grain or other foodstuffs. This is explained by the fact that, even in those difficult conditions, many collective farms substantially increased the productivity of agriculture, thanks to the improved organisation of farm work and selfless enthusiastic labour of collective farmers.

The Osakarovka collective farm in the Karaganda region of the Kazakh USSR has several thousand hectares under crops. In the course of the four war-years this land was tilled considerably more productively than before the war. Whereas the average grain production amounted to 4·3 tons per able bodied member of the farm during the last four pre-war years, the figure rose to 8·8 tons during the four war-years.

These results the farm achieved with the same number of farm implements and tractors it had before the war. The secret of this success was improved organisation of farm-work and scientific farming which led to increase in productivity of farmers' labour.

The experience of the Osakarovka farm is typical of thousands of collective farms during the war.

It goes without saying that immeasurably greater results may be achieved by providing the farms more farm machines and implements, particularly in view of the fact that the Germans destroyed a sizable part of the farm machinery in the areas that fell into their hands. And this is precisely what the Five-Year Plan provides in the course of 1946-1950 : industry is scheduled to supply agriculture with 325,000 new tractors. It should be remembered that in 1937 the USSR had 365,000 tractors. All told, Soviet agriculture will be supplied in the course of the current five-year period with new perfected agricultural machinery totalling 4,500,000,000 million rubles in value. About one thousand additional machine and tractor stations and hundreds of repair shops and machine shops are to be built. The supply of all kinds of mineral fertilizers will increase greatly.

A substantial effect on the development of agriculture will be had by restoration and further development in the irrigation systems. It is to be remembered in this connection that the irrigated lands are the main producers of cotton and a number of other industrial crops. During the war, however, the number of irrigation systems deteriorated and the irrigated area drifted. This happened in Uzbekistan, Tajikistan, Transcaucasus and elsewhere. In the course of the present five-year period the old irrigation systems will be restored and new ones built.

Highly important are the provisions outlined in the five-year programme for livestock raising. The war interrupted the extensive work that was underway in the country to promote this branch of farming and dealt it enormous losses, particularly in the areas that were occupied by the enemy.

To ensure the achievement of goals set in the improvement of living standards of the population, substantial expansion of output of meat, fats, milk, eggs, wool, leather etc., is vitallly essential. The plan, therefore, calls for a 29 per cent increase over the pre-war in the number of cattle heads to 25,900,000 heads; 62 per cent in the number of sheep and goats to 68,100,000 heads and 35 per cent increase in hogs—to 11,100,000 heads on the collective farms by the end of the five-year period. Substantial increase is also provided for as regards horses and oxen on the collective farms.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Increase in the number of livestock heads and their productivity is ensured by expanding fodder supply. Silage, for instance, has to be doubled in quantity on the collective farms and a sizable increase is provided for in the use of inlustrial by-products as cattle feed.

Year-round grazing is to be practised on a greater scale than ever before especially in Central Asia and Kazakhstan. The natural pasturelands available in these areas will substantially augment the fodder resources available during the current five-year period.

Alongside all this the number of heads of pedigree cattle is slated for further rise ; crossbreeding is to be practised on a wider scale than before and other measures will be carried out to improve the herds.

These are the salient features of the sweeping program outlined for agriculture in the Fourth Five-Year Plan.

Conditions in India may only be compared. Given a Plan and a true National Government, India has the potentialities of becoming one of the three strongest economic powers in the world.

Post-War Educational Reconstruction in Russia

Having done its duty to the country during the war, Soviet higher schools are now turning attention to tackling far-reaching aims of peace-time development outlined in Stalin's election speech of February 9 :

Initial steps to restore and extend the existing chair of higher and technical schools were taken while the war was still on. Today specialists are being trained in 783 higher schools attended by 562,000 students which is equivalent to the 1940 figure. The network of technical schools and other secondary special schools has substantially expanded. There are now 3,164 of these with a student body upwards of 940,000 or 100,000 more than the pre-war contingent.

Post-war expansion will be effected, first and foremost, in the training of specialists for new fields of science and engineering. The principal role in this respect will be played by technical and other secondary special schools. At the present time, for instance, there are between fifty and sixty technicians to every one hundred engineers in building, iron and steel and coal industries. Under the Five-Year Plan the proportion of technicians in some branches of industry is to be increased. It is proposed, during the five-year period, to graduate 120,000 engineers and 347,000 technicians for industry and constructions ; 47,000 persons with higher and 198,000 with secondary education for agriculture and 98,000 doctors and 284,000 medical personal with secondary education.

Development of science is one of the principal requisites for further progress of the Soviet state. In order to raise steel production to 60,000,000 tons a year, Soviet metallurgy must be developed not merely by extending the present methods of production but by introducing new methods that utilize the latest domestic and foreign scientific achievements. The same applies to the boosting of oil and coal output, raising of grain and cotton yields and productivity of livestock.

In his speech of February 9, J. V. Stalin set the Soviet scientific the important and difficult task of overtaking and surpassing within a short time the achievements of science in other countries.

What are the problems confronting the Soviet higher school in connection with the development of science ?

Proper planning of scientific research is one of the primary tasks in this sphere. Some people claim that it is impossible to plan scientific work. There are brilliant scientific discoveries, it is argued, and no plan can foresee which may revolutionize a given branch of science and upset all the accepted theories and views. True, discoveries of this kind cannot be planned in advance. But planning of research makes it possible to concentrate efforts on the most important problems in a given field.

Science, at its present stage of development, requires combined efforts of a large group of investigators in different fields for effective solution of major problems. To build a modern airplane you need, besides designers, mathematicians, physicists, metallurgists, specialists in engine manufacture, etc.

The higher educational institutions, whose faculty includes scientists in different specialities, offer favourable conditions for such large-scale teamwork. Our Soviet universities and colleges, with their fifty thousand professors and lecturers, have solved a good number of complicated scientific problems in this manner. The mining institute in Leningrad, for example, worked out new methods on concentrating and processing of non-ferrous metals which were widely used in the Urals.

No less an important factor in planning scientific work is the co-ordination of research of higher schools and of scientific institutions. Before long, regular information on research work will be available.

The application of completed researches will be promoted on a wider scale.

During the new Five-Year Plan period Soviet higher schools will intensify training of scientific personnel, primarily in these branches lagging behind the practical needs and level of contemporary science.

Last but not the least, there is the problem of supplying our higher schools and scientific research institutes with the latest apparatus, machinery and equipment. The Soviet Government has already taken steps in this direction by setting up special administrations to supervise the production of laboratory equipment, precision instruments and chemical reagents.

The Soviet Union has made great progress in the field of economy and culture. It now aims to advance to the first place in the world in culture, science and engineering.

Can Burma Govern Herself ?

Writing in the British weekly *Spectator*, Mr. Aubrey Buxton has shown an intelligent Britisher's grave concern over the future of Burma. Being acutely conscious of the liquidation of the British Empire which is already almost a settled affair, Mr. Buxton has advised his imperialist countrymen not to ignore the voice of Burmese nationalism and the interests of the empire itself. He says :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

If Burma, through excessive sentiment, should secede, it might be the signal for all nations in South-East Asia to cast off all association with the West. Thus it is vital to us that Burma should become a success as a Dominion.

Though Mr. Buxton has not been able to rid himself wholly of the imperialist myth, which is clear in this statement, his illuminating essay contains some few points which are not only worthwhile to consider seriously but also extremely sensible and realistic. Mr. Henderson might well have pondered over them while speaking during the debate on the political and economic situation in Burma at the House of Commons a few weeks ago.

The right of Burmese self-government, Mr. Buxton points out, is denied mainly on the ground of violent disturbances, riots, murders and general political tension that still prevail in the country. But to expect the Burmese to govern themselves in a totally peaceful way is to ignore not only Burmese character, but Burmese history. Geographically sealed off on all sides, cut off from all foreign contacts till very recently, the Burmese have been naturally rather turbulent in nature. It is only with the British advent that the outer world burst upon Burma with a devastating impact. Burma's progress during the last sixty-one years of British rule, so far as peace and security is concerned, has been quite remarkable. The absence of political assassinations and terrorist activities proves that the Burmese can learn the way of a peaceful civilized nation.

Some would still object to particular cases of violence and barbarism in recent Burmese history. Mr. Buxton meets this objection with these questions :

> How long is it since an English king murdered his wives ? How long is it since men were hanged in England for stealing pheasants ? How long is it since England was torn by political intrigue, violence and civil war ? And may one ask, how the English, in those days, would have received the suggestion that they were not fit to be independent ? (We must not be narrow-minded. There are, after all more ways than one of being civilised. To-day there is such a thing as 'bath-night' in this country. This would shock the Burmese ; even centuries ago, when our kings and queens did not wash at all, every Burmese had a bath every day).

The Burmese people may be grateful, the author points out, for what the British had given them ; but "no amount of roads, railways, schools and so on can outweigh the thought that they are under foreign domination." If Siam can be independent, there is no reason why Burma would not be able to look after herself in her own way. Briefly outlining the history of Burmese politics from the pre-war days of corruption and intrigue to the present ones of fervent nationalist ardour. Mr. Buxton observes that the patriotism of the extreme nationalists are genuine and incorruptible, even if their actions might be misguided.

Mr. Buxton's observations merit close consideration, and his views will be shared by all progressive minds even if they may not be inspired by his vision of a British Commonwealth with Burma as a dominion. Burma to-day wants full independence and she deserves it. In the recent debate at the Commons, Mr. Henderson said that if all went well in Burma it was hoped that a legislature would have been elected and a ministry formed before June, 1947. Although he admitted that there was no difference between the Burmese people and Britain on the question of full self-government for Burma with a status equal to that enjoyed by Britain, he also maintained that the realization of full self-government must come by an orderly and peaceful transfer ; and then again further qualified his assertion by bringing in the issue of the Commonwealth and Dominions. He explained the policy of development towards self-government by describing the two major phases in it. After a ministerial government had been established on the results of a general election, the different parties and sections must agree in drawing up a suitable constitution.

The British Government is still assuming the self-righteous pose of moral responsibility while the forces of history are betraying the imperialist intrigues. Still their policy envisages no change of principle. As Mr. Gallachar said in reply to Mr. Henderson, it was utterly nonsensical to talk about free elections when agents of big monopoly capitalists were spreading corruption in Burma. Thousands of Burmese died without knowing what life was because of the exploitation of the monopolists. The Burmese should be left free to build up their own lives and country in their own way.

Trends in Turkish Literature

It is extremely unfortunate that even in these days of wide international contacts, we know really very little of the socio-cultural trends of our neighbouring countries. Our knowledge of English literature is quite extensive and our concern for it even greater in some cases than our own literature. While admitting the very high merit of English literature upon which we have been nurtured for generations, it must also be said that we should try to understand at least the fundamental facts about the literature of the neighbouring Asiatic nations, particularly in view of the growing Asiatic communion in socio-political aspirations. We give here a brief resume of a lecture given in French by the Turkish Ambassador Rusen Esref Unaydin at the Turkish Halkevi on February 8, 1945, with a view to acquainting our readers with the background of modern Turkish literature.

Cultural studies and artistic production grew round two reviews called *Yeni Mecmua* (New Review) and *Turk Yurdu* (Turkish Land) which were the organs of literary expression during the constitutional era in Turkish history. Modern authors, whose work has appeared in these two reviews, have helped to rejuvenate and to bring fresh splendour to Turkish poetry and prose.

The first World War was unfavourable to the Turkish Empire. But after the victory of Turkish arms the history of the country began to flow in a new channel. A new era came into being with the new state. Vast horizons were opening up and the dynamic inspiration of the new changes also expressed itself in cultural and literary movements. The most important reform was the alteration in the characters of the Turkish alphabet. The Roman script was more suited to the genius of the Turkish language, and it has made the phraseology succinct and clear. Linguistic research and historical studies, much encouraged by Ataturk, have produced significant results.

Translations from the literature of the world have entered on a new era. Authors translated include Andre Gide, Andre Maurois, Pierre Loti, Anatole France,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Maupassant, Flaubert, Zola, Goethe, Dickens, Shakespeare, Tolstoi, Dostoievski, Chekhov, Gorki, Turgeniev and Stendhal. Renaissance and pre-Renaissance authors like Petrarch and Dante have also been translated, and masterpieces of the Hellenic and Latin literature have also been reproduced in the Turkish language.

Turkish literature today is represented by eminent novelists, essay writers, critics, poets and playwrights, such as Halide Edip, Yakup Kadri, Falih Rifki Atay and Abdulhak Sinasi Hissar. Literary criticism also has found its able expositors in men like Hassan Aali Yucel.

It is most refreshing to be acquainted with this survey of the main streams of renaissant Turkish literature as given by R. E. Unaydin. The phenomenon proves the all-round success of the Turkish regeneration, and is thus significant not only to students of art and culture but also to social reformers and political leaders.

Srinivasa Sastri

Srinivasa Sastri is dead ; "the silver-tongued orator of the British Empire" is silent for ever. Though he died at quite a ripe old age, his death has created a void in national life which can hardly be filled. Even the other day when he expressed his weighty denouncement of the Union Government's latest anti-Indian measure, we could not think that the blow would come so soon.

Sastriji, a true disciple of Gopalkrishna Gokhale, began his life as a school-teacher. And he remained a teacher all his life in more senses than one. His association with the education of the country came to an end only with his death when he finished his career as the Vice-Chancellor of Annamalai University. His rare mastery of the English tongue was only the least of his varied gifts, but the perfection he attained was almost unique for a man not born to that language.

Sastriji's public career was dominated by the beliefs and doctrines of literalism. He joined the Servants of India Society in 1907, became its President in 1915 and remained in that position till 1927. A leading light in Indian constitutional discussions, a member of the Madras Legislative Council and the Imperial Legislative Council, a notable Privy Councillor, Representative to the Government of India to various dominions, Indian Agent in South Africa—Sastriji played a number of highly important roles in the course of his long and fruitful life.

When the whole country was throbbing with the stirrings of ardent nationalism, Sastriji with a few noted compatriots held fast to his liberal faith. The strength of that faith has much dwindled in the nation at large, and even Sastriji himself considerably changed in his later political attitude. Nurtured as he was upon a faith in conciliation and constitutionalism, it was no mean development for him to attack unsparingly the policy of the British Government after the August days of 1942. On the whole, his political views are a perfect specimen of sound reasonableness within the framework of liberal thought.

His whole life was a pattern of honesty, strength and brilliance. His integrity earned for him the rarest distinctions in life, and it is to the memory of that greatness of character that his countrymen will ever pay their homage.

—:o:—

The following notes have been sent by Dr. Taraknath Das from New York :

Mutiny and Hunger in India

THE whole world is watching happenings in India. The following is the editorial published in the *New York Times* of February 22, 1946 :

MUTINY AND HUNGER

The revolt of Indian seamen in Bombay, described by Vice-Admiral Sir John Godfrey as 'a state of open mutiny,' underlines the urgency of the mission of three Cabinet Ministers which the British Government is sending to India. It is noteworthy that the rising of the sailors of the Indian Royal Navy, like the walk-out of the textile workers of Allanabad, began as a hunger strike against the drastic cut in the food ration which Lord Wavell was obliged to announce on February 16. When 100,000,000 people are threatened with famine in a country where discontent against the British Government is endemic, the combination produces a crisis of the first magnitude.

The scale of the Indian problem, highlighted by the rioting and blood-shed which are now reported to be subsiding, dwarfs the troubles in Egypt, Greece and the Levant, disturbing and symptomatic as these whirlpools are on the British imperial route. The outbreaks in Cairo are purely and violently nationalist, but India is not so much a national as a continental problem, involving a population greater than that of Europe or the Western Hemisphere and almost as many racial, religious and administrative divisions. Europe, indeed, is rapidly becoming what India is—a sub-continent of Asia—and there are many signs to indicate that the storm center is moving from one area to the other. It is certain, at any rate, that India will be the scene of one of the decisive struggles of the post-war period. Equally certain is that the statesmanship of the British Labor party faces a major political test. Sir Stafford Cripps is one of the three Ministers who will make a new attempt to secure agreement on a plan of self-government, but this attempt is launched in a much worse atmosphere than his unsuccessful mission of 1942. The war is over, the Moslem League and the Congress party are more uncompromising than ever, Great Britain is in a state of uneasy transition. The whole picture this time, moreover, is overshadowed by hunger. In this merging of crises, economic desperation intensifies political violence. It is hard to decide which is more dangerous, but without a heroic effort to stave off wholesale starvation appeals to reason are likely to be vain.

In greater or less degree, this is true of all the post-war settlements. The first emergency of today is a shortage of food, and while no one will claim that a strict rationing and sharing of the world's stocks of wheat will reconcile Jinnah and Gandhi or ease the tensions in Greece and Egypt, France, Italy and Hungary, neither will any one deny that hunger in these countries aggravates every other problem. It is hardly too much to say that hunger is one of the great Powers that will dictate the shape of the peace.

One thing must not be overlooked that mutiny may tighten the bond of slavery. It may lead to disastrous chaos.

To be sure, the causes of discontent must be removed. Indian sailors and soldiers should not be discriminated against by their alien master, because of their race and color.

Indian people must not starve. Britain, which does

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

not produce half of the required food for her people, did not have a famine even in war time. Why should there be a famine in India? India's sterling balance should be used to buy grain from Argentina, Canada and other lands.

Indian leaders should not allow irresponsible agitators to create chaos in India. A chaos in India may become a burial ground for Freedom.

Scientific Efficiency of the Japanese

THE *New York Sun* of January 13, 1946, published the following news-item which will interest Indian leaders :

> Tokyo, March 13 (*A. P.*)—Japanese torpedoes were better than either the American or the British, for they carried larger explosive charges, had more range and greater speed, and left no air bubble trains. Capt. Allan L. Dunning of Granby, Conn., who directed a United States Navy technical mission to study the war secrets of the Japanese Navy, announced this finding upon the completion of his project today.
>
> [Navy officials and correspondents knew of the superiority of the Japanese torpedo since very early in the war, but were not permitted to hint at the fact.]
>
> Dunning said the Allies gained little new information from their study. His records have been sent to Pearl Harbor, however, for evaluation.
>
> One eye-opener, he said, was Japan's huge aircraft-carrying submarines. The Japanese told him they had made reconnaissance flights over the Hawaiian Islands in planes catapulted from submarines that could carry three planes each.
>
> "The Japanese researchers had technical horizons as great as our own, but they were unable to co-ordinate production with their findings," Dunning said, adding that in one laboratory they were making oil from rubber, exactly reversing a rubber-from-oil process developed in the United States. On the other hand, Dunning said, Germany gave little help to the Japanese Navy and most of the information arrived too late to benefit the Japanese. There were no records, he added, that the Japanese ever received any assistance from Russia.

Before the Sino-Japanese War (1894-95) the Japanese could not build war-ships and large passenger steamers. Before the Sino-Japanese War (1904-05) the Japanese bought their best naval vessels from Great Britain. On the authority of the late Marquis Okuma, who told me during a conversation in 1915 that the Japanese Naval arsenals were supplying naval guns for the British navy. It was well-known that Japan supplied arms and ammunitions both to Britain and Russia in their struggle against Central Powers. After the Washington Conference (1922) when the Japanese navy was limited, Japanese naval experts specialised in submarines and "carriers." It is well-known that the late Admiral Yamamoto was the staunchest advocate of building "plane-carriers" and at the beginning of the World War II Japan used the weapon of "torpedo-planes" effectively.

What the Japanese could develop in the scientific field and in the field of National Defense—India—with proper Indian leadership can also attain.

Oil Interests in the Middle East May Cause A World Conflict Affecting India

American and British oil interests in the Persian Gulf area are making rapid progress in bringing crude oil production up to refinery requirements, according to advices to the companies concerned. Demand for petroleum products for the rehabilitation of Europe, for British post-war industry and for supply of North African, Near East and Middle East markets, it is said, is supporting record refinery operations.

Arabian American Oil Company, jointly owned by Standard Oil Co. of California and Texas Co., has just completed a forty-mile, twelve-inch pipe line from the Abqaiq field, in Saudi Arabia, to the company's main headquarters at Dhahran. Another line of similar size is under construction from Dhahran to the company's new Ras Tanura refinery.

Previously, all the marketed crude oil output of Saudi Arabia has come from the Dammam discovery field in the Dhahran area. Production from this field has been running at 95,000 barrels daily, part going to the Ras Tanura plant and the remainder to the refinery of Bahrein Petroleum Company on Bahrein Island. The two refineries have been processing about 150,000 barrels daily. The Ras Tanura plant, designed for capacity of 50,000 barrels a day, has been processing about 80,000 daily.

The Abqaiq field, forty miles south-west of Dhahran, was proved up in February, 1941, an initial well being completed at 6,180 feet. Five wells have now been completed in the field, and oil men believe that output from these, in conjunction with production from the Dammam field, will be sufficient to supply the needs of the Ras Tanura and Bahrein refineries.

Officials of Anglo-Iranian Oil Co., Ltd., jointly owned by Anglo-Iranian, Ltd., and Gulf Exploration Co., the latter a subsidiary of Gulf Oil Corp., predict that crude oil shipments from the Burgan field in the Kuwait concession will be initiated in May.

Commercial production was scheduled to start in March, but delays have been occasioned by lack of loading tanks and other construction equipment. Production is indicated at 30,000 barrels daily. The company's Abadan refinery is approximately 120 miles from the Burgan field.

Kuwait's oil wells were cemented to seal production early in 1942, when it was feared that the Nazi army would invade the area. Drilling rigs are currently at work reconditioning the wells, which number nine. A tenth well is projected. A production average of 5,000 barrels daily from each well is indicated, according to officials. Proven reserves of the Burgan field are estimated at a minimum of 5,000,000,000 barrels.

The above picture of increasing activities of the Anglo-American oil interests in the Middle and the Near East has a serious bearing on world politics of to-day and tomorrow.

Soviet Russia's efforts to get control over Persia has a serious side of economic warfare against the Anglo-American Powers. Soviet Russia will not only get control over the oil resources of Northern Persia, but a government, controlled by Soviet Russia, will try to oust Anglo-American interests from this region which is bound to produce serious consequences in which India is sure to be involved. Thus Indian statesmen should think of developing India's national defense now. Well-educated Indian youths should dare to join the Indian National Defense Forces to develop it to the status of one of the best forces for defense in the world.

BATTLE OF PANIPAT: THE VICTOR'S DESPATCHES

By Sir JADUNATH SARKAR, kt., c.i.e., d.litt.

The momentous third battle of Panipat (in January, 1761) changed the fate of India, but unfortunately the historical inquirer is puzzled by the absence of any official despatch on it from either side. The silence of the Marathas can be easily understood, as all their chiefs except one perished on that fatal field or in the long-drawn murderous pursuit, and they had to abandon all their official papers after their rout. In their language only a few brief reminiscences and a few private letters survive to throw light on the final battle, though the thirteen months of movement before it are tolerably illustrated by the historical letters discovered by Rajwade. One Deccani has no doubt left a very full account of the preceding negotiations and the battle, but it was written in the Persian language. The author was a Deshasth Brahman named Kashiraj Shivaram, a civil officer of the Nawab of Oudh, who was present in the field. I have published a new English translation of his book in the *Indian Historical Quarterly*, Vol. X (1934).

The most interesting and intelligent account of the long campaign and of the changing phases of the battle is given in Persian by Sayyid Nuruddin Husain Khan (an agent of the ex-Wazir Ghaziuddin, Imad-ul-mulk), in his *Life of Najib-ud-daula*, which I have translated into English in the *Islamic Culture* of Haidarabad (1933-34). Muhammad Jafar Shamlu, a participant in the battle wrote his recollections of it thirty years later, and these can be read in English in Elliot's *History of India*, viii, 145-157.

Not a single letter from the side of the victors was hitherto known to have survived. But recently Khan Sahib Sayyid Husain Askari, M.A., has very generously placed in my hands a unique Persian manuscript which gives Ahmad Shah Durrani's own account of his policy and movements throughout the campaign and his tactics during the battle. It is a thin book of 36 folios, with a gap (probably one folio) between 34 *b* and 35 *a* and all the leaves after 36 *b* missing. It lacks the author's preface and colophon which we find in regular Persian letter-books. Each page carries 15 lines, three inches in length. In the MS. as it stands there are 44 letters, out of which 15 were written by the Durrani Shah or his Wazir Shah Wali Khan, and four by Najib-ud-daulah, to Sawai Madho Singh, the Rajah of Jaipur and his minister Har Sahai. There are also some letters relating to Ahmad Khan Bangash (the lame Nawab of Farrukhabad) with the terms of Durrani's alliance with him and a florid description of the visit paid by him to the Durrani Shah at Aligarh on 31st March, 1760, besides letters from the Emperor Shah Alam II (then a wanderer) and from and to the Indian Rohela chiefs.

Those letters which are historically the most important are translated below, but a short sketch of Ahmad Shah's movements with dates, must be first given in order to help the reader.

Ahmad Shah Durrani's Movements in India—1759-1761

Early in September 1759, Sabaji Sindhia (the Maratha governor of Multan and Lahore) defeats Jahan Khan (the Durrani general) and drives him across the river Indus. Soon afterwards Ahmad Shah Durrani himself invades the Punjab, takes Lahore and expels Sabaji, who reaches Dattaji Sindhia's camp at Shukartal (near the right bank of the Ganges, 16 miles east of the city of Muzaffarnagar) on 8th November. The remnant of the Maratha garrison in the Panjab arrive there on 23rd November.

20th November, Ahmad Shah crosses the Beas at Govind-wal; on 10th December, crosses the Satlej at Rupar; on 15th December, his vanguard occupies the Banur and Chhat district (16 miles north of Ambala City), and seize Ambala and Sarhind.

8th December, Dattaji Sindhia raises the siege of Shukartal and marches towards Karnal; crosses the Jamuna at Ramra-ghat, east of Panipat, (*c* 20th), 23rd (or 24th) December, the Afghan vanguard defeats Dattaji's vanguard near Thaneshwar. *C.* 25th Ahmad Shah crosses the Jamuna at Buriya and proceeds to Saharanpur, thence marches to Loni (opposite Delhi).

9th January, 1760, Dattaji slain at Barari ghat, Marathas evacuate Delhi. On 14th January, Ahmad Shah reaches southern suburb of Delhi, is joined by the Ruhela chiefs, and on 1st February, places his own governor (Yaqub Ali) in Delhi. On 27th January, Ahmad Shah leaves Delhi suburb and begins march towards Jaipur, against Malhar Holkar, is near Shergarh (Nu Jhil) on 3rd February, at Dig on 5th, at Narnol on 17th, at Rewari on 19th, and outside Delhi again on 29th February.

Ahmad Shah crosses over to Patparganj on 1st March, surprises Malhar's vanguard near Sikandrabad on 4th and reaches Aligarh on 5th, (its fort captured *c.* 9th April).

14th January, 1761—Battle of Panipat.

I.

From Ahmad Shah Durrani to Madho Singh, Rajah of Jaipur, written on 20th November, 1759:

"At this time Najib-ud-daula Bahadur, Amir-ul-umara, the Mir Bakshi of the empire of Hindustan, has brought to my notice your friendship and devotion towards me. Let your mind be composed that, God willing, I shall gratify your desires in proportion to your devotion. During the long time that I was busily engaged in regulating the affairs of Persia, the wicked race of Deccanis seized the opportunity, came and subdued the entire country of Hindustan, and wrought extreme harm at every place. When the details of the movements of this despicable race reached me, I turned my reins towards Hindustan. Today, the 29th Rabi-ul-awwal (20th November, 1759) I have crossed [the Beas] at the ferry of Govind-wal. I shall continue to march in the same (eastward) direction. The worthless Patil [Sabaji Sindhia], after taking to flight from Rohtas, has arrived near Janko [*i.e.*, Dattaji Sindhia], and it is highly probable that the wretched Janko too will flee away.

"You are faithful to me; do you join Rajah Bijay Singh [of Jodhpur] and bar the path of this wicked tribe, so that not one of them may reach the Deccan in safety. God willing, they will be as grass before the merciless swords of my victorious *ghazis* (warriors of the true faith), and you will be exalted in proportion to your splendid and devoted services."

Govind-wal, 14 miles west of Kapurthala, but on the right bank of the Beas. Sabaji Sindhia was the Maratha governor and commander of the Panjab on behalf of Dattaji Sindhia. (See Sarkar's *Fall of the Mughal Empire*, iii, 211-216).

II

Ahmad Shah Durrani to Rajah Madho Singh, written on 10th December, 1759 :

"God's blessings be on you ! Your face has been brightened inasmuch as you are engaged in fighting the abandoned Deccanis. I too have turned in this direction for suppressing these wicked people, and have today the 10th December, 1759 arrived at Khizirabad, a pargana of Rupar [across the Satlej]. God willing, in a few days I shall destroy the cursed infidel Janko and go in your direction. You should then come and meet me ; I shall, out of my royal grace, grant the desires of this devoted ally. If there be any Deccani force in your quarter, you should with perfect composure of mind disperse them all, so that these wretches may really cease to exist in the realm of Hindustan."

III

Ahmad Shah Durrani to Rajah Madho Singh, written on 30th December, 1759 :

"Received your letter reporting that you had sent onward my letter in praise of the devotion and friendliness of Rajah Bijay Singh of Jodhpur, and that Malhar Maratha was still engaged in hostility to you, but that when Janko is defeated, Malhar too will take to flight. At present I am sending a separate letter to Rajah Bijay Singh, honouring him and asking him to assist you. Most likely he will do so. Praised be Allah ! On Sunday the 2nd Jamadi-ul-awwal [Sunday was the 3rd Jam.A=23rd December, 1759], an army of twenty thousand brave horsemen of Ghaziuddin Khan and the Maratha named Janko, were dragged by their hair by Death to oppose my victorious troops. A battle ensued ; my soldiers fell upon them like tigers on a flock of sheep ; many of the enemy were killed, some taken prisoner, and a few escaped with their bare lives with the utmost difficulty ; the heads of the slain were brought to me. Ghaziuddin and Janko, in terror of my *ghazis*, have fled away like jackals ; a party of my troops has been detached to pursue them, and they too will be dispersed and suppressed, so that the face of this country may be cleared of this worthless bramble [the Maratha invaders]. You should, in perfect peace of mind, turn to the chastisement of Malhar, so that he too may not escape. Rewards are promised to you."

IV

Ahmad Shah Durrani to Rajah Madho Singh, written on 17th February, 1760 :

"Received your humble letter reporting the arrival of my letter addressed to you and your rendering thanks for it, and assuring me that when I have made a few marches, Malhar too will be defeated and put to flight, and repeating your professions of devotion and friendship to me.

"Janko Maratha, bent on causing disorder, with a force of his wicked tribe, engaged in fighting the Afghan clans [of Rohilkhand, at Shukartal] and trampled down God's creatures. All the time letters from this true friend were coming to me. I [therefore] marched with my army into this country in the very hot season and alighted at Buriya near Jahanabad, when that evil-minded person [Jankoji Sindhia] came up with his troops to oppose my victorious army. A battle took place. By the first charge my men drove the enemy away from before them, many of the latter being slain or taken prisoner and only a few escaping.

"The Afghan clans [of Rohilkhand] being now fully released from their oppression, came and joined my camp. At Jahanabad, too, news reached me that Malhar Maratha also had a large army under him and was staying in that country causing disturbances. On receiving this news, I did not halt at Jahanabad but advanced towards that region, alighting at Nu-Jhil. The report of the arrival of my army here having reached that wretch [Malhar] he marched away from his halting-place, traversing twenty kos in one night and fled away. On the 17th February, 1760, when I am at Narnol, it is not known for certain where he has gone.

"You ought to remember your duty to close the path of Malhar through your territory immediately on the receipt of this letter. God willing, I shall spend the summer season also in this country, and when the monsoons are over, I shall with divine assent march into the Deccan at the head of a countless host and a vast force of artillery and give Malhar and other mischief-makers of that country their due punishment, so that in future none of them can cherish the idea of waywardness.

"Compose your mind in every way, remain constant in your fidelity and friendship to me, and at the proper time you and other well-wishers will be rewarded according to your wishes."

V

Ahmad Shah Durrani to Rajah Madho Singh :

"Know, my faithful friend that you will see your desires gratified by my God-given Government because as I had regard for your brother [Ishwari Singh], so towards you also I am gracious and kindly disposed. Know for a verity that "the word of a king is the king of words." It is my intention to bestow abounding favours on this obedient person [Madho Singh]. I have cherished friendliness for all the Rajputs from of old, and I regard all of them as old devoted friends of my Government, and I shall continue to so regard them. God willing, they would all share my favours and become grateful for my benevolence. It will be specially so in your case because your devotion and loyalty has been reported

Khizirabad, a place in the Rupar sub-division, ten miles south-east of Rupar town (which latter is on the east bank of the Satlej). It should not be confounded with another Khizirabad, which was a village some miles south-east of Delhi.

Janko—After the murder of Jayapa Sindhia at Nagor (1755), his government was conducted in the name of his minor son Jankoji, but the real head of the Sindhia army and administration was Jayapa's brother Dattaji Sindhia, who is the person really meant by the term of Janko in these letters.

The battle of 23rd December, 1759 took place near Thaneswar. For a full description of it, see my *Fall of the Mughal Empire*, vol. ii, p. 218, where the date given is the 24th of December ; but a letter from the Durrani Wazir Shah Wali Khan to Madho Singh in this MS. states that the battle took place on Thursday, the 27th December, and near the bank of the Jamuna. The former date and place are more reliable because supported by the Maratha records.

Bahadur Khan Baloch was in Ghaziuddin (Delhi Wazir's) army.

Buriya, on the right bank of the Jamuna, 18 miles north-west of Saharanpur and 32 miles south-east of Ambala.

Nu-Jhil, on the left bank of the Jamuna, and opposite to Shergarh (20 miles north of Mathura) on the right bank of the same river. Here Ahmad Shah arrived on 4th February, 1760. *Narnol* (wrongly spelt in the MS.) is 35 miles south-west of Rewari and about 60 miles south-west of Delhi.

Ishwari Singh, the predecessor of Madho Singh on the throne of Jaipur, had fled away with his contingent, instead of fighting Ahmad Shah Durrani, when the latter was attacked by the Delhi imperial army on the 11th March, 1748. (See *Fall of the Mughal Empire*, Vol. I.)

to me by Najib-ud-daulah and is being repeatedly brought to my notice by him. If Allah wills it, you can hope to receive from my Government even a greater degree of honour and rank than what you enjoyed under the Padishahs of Hindustan. Prove your friendliness by action so that you may succeed in getting all of your desires gratified by my Government."

VI

Ahmad Shah Durrani to Rajah Madho Singh :

"On hearing of the occurrences in the city of Delhi, I marched with my army from Anup-Shahar and alighted at Shahdara. But as it was the season of rains and heavy flood, it was impossible for me to cross the river here. The wicked enemy, seizing this opportunity, started for Panipat and Karnal and advancing beyond Karnal, they overthrew Abdus Samad Khan and other [Afghans] at Kunjpura. From Shahdara I started for the purpose of punishing these insolent foes, crossed the Jamuna [at Baghpat, on 25th October, 1760] and marched day after day. We arrived at the caravansarai of Gharaunda, an outpost of the enemy. My *ghazis* in a twinkle of the eye broke up their post and put all the garrison to the sword. Thence I marched to Panipat and dismounted. The Deccanis, too, came to Panipat, entrenched and sat down. Every day our holy warriors fought the enemy. Govind Pandit was slain outside Ghazi-ud-din-nagar with 7,000 Maratha horsemen [on 17th December]. Then we invested the enemy on all sides ; every day we dispersed them, set their trenches on fire, and sent many of them to the lowest Hell. All the above details you must have heard.

"At last on Wednesday, the 14th January, 1761, the infidel host with their artillery, cavalry and infantry, came out of their trenches for fighting and showed audacity by making repeated assaults on our *ghazis*—who are like the *Ashab* of the Faith. The scouts of our army came and reported the facts about the foe to me. During the last two or three months that we lay facing each other, everyday the enemy used to make sorties from their entrenchments on all four sides, severe fighting used to follow, and the enemy, after being beaten and giving up most of their men to slaughter used to flee away to their camp. So, it was imagined by me that on this day too the same thing would happen as in the past.

"But as soon as this news reached me, I took horse for the purpose of suppressing their violence, and threw the dust of the hoofs of my swift horses into the eyes of the foe. Arrived in the field, I surveyed the position. It was then seen that the enemy were in motion on the battle-field in a body of two hundred thousand horse and foot and engaged in firing their guns and rockets. For a space of six kos they were drawn up in line behind line, stepping forward, and with great haste manifesting their determination to fight and discharge their muskets.

"I then drew up my *ghazis* in two wings. Right and Left, rank behind rank, kept each rank firmly in its proper place, and ordered that the artillery and the foot-musketeers with my personal guns, should advance and fight the enemy bravely.

"I also ordered my Wazir Shah Wali Khan Durrani to take post with his own regiment (*dasta*) in support of my artillery at the station assigned to our guns. As soon as the Wazir reached this position, the flame of fighting blazed up and raged on all sides. The clamour of drums and trumpets rose up and filled the breasts of the valiant heroes with enthusiasm. In a twinkle the multitude of athletes strong in fighting and tigers capable of tearing up dragons, fell upon each other. They threw themselves on the centre of the enemy's formation like a lightning flash consuming a cornfield, and performed such deeds of heroism as no man had seen before this battle and no ear had heard of. If Rustam and Asfandiyar had been present in this field, they would not have turned their heads away in contempt but would have bit their fingers of astonishment with their teeth. The enemy too distinguished themselves and fought so well that it was beyond the capacity of other [races]. The blood-shedding fists of the heroes on both sides became equally red with blood.

"Gradually the fighting passed from the exchange of cannon, swivel, and rocket fire to the discharge of muskets. [Six lines of verse *omitted*.] Then it proceeded beyond musketry-fire to the stage of combat with swords and arrows. From the use of swords even, it passed on to the plying of daggers and knives. They grasped each other by the neck and crushed their opponents' breasts. Those dauntless blood-shedders [the Marathas] also did not fall short in fighting and doing glorious deeds.

"As divine grace is always my aid, suddenly the breeze of victory began to blow and, as willed by the Eternal Lord, the wretched Deccanis suffered an utter defeat. Viswas Rai, the son of Nana [Sahib Peshwa] and the Bhau, who had been fighting in front of my Wazir, were slain, and many other *sardars* also on their side fell. Ibrahim Khan Gardi and his brother were captured wounded. Bapu Pandit [Hingane] also was taken prisoner. Forty to fifty thousand troopers and infantrymen of the rebel army became as grass before our pitiless swords, the rest turned their faces away in flight. I ordered a party of my troops to pursue the fugitives; they killed about fifteen to twenty thousand of the enemy. It is not known whether Malhar and Janko have been slain or what else has happened to them. All the enemy's artillery, elephants, and other property have been seized by my men. The whole of Hindustan has come into my possession. The enemies of my God-gifted kingdom have received the due punishment for their acts. The plant of the hope of my well-wishers, has, by order of the Creator of Day and Night, become green and flourishing.

"Now is the time that devoted friends of my Court should take away their shares from this dinner table of gracious gifts. My Wazir has again and again reported your devotion to me. It is fitting that you should come and see me as soon as possible, in order that the foundations may be laid for the proper regulation of the administration of the spacious empire of Hindustan under my eyes. As I have called to my presence all the nobles, Nawabs and Rajahs of this empire, you too should attend, and you will, God willing, be honoured and exalted more than before."

Sarai of Gharaunda (10 miles *north* of Panipat) is evidently a copyist's error for *Sarai Sambhalka* (17 miles north of Sonpat) where the Maratha advanced patrols were defeated on 28th October, with two to three thousand casualties in the two armies taken together. (*Fall of the Mughal Empire*, ii, 284.) But *after* the battle of Panipat, a party of fugitive Maratha horsemen, who had taken shelter in the sarai of Sonpat, were totally destroyed by the Durrani pursuers, as Md. Jafar Shamlu describes. (*Elliot and Dowson*, viii, 157).

Ashab, the first three Khalifs of Islam who were great conquerors.

Dasta means a regiment, varying in strength from one thousand to several thousands.

THE MOTION PICTURE INDUSTRY

A New Reorientation

By KAMALADEVI CHATTOPADHYAY

The motion picture which chooses to call itself an "industry" because of its wide use of the mechanical apparatus, is comparatively one of the youngest amongst Indian industries. That our industrial pattern should more or less blindly follow the Western model, was perhaps inevitable. The early initiative in the field of all mechanical industry came from the West, mainly from England. We were not only under its physical grip but also under its psychological domination. It is only the last half century that has been seeing the gradual unloosening of that grip. But the glamour has not passed. We have been so mentally and materially obsessed by the sense of power that has emanated from the West, that in spite of all our past traditions to the contrary and our tall talk of our special moral standards, we meekly bow to power and be content to follow the pattern. To us it signifies the desirable, the objective to be attained. Hence our susceptibility to its influences is not only inescapable but becomes subtly welcome. In many respects our knowledge of the West is superficial. Those who have lived abroad over a long period as those who make fleeting trips, come so completely under the West's fascination that it exercises almost an abnormal lure because of the contrast with India. From every angle and every standard to them India falls short and suffers by comparison. The West rules the world, therefore if India is to rule even her own destiny, it should become a prototype of the West—is the inevitable conclusion they come to. Few care to probe deep into the social core of the Western structures, to sound the amplitude and vitality of their human values. If one did that, one would find every time that they were found wanting, that their content was almost as poor and inadequate as of that in this country, that basically the Westerners have no more solved their fundamental problems than we have. Although it is gradually dawning on us that the magnitude of industrial and technical development is not a sound criterion for evaluating human fulfilment or happiness, still that oppressive fascination continues its grip on us.

The effects of the last world war are, however, largely changing the face of life in the West. Deep inroads have already been cut into its rigid body and the social forces of progress are rising to the surface to create a new pattern. The conviction that Democracy must represent an adjustment between the values of freedom and society is today a living experience and not mere vanilla-flavoured homiletics.

All forces that go to the moulding of a society are of equally vital importance. All cultural expressions are an integral part of the life-throb of a people. Hence the importance of the social content of any of the cultural phases, be it the film or the drama, painting or sculpture.

In the making of our pictures we have naturally been greatly influenced by Hollywood which has been called the home of the movies. It has more or less represented to us the goal to work for and to strive to attain. The high efficiency of Hollywood studios, the amazing strides in technical development, the universal popularity of Hollywood pictures, these factors have set the standard for us. Their poor social content, their general reactionary outlook on national problems, their unreal character, their divorce from the day-to-day life of the American people, their failure to express the nation's normal ambitions and struggles, these have been generally lost sight of. In fact often the ignoble social role of many Hollywood productions in alluringly dramatising anti-social elements, lending heroism to gangsterism and the garb of idolatry to crooks, high-lighting with colour and music the meanest and most unsavoury of human weaknesses, has been one of the social tragedies of American life. We have not hesitated to blindly copy even the vulgar printed rags of Hollywood purveying with stinking gossip and hold them up as "Film journalism" and proudly quote the opinions of Hollywood figures in praise of Indian Hollywoodism. Hollywood has thus become almost the last word in movie pictures lock, stock and barrel.

Traditionally Hollywood has regarded the film as a fantasy, a medium with only one purpose, to provide enjoyment or entertainment for its audiences. Consequently the average Hollywood producer has never been moved by any other social urge and therefore felt no greater obligation towards society beyond that. Even where important topics of the day are presented, either out of confusion or ignorance, either the emphasis is on the wrong end or facts are turned and twisted. If ever greater integrity of presentation was upon any of them, the reply has been a brusque "it is after all only a movie," in other words a make-believe which is not supposed to have any relationship with the realities of everyday life, except for occasional lapses like the *Grapes of Wrath*.

The exigencies of war have, however, brought a new reorientation to all social expressions including the film. Even the hard-boiled Hollywood producers have been forced into a slow but nevertheless a growing realisation that the film is after all a social document, that cover cannot be taken under the cloak of "escapism." But it needed all the brutality, the stark naked ruthless unsheathed sword to bring this elementary fact home to these cynical leaders of this so-called industry.

The first dynamite that made the hardened Hollywood top strata crack was the ingenious use made of American pictures abroad by the Nazis, especially the gangster pictures, some of which were re-edited for the education of Europeans on the sub-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ject of American people and their rulers. "Are these the 'liberties' you look to?" the hapless people of war-torn, Nazi-dominated Europe were asked. Hollywood producers who had scorned documentaries and refused to give credence to the social value of pictures, relegating them to the "unreal" now sat up to see their childish make-believes accepted overseas as documentary portrayals of American life. At the same time the pictures utterly failed to reach out to the American public who were psychologically as well as materially unprepared to meet the debacle initiated by Pearl Harbour and followed up by the collapse which followed all along the line in South East Asia. The pictures produced at this period failed at both ends neither able to hold up the fighting line by their sheer inability to mobilise the public for an all-out effort, nor the home-front by not being able to speak straight to the average man—and in a war it is the average man that is the hero, for it is on his industry and loyalty that the entire war effort rests. On the contrary the home-front came to be kind of parodied and given comedy treatment. Red Cross and air-raid workers were ridiculed, in fact all civil defence activities were to a larger or lesser degree the butt-end of jokes. It was but adding insult to injury to distribute such films abroad in countries where the home-front was taking as fierce or even more fierce beating than the war-front. Nor were the pictures of the enemy any better. At a time when the people needed to know above all else a sober evaluation of the enemy's strength and weakness to merely portray them as crude monsters or tricky crooks fit to be just ridiculed, was not getting anybody anywhere. Childish tales of spies and fifth-columnists were the order of the day. Of the 486 pictures put out by Hollywood in 1942, more than a quarter were war films, 65 per cent of which and 15 per cent of all pictures produced were spy stories! It was the easy way out to capitalise on war and exploit war sentiment and assume that anything, sufficiently "thrilling" built into a war theme will go down. Hollywood tripped up badly, however, when it started depicting the "lighter side" of army life. These pictures began to cause deep resentiment amongst the G. I. men. It is said that at the front when some of these pictures were shown, the service men would just walk out in wrath. Men caught up in the grim tentacles did not very much enjoy seeing themselves "caricaturised" or so at least these scenes with the "comedy" G. I. men seemed. There were continuous floods of protest in the press. Foreign audiences got a very poor conception of American reaction to war, whether at home or abroad. While all Europe was on starvation diet, they saw the American public fed on sumptuous rations—food, food everywhere; whilst they went about struggling in tatters, the American fashion-shows seemed to be making colourful displays, the chief characters in the film shown undergoing sartorial changes six times a day. The resentment against Uncle Sam kept steadily rising. Hollywood had come to be conditioned over decades to put out fantasies, and it was now failing hopelessly to act as vehicle for conveying information. Even later when efforts were made to use a different form, by giving a documentary touch as for instance in *Wake Island*, *Wilson*, etc., even the real people and real events seemed to have a flavour of unreality clinging to them. They were "stories-first and everything else afterwards. The Hollywood technique of fantasy-facts, could not be shattered in a day and it is said that for quite sometime the American audiences kept on getting confused unable to distinguish between factual and fictional happenings. In the words of Dorothy B. Jones, a commentator on Hollywood and its productions: "From December, 1941 to December, 1944, 1,321 features were released. The main story of three in every ten of these films revolved around the war. Yet of a total of some 370 war pictures, only a few dozen can have accomplished anything of significance for the war effort at home or raise the morale abroad. What is behind this failure of the motion picture industry to fulfil its obligations to the nation at war? What is its future role in the construction of peace?"

To begin with, the movies, like most others, were unprepared for the important work they had to do. For years Hollywood had been producing six or seven hundred films a year, the vast majority of which were comedies, musicals, wild western adventures, murder mysteries, and similar well-worn formulas. For years producers had stoutly maintained that the American public wanted, above all else, to be "entertained". It is small wonder, then, that faced with the task of making films which would educate the public about the war, Hollywood movie-makers did not know where to begin. They lacked the experience. They lacked the know-how—and like the rest of America, they themselves lacked real understanding of the war.

But this cycle of melodrama had to spend itself out and as the seriousness and tempo of the war heightened up, more earnest exploring was called for to meet the situation. Amongst those who made a determined bid for a reorientation, were some of the Hollywood writers and a few individual artists, producers, directors, story editors,, etc. But the dominating group was that of the writers. They had been first stirred by the heavy depression in the early thirties and even before the outbreak of war, the more successful members of this group had occasionally been allowed to make a film or two which were marked out for their social content as being of national significance. But on the whole what they had been able to achieve was too meagre and inadequate to what social problems and conditions demanded; and although their salaries ran into astronomical figures and they held top places as experts in the industry, their initiative was curbed, their field of production circumscribed. A sense of hopelessness had come to settle on them like the evening mist which only the warm flood of a ray could help lift. These men and women saw immediately the opportunity offered by the war for the realisation of their dreams and saw at the same time unable even decadent Hollywood play a vital and progressive role in winning the war and securing the peace.

1943 thus saw the emergence of a new class of pictures, distinguished by a more realistic and more seriously intentioned screen treatment of the national problems. A new prestige came to be lent to such pictures as *Hitler's Children*, *This Land is Mine*, *North Star*, *Watch on the Rhine*, stories of anti-Fascist struggles. For the first time attempts were made to examine the Nazi ideology in its correct perspective. Then came pictures like *The Human Comedy*, a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

homely portrayal of American small town life ; *Joe Smith,* the life of an average American production worker, dramatising the values of the little things of life ; *The Ox-Bow Incident* aimed to turn the spotlight on the question of civil liberties ; *Power of the Press,* meant to dramatise the responsibility entailed by freedom of the press. Feature films have certain advantages of their own. For their very freedom from factual details enables them to achieve a clarity of theme that can state a point more easily than the documentary. In addition imaginary characters give the audience an unbiassed start and is, therefore, an asset in helping them understand the intricacies of a problem. A spirit of reality can thus be conveyed without tying oneself up with a specific set of facts.

One week after Pearl Harbour, these Hollywood elements met to dedicate their talents to what they called "furnishing morale-building material," and an organisation known as the Hollywood Writers' Mobilisation was established. This body not only acted as an agency to the Government to provide talent, it came to exercise considerable influence on the new scripts that were being written by giving them a new reorientation. In October, 1943, the Mobilisation in conjunction with the University of California at Los Angeles, sponsored a Writers' Congress which was attended by about 1,300 people. Although the immediate pressure of war provided the occasion, the writers assembled laid down that the film could not continue to think it could remain isolated from the day-to-day social problems. This conference was followed up by the initiation of a series of seminars by the Mobilisation, in which the writers discussed the problem of portrayal in relation to the social questions. The popularity of these seminars was evidenced by their large attendance. They proved without doubt a source of information and a stimulus to constructive thinking and gradually a new form of social expression promised to emerge as writers set out to clarify their thought processes in reference to current affairs. Amongst those who took the lead in this new movement were Orson Welles, Katherine Hepburn, Edward Robinson, The Warners, Duddley Nichols, Datton Trumbo, Henry Koch and a host of other top artists.

This has also meant a fundamental change in the old stereotyped attitude towards foreigners and minorities. Just as during the war it became necessary to stop identifying the enemy as the guttural-tongued German or the slant-eyed Japanese, it became equally imperative to cease portraying the Negro as the domestic-help, the Chinese as a laundryman, the Amer-Indian as the wildman in feathers, the Mexican as the Rustler stealing cattle on a ranch, and so on. These cartoonist pictures had to be replaced by new portraits that showed each primarily as a human being not so very different from the average white American, men and women whom the audience can accept as members of their own society, not some sort of outlandish individuals who had no counterpart in their own social organism. One notices today several evidences of an increasing maturity in the Hollywood film industry. With the spread of the new attitude towards pictures, various talent groups have stepped forward to accept their social and political responsibilities towards society in general and the motion picture colony in particular. There has also come a broadened concept of film audiences as a living society. Moreover, the old days of easy monopoly have gone. Practically every country has today come to appreciate the power of the screen and is anxious to have it serve its own national interests. There is thus a livelier effort to develop a national film industry while at the same time watch the effect of foreign particularly American pictures on the mind of its people in their relationship to native traditions philosophies and needs. Thus each country is becoming more acutely aware of its social obligations and equally sensitive to propaganda machineries. It seems that the American film industry has come to a difficult pass on its onward march in the international career. For today the world calls for a new and higher degree of international knowledge and a wider, more broad-based and at the same time more sympathetic treatment of native themes. It has been found that on more than one occasion, the diplomatic relationship between the United States and the Latin American countries became strained due to pictures like *Down Argentine Way* produced by Hollywood. Thus international *knowledge* has to go hand in hand with *good-will,* for good-will alone cannot make for good neighbourliness. There is the instance of the war picture *The Chetnicks* portraying the heroes of the Yugoslav "two-timer" Mihailovich, typical of American ignorance of Yugoslav war-torn resistance period. In the past Hollywood has been led by its salesmen who have done very well for it so far as dollar bills go. But the need of tomorrow is not the satisfaction of yesterday. Today the call is for those who will go behind the mere problem of sales and seek for the core of international relations, of understanding and trust based on common interests. For as in the political field so in the film-world, a comity of nations can only be brought about by considered and creative co-operation in the pursuit of common values and ideas.

True, to say there has been one long uninterrupted revolution in the Hollywood picture-world would be wishful thinking. As a matter of fact, as the war began to come to a close and plans for reconversion got set afoot, there was a swing back to the semi-familiar pre-war formulas, and the stereotyped light musicals, murder mysteries and similar escapist pictures were into production again. Still the change is there, definite and visible. For this new influence is not going to merely exert itself through just production, but also through those artists who have become more socially conscious and aware of their responsibilities. The Writers' Mobilisation for instance will function as a cultural centre for motion-picture writers interested in the social and political implications of the film and will further the exchange of ideas with script writers of other nations.

I MEET LOUIS BROMFIELD

By S. CHANDRASEKHAR, M.A., Ph.D.

New York City

I

"Indian villages are the key to India; not the politicians in New Delhi," declared Louis Bromfield, famous American novelist and author of two novels about India. His picturesque Ohio farm, where we met, is called Malabar Farms in memory of his years in India, and it resembles an Indian village indeed—but a rather Utopian and modern one.

I drove through miles of beautiful countryside to meet Mr. Bromfield at his charming and secluded thirty-room house. I found the man as genial and spontaneous as his setting. He readily gave me his views on the questions that are all important to India. The future of the world, he believes, lies in the hands of India and China, because of their superiority in land, resources, and population over other countries; whereas Britain has reached the zenith of her power and will soon begin to decline. "India will have to acquire freedom through gradual disintegration of the British," Mr. Bromfield said. "It will be a rapid evolution and not a revolution. It is inevitable that Britain will soon be out of the picture in world politics."

I asked Mr. Bromfield for his opinion of the future of Indian industry. "Industrialization of India," he answered, "will advance in proportion to the advancement of Indian agriculture. India cannot advance industrially if her agriculture does not progress simultaneously. Since Indian industry cannot seek a foreign market, it will have to look at home for consumers. Who will these consumers be? Peasants—for the overwhelming majority of the Indian population is composed of peasants. And their purchasing power is so low that they cannot even afford to buy a shirt.

"Improving Indian agriculture, however, means raising the standard of living of the Indian peasant. Then the peasant will have the purchasing power to buy India-manufactured goods. Thus industrialization will follow close upon improved agriculture."

Mr. Bromfield discussed Indian agriculture enthusiastically, for he himself is a farmer as well as a writer—not a gentleman farmer, as many consider him to be, but a "dirt farmer," working on the land himself during the day and writing at night. His large farm is run on a co-operative basis—all of the profits over the first five per cent, which is paid on the capital he invested in the farm, is divided among the employees. The dozen tenant families not only live on his farm but of it. So he was naturally interested in the improvement of agriculture in India.

"India needs modern and mechanized forms of agriculture," Mr. Bromfield continued. "She must change from the wooden plough to the steel tractor. And the health of the average Indian must be improved to the point where he at least has the stamina and strength to work the land efficiently. Then transport conditions must be improved—good roads must be built—so that the farmer can bring his produce to market.

"Before India can even talk of industrialization, she must make her agricultural methods five thousand times more efficient. And the improvement of agriculture will help solve another problem—overpopulation. For an increase in the standard of living tends to lower the birth rate."

"Do you believe in birth control?" I wanted to know.

"I am not against birth control," Mr. Bromfield explained, "but it will not solve the Indian problem. It reduces the number of poor people without raising the standard of living. That is not enough."

"Why Russia has come out of this war strong," he went on with enthusiasm, "is because of her limitless manpower, large land area, and great resources. I do not see why India cannot become like Russia in the near future."

II

Farming and writing have always been the two primary interests in Mr. Bromfield's life. He was born nearly fifty years ago—on December 17, 1896, to be exact—on a farm in Mansfield, Ohio, near where Malabar Farms is now located. He wanted to be a farmer, and so he enrolled at the Cornell University School of Agriculture when he was sixteen. But the urge to write proved to be too strong, and so he left Cornell after one term to enter the Columbia University School of Journalism in 1914. When America entered the First World War he gave up school and joined the American Expeditionary Forces. For two years he served in every major sector from Switzerland to the sea; his military activities in France winning him the Croix de Guerre.

Returning to the United States, Mr. Bromfield became one of the original members of the staff of *Time* Magazine. A year before his first novel, *The Green Bay Tree,* was published, he married Mary Appleton Wood—in 1923. In 1925 they sailed for France where they settled on a farm near the little village of Senlis—thirty miles north of Paris. They remained abroad for the next fourteen years and all of his three daughters—Mary, Ellen, and Hope—were born in France.

From 1924 until the present Mr. Bromfield has been writing steadily at the rate of a book a year. His total output to date comes to more than twenty books, most of them highly successful if not best sellers. An interlude of residence in India gave him material for two of his novels—*The Rains Came* and *Night in Bombay*. Both proved to be immensely popular, for they had everything that an American reader expects of India—incredible Indians, blundering Britons, spendthrift Americans; earthquakes, floods, plagues, and other disasters; and what not, together with clever social commentary and a rare insight into Indian *mores*. *The Rains Came,* which is Mr. Bromfield's favorite and most successful work, was made into a Hollywood motion picture—popular in America and rather impossible in India. Many of Mr. Bromfield's subsequent novels seem to have been slanted toward Hollywood—his *Mrs. Parkington* was recently made into a record-breaking picture. Besides being a best-selling writer, Mr. Bromfield is a Pulitzer Prize winner—he received the prize for his third novel, *Early Autumn*. He has also written a number of short

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

stories which were recently brought together in one volume under the title of *The World We Live In*.

III

Mr. Bromfield and I had a lengthy discussion on politics. He himself was formerly an ardent New Dealer, but during the last election he became critical of Roosevelt's agricultural policies ; and so he voted for Dewey on the Republican ticket. It was rumored that Bromfield himself had hoped to be Secretary (Minister) of Agriculture—the post which Roosevelt gave to Henry Wallace, now Secretary (Minister) of Commerce. It was, however, the effect Britain's change of government would have on India that absorbed us most.

"Labour Government is not the solution for India," Mr. Bromfield told me. "Every workingman in England has to have a job, and to them that means that they have to be imperialists. The change in government in London may appear to be for India's benefit but actually, although the British workingman may be socialistic as regards the country's domestic policy, when it comes to her foreign policy he remains just as much a Tory as ever.

"Britain still has to exploit raw materials from her colonies, bring them back to England, manufacture them into commodities, and export them again to the colonial markets. This means she needs sea routes, which means the empire life-line, which in turn means the continuance of imperialism all over the world. Look at Hongkong."

"But," Mr. Bromfield concluded, "the British Empire is an economic anomaly. It has to go. The United States' pouring money into England won't help England. It is like eternally helping a poor relative ; he gets hungrier and hungrier. England has become a second class power and nothing will help her."

"What do you think of Pakistan ?" I inquired.

"I have met Mr. Jinnah socially both in Bombay and New Delhi, but we never discussed politics—at any rate, not Pakistan," answered Mr. Bromfield warily. "On the whole, however, I think Pakistan can't work, because Moslems are scattered all over India, even though they are in a majority in a few provinces. It will be impossible even if you attempt to transfer populations—and that has been tried in Europe and found to be not feasible. And, above all, from what I know of India, Pakistan, if effected, would be the poorest territory in the world."

While discussing the obstacles to Indian freedom we talked of India's minorities, the question of defense, and the problem of India's Maharajahs. He said that he had met a few Maharajahs during his sojourn in India, but he feels that "the Maharajahs are doomed. They have a brilliant future only as great Indian patriots, scholars, or industrialists ; but certainly not as Maharajahs, for their days will soon be over. Look at the European Maharajahs. Their abilities as rulers are very questionable, but they have a great future as great individuals developing their talents for the benefit of their country."

This led naturally to European affairs, on which Mr. Bromfield touched but slightly. Of France, his home for some fifteen years, he said : "No Frenchman will leave France ; French emigration is an unheard of thing." He also predicted that France would conquer Germany culturally, and pointed out that even in America the culture is more truly representative of the French than the British. "In fact," he said, "our judicial system is the only British thing we have."

Before I took leave of Bromfield he took me to his magnificent, book-lined study to give me an autographed copy of his latest book, *Pleasant Valley*. Although it is partially autobiographical, describing his life as a "dirt farmer," Mr. Bromfield says he does not plan to write an actual autobiography until he reached the age of sixty-five. From the huge bay window in the room I could see the endless greenness of his spreading thousand acres, reminding me again that Bromfield is just as much a farmer as he is a writer. As we shook hands, my eye caught the little figure of Ganesha, the Hindu God of Luck, in a niche over the doorway. Bromfield noticed the direction of my glance. "God of Success, you know," he smiled.

THIS FREEDOM

By A. C.

The Muslims are not a new force in Indian politics. Ever since the Muslims of Arabic, Turkish and Iranian descent began their long chain of invasions of India, ever since the Muslim rulers of various parts of India began their work of Muslimising India, they have been a strong force in Indian politics and Indian life. No matter whether they are now of pure or part Arabic-Iranian-Turkish blood, no matter whether their own traditions, culture and way of living have undergone fundamental changes, they remain a body of men, with extra-territorial loyalties and an outlook on life which is not indigenously Indian. (This is true of a large number of Muslims, though not of all Muslims.) They are really afraid of becoming Indians, although they may be so in blood, language, food, clothing, vocation and what not. Mahomed Ali Jinnah has said in so many words that he is not an Indian. The question is what is he then ? Is he an Arab, a Turk or an Iranian ? He is not any of these, but is according to him, a Muslim, belonging to the Muslim Nation of Pakisthan. India. The trouble is that this Nation has not existed before Jinnah, nor has their homeland Pakisthan. But Jinnah says all or most Muslims of India want to belong to that Nation and that Land. They must, therefore have their own Nation and Land in India and unless they were granted this simple demand, they would devastate everything to the best of their power and ability. The difficulty is that no part of India is purely Muslim. In some places there is a high Muslim majority, in others they are 50-50 with Hindus and in most places they are a definite minority. They say that they must have all the places, where they are in a majority or are equal with Hindus, as Pakisthan, and to round off things nicely, they must have a few more areas,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which are predominantly Hindu, thrown in for the sake of peace.

The point is that where they are in a definite majority they can have their own Government, provided such Government conform to the accepted codes of civilised governance, in the natural course of things. Where they are 50-50 they have to guarantee to the other side that they shall not try to play any selfish tricks to feed their own interests or even their vanity. For if they did that, the slightly less numerous but almost equal minority will deal with them in a manner which will not make for peace. Where they are a minority they cannot by any means establish Muslim Raj, for the simple reason that the majority will not have it.

In any scheme of self-government for India, the various linguistic-racial groups will have full freedom to set up their own Government in their own area. Working on this principle any large enough area will be free to choose and make its own Government. Assam and Western Bengal, for instance, are predominantly non-Muslim. In their history too the Muslims have never been in political power in these areas. The hope, therefore, that either the British or the rest of India will make a gift of Western Bengal or Assam to the Muslims can only be based on the assumption that the British or the other Hindu areas of India have a moral or political right to make such a gift. They have no such right. The British cannot establish any kind of Government anywhere in India without the sanction of the people of the particular region. If they tried that, they shall be resisted. The other Hindu areas cannot make such a gift for the simple reason that Western Bengal and Assam are not the property of the people of, say, Bombay or U.P. to dispose of as they liked and to suit their convenience. The people of Western Bengal or Assam have as much right to their own freedom as the people of Bombay or the members of the Muslim Nation have to theirs. In other words, if the British or any part of India tried to decide the fate of any other part of India, they shall be resisted.

The only way for the Muslim Nation, therefore, to build Pakisthan anywhere in India excepting where they are unquestionably and outstandingly in a majority will be by the use of force.

The U.N.O. has been set up to prevent War. In future no nation will be allowed to establish its "Rights" by virtue of might. If this be the real purpose of the U.N.O., the Muslims of Eastern Bengal or Western Punjab or of N.-W.F. Province or Sind will have to make War on Assam and Western Bengal to build up Pakisthan and they will have to fight the U.N.O. along with the people of these areas to achieve their end.

We all know how absurd that proposition is. Mr. Jinnah can ask himself one simple question as he moves his eyes over the map of India. "Who is giving away *What* to whom?" And while answering that question he must remember that he is now in conference to settle a question of Freedom for those peoples of the Earth who have not been free for some time. He is not on a battle-field where he can decide things by force. He can no more force a Government on any group of men than they can on him. He may like to have Calcutta for his Pakisthan, but the people of Calcutta may not like it. His able assistant Suhrawardy may wish to rule over all the areas where Bengali is spoken, but the people of those areas definitely have a say in the matter. Whether the idea of Pakisthan is a sound one or not does not matter. If in an area an overwhelming majority of people want a certain form of Government, they can surely have it. But no one can impose his own folly or wisdom on some one else without the other's approval. That is the basis of all Freedom.

The people of those districts where Hindus are in a definite majority can never be included in Pakisthan, no matter what British Province these districts are in. The same is true of Muslim majority districts. I say district, because a district has a large enough population to be counted as effective in any political issue. The ease with which the Muslim talkers are settling the political fate of 25 or 30 million people according to their own sweet will, truly savours of Chengiz Khan (who incidentally was not a Muslim) who has been mentioned by Sir F. K. Noon in this connection. But the Great Khan fought the armies of less capable despots and not Nations. Maybe a nation of 30 million Bengalis who have produced Surendranath Banerjea, C. R. Das, Rabindranath Tagore, Jagadish Chandra Bose, Subhas Chandra Bose and an endless number of political fighters during the last half a century, will not surrender to anybody's will so tamely. Chances are that the fate of Pakisthan will be decided on the fields of Western Bengal if any liberties are taken with the freedom of the people here by the British, the Hindus of the rest of India or the Muslim Nation. The Bengalis have no reputation as swashbuckling mercenaries, but they have a fair enough name as undaunted fighters for freedom.

Mr. Jinnah's latest demand of Calcutta as a Muslim port and a corridor right across India to link up his kingdom, is only another example of an ever-shifting outlook on politics. A man who loves freedom and does not believe in interfering with the freedom of others cannot demand control over the homes of other people in this off-hand fashion. He has also mentioned his friendly relations with Afghanistan and other Muslim States of Asia who will do his job for him. One can begin to see the slowly unfolding pattern of a two-fold conspiratorial design through the mist of all this apparently senseless outbursts. On the one side there is some scheme afoot to crush some power against whom all the Muslims will combine on the side of Britain. On the other hand, India shall be in the grip of this Muslim combine and may, *Inshalla,* develop into a hundred per cent Pakisthan in the near future. This is the not long-forgotten dream of the decadent despots of middle Asia—Pan-Islamism. Up to a certain point the British Imperial diplomacy may thrive on this. If they could gain the support and sympathy of a large bunch of sturdy men, who are sufficiently fanatical to overlook the modern ideals of freedom and progress, one may even hope to meet the challenge of Russia. The question is: Will the youth of Asia subscribe to a scheme of this nature? Will the Indians—Hindus and Muslims, lend themselves to be used as pawns on the British Imperial chess-board to that extent? Will they agree to march backwards a couple of hundred years to satisfy the desires of men to whom humanity and the purer ideals of democracy mean nothing?

I should say, no. Nobody is going to tolerate such things in this age. If in Sind or Baluchistan the majority of Muslims agree to heap upon the non-Muslim

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

minority disabilities or indignities of any kind whatsoever, if in Bihar or Madras the Hindus do the same to non-Hindu minorities, then one would have to admit that India's fight for freedom has been a mockery and a tragic failure. The future of India depends on the establishment of Justice, Equity and Truth as the foundation of her new freedom. There may be Muslims who hope to see *Quazis* occupying the High Courts of India and there may be Hindus who wish to re-establish Brahminism with its sordid paraphernalia in the cities and villages of Hindusthan ; but neither must be allowed. The Rajahs and Nawabs may like to continue to vegetate in pomp and splendour, the Banias may dream of building up endless trusts and monopolies ; but no, all these degenerate ambitions must be sacrificed willingly or shattered. A free India means a land in which *all* men have equal rights and privileges, where all men hold their heads high, where no man is made to feel small or suffer any disability on grounds of religion, caste, dogma, race, colour or such other unrealities which have vitiated human existence in the past.

If the Muslims of India, where they are in a majority, wish to change the names of their cities and villages or larger areas they may do so ; but not a single individual anywhere in India must be put under any disadvantage for reasons which have no basis in Justice, Equity or established fact. If that is allowed then India will be exchanging her present slavery for another which will be far worse and thoroughly evil.

———:O:———

THE TRANSITION BUDGET OF INDIA

By NIKHIL RANJAN BANERJEE, M.A.

The Indian Budget, the Finance Member claims, has been so framed as to meet the basic needs of India in transition from war to peace economy. Not alone were economic contingencies forestalled, but the political side of the question did equally engage his attention—as the one self-vaunting expression leads him to assert that the Budget, as framed, would be an important augury for his successor, Indian or British, more probably Indian than British, for, he sees the political metamorphosis in the offing, and makes for the latter the Membership a bed of roses.

Whether, or not, the future budgetary business would be a cold weather theme does matter little for, his successor, Indian presumably, has, as he says, no reason to be found lacking in the qualities of clearing the Augean stable of Indian finance. We here propose to confine ourselves to a consideration of how far the Budget as introduced is appropriate to the peculiar circumstances of the time and whether the claims put forward by its architect is borne out by facts.

Even to a casual reader of the Indian Budget it would be deemed as an epitome of efforts to make the best of a bad job. But who has made the job bad for us ? When, however, in spite of himself, the Finance Member touches upon the fringe of the problem, an all-out effort to camouflage the real issue, if not misrepresent it, becomes clearly marked. But, at the same time, it must be admitted that in this year's budget an attempt has been made to remedy certain flagrant defects in certain directions, while in respect of others, it breaks altogether new ground.

To take the first thing first, improvement under this head has been sought in two respects, (1) to make the burden of taxation more equitable by some alterations in the scheme of income-tax and in the sphere of certain indirect taxes as well ; (2) to give a fillip to, or rather, remove the shackles on the development of the industrial life of the country which is calculated to take in the slack caused by demobilisation.

So far as the income-tax is concerned, thank Heaven, that even in this late hour the idea has dawned upon the authorities that it was the members of the smaller income groups (earned income, of course) who had to bear the brunt of the war, and as such, their share of the burden should, a bit, be reduced. Accordingly, the slabs of Rs. 3,500 and the upper one were dealt with. But it must be said that the revelation that they have had was the imperfect one, and the counsel that prevailed on the authorities was the counsel of the partisans. For, on any showing, it was the income group of the lowest slab that suffered most ; and though there are not many who would envy the position of the two upper income groups, few would have been surprised if the tax-free limit was scaled up a little, particularly in view of the marked obduracy of the price-level not to fall and the impending food crisis. The loss in revenue due to relaxation on this count could be easily made good by a tightening of the belt a little in respect of another source which remains virtually untapped—I mean the Death duties, and taxes on properties in general. It is true, that in India, unearned income has been distinguished from the earned, a system of taxation devised which hits the former harder than the latter, and the whole business brought, so the Finance Member claims, to its logical conclusion by having the surcharges initiated to this discrimination.

Taken in the right perspective and with the situation which obtains in other countries before our mind, it will be realised that this falls short of what is needed. While in other countries the question of Capital Levy as a means of liquidating the forced savings is being given a serious thought to, it becomes on the face of it, extremely ludicrous, that the case for even the Daltoniac plan of terminable annuities[1] or the plan of Rignano[2] in relation to India should thus have been slurred over. Indeed the time has come for a review of the whole position of Income-tax *vis-a-vis* Inheritance-tax, more so because, in the context of the Indian situation the question has gathered a fresh momentum. I do not propose to enter here upon an elaborate discussion of the subject, but shall be content simply by pointing out certain aspects of the question in broad lineaments. Even when it comes to a comparison of the Inheritance-tax, pure and simple, and neither jammed in Rignano's or Daltoniac plans must insured against, *i.e.*, between inheritance-tax made progressive according to size only and the income-tax also so made progressive, the issue is no longer in doubt. In the first place, Marco's caveat[3] against the

1 Expounded in his book *Inequality of Income.*

2 Explained, in the book *Uma Reforma Socialista del Diritto Successorio.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

progressive taxation in general falls to the ground, because here, unlike in the case of income-tax, the Effort Supply curve is conspicuous by its absence. In the second place, even a very steeply progressive inheritance-tax will not have that deterrent effect on the incentive to invest as distinct from the motive to accumulate which a correspondingly steeply progressive income-tax is wont to have. Thus writes Prof. Meade :

"In their effect on employment, progressive death duties are to be preferred to a progressive income-tax. For the incentive to spend money on capital development at any given rate of interest should, as we have argued, be little affected by death duties."[4]

This unusual period of bottlenecks aside, what would be vitally necessary in the deflationary dispensation of the immediate future, is an all-round predominance of the economics of consumption, and the consequent reduction in the propensity to save.[5] When there still exist certain inflationary pockets, and bottlenecks have been in more than one direction, savings have got to be tapped in order to prevent further lopsided development of the economic life ; and rightly enough does the Budget incorporate certain provisions designed to secure that end in view. At the same time, as a result of the severe cut in defence expenditure having worked out its full effect, or ensuing large-scale demobilisation, the deflationary forces get under way in future then measures calculated to augment the propensity to consume while not impairing the incentive to invest would be the desideratum. Viewed thus, the tax on property, innocuous in its effect on incentive to invest, is the tax *par excellence*. Administrative difficulties, lack of statistical data, etc., should no longer be allowed to baulk the attempt to do the thing in the desired direction.

Coming to the consideration of measures under head (2) of our classification, the first important thing that strikes us is the marked contrast between the features of the transitional economy of India and those of the Western countries. While in the West the problem is mainly that of a switch-over from the war-time industries to the peace-time ones, with no fear of a prolonged unemployment to embarrass its course, in India, the authorities are working under the shadow of a depression whose magnitude becomes larger and larger as the sun of economic tempo reclines on the Western sky and the spell of war activities dies down into helpless inertia. The whole problem of the transition economy in the West resolves itself into a question of adaptation, the course of which may be clogged by the emergence of certain factors, *e.g.*, (1) structural changes in production, (2) the cataclysmic character of post-war demand, (3) availability and ownership of resources, etc.[6] But all these can do no more than make unemployment a passing phase—a mere incidence of a conversion.[7] But in India the war-boom is of a rather different nature, created as it is by an infinitely large proportion of new employment in a land hitherto of the unemployed and it is no wonder, therefore, that as soon as the wieldy hand of the war-lord is withdrawn the activities sag, things return to their old grooves, and depression engulfs the whole of India. Taken in this perspective, the need of energising the economic system of India cannot be over-emphasised. It is probably with this idea before his mind that the Finance Member proceeded to incorporate in his Budget certain innovations which, according to him, are calculated to rouse the economic life from stupor. These measures to name them, are (*a*) The abolition of the Excess Profit Tax, (*b*) Refund of the E. P. T., (*c*) Depreciation allowances of 10 per cent on new buildings and 20 per cent on new plants, (*d*) Relief from customs duties on raw materials imported for industry, *e.g.*, plants and machinery, (*e*) Reduction in the combined rate of income-tax and super-tax by one and three-fourth annas, (*f*) Steepening of the rate of super-tax on dividend above a datum line.

Nobody, perhaps, will deny that these are improvements in the desired direction. The excess profit tax has been a blight on the capital development of the country inasmuch as, it is a positive encouragement to inefficiency ; and the loss in revenue sustained due to its withdrawal will be made good by increased advances through ways and means. If the Building Industry can alone work out Indian salvation, then the improvement under this head is a master-stroke. But a bit jejune, perhaps, is the allowance on plant establishment in a land where by the tricky manipulation of the sterling-balance it has been made a tantalising disillusionment. The rest of the measures speak for themselves.

But, what after all, does this amount to ? It is no more than a mere lip-service to the problem of Indian industrialisation. When the fear of an impending depression stalks over the country and a great lee-way has to be made in the direction of Indian industrialisation if the country is to be saved from that cataclysm, then such tinkering with the vital problem is really exasperating. The Hon. Member's Sphinx-like silence on the issue of tariff measures as a protection to Indian industries may be attributed to either his complacent belief in the future of Indian industries or his attempt to side-track the issue willy-nilly.

Thanks to this war, India was converted overnight into a base for supplying nearly 70 per cent of those infinite varieties of materials required for the prosecution of war, and many industries have sprung up which otherwise would have remained dormant. These industries were taken out of the faggot of other countries and planted in Indian hot-house of war and, hence, their attempt to recover the ground thus lost is a question of months only. Moreover, it is wrong to suppose that these countries will be baulked in their attempt to do this owing to their pre-occupation with setting their houses in order. For, their change-over, as we have seen, may at worst, be stinted by some jolts and jerks due to temporary maladjustments ; but the complete overthrow of economy out of gear bringing in its trails depression of a persistent character, which is likely to mark the Indian adjustment, is far from happening in America. And as a matter of fact, the country like Great Britain, with the Anglo-U.S. loan agreement before her, has been hard put to it to increase her foreign trade by £75 millions for her very existence. Clearly enough, these war-creatures will not be able to hold their own unless being sufficiently buttressed up. The same is, perhaps, true of the nation-building industries, *e.g.*, automobiles, aeroplanes, locomotives, shipbuilding, etc., introduction of some of which was held

back until very recently. We shall return to the discussion of this particular matter shortly. In view of the imperative character of protection in the transition economy of India, it is difficult to believe that the Hon. Member failed to appreciate their significance. We are then reduced to fall back upon the second explanation. Here we come upon interesting phases of their policy and get at the true meaning underlying his reticence. Here it becomes all the more manifest that they have taken for granted certain circumstances and then proceeds within the circumscribed limit to work out the economic destiny of India. The situation has been made impossible for India for her having been made an unwilling partner to the Sterling Block, by not delinking her currency, her being a creditor country notwithstanding, Imperial preference, blocked sterling balances, and all that. In the international sphere also there are also certain factors which do not portend well for India. The repercussion that the Anglo-U.S. loan agreement will have on India may not be unmixed evil. But that would really be a sorry business for India if her hands already tied, are forced to make any commitments to the Bretton-Woods Monetary Agreement as it now stands.

We cannot enter into an elaborate discussion of the subject here which, we are afraid, will take us far afield. But this must be pointed out that it is not for a country, with promises of an infinite growth of industrial life but the resources lying unexploited for the time being, to participate in a common economic *milieu* with an industrially advanced country. It is this common measure meted out to the diametrically opposite countries, that List, the father of the protectionists, inveighed against, and his suggestion to accord some measure of protection to this sort of industries did not fail to find favour with even the best of the classical exponents, John Stuart Mill.

The Hon. Member might have pointed out that a Tariff Board has been set up to look into the question of industries and to suggest measures for their safety. But the thing is that only a certain specific industries have been marked out for their consideration while the question of general tariff policy, and even that of certain very important industries from the nation-building point of view, has been kept beyond their purview. Worse still, perhaps, is the fact that by the time their suggestions, assuming them to be constructive in nature, sees the light of day, the fate of the industries may well-nigh be sealed. The Hon. Member should have on his own initiative and subject to revision by the Tariff Board when that Baby would be in a position to do so, incorporated in his budget certain duties designed to give relief to the struggling industries. His argument in regard to blocked sterling-balances is not convincing. Granted that these countries are not in a position to supply plants and machineries at present, what valid argument can there be against sending *en masse* technical experts from Great Britain where there is a surfeit of it, and also from Germany in payment of the latter's 2 per cent reparations to India? Then, again, so far as the Empire Dollar Pool is concerned, with the plight of South Indian automobile and air-plane industry still fresh in our mind, our understanding refuses to acquiesce in what the Finance Member says. It requires no more than average intelligence to understand, therefore, that what has been done is a mere tinkering with the problem, cutting the *t's* and dotting the *i's* while leaving the main issue undisturbed, lest any infringement on the sacrosanct sphere, they might have feared, would recoil on the British vested interests and jeopardise their position in India, that nucleus of British economic imperialism.

The same dilettantism which marked their policy in regard to industrialisation also marks their effort at planning. In recent years, there has been a good deal of prostitution of planning. A control here, an operation there, a supervision in a third place and a patronage in a fourth, have all been crystallised into planning, and made to pass for it accordingly. India is no exception to this uncanny development. In order to save the country from being thrown into the abyss of a depression, and to keep the level of employment up to the mark the authorities have come forward with a plan the main features of which are to deal with certain specific questions separately and in a disconcerted fashion. Road-building, establishment of Industrial Finance Corporation, development of tele-communication in the federal sphere and certain measures in the provincial sphere as well form the main plank in their programme. If such sporadic, piecemeal, ersatz measures become planning, then words as laissez-faire, laissez-passer, would not have found their way into the Dictionary. There is no half-way house in planning. It must be thorough, otherwise, it is nothing. When thorough, it brings cosmos; when partial, it ends in chaos. Space does not permit me to enter upon an elaborate discussion of it here. But those who have any doubt as to that will do well to remember the stupendous failure of the control measures in India at their inception, and the causes underlying it. The economic life is so inter-twined, its different aspects so scrupulously juxtaposed, that even a minor ruffle at one end percolates itself throughout the entire system with an amazingly hectic speed. Even in such matters as price control, writes Profs. Bye and Hewett:

> "Once it is begun there is no way of stopping it. . . . One cannot thrust the ramrod of maximum prices into the delicate mechanism of industry at but a few arbitrarily selected places."[8]

Not to speak of these erratic, piecemeal measures which are an apology of planning,—planning, within the capitalist fold, however concerted and full-fledged it might be, is sure to give rise to what is known as the Fascist planning. For, under planning, within the capitalist fold, the role of the capitalists is relegated to a minor importance, while their claim to shares of national dividend is fully ensured. This anomaly the labour naturally resents with the result that the State as the guardian of the system, has to come forward as an arbitrator, and arbitrate invariably it would against the labour whoever dared to dispute its dispensation. This is fascism, pure and simple. Economic planning must have for its end, to speak in the words of the Webbs "mass production for community consumption." Production and distribution should both be simultaneously tackled in order to ensure to the teeming millions of India the bare physiological needs of life at least. Hence our emphasis on Death duties, Inheritance-tax and vigorous exploitation of taxes on property in general. Only by our concerted action on all these fronts can we hope to see rise from the welter of disrupting forces a "Brave New India."[9]

A TALE OF THE GAMMA-MEN

By RAJSHEKHAR BOSE

(Translated from Bengali by Prof. Satkari Mitra, Carmichael College, Rangpur)

This story relates to a period thirty years after the complete extinction of man. It may be questioned, since we are all dead, who writes this story and who reads? There is no need for worry. Authors and readers transcend time and space. They can look into the present, past and future and have access into the remotest corners of the universe. But let us proceed with the story.

For a long time there had been strained relation among the big nations of the world, and gradually the tension became so acute that there remained no hope of settlement among them. Dwijendralal's song :

We are the judges of Iran by divine call,
Those who grumble at our judgment are villains all.

had been translated and adopted by every nation as its national anthem. At last the political leaders of various countries held consultations with their own wise men and each nation came to the conclusion that it was impossible to live in safety, security and tranquillity unless the others were wiped out from the face of the earth. With that end in view each nation used the Annihilium bomb against the others. In comparison with this latest product of science the old uranium bomb was merely a pillow stuffed with cotton.

Each nation had thought that it would be first in the race and would be able to carry out its design and annihilate the rest before the others could complete their research and organize production. But as ill luck would have it, no nation lagged behind, and having come to know the design of others through espionage, let loose the Annihilium bomb against one another on the same day and at the same auspicious moment.

No country, civilized, semi-civilized or uncivilized, escaped destruction, and in a moment the whole human race with all its achievements, the beasts, birds, insects and even plant life were completely destroyed. But life is a tenacious and persistent stuff. In the sea, in caves, in desert islands and in a few other inaccessible places some plant life and lower animals escaped destruction. We are, however, not concerned with all the survivors. Let us proceed with the lot of those who are the subjects of this history.

In the huge underground sewers of big cities like London, Paris, New York, Pekin and Calcutta, there lived millions of rats. The greater part of them had of course been annihilated by the bombs, but a few young male and female rats survived accidentally. Not only that, but the gamma rays emanated by the bombs wrought in their generic traits a profound change which biologists call mutation. In a few generations they lost their tails and fur, their forelegs developed into hands, their hind legs became so strong that they began to stand erect and walk about ; their brains increased in size, and their squeak gave place to distinct and articulate speech. In short they acquired all human traits and were endowed with a keen intellect and capacity for rapid progress. Further, from the very beginning, the rats in one respect had an advantage over the human species—they multiplied very rapidly. Now that power put on a more accelerated pace. I do not want to insult these new talented tailless bipeds by calling them rats, they should rather be regarded as human beings. But to distinguish these newly evolved children of the gamma ray from the old human species like ourselves, I shall call them Gamma-men.

It will now be necessary to enter into a little calculation. It is well-known that historians roughly allow 25 years for a generation. Thus, in 18,000 years, there are 720 generations of men. What were our No. 720 forefathers like ? Anthropologists tell us that they belonged to the old stone age. They did not know agriculture or cooking, went about naked, lived in caves and ate raw meat. Just fancy what tremendous progress in all branches of knowledge has been made in the course of only 720 generations ! Now, while we require 25 years for a generation, only 15 days sufficed for the Gamma-men, they could start procreating a fortnight after their birth. Thus, in 30 years after the extinction of *Homo Sapiens* there were 720 generations of the Gamma-men. In other words, 30 years of the Gamma-men's existence equal 18,000 years of human history. If you cannot believe you may figure it up.

In this long period of 30 years the Gamma-men quickly reached the zenith of civilization. They learned all the sciences and arts and became as wealthy and powerful as their predecessors. But all branches of Gamma-men were not equally civilized or equally powerful. Among them were to be found class and race distinctions and differences in political opinion. Some of their states were big and powerful, others small and weak. There were empires with ruling races and subject nations. There also existed keen struggle, hatred, envy, rivalry and inter-state economic warfare. Wars and aggressions were also not infrequent. After repeated internecine wars good sense at last dawned on the foresighted intellectuals among the Gamma-men. They thought : What is the good of these wars ? Is it not possible to agree among ourselves and live together in peace and harmony ? Our present civilization is incomparably great. We have unravelled many secrets of the universe. We have brought under control the stupendous forces of nature and harnessed them to our use. We have eradicated many of our social evils and bodily ills. We have acquired profound knowledge in philosophy and ethics. If our political leaders and the leading men of thought would but lay their heads together it would be certainly possible to reconcile our conflicting national interests.

At the insistent demand of the wise men of all nations, the political leaders called a World Conference. To it came from various countries all the eminent politicians, philosophers, scientists and others. Many attended in the visitors' gallery to see the pageant and the fun. As the actual Gammanite names of the various

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

speakers would be difficult to pronounce, names which are pleasant to hear and easy to utter have been substituted.

Mr. Chung Ling, the wise President of the Conference, in his opening speech explained to the delegates the urgent need of establishing world peace and goodwill among the nations, failing which, he added, there was no hope for Gammankind.

After the address of the President, Count Notenoff, the delegate from a moderately rich state, said, 'The inequitable distribution and division of world's territory and resources are the root causes of world unrest. A few big states have in the past through dishonest means obtained vast empires and established extensive colonies. They have thereby secured control over prodigious amounts of raw materials and domination over huge masses of docile and subservient subject-races. At the same time we have not only been prevented from expanding but have been deprived of even living space. If future wars are to be prevented we must be given a half-share in the world's wealth.'

Then rose Lord Grabearth, the delegate from a mighty and extensive empire. He said, 'As we possess the longest and most varied experience in the governance of empires, it is desirable for the peace of the world that these areas should continue to be under our control. The stronger my state is the greater would be the security of the other nations. As for raw materials, we are prepared to part with a little on suitable terms. But I would request you not to cast greedy eyes on those uncivilized and semi-civilized countries which are under our care. We are merely the trustees for these people and should only be too glad to get rid of our burden as soon as they become fit to manage their own affairs. We do not seek to harm anybody. If danger comes, it will be from the country of my friend General Keepoff. In his country there is no private or independent enterprise, everything is done by the State. There is no place there for the aristocracy and capitalist magnates who are the head and front of society. The bad example of his country is spoiling our working classes. In a short time you will see the vile principles and cheap products of his country flooding the world. Our social structure, religion and industry will be ruined. The first step towards world peace is the reformation of General Keepoff's country.'

Then rose General Keepoff. Twirling his thick bushy moustache he said, 'Gentlemen, you all know that my friend Lord Grabearth is a great liar. It is his country that has kept the rest of the world under its heels. His state has repeatedly fomented internal revolt in my country through bribery. The day of reckoning will come soon, then we will have our revenge. I do not want to say anything more now.'

Abaldasji, the popular leader of a dependent country, then said, 'The plea of trusteeship put forward by Lord Grabearth is downright hypocrisy. So long as his lordship's countrymen arrogate to themselves the power of judging our competence for self-government, we shall never be let off from bondage. The sole duty of this conference is to abolish all empires and acknowledge the freedom of all nations. Dependent countries are the root cause of hatred and jealousy.'

Nischint Maharaj, the great yogi, had so long been sitting with eyes closed in meditation. He now broke his silence and caressingly stroking Abaldas's back, said, 'Set your mind at ease my son, have trust in me. Through my penance you will all attain salvation in due course. I am continually exchanging thoughts with the great sages living on the summit of Mt. Everest. They are all at one with me.'

Dharmadasji, the *karmayogi* or man of action, said, 'Nothing will come out of these trite words. For world peace, it is first of all imperative to reform and purify the character and conduct of all, and then only can emerge a true social conscience. My scheme is very simple. Let all eschew animal food and take to a vegetarian diet, shun all luxury, and lead a life of strict continence for a month (which, by the way, equals in effect 50 years of human existence). The result will be that in this period the aged will die a natural death and no children will be born, so that world population will be reduced by half. Thus, war, famine, epidemics and the other positive checks to population will not be necessary. In a perfectly moral way the needs of the remaining population will be fully satisfied.'

Pandit Satyakamji next said, 'I am fully convinced that nothing can be achieved through supernatural influence or arguments. A vegetarian diet, denial of luxury and a spell of celebacy are all useless. They are against our natural instincts and defy enforcement through international laws and regulations. If the delegates assembled here will only lay bare their hearts and honestly tell us about their policies, it will be easy to find out means for adjustment and the establishment of world peace. We have been able to make enormous progress in science but have failed to modify or improve the Gammanite character in the slightest degree. The reason is simple. Inanimate nature does not deceive, consequently experiments and observations lead to definite and truthful results. But our political leaders cannot move a single step without falsehood. No means can be devised for establishing world peace unless they open their hearts and show all their cards. How can there be any diagnosis and treatment unless all the symptoms of the disease are known?'

Lord Grabearth pursed up his lips and said, 'If a person does not want to give out the secrets of his mind, how can you compel him to speak the truth?'

General Keepoff said, 'Why, by administering drugs. Ever heard of sodium-pentothal? Under its influence one is forced to blurt out the truth. In my country, the drug is administered to rebels to secure confession, and then bang bang go the guns. We do not waste our time in long drawn-out legal proceedings or our money on counsels' fees.'

The renowned old physician Dr. Bhringaraj Nandi said, 'Fools and idiots all! Pentothal stupefies. The victim tells the truth no doubt, but his critical faculty and judgment are destroyed. This is not an opium den; we are not assembled here to exchange befuddled confidences but to solve grave and urgent problems of international politics. Pentothal will not do. What is wanted is injection of Veracitin which I have prepared from the Indian hemp. It is harmless but infallible. It does not deaden judgment; but no matter how crafty and subtle you are it will drag out your innermost thoughts. It has no permanent effect; in an hour its influence passes off and then you are again your old self and free to pursue your campaign of lies. I have got the drug in my pocket and if the President will only permit, I can in a moment convert all here into truthful beings.'

Count Notenoff asked, 'Has it been actually tried?'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dr. Nandi replied, 'Of course. I have tested it on a large number of rats and guinea pigs.'

General Keepoff burst out into a guffaw and said, 'Do truth and falsehood exist among rats? Do you know their language to understand what's what?'

Dr. Nandi replied, 'Certainly I do. I have only to observe their reactions. If they wag their tails to the left, their motive is bad and they are trying to hide their real intentions. If they wag their tails to the right, it is clear that they are responding honestly and their intentions are good. Moreover, I have tried the drug on a student of mine. Poor fellow, his wife has applied for divorce.'

The President, Mr. Chung Ling said, 'There is no necessity for scepticism about the results. Let us have a demonstration here and now. Gentlemen, I call for volunteers. Will any of you come forward for the sake of science?'

Dharamdas came up to Dr. Nandi and stretching out his arm said, 'Let me have the injection, Doctor.'

Nandi at once took out from his pocket a big magazine syringe and injected about 15 drops of his Veracitin into Dharamdas's arm. Allowing 2 minutes for the drug to take effect, the President said, 'Now Mr. Dharamdas, open your heart and tell us your thoughts.'

Dharamdas said, 'A vegetarian diet, plain living and strict continence. But I confess that I have failed to live up to my ideals and have had several slips.'

General Keepoff smilingly said, 'It is useless to experiment on these cranks. Even in their normal state they do not indulge in many lies. They profess and preach what they honestly believe. Come, try your injection on me. Truth or falsehood is a matter of indifference to me.'

Lord Grabearth became greatly perturbed and catching hold of Keepoff's hand said, 'Stop, sir. You do not know what you are doing. Don't you be a party to this silly affair. No one with a grain of self-respect can submit to this humiliating experiment. To hide our thoughts is our natural right, and we are not going to give it up at the instance of a quack. I do admit that blatant and crude lies are barbarous, but in their subtle and refined form they constitute a valuable weapon, which if judiciously applied can bring the whole world under one's feet. We are not going to give up such a potent weapon. Refined lie is the foundation and cover of civilized society, on it are based social customs and politics. Have you no sense of shame Keepoff? To bare our minds before this Conference would be as indecent as baring our bodies.'

General Keepoff was not deterred. He forcibly extracted his arm from Grabearth's grip and extended it to Dr. Nandi, who forthwith gave him the injection. Then clasping Grabearth in his embrace, Keepoff said, 'Quick, Doctor, give him a dose too, and a stiff one.' Dr. Nandi pushed in a double dose into Grabearth's arm. Writhing in the thick and hairy hands of Keepoff, Grabearth cried, 'What outrage is this! You have transgressed all international law. Mr. President, you have miserably failed to maintain order and discipline in this Conference, you are worthless. Get up Sir, get my Foreign Minister on the phone for me.'

General Keepoff said, 'A very bad and obstinate patient. The disease has gone deep into his bones. Doctor, give him another double dose.' Nandi complied with alacrity. Then gradually Grabearth became quiet and softly said, 'Why single out only two of us? Give a dose to that wicked goonda Notenoff too.'

Notenoff clenched his fists and attacked Grabearth. But Keepoff intervened, and having clasped Notenoff, cried out, 'Stop, stop! Why are you so much afraid of telling the truth? However much we might try to dissemble, we well understand each other's motives and designs. No great harm can result from our speaking out the truth.'

Notenoff whispered, 'I don't care a damn if you know it all. I object on other grounds. Domestic trouble is more dangerous than international complications.'

Just at this moment Countess Notenoff from her seat in the visitors' gallery cried out, 'Give him the injection by force. The Count is an inveterate liar. He has been deceiving me all along.'

Taking advantage of the hubbub, Dr. Nandi crawled forward on all fours and injected his drug in Notenoff's hind part. The Countess cried out, 'Now confess who are your paramours.'

President Chung Ling said, 'No hurry Countess. The Count's mistresses will not fly the country. Let us now proceed with our business. Now, Lord Grabearth, Count Notenoff, General Keepoff, let us hear you one by one. Please relate frankly the actual policy of your States.'

Lord Grabearth said, 'Our aim is very simple. The only policy we believe in is: Might is right. Charity and philanthrophy are quite good principles for practice at home and among kinsmen, but they have no place in international affairs. We want to exploit to the utmost, all, be they civilized or uncivilized, weak or strong. Who thinks of the woes of the calf when milking the cow? Do you consider the case of the victims when for food or other purposes you slaughter cows, sheep, tigers, snakes, rats and mosquitoes? Even plants have life. Can you practise non-violence by subsisting on stones? We want to have the best of everything and to get the best out of life. For that we are ready to perform all sorts of nasty deeds. But we are not free to do as we like. We have to reckon with powerful rivals and our own softness of heart which fools call conscience. Then there are weak-minded sanctimonious people—both among us as also in other nationalities—whom it is difficult to bluff always. To keep them quiet we have to make some concessions at times. I am firmly convinced that the aim of this conference will never be realized. I may be compelled to make slight concessions out of fear of my opponents, but I can never agree to any permanent agreement. What we may be compelled to concede today, we mean to regain at the earliest possible opportunity. You understand the laws of evolution, the struggle for existence and all that. I need not elaborate.'

Notenoff said, 'Our doctrine is exactly the same, though there might be slight differences in our methods. We come from the best stock. A time is bound to come when we shall be the sole masters of the world, and we are out to achieve our end by all means, fair or foul.'

Keepoff said, 'I am generally of the same mind as you, though there is a gulf of difference between our methods and yours. Fortunately, we have a vast country, and so the necessity of exploiting others has not yet arisen. But we are trying our hand so that we might not be found wanting when the need arises.'

Abaldas thumping his head with his palms in despair said, 'Woe betide us! Even falsehood was more bearable than this frank avowal. I thought that puffed

CC-0 In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with the arrogance of power these people have lost their conscience, but there was a slender hope that their moral instincts would again survive. Well, Lord Grabearth, will you answer a question? There is no denying the fact that we of the dependent nations of the world are slowly but gradually gaining in strength. Whatever you may say to the contrary, there are still honest persons in all nations and they support our cause. We shall one day shake off our shackles. But meanwhile rancour and hatred against you are growing in our hearts. Don't you realize what a fate awaits you when nemesis comes? If you come to a fair agreement with us now and make even large sacrifices on that account, we shall not leave you entirely in the lurch. Why doesn't this simple fact penetrate your head?'

Grabearth said, 'It does. But why should we forgo the whole now in the hope of retaining a morsel in some remote future? We do not care what befalls our great-great-grand-children.'

Abaldas heaved a deep sigh and sat down. Nischint Maharaj again stroked his back and said, 'No fear, my son! I am here by you.'

Dharamdas said, 'Of what avail has this injection been? All that has been said under its influence was long known to us. In our holy books, the thoughts of the unrighteous have been described thus: I have gained this today, I shall achieve that end too; this is what I have, and I shall possess those riches as well. I have slain that enemy, and shall slay others as well. I am the master, the enjoyer of the good things of the earth, I succeed in whatever I attempt, I am powerful, I am happy. I am high born, there is none comparable with me.' (From the Gita).

The President then turned his gaze on the delegates and said, 'We have heard the representatives of the major States. Let us now discuss the ways for establishing lasting peace on earth.'

Grabearth, Notenoff and Keepoff all cried out together: 'We are quite happy as we are. Peace and goodwill are empty nonsense. We don't want to be harmless creatures without fangs and claws. We want to spend our lives in the joy of looting and fighting.'

Then, another member, who had so long been sitting silent in a back-seat, stood up. He was Professor Byombajra Shastri, the great philosopher-cum-scientist whose degrees and titles were too long even for a whole quire of foolscap paper. He said, 'I have discovered a way for establishing world peace.'

Dr. Nandi asked, 'Have you too an injection?'

Prof. Shastri replied, 'No sir. It would be impossible to treat the millions of the inhabitants of the globe in that way. The best way is to use my latest invention—the Peace Bomb. Under its benign influence peace will reign everywhere. The rays which emanate from this bomb are a thousand times subtler than cosmic rays. Contact with these purifies the heart, roots out greed, anger and all the passions, and frees the soul from the bondage of the flesh.'

Grabearth exclaimed: 'Silence Professor! You must not divulge secrets here. You have carried out the research with our money and our resources. Whatever you have to state you must report in confidence to our Prime Minister.'

Notenoff jumped to his feet and said, 'What? It is we who have borne all the expenses. The Bomb belongs to us exclusively.'

Keepoff said, 'You are a set of damned liars! My State has long been helping the Professor in his researches, we have the sole right to the invention.'

Byombajra lifted up his arms in a gesture of peace and said, 'Don't be impatient. Everybody has a right to my bomb, you will all be benefited. Abaldasji, it would put an end to the factious spirit of your people and cure all your ills.' Saying this he began to unpack a small bundle.

There was a great stir and noise in the Conference as Grabearth, Notenoff, Keepoff and the other delegates began a tussle for the possession of the bundle.

Dharmadas said, 'Quick, Byombajraji! Do let off your bomb.'

But there was no necessity for this exhortation. In the tussle the bomb slipped from the Professor's hands fell on the floor and burst. No noise was heard, no flash of light seen. Before the waves of sound and light could reach the sense organs, the whole race of Gamma-men had lost its faculty of perception.

.. ..

After being stupefied for a time, Grabearth said, 'Prof. Shastri's bomb is an excellent stuff. I feel as if all of us have attained liberty, equality and fraternity. Notenoff, Keepoff, I do love you dearly. Abaldas, you too are very near and dear to me. Gentlemen, listen to the international anthem I have just composed:

We are brothers of one spot,
There's no variance in our lot.

Now let us embrace each other.'

Nischint Maharaj patted Abaldas on his back and proudly said, 'Didn't I say so?'

The conference overflowed with brotherly feeling. After a time. Notenoff said, 'Come brothers! Let us now divide the world's coal, oil, wheat, cattle, sheep, pigs, cotton, sugar, rubber, iron, gold, etc. Equal share for everyone—what do you say?'

Byombajra said with a smile, 'There is no need. You have shuffled off your mortal coils and are now suspended in the void. You can now go straight to hell, or you can be reborn, or just evaporate into nothingness according to your individual choice.'

Keepoff said, 'Do you mean to say that we have become ghosts? I don't believe in ghosts.'

Byombajra said, 'You needn't. Your disbelief does not affect the other ghosts.'

.. ..

Mother Earth bereft of offspring will rest awhile and will become pregnant again. She does not lament the loss of wicked and worthless sons. Time is boundless, the Earth is colossal too; she is slow-marching and will not turn impatient at the rolling of a million years. She will conceive again and again in the hope of being the parent of a worthier progeny.

LANDSCAPE PAINTING IN THE SANTINIKETAN SCHOOL

A New Development

By KAUNDINYA

A new leaf appears to have been turned at the Kalabhavan, the Department of Fine Arts in the University of Tagore. The towering personality of Tagore and his incessant productions in all phases of literature appear to have over-shadowed the other activities of Visva-Bharati. It is very seldom realized that very solid work has been put in by the Department known as Vidya-Bhavan, whose scholars under the able direction of Pandit Bidhusekhar Sastri have made valuable contributions to Tibetan studies. The direction of Acharya Nandalal Bose in the Department of Fine Arts has produced equally rich and perhaps more abundant fruits. The new movement in Indian Art initiated by Dr. A. N. Tagore half a century ago, received a new orientation when Nandalal Bose migrated to Santiniketan. A new environment led to a new orientation. Prof. Bose and his disciples, hitherto confined principally to themes from the Indian mythology, gradually turned their faces away from imaginative topics and began to react to the natural sights and scenes of Santiniketan. It reminds one of the great French landscape-painter, Corot, and his sojourn to Ville d'Avray from his studio in Paris. But Corot's excursions to the country were temporary trips while Prof. Bose's migration to Birbhum was a permanent one. Everybody predicted that the New Indian School, in its new environment, was destined to put forth a branch of landscape painting. But there were no immediate signs for such a happening. Bose himself had no burning passion for nature-scenes as such, though trees and flowers have frequently figured in many of his compositions. He had to wait for the advent of an artist with the necessary leaning for a devout worship of Nature. Masoji tried his hands for a time at nature-scenes, but he left Santiniketan, and the dream of an Indian landscape school was frustrated for the moment. Then came Ramendra Chakravorty (the Late Principal of the Government School of Art, now banished to Delhi, by the vagaries of the Public Service Commission) who took assiduously to study village-scenes and, incidentally, landscape subjects. But his great success in figure subjects deferred the hopes for the immediate birth of an Indian Barbizon, for Chakravorty, happily for himself and unhappily for Indian landscape-painting, strayed to figure painting though he has frequently come back to nature-scenes, as in his delightful *Sketches of Europe*. It is very little known to those who ought to know that Mr. Bireswar Sen has richly contributed to the art of landscape. Some of his tiny water-colours are mystic and mysterious renderings of glimpses into the secrets of Nature. But, yet it cannot be claimed that Indian landscape painting had won any devoted worker before the advent of Benode Behari Mukherjee, one of the talented disciples of Prof. Bose. And it was a happy thought on the part of the Asramic Sangha of Santiniketan to arrange for a small exhibition at Calcutta (March last) of about fifty selected examples of landscapes by Mukherjee in various mediums. It was indeed a revelation. The birth of a

Landscape—*Sirish, Palas, Tal* (Tempera on paper)
By Benode Behari Mukherjee

Digitized by Arya Samaj Foundation Chennai and eGangotri

new school of Indian landscape was not announced before and the evidence of its birth was indeed a pleasant surprise. Here is an Indian artist, a devoted admirer of Nature, actually dedicated to a devout calling—the sacred vocation of interpreting the beauties of Indian landscapes to Indian connoisseurs. To be a real patriot one must be trained to admire "everything Indian." And Indian artists alone can teach us how to love our motherland and the beauties of her visual treasures. Yet Benode Mukherjee's renderings of Birbhum landscape and the beauty-spots of Santiniketan are no mere topographical studies of sentimental values to the dwellers or the visitors of the famous seat of education and culture. Mukherjee has looked with transfiguring eyes and has

Forest *by* B. B. Mukherjee

given us visions which take his themes to planes far above their recognizable values. In order to build up his technique and the language of his interpretation he has sought inspiration from diverse sources and in different traditions. His schooling in the methods and manners of Chinese and Japanese artists has been obvious, but he has not disdained to profit by the study of the modern masters of Europe. Yet very uncharitable criticisms have been made of his so-called exaggerated debt to the manners of Van Gogh and Cezanne, particularly in his studies of sun-flowers. But his many original and charming studies of Indian plant-life have demonstrated his native gift of giving creative interpretations of the forms of Nature. He has direct vision and he has no need to borrow the language of others, however eminent. Yet another

criticism has come from orthodox nationalists who h bitterly complained that Mukherjee has deliberately or otherwise, the many valuable les that the traditions of Indian landscape art of the schools had to teach him in abundance, and in this pect he has flouted the great landscape painting not only the old Buddhist schools but also of medieval, and the later schools of Kangra and of Moghul miniaturists. There is apparently much in this criticism and it has been pleaded that history of Indian painting has left no continuous easily accessible records of its contribution to la scape painting as such. The frescoes of Ajanta are of representations of plant life, as effective decora backgrounds to the illustrations of the Jatakas,

Forest *by* B. B. Mukherjee

there is very little record of the monk-artists' worsh of Nature for its own sake. In European Art, la scape as such does not emerge very much before advent of the Dutch school, though charming natu pieces are glimpsed in the background of masters of the Italian Renaissance. And even in miniatures of the Kangra school, landscape does figure independently. But it has to be admitted Mukherjee's 'experiments' (many of them have deed passed that stage) do not show any contact the masters of Kangra whose magnificent contribut to flower-painting and the transcendental use of plants, and blossoms cannot be neglected with punity. But, after all, the productions of a mod judged by the actual merits of works and not by a consideration of what he

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

borrowed or failed to borrow from earlier masters. It perhaps unfair to judge the specimens exhibited in the show as final and finished efforts of what Mr. Mukherjee has set out to accomplish. They must be regarded as promises rather than fulfilments. But many of them are happy examples of considerable present achievement. But even to evaluate the artist's successful experiments it is necessary to consider the general position of landscape in the history of painting. Landscape, as an inevitable expression of the Romantic spirit, is the characteristic art of the nineteenth century. Its pursuit called the artist away from society, and encouraged an unconditioned individualism. It corresponded to elevated and solitary states of mind. The mystic Wordsworth had made the case for the soul. The mystic Wordsworth had made the case for the soul. The eighteenth century ran out :

"One impulse from a vernal wood
May teach you more of man,
Of moral evil and of good,
Than all the sages can."

So by one of those substitutions of *genres*, landscape painting largely usurped the function of the old historic style, enlisting the most elevated ideals and evoking all the deeper emotions. There was, of course, a fallacy in the idea that man, essentially a social creature, can best fulfil himself in solitary communion with Nature. Such a notion shows how far the art of painting was losing social significance. From the strictly doctrinal Indian point of view, to be ensnared by the superficial aspects of Nature is to ignore the fundamental realities behind the illusions (*Maya*) of visual appearances. To rend that "veil" is to contact the basic realities. To be confined to the four corners of a natural scene as reflected on the retinal image is to be enslaved by the skin-dip beauty of Nature. A master-painter of landscape must over-step the limits of his visual image and unmask the illusion. A very instructive approach to natural scenes, without a slavish imitation of its superficial features is indicated in the meditative soliloquies of Corot, the French master, recorded in a letter (which we quote here) :

> "We see too much. There is nothing left to the imagination. I will rest ! I will doze and dream of my morning scene. I will dream of my picture ; and later on, I will paint my dream. . . . The sun has sunk. Everything is fast fading, yet we know that everything is still there. All is vague, for Nature is falling asleep . . . *The Illusion is over.* The sun having gone to rest, the inner sun, the sun of the soul, the sun of art—arises. Good ! my picture is finished."

Corot is evidently not concerned with the passing mood of Nature or a transient disclosure of it. He has been obviously attempting to over-ride, to transcend the "illusion" of Nature, instead of submitting to its blandishments, in the manner of the average mediocre painter, usually satisfied with an accurate recognizable likeness of Dame Nature. The real master attempts to dig below the surface, and to reveal the remote, the impenetrable, the inscrutable mystery of Nature. This appears to have been the motif of the Chinese masters and a few of the moderns in Europe—Turner, Constable, Cezanne, and Van Gogh. It is unfair to claim that Benode Mukherjee has yet succeeded in dissecting the mysteries of Nature but he has the correct attitude and he sometimes refused to be held in chain by the transient attractions of the beauties of Nature. There is as yet nothing in his renderings to dazzle, astonish, or infuriate anybody. He seems yet to lack the terrible intensity of conviction which turned Van Gogh, originally an art-vagabond, into a glorious artist with a feverish intensity of emotional reactions to Nature. But Mr. Mukherjee's landscapes are full of promises, and he appears to have sown the seeds of a truly national school of Indian landscape.

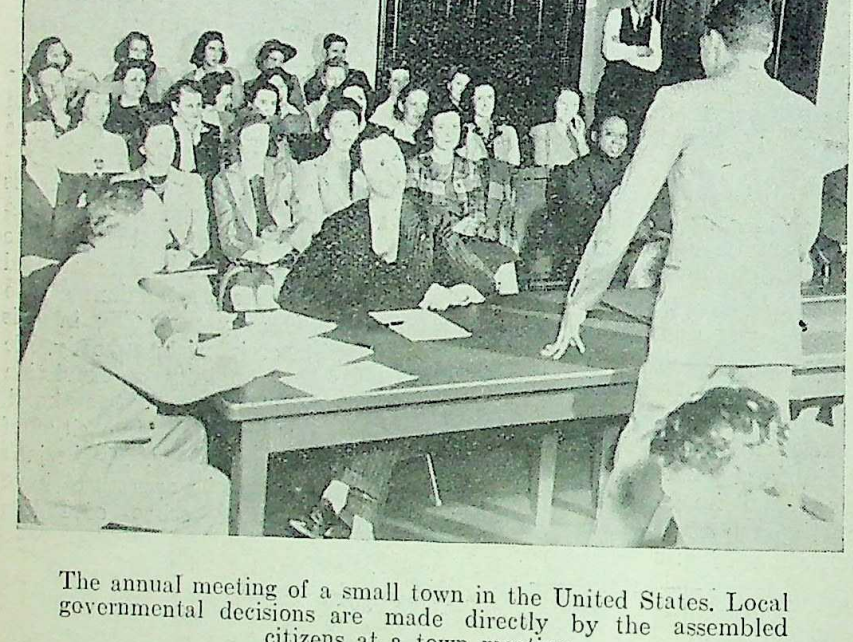
———:O:———

THE WORKING OF A SMALL-TOWN GOVERNMENT

In the United States the privilege of local self-government is regarded as one of the chief merits of the political system, as one of the inalienable rights of the people and the purest form of functioning democracy. Local government units permit the people of each locality who are most familiar with their own local conditions and needs to regulate their own affairs. Direct participation in local government stimulates, moreover, an interest in public affairs, thus serving as a training school in the political education of its citizens and giving to the nation a more active and valuable member of society.

Villages and towns vary greatly in the United States, both in size and precise form of administration. In addition to these units there are administrative units called townships, which are subdivisions of counties. These townships vary in size from one square mile to forty square miles. They are often more important as governmental units than counties, and in the New England states they actually perform county functions. In New York, Pennsylvania, New Jersey, Michigan, and other states, township government involves less direct participation than in New England, and boards of elected officials do the work of directing the affairs of the townships. In such states the larger administrative areas—counties—have great responsibilities. In general, all townships are subject to limitations imposed by the states, and do not have state charters of incorporation.

There are approximately 9,678 incorporated cities, towns, boroughs and villages with populations under 1,000 in the United States. The legislative powers of the incorporated village or borough are usually in the hands of a board of trustees, with a village president or mayor ; and the executive power is in the hands of the village president or mayor, supported by varying officials such as a treasurer, a chief of police or marshal, etc.



In order to become incorporated as village, town, or city, the community in most states must petition the state for the authority to set up its own local government. The grant is given in the form of a charter. This when unit is then free to carry on its self-government and to formulate such rules and regulations as suit its

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

local needs, in so far as these do not conflict with the rights and laws of the larger units of which it is a part, of the county, state or nation. In some states which have by their constitution or by legislative enactment, granted home rule, the municipality draws up its own charter and has the people vote on it. The municipality is always subject to the control of the state legislature.

Each of the 48 states has, under the American system, the right to rule itself in its own way, within a republican form of government, and within the limitations of the U.S. Constitution. The states grant local government powers not only to incorporated urban communities, but also to their territorial subdivisions known as counties, of which there are more than 3,000 in the United States. Thus the inhabitants of the United States may express their will and find a common protection in three levels—local, state and national.

The annual meeting of a small town in the United States. Local governmental decisions are made directly by the assembled citizens at a town meeting

In their government, types of local government range from the direct government by town meetings, as in New England, to the representative system of delegating authority to elected representatives.

The number and types of officials chosen under the latter system must also vary greatly, not only in accordance with the size of the community, but by reason of geographic conditions and of occupational and economic differences.

A small rural municipality has fewer requirements than one located on a harbor and which engages in shipping and foreign trade. A town on a main highway has need of more traffic officers than a narrow valley town with few cross-streets.

Many towns in the mid-western states which were settled by pioneers from New England have retained, to a certain degree, the town meeting system, whereas in the South and Far West, the town meeting is non-existent.

A Typical Example

In a mid-western township of some 4,000 inhabitants, the system of local government is carried on in such a manner as follows:

An open town meeting is called annually for the election of officers and committees. Procedure requires that formal notice must be given of the time and place of the meeting, with an outline of the business to be transacted, and that this notice be posted in conspicuous places and printed in the town papers a certain number of days before the meeting.

Since this town does not possess a town hall, since schools are in session, making the high-school auditorium inaccessible, and since no one of the three denominational churches offers adequate facilities, the meeting is to be held in a hall, called the Lodge Hall, which serves as the gathering place for many political and social affairs, such as dances, masonic meetings, veterans reunions, and home-coming week festivities.

It is spring, and farmers living within the township drive in with their families to spend the day. Most of them bring a lunch basket, preferring—the day being warm—to eat outdoors in the *Grove* on the river's edge at the outskirts of the town. Relatives and acquaintances gather here in groups for a visit together before attending the afternoon meeting.

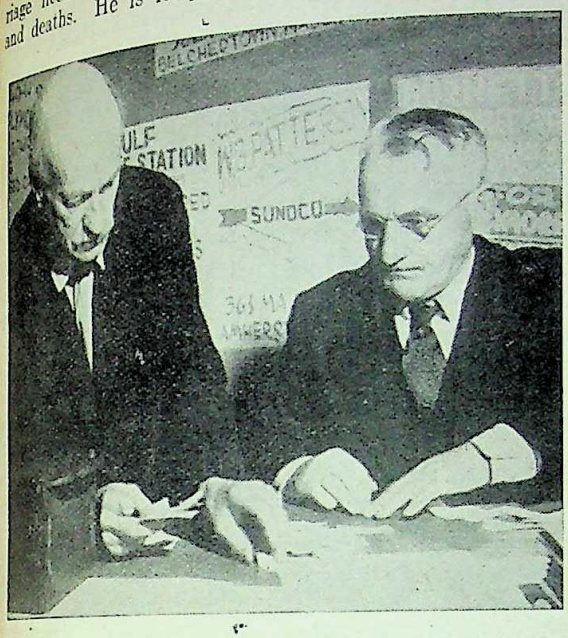
Almost everyone, regardless of age, attends the meeting, and all qualified voters arrive at their decisions on general problems through open discussion and open voting, either by a majority showing of hands or by the voice response of *Aye* and *Nay*. In the matter of the election of officers, written ballots are taken up.

The meeting is called to order by the town clerk who reads the warrant. A presiding officer, or moderator, is then elected and business proceeds according to parliamentary rules.

The first order of the day is the election of town officers for the ensuing year. Following this, appropriations are discussed and agreed upon for the payment of public expenses, such as the salaries of officers, the care of roads, street-paving, street lighting, appropriations for education, for the public library, for a so-called "community chest" or charity fund (though most charitable institutions, such as those for orphans, the aged, the mentally infirm, come under the control and support of county or state), and for such special cases as the erection of a new public building or the replacement of a damaged bridge. Problems of epidemics and health laws, of water supply, and fire protection may also come up for discussion.

This town, while retaining in framework the town-meeting system, tends toward the representative form of government, vesting less authority in its town meeting and leaving more decisions to be taken by its elected officers as the need occurs throughout the year.

Officers of a Town



The officers elected at this annual meeting are:

A town clerk whose principal duties are to keep the records of town meetings and of meetings of the councilmen; to prepare vital statistics; record deeds,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mortgages and other legal documents; to issue marriage licenses and keep registers of births, marriages and deaths. He is frequently re-elected from year to year, and thus becomes an authority on the town history, on precedents and genealogy.

The moderator of an annual town meeting counts the ballots cast for town government officials for the coming year

A tax assessor who prepares the list of tax-payers in the town; evaluates property; collects the taxes and turns the funds over to the town treasurer.

Here at an election station, citizens of a small town sign the election register preparatory to casting their secret ballots for state and national legislators, U.S. President and other governmental officials

A town treasurer who receives and takes care of all taxes collected from the payers and turns over to the proper officers the portion which goes to the state and to the county; he also keeps account of all other receipts and disbursements and makes his annual report to the town meeting.

Two constables who serve as peace officers, pursuing and arresting criminals, and executing warrants issued by the justice of the peace.

A justice of the peace whose duties are to administer summary justice in minor cases and commit others to court trial.

Library trustees who appoint the librarian; authorize the purchase of books and other expenditures; and who are usually re-elected from year to year.

This voter in a small U.S. town has marked his ballot with his choice for county and state officials in the privacy of the walled booth

A school board of five members, frequently re-elected, whose duty it is to establish and visit schools; to select teachers; to determine teachers' salaries and promotions; to prescribe courses of instruction; and to appoint truant officers.

A board of selectmen whose duty it is in the intervals between the annual meetings to look after all community affairs which are not specifically taken care of by the other elected officials, and to appoint such minor officials as they see fit, such as an overseer of the poor, who shall care for paupers, investigate the dependent and needy class and determine who is entitled to receive public aid; a poundkeeper, who shall pick up and keep stray animals until they are claimed by their owners; a road-surveyor, a park commissioner, a health officer whose principal duties

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are to control epidemics by enforcing quarantines, by requiring water analysis, drainage and food inspection, and seeing that all health laws are enforced.

This board of selectmen, or as it is also called town council, may look after the upkeep of the town waterworks; may investigate fire protection and appoint firemen; may authorize contracts for street-lighting; may decide upon the granting of liquor licenses and upon the keeping and sale of fire-arms; may appoint a keeper of the cemetery; may regulate such traffic matters as bicycling on the sidewalk, and animals running at large; may take action on a great variety of matters of local interest. If important appropriations or decisions are involved, the council may call for a special town meeting and put the question to a general vote.

In addition to the management of purely local affairs of the community, the town acts as an agent of the state government for the carrying out of certain state laws and policies. It not only assesses and collects state, as well as local taxes, but it enforces the health laws of the state, and acts for the state in many other ways. Thus the governmental organizations overlap and merge at many points, the common good of the greatest number being always the determining factor.—*USIS.*

——:O:——

TECHNIQUE OF DANCE IN SOUTH INDIA

By V. R. CHITRA

According to the accepted canons, the complete curriculum of an ancient Indian gentleman's education and as a matter of that of a cultured lady too—included a number of arts, now mostly lost; others became strange and many degraded themselves to absurd depths of vulgarity. Tradition enforces the knowledge of seventy-two Kalas (Arts) to make a man perfect in his education and sixty-four for ladies of a similar degree. These included, at one time, besides the ordinary types of learning and writing, art of self-defence, art of dalliance, art of dancing and even the art of stealing. Amongst these, dance played no insignificant part and was held in high esteem.

Nataraja (bronze image) showing the exquisite dance of Siva

The art of acting and dancing—which in India as elsewhere—is closely associated with drama and music, is very ancient, though to-day we see very little of the old Indian type of dancing, as it was originally meant to be. Being attributed to divine origin, this divine source is claimed not only for those elements of Hindu culture that strive to express the spiritual aspirations of man, such as poetry, music, but also such apparently lighter matters as erotics. An explanation of this tendency can easily be found in the mode of life of the Hindu; as he lived at the dawn of history, occupied with his sacrificial rites and rituals, his ceremonial offerings and prayers and viewing neither duty nor pleasure save in relation to his religious background. It is hence not quite surprising, that Natya Sastra, the science of dancing, claimed a divine origin and that it was fathered by no less a deity than Brahma himself—the creator of all that constitutes the Universe.

Bharata, the author of Natya Sastra, narrates that at the request of Indra and other gods for a pastime befitting the inhabitants of the celestial region, Brahma, distilled the essence of the four Vedas, taking the Pathya—the words from the Rig-Veda, the music from the Sama-Veda, the gesture and gesticulations from the

Yajur-Veda and the Rasa—the flavour—from the Atharva-Veda and compounded them into the gracious

A sculptural dance-pose in the Chidambaram temple

Another sculptural dance-pose

art of his new creation—the Natya Veda, endowing it with all the sanctity and dignity attaching to the four Vedas. This fifth Veda was thereafter bestowed by the Creator on Bharata and his hundred sons and disciples, who in due course passed it on to the mortals on earth.

Thus it is no doubt apparent that dancing played a prominent part in the Vedic rituals relating to the offering of sacrifices to the gods, the consecration of kings, the performances of festivals in temples and other auspicious occasions. Bharata himself observes :

> "All the activities of the gods, whether in house or garden, spring from a natural disposition of the mind ; but all the activities of men result from the conscious working of the will ; therefore it is that the details of activities to be done by men are to be carefully presented."

This art of dancing never gets a status equivalent to the most rig'd canons as laid by the Vedas. It is a divine art, with the greatest gods of the Hindu Pantheon as the fathers of the revival style of dancing. Each of these divine dances is symbolical, pregnant with meaning that only the adept can know.

Another sculptural dance-pose

Of the gods that originated the several styles of dancing, the most prolific is the great Siva and the most popular and the much beloved is Krishna, the Eternal Lover. The mythology connected with the dance of Siva is well-known. In short according to the Patanjali myth—the story is that Siva wanted the assistance of Vishnu to put down the arrogance of a few of the heretic Rishis living in the forest of Tarakam and convert them. Vishnu consented to accompany Siva on this proselytising mission. Together they went, Siva disguised as a good-looking mendicant and Vishnu as his young beautiful consort. The Rishis suspecting them as objects to detract their piety and the chastity of their wives immediately raised an *abhichara homa* to destroy the intruders. A fierce tiger emerged out of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fire and Siva tore its skin and wore the same as his mantle. The Rishis then sent a huge serpent, which Siva seized and coiled it round his neck. Thereafter the mighty God began his mystic dance. Undismayed, the Rishis sent the demon Muyulagan, whom Siva crushed under his sacred feet and continued his hectic dance, which was witnessed by all the gods. The heretics thereafter acknowledged Siva as their Lord. After the successful completion of their mission, Siva and Vishnu returned to their heavenly abode. Adisesha, the serpent couch of Vishnu, was so enchanted with Vishnu's recital of the great dance of Siva, that he prayed to Siva to grant him the beatific vision of the dance once again. Accordingly, Siva revealed this dance to Adisesha at Tillai (Chidambaram), which is now preserved for all of us to see and enjoy.

The young artiste—Baby Kamala—attempting to imitate the divine dance of Siva

This great dance of Siva has also its symbolic significance and Tantra-Tattva, a semi-mystic Tantric work describes at length the meaning of this wonderful dance of the Lord of Dancing, which is not possible within the scope of this short article to elucidate.

Equally significant are the dances of Sri Krishna, which are much more popular. Once the dance occasioned the subjugation of the great serpent Kaliya and in the Rasamandala he danced with the Gopis and cowherds of Brindavan. If Siva is the Lord of Dance, Krishna, who became the Avatar of Vishnu, is the Prince of Poets and Sovereign of Song. So His immortal flute enticed the Gopis away from their homes and husbands;

and with the joy of the dance, its simple yet beautiful and enchanting melody and rhythm is so stirring as to move even the most stone-hearted mortal.

Dancing in India is thus a symbolical art. It is of two kinds—one consisting in the simple movements of the body to keep time with the music, and the other the musical theme in itself. Hence it formed part of the rituals to be observed in the earthly abode of the gods, namely the temples. Every Hindu temple has, even to-day, its troupe of dancers—the Devadasis—women dedicated to the service of the gods, even as in heaven the nymphs are supposed to discharge that office. Hence the Devadasis were originally intended for the exclusive service of the God—as it is ordained that *rajopachara* or the paying of royal honour is to be given to the deity installed in temples.

A dance-pose of Bharata Natyam

However this institution of Devadasis has now-a-days fallen into disgrace, thanks to some unsavoury associations entwined with it. It is impossible to deny that there is much in these institutions that would disgust the puritanical conscience. Nor is it only to-day that the evil has attracted public notice. However the association of the prostitute with the arts of music and dancing has been fatal to the latter, so far as it concerns the regular cultivation of them by more leisured and more devoted people. This does not mean that dancing and music are not the finest of the Fine Arts and that the art, as even now practised, have not much in them that is exalting to the utmost.

In the days of the Moguls, the art of dancing became an integral part of the pomp of royalty—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

descending in the scale of respectability—because the patrons perceived only the bodily movements displaying the physical charms, the mortal beauty of the dancer and knew nothing of the inner meaning of her art.

Two of the youthful exponents of Bharata Natyam

The art nevertheless continued to be preserved in a form, which has not even now lost all its ancient grandeur, grace and beauty.

The *Tandava Lakshana*—an elaborate treatise laying down clear-cut rules for dancing poses—describes in minute details the requisites of this art. It narrates in detail for example the thirteen poses of the head, thirty-six kinds of glances, nine different movements of the eye-balls and all the various Nritya Hasta (hand) poses and so on. The minute analytical way by which this art is detailed in this ancient treatise has given this work a unique place in the history of Hindu dancing.

Of the most ancient types still preserved, we have the Bharata Natyam of South India, the Kathakali of Malabar, the Garba of Gujarat, the Manipuri of North Bengal and the Kathak of the United Provinces.

Perhaps twenty years ago, interest in his branch of Fine Art was mainly confined to the professional and hereditary dancers. But a change—a Renaissance set in, in the early years of this century, and the Neo-Bengal movement for the revival of our old Arts on the basis of ancient traditions set the ball rolling. The great Gurudeva—Poet Rabindranath—and his family can be rightly mentioned as the leaders of this new school of regeneration. Abanindranath Tagore founded the new school of painting ; and drama and dance soon followed it under the guidance of Rabindranath. To-day sharing the new creative life in India, dancing has resumed its right place as a vital art and has become a subject of aesthetical study and enjoyment not only among the professional classes but among the cultured and aristocratic members of our society.

In passing, credit must be given to such enlightened men, like Uday Shankar and others, who have devoted their lives to the cultivation and betterment of this art. Thus revived and publicized throughout the world, the art of dance has been given a renewed life and vigour. Among the South Indian exponents, it is worth mentioning the names of such talented artistes, as Srimatis Balasaraswati, Varalakshmi and Bhanumati and others, who have infused by their worthy exposition new blood into this art.

Too long has this enchanted realm of classical dance been hidden from the majority of people. It has now emerged out again and with every generation producing talented exponents and with elderly patrons giving an impetus to this great art, it is for the young generation to preserve this heritage untainted by passing fashions and keep this ancient and glorious art alive and worthy of its divine nature.

REVEALING THE PAST

Digitized by Arya Samaj Foundation Chennai and eGangotri

By H. N. BALVIR

Archaeology, as defined in the *Encyclopaedia Brittanica*, is "the scientific study of the remains of ancient human activity." Or, as Dr. Gordon Childe puts it :

> "Archaeology attempts to furnish a sort of history of human activity provided always that the actions have produced concrete results and left recognizable material traces."

It is generally believed that such a study has no use for men ; and, it has, no doubt, no immediate use. But to believe that it has no use at all is an erroneous conception. A truly cultured man possesses a broad, rational and liberal outlook, to acquire which he has to study other people's viewpoint on life, and its multifarious activities, as expressed in objects—material or otherwise. And as, 'They know not the present, who only the present know,' such a study shall have to cross the bounds of the present and extend to a wide spatial span. But to understand and appreciate the material relics one should get acquainted with the various sources of stimuli that inspired their authors to create them. Therefore, an attempt should be made to learn about the actual political, social, economic and cultural setting in which those people had their being. And herein comes the Archaeologist. It is his job to discover and reconstruct that setting, and consequently, make an intelligent critical appreciation of those material manifestations of mind possible.

The methods of Archaeology involve work both at the field and in the study. The former broadly comprises exploration, excavation and restoration while to the latter falls the task of interpretation. To get a vivid picture of Archaeological methods we should visualize an archaeologist at his work.

The aim being to discover the course of human civilization, his job is to throw light on some obscure or controversial link in that course. After selecting some such link he proceeds to seek for material. But where to seek for it ?

Here the exploration begins. The epics, the inscriptions, the travellers' accounts and the literature have usually mentioned some prominent places of their times. He, therefore, attempts to find out from these sources a place that existed in the period of his search. When the name of such a place is found its identity in the present world is surmised on the basis of topographical indications afforded by those works. He, then, proceeds to the place and begins exploring the surface as well as making the enquiries from the neighbouring villagers. He studies the one inch map of the locality also to get some enlightenment by the lie of the land. If his labours are rewarded by some village folklore or some antiquity dating back to the period of his research, he feels definite that the place shall provide him with the material.

Sometimes it also happens that during a pleasure walk the explorer unexpectedly comes across some arrestive object lying on the ground or half-buried in it. He tries to find out its date by comparing it to those of its type already known. If the find proves to be of remote origin, it naturally arouses curiosity as to how it happened to come at that place. He, therefore, explores the surface and may find some other indications too. Minor clues have sometimes led to major discoveries.

Moreover, in India most of the excavated sites have not yet been fully treated, and he can find ample room to excavate near those earlier ones with good hopes of enriching the knowledge.

Howsoever he may find the site, but rarely does he get full material for his thesis laid bare on the ground. The ancient sites, when fallen on evil days, were neglected or deserted. They gradually crumbled to debris and were lost to view by the drifting sand which covered them. In such mounds of accumulations lies buried much of the history of the site. Hence, the Archaeologist has to undertake the work of unearthing the hidden material. This is technically called 'Excavation.'

As excavation involves disturbing the soil and debris deposits on and round the buried structure, there is always a danger of disturbing and destroying the historical and archaeological evidence. An error committed once in excavation can never be made good. Therefore, the imperativeness of careful digging can never be over-emphasized. The digging, in the light of the growing experience, has assumed the shape of science in itself, and this so much so that much of the result and value of an excavation depends upon the scientific training of the excavator.

Dr. R. E. Mortimer Wheeler, the present Director-General of Archaeology, has taken some steps in training the interested scholars in the scientific methods of excavation and its allied subjects through specially conducted courses at some camp-schools.

The archaeologist after getting to the site recruits some local labour as pickmen, shovelmen and basket-carriers. Now, if the site happens to be an extensive one he has to choose his point of attack. Here many indications help him in making a decision, *e.g.*, in summer the grass withers more quickly where the soil lies thin over the buried tops of stonewalls. Thus the luxuriance and scarcity of the field-growth may indicate the direction of the walls of the buried structure.

Now a word about the basic principles of excavation. The principle can aptly be described in the words of Dr. Wheeler who says :

> "The keyword of excavation is 'stratification'—a word which means nothing more or less than the relationship of one deposit to another, in the soil. This means that the history of our civilization is built up not only in our documents nor even in the bricks and mortar of our ancient buildings, but that it is enshrined also in the soil which may on its surface bear no vestige of antiquity."

Thus, Dr. Wheeler means to emphasize that the stratified soil near the walls of the buried structure is more, or at least as important as the walls themselves. The wall may be plain, or at the most show a few recognizable repairs, but its muteness is counteracted by its neighbour, the soil, which speaks volumes for the day-to-day history of the wall. An example shall make it clear. Imagine any walled structure. It had its floor somewhere when it was built. The occupants of the house lived, moved and cooked their food on that floor. With the passing of the time the house decayed, fell or was pulled down for rebuilding. The debris on the floor was left as a filling over which pebbles were laid to form the new floor. Now this floor became the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

habitation level or the 'occupation layer.' Thus many occupation layers are formed, and it is obvious that the relics emerging from these successive hearths, if grouped layer by layer, will form "an index-series illustrating something of the culture of the settlement in correct chronological sequence." It is in this capacity of giving correct sequence of things that the value of stratification lies.

It now becomes clear that throughout his excavation the field archaeologist has to lay great emphasis on first tracing and then following the trend of the layers. He, therefore, digs in several squares of about 3 ft. × 3 ft., technically called 'trial pits'. The so-called trial pits or control pits are dug on each site to enable the supervisor to determine the stratification ahead of the coolies. It is essential that the supervisor should dig these pits deep enough to enable him to be at least a layer ahead of the main digging. On the sides of these small control pits he marks the different layers by either noticing the differences in colour or feeling the softness or hardness of the soil. The pit is then widened, the earth being taken off layer by layer, and the small objects coming out of each layer are kept separately. The process may sound easy, but it is difficult in practice. It requires an intelligent, alert and constant supervision over the labour. As the layers are neither parallel straight lines nor the transition from one to the other always easy to detect, the ordinary pickman cannot be left alone to continue with his work. He is made to dig foot by foot removing very little earth each time—the supervisor constantly checking the course of the layer. The whole work proceeds on a slow pace. It is why even after consuming great labour, much time and money the final output of work on the whole is small in area and volume.

The finds, *i.e.*, the coins, beads, terracottas, metallic objects and potterysherds are kept properly labelled—each label giving the object's actual location, its depth below surface and other relevant information. It should be realized that any find has value just because of the conditions in which it was found. Therefore, before it is removed or the soil near its findspot disturbed, the excavator must make a careful study of the spot. Sometimes, even photograph is taken of the object *in situ*. These antiquities, after the elementary 'field dressing', are sent to the chemical laboratory of the camp to be cleaned, restored and preserved ; after which they go to the proper scholars for being studied.

The archaeologist continues to go deeper and deeper till he reaches the virgin soil—the soil barren of any finds and thus indicating that there never was any habitation below that level. On every evening he also writes a report on day's work recording every worthwhile observation.

Reaching virgin soil in depth, and as wide in area as his funds permitted, he stops. And the task that faces him now is that of interpreting the structure and drawing inferences from it and the finds about the culture of the place. It was for this ultimate task that he had taken so much pains while excavating.

He, therefore, turns to the structures, and then to the finds.

"An ancient building is important not merely as illustrating the history of architecture", says Sir Leonard Woolley, "but as a setting for the lives of men and women. If we do not know in what surroundings people moved, we shall understand very little of their attitude towards life. Moreover, sometimes the picture of the past life that a building gives is extraordinarily vivid. It is the business of the Archaeologist to find out not only what was the building he digs up and what it looked like before it was buried, but also through what vicissitudes it passed for these may reflect the fortunes of a family or even of a nation."

An instinct may tell that a particular building is a temple or a house, but to know more definitely he has to resort to the building's layout. Therefore, the building is surveyed and a plan is drawn. This drawing may look like a labyrinth, formed of meaningless lines and circles, and it is due to the overlapping of the structures of various periods of constructions which he has laid bare in digging up to the virgin soil. To make sense out of this jumbled confusion, alterations and eliminations in the building done in one period have to be separated from those done in another. For this the layers are studied. All the structures having their floor levels in the same layer can reasonably be supposed to be contemporary. Structures of different periods, thus separated, are traced over from the drawn plan. We now get many tracings—each showing the plans of the buildings at one period. The tracing of the bottom level shows the plan of the buildings in inception, the rest showing its later biography.

How is this biography read ? Take an illustration. Suppose a burnt stratum appears and above these ashes there appear new forms of pottery which do not resemble the predecessing types. This implies a sudden foreign contact, which in the light of the burnt stratum—a sign of destruction—points to foreign conquest ; and if the new pottery can be traced the identity of the conquerors can be established.

Though by the study of the layers the fortune of the site can be guessed to a fairly reasonable extent, yet for more knowledge about the culture as also for dating purposes, he has to fall back on the finds.

Finds like the coins or dated inscriptions directly give the date. But others have to be dated first, and then the date of the site inferred.

The study of the finds falls under three headings : (1) Typology, (2) Association and (3) Distribution.

By 'Typology' is meant the shape or type of the find. Suppose a pot with a black slip is found in layer 4 at a site ; and if we know that similar pots were found at a site that belonged to Mauryan times, we can conveniently declare layer 4, with all its contents, to be contemporaneous with Mauryan times.

By 'association' is meant that an object if found with certain other dateable object, the former can also be dated with the help of the latter. For example, some Indian pottery is found with potsherds of Roman pottery at seacoast in South India. As a chronological history of Roman pottery has been prepared, the date of these Roman potsherds can be known, and the same date can be assigned to the Indian pottery found in association with those pieces of Roman pottery.

By 'distribution' is meant that if a certain variety of bead, found at Taxila, is found at some other place also, some sort of commercial relation among all such places can be supposed to exist. This may have been due to their belonging to the same empire. The extent of the empire thus known, by marking all those places on a map, may reveal the name and date of the empire

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The finds can thus be dated, and once dated, they give the date of the site or the layer from which they came out.

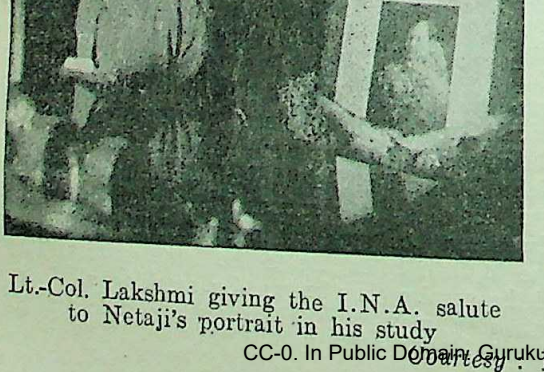
When a dated sequence of the site is known, a further study of the finds can be made to reveal more about the culture of the place.

Digging being over, the excavator's party begins to pack up, and then arises a problem as to what is to be done with the excavated area that he would be leaving behind. Modern tendency is in favour of refilling it with earth. This has three main arguments in its favour. First, the conservation of the excavations shall entail big recurring expenditure, while on refilling them the ground can be cultivated and be a source of income. Secondly, conservation is merely a dilatory process. Whatsoever care be given in conserving, it can only retard the process of tear, wear and decay ; it cannot prevent it altogether. But, buried in the womb of earth, which kept it safe for hundreds of years, the site may remain safe for thousands of years again. Thirdly, as all that was worth knowing has been recorded, drawn and photographed, burying the excavations again shall mean no loss of knowledge to the world. However, this is true of big city sites, where there is no use of keeping the whole area open for casual visitors. But where some important structure comes out, it is naturally kept uncovered.

In India, there is, in the words of Lord Curzon, "the most glorious galaxy of such monuments in the world. These monuments have to be saved as national heritage looms from the ravages of nature and the ignorance of human beings. While the 'Act of Preservation of Ancient Monuments' looks after the latter, the conservation branch of the Archaeological Survey looks after their proper repair and upkeep.

The conservation includes not only preservation of a site or an antiquity, but sometimes its restoration also. The whole of the thing has to be dismantled and put together again to gain its former appearance.

Analogous to conservation of building is the conservation of small antiquities, which is mainly the job of the Curators and the Archaeological Chemist.



To conclude, the Archaeologist takes all this labour to tell us what our cultural ancestors did, to trace the progress of civilization in the country and to define the vicissitudes in the life of the nation. But much depends upon the intelligent co-operation of government and the public. Archaeological exploration is not very expensive work, and an investment in it by great capitalists of the country would show that they have enlightened views and an appreciation of aesthetic and historical knowledge.

INDIAN WOMANHOOD

Dr. Roma Chaudhuri, M.A., D.Phil. (Oxon.), Professor and Head of the Department of Philosophy, Lady Brabourne College, Calcutta, has been elected a Fellow of the Royal Asiatic Society of Bengal. She is the first lady to get this unique distinction. Dr. Chaudhuri had a brilliant career in the Calcutta University, having stood second in the I.A., and First Class First both in B.A. Hons. and M.A. Examinations in Philosophy. She then went to Oxford and got a Doctorate in Philosophy with credit. She is the author of several works on Indian Philosophy and Sufism, and three of her works on the Nimbarka School of Vedanta have been published by the Royal Asiatic Society of Bengal. She is the Joint Secretary of *Pracyavani*, Institute of Oriental Learning and Joint Editor of the English Research Journal of the Institute. She is a grand-daughter of late Ananda Mohan Bose, and wife of Dr. J. B. Chaudhuri of Presidency College, Calcutta.

AN ANALYSIS OF THE 'RELIGIOUS-MINDEDNESS' AMONG THE HINDUS

Digitized by Arya Samaj Foundation Chennai and eGangotri

By JATINDRA MOHAN DATTA, M.Sc., F.R.S.S.

The normal attendance at the Ganga Sagar Mela held at the confluence of the sacred Bhagirathi or the Ganges with the Bay of Bengal in the middle of January is of the order of 80,000 per annum. On account of restrictions on travelling and closing of certain routes during the Japanese war, the volume of pilgrimage was reduced very much. This year it is estimated—though not authoritatively—that the number of pilgrims would be about *twice* the normal.

Many of the pilgrims generally pass through the rail-head at Diamond Harbour and catch boats or steamers there. This year on account of accidents—collapse of jetties once in the forenoon and again in the afternoon—a considerable number of pilgrims died and many more were injured. The published death-roll has mounted to 184. The details as to sex and age of most of them, and as to civil condition of some have been published in the daily *Hindusthan Standard* of Calcutta. Taking this to be a fair sample, truly chosen at random by the fact of mere accidental deaths, and assuming the proportion of victims to the total number of pilgrims of the group or that sex or that category to be the same, we may draw certain conclusions. Summarising the information as published in the *Hindusthan Standard* of the 17th, 18th and 20th January, 1946, we get the following table :

TABLE I
(Number of Dead)

Males—		
(of all civil conditions)		67
Females—		
Unmarried	1	
Married	22	
Widowed	13	
Unclassified	81	117

The dead, mostly non-Bengalees, included a fair sprinkling of Bengalees and hailed from many provinces and States of India. They may safely be regarded as a fair sample of Hindu India. So we would not be very wrong if we prefer the all-India figures to the purely Bengal figures as to the proportion of sex and age-distribution.

The proportion of females to males among the Hindus at the different censuses were as follows :

Proportion of females per 1,000 males

1891	1901	1911	1921	1931	1941
962	969	963	954	953	944

The proportion is steadily decreasing since 1901 ; and the rate of decrease has been greater during the last decade. Assuming the rate of decrease since 1941 to have been the same as that in the decade 1931-1941, the proportion would come down to *940* in 1946.

The relative religious-mindedness of the Hindu males to that of the Hindu females is, therefore = $\frac{67}{1000} \div \frac{117}{940}$ or 1 : 1·9. Or in other words Hindu females are nearly *twice* as much religious-minded as Hindu males. This tallies with our social experience and is as is to be expected. Our females are more given to *pujahs*, observances of *bratas* and pilgrimages than our males ; they are more orthodox by instinct. This is more especially true of our widows.

Now, this religious-mindedness varies with age. That is our social experience, and is as is to be expected psychologically. The age-distribution of the victims of accidents at Diamond Harbour is shown in Table II below. The ages are mere eye-estimates ; and often given in round numbers. They are not the statements of the victims or of their relations ; so their accuracy falls below the census standard.

TABLE II
Age Distribution of the Dead

Age	0-10	10-20	20-30	30-40
Males	2	2	1	8
Females—				
Unmarried	..	1	..	..
Married	..	1	1	..
Widows	..	..	1	1
Unclassified	2	1	1	8
Total females	2	3	3	9
Grand total	4	5	4	17

TABLE II—*(Contd.)*

Age	40-50	50-60	60-70	70 & over
Males	12	10	17	11
Females—				
Unmarried	..	..	..	..
Married	8	8	3	..
Widows	1	5	5	..
Unclassified	18	28	16	3
Total females	27	41	24	3
Grand total	39	51	41	14

Assuming, however, that they are comparable with the census statistics, we get certain highly revealing relations.

The age-distribution of the Hindus, male and female, was in 1931 as shown below. They are all-India figures. We are using the 1931 figures as they are the latest available. They are :

TABLE III
Proportion at different age-groups per 1,000

Age	0-10	10-20	20-30	30-40
Males	274	208	176	145
Females	281	202	185	139

Table III—*(Contd.)*

Age	40-50	50-60	60-70	70 & over
Males	100	58	27	12
Females	93	59	29	12

If the religious-mindedness is the same for all ages, then among the pilgrims we would expect to find the same proportions ; and as by our hypothesis the victims have been chosen at random, the age-distribution of the victims would also be the same. But the facts are otherwise. That is because among the pilgrims the proportions at different ages are not what they are among the general Hindu population, but according to, what we may as a first approximation suppose to be due to different religious-mindedness. The religious-mindedness at different ages may, therefore, be estimated from the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

number of victims of a particular age-group to the common experience; and this is reflected in the higher proportion to population of that age-group; and it is found to be as follows:

TABLE IV

Religious-mindedness at different ages

Age	0-10	10-20	20-30	30-40
Males	2/274	2/208	1/176	8/145
Females	4/281	5/202	4/185	17/139

Table IV—(*Contd.*)

Age	40-50	50-60	60-70	70 & over
Males	12/100	10/58	17/27	11/12
Females	39/93	51/59	41/29	14/12

From the figures in Table IV, we get Table V.

TABLE V

Religious-mindedness at different ages × 10,000

Age	0-10	10-20	20-30	30-40
Males	73	96	57	552
Females	142	247	215	1,295

Table V—(*Contd.*)

Age	40-50	50-60	60-70	70 & over
Males	1,200	1,724	6,296	9,166
Females	4,192	8,644	14,137	11,666

It will be noticed that religious-mindedness increases with age and that it increases by leaps and bounds at older ages, both in the case of males and females. One word of caution is necessary; the figures for ages earlier than 30 may be either truly real or merely accidental as they are based on very few observations. Another curious fact is that in the case of males there is a continuous increase in religious-mindedness with age; but in the case of females, there is a drop—a drop of quite 17 per cent, at ages '70 and over' from the figure for 'ages 60-70.' Is it accidental or due to some fundamental basic social cause or causes? We shall attempt an answer later on.

From the figures given in Table V, we can calculate the relative religious-mindedness of the males and females at different ages. Taking that of the males at each age-group to be unity, the religious-mindedness of the females at different ages is found to be as follows:

TABLE VI

Relative religious-mindedness of Females at different ages

Age	0-10	10-20	20-30	30-40
	1·94	2·57	3·77	2·35

Table VI—(*Contd.*)

Age	40-50	50-60	60-70	70 & over
	3·49	5·01	2·25	1·27

The religious-mindedness of the females is always greater than that of males, reaching a relative maximum at 'ages 50-60'. It may be urged that religious-mindedness at early ages, as shown by our method of calculating it, is not very real, as the children have no great volition in the matter and they may have merely accompanied their parents and grand-parents. This is particularly and specially true of infants at breast. But this charge is only partially true. We must not forget the social fact that when an elderly member of the family proposes to go on a pilgrimage, children partly out of affection for that member, partly out of an inmate love of change and adventure, and partly out of what is 'true' religious-mindedness—a resultant and product of the traditions and culture of the family and its environments, accompany him. Even there our girls are more affectionate and more religious-minded. This is our religious-mindedness due to age. We are not, however, relative religious-mindedness at early ages in Table VI.

While males of all civil conditions go on pilgrimages, independent of their particular civil condition; our females widows mostly attend pilgrimages partly out of a sense of religious duty and partly out of the fact that they have less social obligation or obligations to the family. It is inculcated in our religious books that widows should spend their time in religious exercises. Hence among the pilgrims we generally find a large proportion to be widows. The result is that the relative religious-mindedness of the females is partly dependent on the number of widows at each age-group. The number of Hindu widows per 1,000 females of all civil conditions at each age-group as in 1931 is shown in the following Table VII.

TABLE VII

(No. of widows per 1,000 females of all civil conditions)

Age	0-10	10-20	20-30	30-40
	·92	4·7	16·1	31·8

Table VII—(*Contd.*)

Age	40-50	50-60	60-70	70 & over
	41·9	37·9	23·8	10·4

The number of widows reaches a peak at ages 40-50; while the relative religious-mindedness reaches the peak at ages 50-60. This does not seem to us to be purely accidental, but connected in some way which we are unable to find out at present.

The proportion of widows to total number of females of a particular age-group increases with age. The relevant facts are tabulated in Table VIII below:

TABLE VIII

Per 1,000 females of all ages and all civil conditions

Age	0-10	10-20	20-30	30-40
Total Females of that age-group	281	202	185	139
Widows	0·92	4·7	16·1	31·8
Percentage	0·3	2·3	2·3	22·9

Table VIII—(*Contd.*)

Age	40-50	50-60	60-70	70 & over
Total Females of that age-group	93	59	29	12
Widows	41·9	37·9	23·8	10·4
	45·1	64·2	82·1	86·6

Religious-mindedness is expected to increase with age, both among the males and the females. This is specially the case with widows. So for ages where the proportion of widows is very large, ordinarily we would expect 'religious-mindedness' to increase *absolutely*, not relatively to males. Why then the religious-mindednes of females has decreased from 14,137 for 'ages 60-70' to 11,666 for 'ages 70 and over' [See Table V]? To us the economic dependence of Hindu widows seems to be partly a cause. At the age, when the grand-mother is more dependent upon her grandsons than upon her sons, she is not expected to go on pilgrimages for economic reasons in spite of her greater

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

certain; and we suggest this explanation as a probable cause.

In the above analysis we have used our Bengal experience of social phenomena to all-India statistics: this may be a source of error. But as Hinduism is fundamentally the same all over India the magnitude of the error due to this cause is likely to be quite small.

———:O:———

THE POETRY OF EZRA POUND

By B. MIRANDA, M.A.

There is perhaps no better index to the state of English poetry in the first decade of the present century than that Alfred Austin was the Poet Laureate. Bridges and Swinburne, Kipling and Yeats were also there, but they enjoyed an uncertain measure of popularity. Poetry seemed an effete, far-off thing, not a living force permeating the soul of the nation. A faint ray of hope penetrated the thickening gloom when the Georgian Revolt announced itself. There was a brief re-awakening. A succession of new stars began twinkling in the poetic firmament of England, but, alas, the promise was more than the fulfilment. The Georgians failed to reach the masses, for they still clung to a tradition 'which had become with time as rigid and as tyrannous as Mr. Barrett of Wimpole Street.'

The remedy against this hopelessness came from across the Atlantic. Ezra Pound and T. S. Eliot felt the need for revitalising poetry in order to realize its potentialities as an instrument capable of expressing with truth and emotion the seething turmoil which characterises twentieth century life. A new technique had to be evolved and, even if the poetic experience was fundamentally as old as poetry itself (for no poetry is entirely new), the old wine had to be put in new bottles to preserve its flavour. Ezra Pound had the courage —though one dare not say of genius—to give the lead. With a flair for the niceties of language and a keenly perceptive ear, he studied the technique of verse and sensed intuitively rather than by conscious effort, the wonderful possibilities of new rhythms. "I fly on the wings of an unknown chord," he cries out. For him a poem was a song, a symphony not less complicated than an orchestral piece. "Don't imagine," he warns us, "that the art of poetry is any simpler than the art of music." It is this gift for the subtleties and complexities of metrical music that makes Pound one of the major innovators of our poetry. "He has done most of living men," says Carl Sandburg, "to incite new impulse in poetry." Surely, he is one of the leaders of "new" poetry.

I

Ezra Pound was born in Idaho, U.S.A., in 1885. Having graduated in the University of Pennsylvania, he travelled to Europe with a view to write a thesis on Lope de Vega. However, his interest in the Provencal and Italian poetry led him away from his purpose. As he widened his acquaintance with the Troubadours, he became aware of the inertness of contemporary English poetry. What was this "hogwash" compared to the rich accents of the medieval singers? Pound felt that he would do something about it and in 1908 he left America to settle in Europe for good.

After a brief stay in Italy, where he published his first collection *A Lume Spento,* Pound went to London, "seeking such as love Beauty somewhat after my fashion." He met Yeats, who influenced much of his early poetry. Pound was also influenced by Browning, Swinburne and the poets of the Nineties. After all, no poet can be absolutely original. The so-called original poet only works on the achievements of his predecessors and develops their technique. Pound's earlier poems, indeed all his poems are strongly reminiscent but they belong to him no less than Shakespeare's plays belong to Shakespeare. For reminiscence is "a law, not a privilege," and we may add quoting Mr. Charles Williams, "It is a sign of what may turn out to be a growing tendency on the part of English verse. So rich is now our inheritance of associations in literature that it is beginning to be difficult to avoid them."

In 1909 Pound published *Personae* and *Exultations,* the latter containing the *Sestina* : *Altaforte,* a remarkable tour de force, revealing Pound's mastery of the Provencal art. Both these volumes were well received. Pound could now adventure further. He had perfected his acquaintance with the Troubadours. He had learnt the art of the Italian poets, notably Dante and Guido Cavalcanti. He now met T. E. Hulme and joined the Imagist movement. The Imagists sought to replace the out-worn conventional forms by pure *vers-libre* "to which an image is the resonant heart of an exquisite moment." Pound was still very full of his Provencal masters and according to F. S. Flint, added nothing to the Imagist movement. Yet, on the death of Hulme, he assumed the leadership of the Imagist school and even published *Des Imagistes* : *An Anthology* in 1914. But Pound's affiliation with the Imagists did not last long. Though later he styled himself a Vorticist, his reputation had been made and he could now command an audience independently. His *Canzoni* were eagerly welcomed. He next published the *Ripostes,* an attempt at Symbolism in the French style. He translated Guido Cavalcanti and the Japanese Proh plays. What fresh fields and pastures new were there to be tried in the technique of verse?

Pound became literary executor of the late Ernest Fenollosa and began publishing translations from the Chinese. He was evidently not new to translation. But the Chinese poems raised a veritable hornets' nest about his ears. He was denounced as an ignorant fraud, a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

literary poseur, a base charlatan. Similar sarcasms were poured upon his translations from the Provencal and upon his *Homage of Sextus Propertius* . . . and an American critic trenchantly remarked, "It is time Ezra were put in the pound." It is not to excuse Pound to say that "Chinese (or for that matter, Provencal) poetry as we know it to-day is a creation of Mr. Pound." Each translation is a *persona* of Ezra Pound; and of the *Homage of Sextus Propertius* Eliot adds: "It is a criticism of Propertius . . . it is also an interesting study in versification and a necessary prolegomena to the Cantos."

We now come to two poems which have brought on Pound judgments of praise as well as of another kind. They are *Hugh Selwyn Mauberley* and *Cantos*. *Mauberley*, published in 1918, is a companion to Eliot's Prufrock poem and, like it, moans the collapse of civilization. It is indubitably a great poem. It is a genuine piece of self-revelation and an avowal of purpose. In the words of Eliot, "It is also a document of an epoch; it is genuine tragedy and comedy; and it is in the best sense of Arnold's worn phrase, a criticism of life." The technique is fashioned after the French Symbolist manner; it is the *ultima thule* of compression. A word, a cliche is thrown to evoke associations ever widening outwards, 'like ripples from a stone dropped in clear water.' The poem is divided into self-contained sections, but each contributing towards the general effect of the whole. The criticism of society is harsh, almost Juvenalian at times.

In our age, says Pound,
Christ follows Dionysus,
Phallic and ambrosial
Made way for macerations;
Caliban casts out Ariel.

Civilisation is

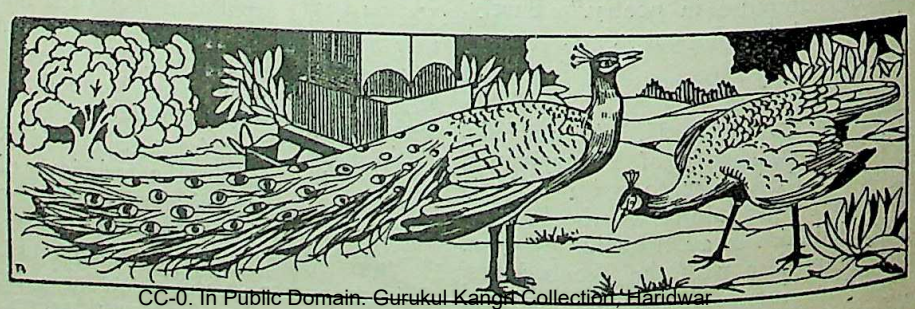
A heap of broken statues,
An old bitch gone in the teeth.

Mauberley is within our grasp. But what shall we say of the *Cantos*? Seventy-one of them have been published so far and they form part of a monumental whole, at least Pound thinks so. Eliot, who at any rate pretends to understand Pound, calls them "a mine for juvenile poets to quarry." But what Ariadne's thread will help the uninstructed tyro through this immense labyrinth of words? There are erudite historical references and sly contemporary allusions; and it is all a timeless, spaceless pattern, a mighty maze, though perhaps not without a plan. This plan was explained by Pound to Yeats. Let us hear it from Yeats himself: "It will, when the hundredth Canto is finished, display a structure like that of a Bach-like figure. There will be no plot, no logic of discourse, but two themes, the descent into Hades from Homer, a metamorphosis from Ovid, and mixed with these medieval or modern historical characters." So far the Cantos are beyond our ken, but perhaps the mystery will be revealed to us 'when the hundredth Canto is finished.' Yet we shall have to approach the *Cantos* with an Encyclopaedia of Universal Knowledge under our armpit, and who knows but even then we may come back no wiser?

II

It is difficult to assess the poetic merits of Ezra Pound, but he is a challenging poet nevertheless. At times, especially in his shorter poems, Pound reveals true poetic sensibility, lyric emotion and a capacity to fuse form and content into one inseparable whole. Take, for instance, this fine piece from the *Personae*:

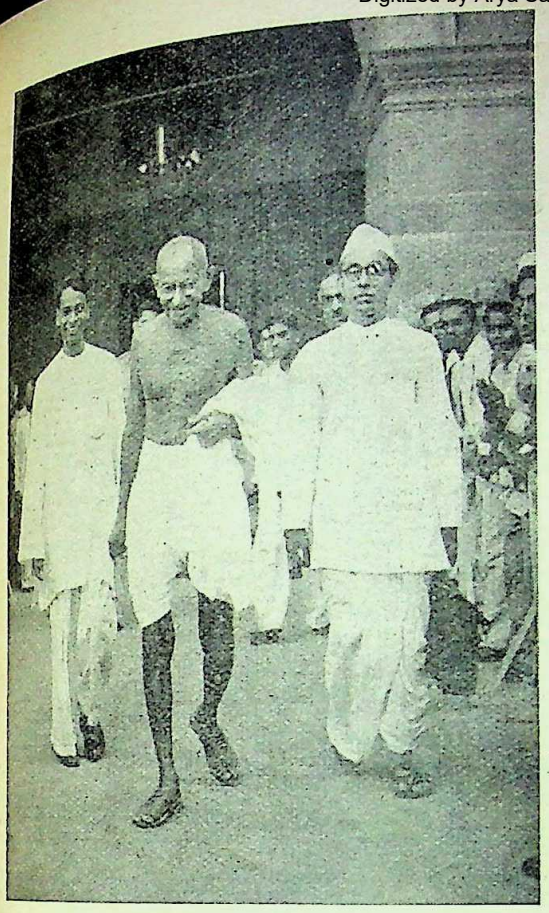
I stood still and was a tree amid the tree,
Knowing the truth of things unseen before;
Of Daphne and the laurel bow
And that god-feasting couple old
That grew elm-oak amid the world . . .



But what about this one?

Gladstone was still respected,
When John Ruskin produced
'King's Treasuries'; Swinburne
And Rossetti still abused.

This is little better than mere prose cut into verse. But worse still is all the ununderstandable gibberish of the *Cantos*. When all is said, Pound is an unequal poet. It seems evident that he has little to say, and is merely trying to be very loud and very obtrusive. Yet, he cannot be ignored.



Eliot himself calls him 'il miglior fabbro'. It is as a technician of verse rather than as a poet that Pound ought to be judged.

Pound's poetic technique follows a definite line of development and the advance is towards greater compression, closer approximation of form and content, deeper exploration of the phonetic and semantic effects of language, and subtler rhythms. But unfortunately, as in his later poems, Pound has tried to wade beyond his depths. Perhaps, as Eliot says, he means too much to mean anything. In any case, he remains baffling and obscure. Though Pound started writing poetry with a view to bring it nearer to the masses, he has ended by taking it farther away than it had ever gone before. In his later practice he has shown a careless disregard for the public and written only to please himself. Yet let us not forget the debt we owe him for re-vitalising poetry and "for stirring up and leading forth other minds."

THIRD PARTITION OF BENGAL ?

By DEBAJYOTI BURMAN

Like Poland, Bengal today faces the possibility of a third partition. The first partition was made in 1905, The second one took place in 1911 when, at the time of unsettling the settled fact, four of the most resource-ful districts of Bengal were cut out and joined to the newly created province of Bihar and Orissa. This second partition was effected, like the first one, in flagrant disregard of popular opinion and the accepted principles laid down by the Government themselves, but as the leaders were exhausted and as the full significance of this partition was not well understood at the time there was no active opposition to it. Today we are facing the danger of a third partition with an equally thoughtless indifference.

Official View on Partition

Lovat Fraser has at length explained the official view of the first partition. He says that "the chief reason unquestionably was that the task of the Government was beyond its strength." The Lieutenant-Governor of Bengal had to administer, in 1903, an area of 189,000 sq. miles with a population of 78 millions. No other provincial administrator in India had so huge a charge and it was complicated by the obstacles to rapid travel. In a Note prepared by Sir Andrew Fraser in February, 1901, the need of a redrawing of provincial boundaries was suggested. In May, 1902, the famous "Round and Round Note" of Lord Curzon was written which was secured and published by the *Statesman* for which the newspaper was punished by withholding from it the courtesy of the usual supply of official informations. For several months the Secretaries wrote about the proposals, built upon them, and evolved fresh schemes for the rearrangement of the Eastern provinces of Bengal and Assam. Curzon himself wrote :

"Secretaries and Deputy Secretaries have been calmly carving about and rearranging provinces on paper, colouring and recolouring the map of India according to geographical, historical, political, or linguistic considerations—in the manner that appealed most to their fancy."

Sir John Hewett suggested the transfer of the port of Chittagong to Assam. Early in 1903 Sir Andrew Fraser, then Lt.-Governor of Bengal, followed up Sir John Hewett's recommendation by propounding a much larger scheme, which was the real genesis of the partition of Bengal. The main arguments advanced were that the administration of the districts of Dacca and Mymensingh was excessively defective, and that Eastern Bengal needed more immediate personal contact with the higher authorities. It was, therefore, proposed to attach these districts as well as the division of Chittagong, to Assam. Lord Curzon for the first time recorded his general approval of this scheme about the middle of 1903. At the end of the year the proposals were made public. The chief reason assigned were that the Bengal Government needed relief from its excessive burdens ; that the outlying districts of the province required more efficient administration ; and that Assam should have an outlet to the sea which it would find at Chittagong.

In April, 1904, Curzon went to England to report to the British authorities. As a result of the discussions there, the project continued to grow. After his return in February, 1905, the Government of India sent their final proposals to Mr. Brodrick (later Lord Middleton), the Secretary of State for India. They were sanctioned by him on June 9, and the Resolution of the Government of India promulgating the decision was dated July 19.

The new province included, in addition to Assam, Chittagong, Dacca and Rajshahi Divisions. It had an area of 106,540 miles and a population of 31 millions of whom 18 millions were Muslims and 12 millions Hindus. About the Muslim of Eastern Bengal, Lovat Fraser says :

"They are not of alien race but are mostly the descendants of large batches of forced converts made by the early Mahommedan invaders."

Old Bengal received the addition of the district of Sambalpur and certain Oriya states on its western frontier and was left with 141,580 sq. miles of territory with a population of 54 millions of whom 42 millions were Hindu and 9 million Muslims. Lord Curzon had suggested the name of North-Eastern Province for the new one but the Secretary of State named it Eastern Bengal and Assam.

There were several causes which led to the organisation of the agitation against the partition. According to Sir Andrew Fraser, the first and most immediate was that it seemed likely to strike at two vested interests. One was the Calcutta Bar. The Bar saw that the creation of a new province must inevitably lead to the creation of a separate High Court ; all the wealth and weight of the Calcutta Bar were therefore thrown in the fight against the scheme. The other was the Calcutta newspapers. They also, according to Fraser, feared that the regeneration of Dacca as the capital of the new province would bring about the foundation of fresh newspapers and that the people of Eastern Bengal would then turn to Dacca for their news rather than to Calcutta. Lovat Fraser adds two more reasons, *viz.*, that passion against Curzon had been roused among educated Bengali Hindus for his Universities Act and that there was the undoubted growth of a unity of sentiment among Bengali Hindus.

People's Protest

Although administrative reasons were put forward to explain the partition, a desire to erect a bulwark of fanatic and reactionary Muslim bloc behind the partition as a set-off against Hindu progress was discernible. Nawab Salimullah of Dacca was induced to establish the Muslim League and he received financial aid from the Government for this purpose. This and subsequent measures leave little room for doubt as to the real intents of the partition.

The partition was given effect to on October 16, 1905. People's protest and opposition was universal and unprecedented in the history of this country. From December, 1903 to October, 1905 more than 2,000 public meetings attended by 500 to 50,000 people were held in different parts of East and West Bengal to protest

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

against the partition. The resolutions unanimously adopted at these meetings were regularly submitted to the Government of India as well as to the Secretary of State. The people of United Bengal met five times at the Calcutta Town Hall to give expression to their feeling. Many Muslims also joined in the protest. Memorials were submitted by the Indian Association, British Indian Association, the Bengal Landholders' Association, as well as by nearly all the important and recognised public bodies and Associations in either part of the province. In July, 1905, a mammoth representation over the signatures of about 70,000 people of all classes and communities was submitted to the Secretary of State from East Bengal. The Indian press, both in Bengal as well as in other provinces, were unanimous in their condemnation of the partition and even a large section of the Anglo-Indian press including the *Englishman* and the *Statesman* joined in the protest. The *Statesman* gave out the real truth when it wrote :

> "The Government is well aware that its scheme is a direct attack upon the *solidarity and the growing political strength of the Bengali race.*"

The Indian National Congress repeated its protest year after year. The revolutionary movement took deep root in Bengal. The intensity of the agitation was such that Lord Curzon himself was unable to defend the measure in the House of Lords and was forced to go so far as to practically disavow its authorship and throw the responsibility upon Lord Middleton and Lord Ampthill. Muslims of West Bengal were throughout opposed to it. During the earlier stages of the agitations, the Muslims of Eastern Bengal were also opposed to it. Khwaja Attikullah, brother of Nawab Salimullah of Dacca, speaking at the Congress of 1906, said :

> "I may tell you at once that it is not correct that the Mussalmans of Eastern Bengal are in favour of the partition of Bengal. The real fact is that it is only a few leading Mahomedans, who, for their own purposes, supported the measure."

The Central Mahommedan Association, in a representation to the government submitted through its Secretary, Nawab Syed Ameer Hossain, C.I.E., observed:

> "My Committee are of opinion that no portion of the Bengali-speaking race should be spared from Bengal without the clearest necessity for such separation, and they think in the present case, such necessity does not exist."

While many Mussalmans joined in the protest, there were very few demonstrations in support of it. Fanning of the Muslim fanaticism coupled with cash and political bribes gradually slowed down the intensity of Muslim opposition to the partition and ultimately succeeded in veering many of them round in support of the scheme.

Within eighteen months of the partition, riots broke out at Jamalpur (Mymensingh), Rajshahi and elsewhere in the new province. In all these cases, the instigators and the rioters were Muslims. There were no riots in Western Bengal and no oppression on the Muslims where they were in a hopeless minority. The East Bengal riots had been preceded by the publication of a highly inflammatory pamphlet, known as the *Red Pamphlet* and by the preachings of fanatical Moulavis. Strange expectations had been roused in the minds of the Mahommedan mob. A Muslim Magistrate, trying some of the Muslim rioters observed in his judgment that evidence showed that

> "The accused had read over a notice to a crowd of Mussalmans and had told them that the Government and the Nawab Bahadur of Dacca had passed orders to the effect that nobody would be punished for plundering and oppressing the Hindus."

Mr. Barnville, I.C.S., S.D.O., of Jamalpur, Mymensingh, in his report on communal riots wrote that

> "Some Mussalmans proclaimed by beat of drums that the Government had permitted them to loot the Hindus."

The *Red Pamphlet* declared that

> "Among the causes of degradation of Mahomedans is their association with the Hindus" and that "among the means to be adopted for the amelioration of the Mahommedans is the boycotting of the Hindus."

Such languages and such sentiments had never been heard of before the days of the partition.

Readjustment of the Boundary

Under the auspices of the Indian Association, a largely and influentially signed memorial was sent to the Viceroy in June, 1911, which suggested modification of the partition and reconstitution of the province of Bengal on a linguistic basis. In the previous year Bhupendranath Basu had visited England as a delegate of the Indian Association to confer with the Secretary of State for India and members of the Parliament on the same question. He raised the problem afresh in the Imperial Council, but it fell on deaf ears. Samsul-Huda from Eastern Bengal and Mazhar-ul-Huq from Bihar were ranged against him and the British politicians took their shelter behind these two reactionary Muslims.

The Memorial referred to above stated that if a partition of the province were needed to relieve the administration of Bengal, the most appropriate division should be as follows :

Lt.-Governorship of Bengal

	Area	Population
1. Burdwan, Presidency, Rajshahi, Dacca and Chittagong Divisions	76,000	41,250,000
2. Two Districts of Chota Nagpur, *viz.*, Manbhum and Hazaribagh	11,000	2,500,000
3. Assam	56,000	5,600,000
	143,000	49,350,000
4. Cooch Behar, Sikkim and Hill Tipperah	8,000	800,000
	151,000	50,150,000

Lt.-Governorship of Bihar and Orissa

	Area	Population
1. Patna, Bhagalpur and Tirhut Divisions	44,000	24,000,000
2. Three Districts of Chota Nagpur, *viz.*, Palamau, Ranchi and Singhbhum	15,000 13,000	2,500,000 5,000,000
3. Orissa and Sambalpur		3,500,000
4. Feudatory States of Chota Nagpur and Orissa	30,000	35,000,000
	102,000

On August 25, 1911, Government of India, in a despatch, laid down the principle that the Bengali-speaking Divisions should form one province and that "it is in the highest degree desirable to give the Hindi-speaking people now included within the province of Bengal a separate administration." The principle of linguistic affinity as a basis of territorial re-distribution was thus clearly laid down. In the light of this despatch, Surendranath Banerjea claimed, on behalf of the Indian Association, that the Presidency of Bengal should be reconstituted with its five original Divisions together with (*i*) the districts of Sylhet and Goalpara, (*ii*) the district of Manbhum, (*iii*) the Santal Parganas, (*iv*) the Pargana of Dhalbhum in the district of Singhbhum, and (*v*) the portion of the district of Purnea to the east of the Mahananda river.

In the Congress of 1911, the principle was laid down that all the Bengali-speaking tracts should be brought under the Government of Bengal and all the Hindi-speaking tracts placed under the Lt.-Governor of Bihar. According to this arrangement, the Bihari leaders themselves publicly suggested that the portions of Purnea and Maldah to the east of the Mahananda, which is the linguistic and ethnic boundary between Bengal and Bihar, should go to Bengal and the western portions of these two districts come to Bihar. Similarly, such tracts in the Santal Parganahs, where the prevailing language is Bengali, should go to Bengal and the Hindi-speaking tracts of the district remain in Bihar. As for Chota Nagpur, the whole district of Manbhum and Parganah Dhalbhum of Singhbhum district were Bengali-speaking and they should go to Bengal—the rest of the division which was Hindi-speaking remaining in Bihar.

The Second Partition

The pledge of a just and fair distribution of territories between the three provinces of Bengal, Bihar and Assam was not redeemed and the words of the despatch of August 25, 1911 were not honoured. After the declaration unsettling the settled fact, readjustment of boundaries was done in an arbitrary fashion. Bengal was subjected to the second partition by which Purnea, Santal Pargana, Manbhum and Dhalbhum were cut out and joined to Bihar. The two Bengals were united but the seed of communalism was sought to be firmly planted in Eastern Bengal by the establishment of a separate University at Dacca. The proposal for the establishment of the Dacca University was made public in a way which gave rise to suspicion in the minds of the people. Provision of separate representation of Muslims on the Convocation and Council of the new university clearly indicated the real intention of the measure.

This second partition was cleverly effected with the object of weakening the economic resources of Bengal. The successful method of agitation followed by the Bengali Hindus possibly led the British to think that if a solid and united Bengal could gain economic strength it would prove a menace to British Imperialism. Bengal had not at that time become conscious of the vast economic potentialities in her undeveloped western districts. She was also exhausted after nearly ten years of intense agitation. Taking advantage of this situation, her undeveloped western districts were cut away and joined to Bihar in flagrant breach of the Government's own promises. The result was that British interest in tea was handed over to a weak Assam where the planters would dominate, as they really did. The western districts of Bengal where British merchants controlled about 50 per cent of the total Indian coal production, together with valuable minerals like mica, manganese and copper, were handed over to another weak Government of Bihar and Orissa. Fortunately for us, the iron ore of the Singhbhum district, which amounts to about 95 per cent of the total Indian production, came into Indian hands. Only jute and a little amount of tea in the Duars remained for Bengal.

The following are the mineral resources of the ceded districts :

Purneah : Sugar.

Manbhum : Abrasives, asbestos, barytes, building materials, fire clay, china clay, coal, copper, glass sands, gold, iron, kyanite, lead and silver, limestone, manganese, mica, mineral pigments, mineral waters, sand, steatite, apatite, bismuth, corundum, titanium.

Santal Parganas : Building materials, fire clay, china clay, coal, copper, lead and silver, mineral pigments, mineral waters, sand, gem-stones (agate and amethyst).

Singhbhum : Abrasives (garnet and quartz), apatite, asbestos, barytes, building materials, chromite, china clay, copper, glass sands, gold, iron, kyanite, lead-silver, mica, mangasene, mineral pigments, refractory materials (quartz schist), steatite, vanadium, jaspar and quartz crystals.

How these valuable minerals have been exploited and wasted by the British merchants for their immediate gain to the detriment of national interests taking full advantage of the weak government of Bihar and Orissa, will be narrated in a later chapter. Only one instance of coal wastage ought to be illustrative. In a Memoir of the Geological Survey of India, Dr. Dunn tells us about coal losses in mining :

> "These losses may be very considerable, and the life of some coal fields depends on only one or two seams and not on total reserves. Hence only a fraction of total reserves of coal may be available ; it is doubtful whether even 30 per cent can be counted upon.
>
> "If good quality coking coals are considered, and assuming a consumption of four million tons per year, Fox (Sir Cyril Fox, for a long time Director of the Geological Survey of India) estimates the life of the reserves at 400 years, which is reduced to 200 years for an extraction of 50 per cent. But these coking coals are now being used for other purposes besides the manufacture of metallurgical coke, and if this unwise practice is continued, Fox, in 1934, suggested that supplies would be exhausted after about 40 years. This remark applies particularly to the Jharia field."

Any strong government would not have permitted for a single day this sinister practice of a deliberate waste of this vital resource of the nation.

Great care has been taken since the first partition, specially since the second one, to keep the Bengali Hindu out of the administrative and economic field. *Bengalees need not apply*—became a special feature in all advertisements for Government posts. Bengalee Hindu was thus ousted from the administrative field with the result of a serious breakdown in administrative efficiency. Only those Bengalees who were absolutely indispensable in key positions were retained.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bengalee businessmen were also very severely attacked. The Swadeshi movement of Bengal gave a fillip to Indian industry. Non-nationals of this province were quick to seize this new opportunity and immediately came to exploit Bengal. Our Swadeshi sentiment put a high premium on non-Bengali cloth and other products for the simple reason that they were Indian. British business allied with Marwari fortune-seekers in driving Bengalee businessmen out of the jute trade. Bengalee peasants produced jute, Bengalee *aratdars* brought them to Calcutta, but it could not be sold here except through Marwari dealers. A "gentlemen's agreement" operated with full vigour behind the back of the Bengalee Hindu who had been put on the black list of the British trader. Bengalee enterprisers of Swadeshi industries received help from none and opposition from both.

THE THIRD PARTITION

The third partition is coming with a redoubled force whose real object is to exterminate the Bengalee Hindu race. Very cleverly Bengal is being pushed to a tight corner with only two alternatives—either accept whole Bengal as Pakistan or bow down to another partition. We can accept neither and must protest against both. In the name of protection of backward communities the fanning of the fanaticism of Muslim masses began, with the ultimate result that the whole or a greater portion of Bengal is going to be handed over to a body of converts who are backward in every respect to the Bengalee Hindu. Handing over political power to a backward community is the surest way to prevent any progressive movement in Bengal. This trick, if not prevented, will be ruinous for both the Hindu and the Muslim masses. It will retain Bengal as a dumping ground of joint exploitation by the British and the non-Bengalee Hindu-Muslim traders for decades to come.

———:O:———

CURRENT IDEOLOGIES IN POLITICS

BY D. V. RAMA RAO, M.A., LL.B.

IT is noteworthy that the age we live in is marked by an increasing interest in political ideologies in preference to religious, cultural, ethical or even sociological and economic ideologies. It is interesting to note that several ideologies which originated as intellectual or cultural ones tend to merge to-day into some one or other of the current political doctrines. As such it may be not only interesting but also instructive to study briefly the broad features of and the principles underlying some of the political theories and ideologies which have of late been not only receiving increasing interest but have actually been influencing people to the extent of making them participate in great movements involving radical social changes.

For greater clarification the current ideologies may be divided into three categories : First, those that may be described as essentially political ideologies under which may be grouped : Democracy, Totalitarianism and Imperialism ; secondly, those that may be described as quasi-political, since their scope is far beyond merely political implications, under which may be grouped : Fascism, Federalism, Internationalism and Nationalism; Nihilism and Anarchism which are largely intellectual may also be included in this group. Lastly, those which are mostly economic in their implications but having a considerable political significance too. Such are : Capitalism, Socialism, Trade Unionism, Syndicalism and Communism.

Taking up the first, namely Democracy, one is at once reminded of that famous saying of the great American President, Abraham Lincoln : "Government of the people by the people for the people." This is alright in theory but in actual practice one is confronted by many difficulties. Democracy as is evolved out of centuries by the experience of various nations—particularly England and America which have always carried the democratic tradition with the utmost care within their homes—when reduced to a practical proposition means only two things : *Freedom of opinion and association, and freedom to exercise the right to vote.* There has been a great deal of criticism against this working formula by several thinkers. Bernard Shaw, for instance, has pointed out that unless the people are politically educated enough to exercise their vote with sufficient knowledge and discretion democracy may result in the virtual representation of people's ignorance. This is to a certain extent true. That is why it is now universally recognised that for democracy to be successful the electorate should be sufficiently educated. An education—particularly political—can be possible only when there is freedom of expression. In India where the large majority of the people are illiterate, it may be argued, what chance there can be for democracy to be successful. But the people even if they do not understand all the details of the different programmes and state policies have none the less an instinctive commonsense and they elect those in whom they have confidence and whom they consider their best friends. This is the reason for the unprecedented success of the Indian National Congress both during the 1937 elections as well as the recent elections to the Central Assembly—which, by the way, proves that even an illiterate electorate may not be wanting in political alertness.

While as a general rule it may be stated that democracy will be successful to the extent the electorate is politically alert it should not be forgotten, however, that democracy is not only a principle but also a growing tradition ; it is not only a system of government but also a method of political training. This is the reason why in countries like England and America democracy is so successful where the electorates are fairly well educated and where the democratic tradition is one of continuous growth. It may be concluded, then, that democracy is preferable to any other known system of government, whether a country is advanced or not, for want of a better alternative.

Coming now to Totalitarianism it may be, at once, stated that it is directly opposed to democracy. Totalitarianism means the embodiment of the state in one supreme dictatorship. While the idea underlying democracy is that the state derives its power from the individual citizens, in totalitarianism the idea is that the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

individuals exist for the state. In democracy the growth and welfare of the individual is the primary concern of the state while in totalitarianism the individual as such has no rights at all; consequently there are no fundamental rights of the citizen here. Neither freedom of expression nor freedom to exercise the right to vote is expected and all power is concentrated in one supreme dictatorship who is the embodiment of the state. If the powerful dictator (a dictatorship in some instances may consist of more than one dictator) is benevolent a totalitarian state may prove advantageous in some respects as prolonged parliamentary debates, adjournments and delays can be avoided. Apart from the loss of political education which parliamentary debates provide the real difficulty with a dictatorship is that there is no guarantee that the dictator will always prove benevolent; and there is no easy governmental machinery to be rid of the dictator when the people want to. More often than not dictators have proved tyrannical. This is the great danger of allowing all power to be concentrated in the hands of one man. It is wise to remember that physical power has always a tendency to corrupt. In this connection it may be mentioned that some have described Mahatma Gandhi as a dictator. This is not only amusing but absurd because Gandhiji's power over the people is derived by his preachings and the moral influence he wields but not by any physical power. In the political concept of dictatorship, the dictator's power has the sanction of the organised physical force of the state behind. It can be seen, at once, how highly misleading it is to talk of either Gandhiji or Vallabhbhai Patel or even the Congress High Command as dictatorships. The Congress as it is to-day is one of the most democratic organisations in the world because it not only recognises the twin principles of freedom of expression and the right of every adult to vote but also because it relies on no physical force behind to coerce any one. Although dictatorship emerging from the doctrine of the totalitarian state will be repugnant to most of the people, as the great danger of its leading to tyranny is ever present, yet, at certain critical epochs people of various countries seem to welcome it, or at least submit to it. Thus, for instance, not only Germany and Italy but Turkey under Kemal Pasha and Japan under the Emperor, Hirohito, could be described as dictatorships. Even Russia under Stalin, although it is carrying on a great experiment to achieve economic equity, may be described as a dictatorship in a way because the freedom of opinion which is to be generally found in democratic countries is lacking in Russia. In London's Hyde Park any one can preach about communism and publicly criticise the Prime Minister's policy but one dare not preach about capitalism or criticise Stalin's policy in Russia. It should be remembered then that a capitalist country can have an absolutely democratic form of government and a country adopting a socialistic economy may have a ruthless dictatorship.

Coming next to Imperialism, it is nothing but the extension of undue political influence by a nation beyond its geographical boundaries which virtually means domination of one nation by another. England, France, Holland, and Japan till it was defeated recently, may be cited as the most imperialistic nations during these two centuries. Imperialism which may be defined as political aggression chiefly for economic exploitation can have little to be said in its favour, as we all bitterly know, except, perhaps, that it can produce poets like Rudyard Kipling who sang,

"East is East and West is West
And the twain shall never meet!"

Coming next to the second category of ideologies, namely, Quasi-political, let us take up Fascism, one of the most discussed ideologies in recent times. Several people believe that fascism is only the manifestation of capitalism in its last desperate stage and as such the enemy of socialism. If that were so it is difficult to understand why Germany concluded a pact with Russia in the beginning of the war that recently ended and waged war against England and France both capitalist countries. One could understand Russia's anxiety to conclude a pact with Germany for reasons of military unpreparedness but what could have prevented Germany from concluding pacts with England and France and attacking Russia directly? Fascism being opportunist and Machiavellian seems to be neither the friend of capitalism nor the enemy of socialism. It may be noted that fascist countries have treated both the employer and the employee with equal ruthlessness and introduced measures which may be taken as steps towards socialistic economy. Fascism is not anti-socialist but is anti-class-war, since from its view-point the doctrine of class-war is a disintegrating influence in national life. Fascism glorifies aggressive patriotism utterly disregarding the rights of other nations. Fascism is avowedly anti-democratic and opposed to internationalism. Fascism believes in the totalitarian state but it should not be taken as synonymous with dictatorship, for while dictatorship is essentially a political concept fascism may be described as a socio-political philosophy (or perhaps malady) resulting from a feeling of frustration and also the writings of persons like Nietzsche, Houston Chamberlain and Rosenberg. While Fascism has evoked qualities like unflinching loyalty and iron discipline it has also been responsible for some of the worst crimes the world has witnessed. Fascism, as it has manifested itself recently, can hardly be called a progressive force being largely reactionary but it should be remembered that the doctrine of class-war is not a little responsible for the emergence of fascism in this century.

Taking next Federalism it is perhaps correct to describe it as a principle rather than an ideology. It is an extension of the democratic principle into a wider sphere. Federalism is applicable not only in the political field but also in such as economic and co-operative enterprises. It stands for decentralisation of power as against centralisation. If India were to have a federal government, for instance, the federal government would derive its power from the provinces which form the federal units and the provinces in their turn derive their power from their citizens.

Internationalism, it may be noted, is closely allied to federalism for the ultimate ideal of a democratic world federation would be impossible unless all nations cultivate an international outlook. To cultivate an international outlook need not necessarily mean that one should cease to be a nationalist. It means only that while nations should strive to attain their fullest growth in the best of their traditions they should be careful to see that their interests are not allowed to come into conflict with the legitimate interests of other nations. One of the greatest champions of the democratic principle of federalism and internationalism is our great

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

national leader Pandit Jawaharlal Nehru. It will be seen, then, that while imperialism, fascism and totalitarianism are closely allied on the one hand, democracy, federalism and internationalism are intimately related on the other.

It may be asked how the democratic tradition of England at home can be reconciled with her imperialist policy abroad. This is, indeed, an anomaly ; but human nature itself is anomalous. The only explanation is that while the Englishman believes passionately in democracy at home, when leaving the shores of Britain he seems to leave democracy behind. On the same analogy, as thinkers like Bertrand Russel have pointed out, the possibility of a country being socialist at home and capitalist abroad may not be ruled out. It is interesting to note in this connection that the democratic idea is receiving an altogether new interpretation on a far higher level by the great experiment in non-violence that is being carried on by Mahatma Gandhi who is not only the greatest messenger of peace living to-day but who is likely to be recorded in history as the greatest democrat of the twentieth century.

Coming to Nationalism, it is to be remembered, that the term is far more comprehensive than the term patriotism. Nationalism should not be confused with the blind and fanatical patriotism of the kind "my country right or wrong." Nationalism in its best sense is only a faith in the culture and tradition of a nation and an aspiration to be free to attain fullest expression. National leadership, it may be noted, is far more embracing than mere political leadership. Dayanand, Vivekananda, Bankim Chandra, Tilak, Poet Rabindranath, and Pandit Madan Mohan Malaviya may be cited as some of our foremost national leaders of recent times.

The phenomenal all-round awakening which Gandhiji has brought about in so short a time is, indeed, miraculous and he is, perhaps, the greatest national leader our country has produced during the last ten centuries or more. Nationalism is, unfortunately, a much abused term these days and the nationalist sentiment is so perverted and exploited as to pave the way for it to emerge as one brand or other of fascism. Nationalism in its truest sense, however, helps not only to bring out all that is finest in a country but also to contribute a country's best to the world.

Nihilism which originated in Russia during the later part of the last century is largely the result of intellectual idealism and has been instrumental in spreading anarchist doctrines particularly in the European countries.

Both Nihilism and Anarchism, although they have had their share in influencing the political thought of the last century are, however, devoid of political realism and as such may not be included in a discussion of current political ideologies.

Coming to the last category, Capitalism is too well-known to need much elaboration. Capitalism recognises two principles, namely, freedom of economic enterprise and recognition of the private profit motive. But in actual practice this has resulted in freedom to exploit and as such it has been responsible for several evils. This is largely the result of the unforeseen and uncontrollable forces that have been released by the rapid mechanization of industry and allowing the doctrine of *laissez faire, i.e.,* free and uncontrolled commercial enterprise to exercise its influence beyond the limits of its utility rather than deliberate exploitation or inherent callousness on the part of any particular class society. The old-world conception of capitalism, however, is no more popular and thanks to the influence progressive opinion all over the world, irrespective any class-interest, the nature and scope of capital enterprise is being increasingly modified so that existing gulf between capitalism and socialism tends become narrower and narrower in future.

Socialism, it should be remembered, is not a doctrine but a growing idea and as such tends to different shapes in different parts of the world according to the conditions obtaining in and the needs of particular country. Socialism which is gaining popular every day aims at removing economic inequity by control and regulation of all economic and commerc enterprise. It also aims at eliminating the private pro motive. Socialism, it may also be noted, is not compatible with nationalism while to bring abo international socialism the pre-requisite is the establi ment of a democratic world federation. Socialism as idea has progressed a great deal since the time of K Marx and thanks to the efforts of intellectual grou like the Fabians and thoughtful writers like Bertra Russell and Dr. Bhagwan Das, to mention a few, it much better understood today than it was a few ye ago and irrespective of any group-interest it is becom ing increasingly popular with progressive opinion over the world.

Trade Unionism and Syndicalism owe their inspi tion to socialist thought but they are more or less loc developments and their immediate goal is confined bringing about among workers a consciousness of th strength of organised labour. While Syndicalism ha been popular in France, Trade Unionism and Guil Socialism have flourished in the Anglo-Saxon countries

Coming, then, lastly to Communism, it should b remembered, that it is both a method as well as politico-economic doctrine. The common belief th communism is an extreme form of socialism is some what hazy. The Communist method *i.e.,* class-war an the establishment of a proletarian dictatorship may b however, described as extreme. Karl Marx no doub thought that a class-war would be inevitable but h conclusion was based on conditions obtaining in his da when franchise was very much limited. To-day, how ever, there is no reason why it should not be possib to introduce a socialistic economy purely by democrat and constitutional means unless, of course, progressiv views were to be always the monopoly of only a part cular section of the people. It is said that Marx, on th eve of his death, exclaimed, "Thank God I am not Marxist", meaning thereby that he was not a dogmati which unfortunately cannot be said of his follower today. Had Marx been alive, today, in all probabilit he would have modified his views about the inevi ability of the class-war and the desirability of establis ing a proletarian dictatorship.

The Communist approach to the Socialist pro being neither dispassionate nor comprehensive can hardly be described as objective. The Gandhian ap proach in contrast is refreshingly free from all cynicism and based as it is on love instead of hatred it is the Gandhian way that will triumph ultimately if humanity as a whole is progressive. While Communism is increas ingly coming to be viewed as more reactionary than of Gandhian socialism is slowly but surely emerging a new star of hope from a weary and chaotic world

STATES IN INDIAN CONSTITUTION

By NAGENDRA NATH CHANDA

Though without a following the princes promise to be the second great hurdle in the race for Indian Swaraj. Even in the late forties of the twentieth century the princes have remained so many medieval despots—an anachronism in this age of democracy. As a State Dictator, an Indian prince like Stalin or Hitler could have done immense good to his country. But this was not to be. About the Indian prince Sir John Stratchey observed in 1911:

"He has at his disposal in many cases very considerable resources. Wise and upright chiefs followed by worthy successors might bring their States into a condition of almost Utopian prosperity."

But unfortunately the princes have cared more for their personal gains than for their people's benefit to the consequent material backwardness of the States as compared to the provinces. Many princes like those of Indore and Nabha have been deposed for misrule, but the real remedy for such misrule lies not in such deposition but in the democratisation of the States.

On the strength of their treaties and agreements made with the Crown the princes have ever insisted on their right of exercising despotic power and having direct relationship with the British Crown. But the British Indian constitution evolved by the All-Parties Conference of 1928, however laid down that

"The Commonwealth shall exercise the same rights in relation to and discharge the same obligations towards the Indian States arising out of treaties or otherwise as the Government of India has hitherto exercised and discharged."

This Conference, however, otherwise welcomed a perpetual federation of States and provinces. But soon the States Enquiry Committee (Butler Committee) appointed at the instance of the princes reported in 1929 that

"The Princes should not be transferred without their own agreement to a relationship with a new Government in British India responsible to an Indian Legislature and that in future the Viceroy as distinguished from the Governor-General in Council should be the agent for the Crown in regard to all dealings with the Indian States."

In the Round Table Conference, however, the princes declared themselves in favour of

"A Federal Government and a Federal Executive embracing both the British Indian provinces and the Indian States in one whole associated for common purposes, but each securing control of their own affairs, the provinces autonomous and the States sovereign and autonomous."

Thereafter in the India Act of 1935 we find a scheme of a federation of States and provinces, the inauguration of which has been made contingent on the safety valve of the accession of at least so many of the States as would comprise at least half the total States population and be entitled to at least half of the total State representation in the Upper House. To allure the princes, the following extra priviliges were also given to them: (*a*) 125 and 104 seats out of 375 and 260 seats of the Lower and Upper Chambers of the Federal Legislature which works out at 33½ per cent and 40 per cent respectively though the States population of 9 crores out of 38 crores justifies 23 per cent only; (*b*) transference to the federation of 14 subjects less than those to be transferred by the provinces, separate sovereignty of the princes remaining over their non-transferred subjects; (*c*) allowing the above State representation to the princes as opposed to their people; (*d*) non-revision of State representation without consent of the princes. And further the offices of the Viceroy and the Governor-General were also separated in 1937.

A decade has passed since then, still the required number of States have not acceded to the Federation to enable it to be inaugurated. The State objection to this Federation has been based not on non-sovereignty of the Federation (born of Viceregal control of foreign and military affairs and interference in others) but on the princely fear of having to transfer even a part of their autocratic power to this Federation. The States people are, of course, ever eager to join an all-India federation of States and provinces, both being organically connected with the common racial, cultural, linguistic, economic and strategic structure of India.

Now the attitude of at least some of the princes seems to have improved a bit. The Chamber of Princes (which comprises only 236 smaller States out of 562 States of India) passed a resolution in January last saying that

> "The States share the general desire in the country for immediate attainment by India of her full stature and will make every possible contribution towards the settlement of the Indian constitutional question."

Many princes, as the Premier of Patiala said at Ottawa on December 6, 1945, are prepared now to enter a federation of States and provinces. But, it is said, still they want to have their sovereignty in spheres not transferred to the Federation, *viz.*, territorial integrity, succession, custom, law and usage, the existing form of State Government, etc.

Now what are pre-eminently required are: (*a*) the scrapping of this so-called princely sovereignty and the establishment of popular democracy in the States, the princes remaining as constitutional heads; and (*b*) accession of these States into a federation of States and provinces with no exclusive sovereignty left to the States beyond the general purview of the Federation and the Federal Court.

The necessity of essential uniformity of component units in the Indian Federation also requires that the States should be democratised. The federation of two unlikes, one an autocratic State and the other a democratic province, is bound to result in certain deadlock and create economic conflict because of their antagonistic interests. Sir A. B. Kieth observed:

> "I should have preferred federation only for units which were themselves under responsible Government and have admitted the princes only on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

condition that they gave their States constitutions leading up to responsible Government and that their representatives in both Houses of the Central Legislature were elected by the people of the States."

When the Joint Committee define a federation as "a number of governments autonomous in their own spheres combined in a single State" they may have in their minds democratically autonomous and autocratically autonomous States federating together. But when like others Prof. Newton says that a federation is a "perpetual union of several sovereign States" he means States of the same political type more or less.

Further an all-India union and democratisation of the States is enjoined by the obligations of the U.N.O. Charter. India comprising both States and provinces has been made a permanent member of that world organisation of free nations on the understanding given by the sovereign authority of both States and provinces that India (comprising both States and provinces) would be vested with independence without delay. That obligation cannot be satisfied by democratising only one part, namely, the provinces. This requires the States to be democratised (just like the provinces) as well as an all-India union of States and provinces to be formed, which alone, and not States and provinces separately, is recognisable by the U.N.O.

While the U.N.O. is out to destroy world imperialism and autocracy, it can not allow this princely autocracy to go on unchecked under cover of some old treaty with Britain, Chapter XVI of the U.N.O. constitution clearly laying down that

> "In the event of a conflict between the obligations of members of the United Nations under the present charter and any other international obligations to which they are subject their obligations under the present charter shall prevail."

Now the princely objection to this democratisation, based on their treaty rights and *sanads*, is hardly tenable. The States people have (just like the inherent right of self-defence) the inherent right of freedom. Any treaty or usage repugnant to it is null and void to the extent of this repugnancy.

Further, these so-called treaty agreements were made with the princes not absolutely in their individual capacity but as representatives of their States whose resources and allegiance they could command. Only the authority that has that command is entitled to those State rights, and that authority is not the princes now but mainly their subjects. The States people are thus the *defacto* sovereign of the States entitled to this protection of the Paramountcy.

The Crown's promise of protection of the States does not mean the perpetuation of princely autocracy but protection of the real State power which means the people now, as shown above.

But on January 21, 1946, the Viceroy assured the princely order thus :

> "There is no intention on our port to initiate any change in your relationship with the Crown or the rights guaranteed by your treaties and engagements without your consent."

What is this but a perpetuation of the existing princely autocracy and British suzerainty over the States and a hindrance to the attainment of Indian Swaraj ? Does it not give some clue to the recent deposition of the Maharaja of Rewa for his attempt at democratisation his State ?

Recently Sir C. P. Ramaswami Iyer, the Dewan of Travancore, is also reported to have opined that the new Government at the Centre can not inherit any right of paramountcy, and if British India attains freedom the States will emerge fully free, the States in that case to have fresh treaties with the new India Government on the basis of equality.

Does it not mean that the States as sovereign units hereafter are entitled to do anything they like ? But the Crown has absolute suzerainty over the Indian States as was made clear by Lord Reading's famous direction to the Nizam. And as such the States cannot legally prevent the new India Government being invested with this suzerainty over the Indian States through the transference of that suzerainty right by the Crown to the new India Government. Can a treaty ever debar the transference of the superior rights of an overlord to another ?

It is with British India's men and money that these States were subjugated. And legally speaking it is with the Indian Government of the Crown that these so-called treaties were made though the Indian Government of the Crown at that time was more unified with the Crown's Government in Britain. If so, how can the new inheritors of this Indian Government of the Crown (whether a Republic or a costitutional monarchy of the Dominion type) be prevented from inheriting this right of State suzerainty of its predecessor ?

It is curious to find people hold fast, out of self-interest, to old theories and positions even in this post-war surge of democracy. The present-day world demands a reorientation of outlook and approach. In consideration of these factors the best solution of this State tangle lies in an immediate sovereign federation of States and provinces, the States immediately acceding to it irrespective of the wishes of the princes. And the States can have no separate sovereignty in any sphere after they have entered this Federation, the States and provinces alike being under the common suzerainty of the common Federation. Customs and currency essentially being all-India subjects, these shall have to be surrendered by the States and all non-federal subjects in States shall also remain under the purview of the Federation and the Federal Court just as in provinces.

For framing this federal constitution a Constituent Assembly elected by universal adult franchise of States and provinces may appear to be the ideal process. But in view of the time that it will take and the party feud that it will evoke it would be advisable to have for the purpose a small constitution-making body elected on population basis by Legislatures of provinces and States and the States People's Conference where the States do not have Legislatures (only 30 States having Legislatures) so that the new constitution can be inaugurated within six months hence.

In the mean time the British India Government can through convention be provided to be run from this month by a coalition cabinet of all Assembly parties or failing that by the majority party cabinet, all powers being transferred to this interim Government with the safeguard of Viceregal intervention in foreign and defence affairs in case of emergency. No minority obviously can be allowed to veto any decision of the majority in all this.

THE SPIRIT OF HINDU CIVILIZATION

By BUDHA PRAKASH, M.A.

I

"He who perceives one eternal substratum in all elements, the Indivisible in the divided, acquires true salutary knowledge. The wise and the learned see equally the Brahmana, possessed of learning and discipline, the cow, the elephant, the dog and the degraded Chandala."—*The Holy Gita.*

How concisely and beautifully the above verses sum up the spirit of Hindu civilization! Civilization—the word is formed from the Latin word *civitas* meaning the state. The idea of the state implies an accommodation of the rights and interests of the individual with the rights and interests of society. The more happy and harmonious this accommodation is, the more perfect the state becomes and the more civilized the people are called. Hence civilization is that attribute of human mind, in virtue of which man sacrifices and harmonises his interests with the interests of his fellow-beings and realizes a fundamental unity of interest amidst the diversity of individual ends and requirements. This characteristic—the quest of unity amidst diversity—is the keynote of Hindu civilization. Of course, every civilization possesses this feature, but it is as distinguishing a hall-mark of Hindu civilization, as moral fervour is of the Hebrew scriptures, the sense of beauty and rhythm of Periclian Greece and the love of law and government of Ancient Rome. Every aspect of Hindu life and thought bears the impress of this grand principle. The conception of Adipurusa in sociology, from whose mouth, arms, thighs, and feet sprang respectively the four classes of Brahmana, Kshatriya, Vaishya and Sudra, picturesquely symbolizes the idea of social reciprocity and interdependence. Furthermore the assertions that from the mind of the same Adipurusa sprang the moon; from his eye, the sun; from his breath, the wind; and so on and so forth, suggest the essential community characterising the whole universe. Similarly, the ideal of a Chakravartin or Bharat sovereign, combining the ideals of autonomy and centralization[2] is the corner-stone of Hindu politics. In philosophy Brahman or his Buddhist counterpart the Alaya Vijnana[3]—the one being the cause and the other the consequence of the psychological process—holds the field. By far the most interesting and unique manifestation of the Hindu spirit is the legal institution of the joint family. In it a man acquires a vested interest by birth which remains undefined and indeterminate all along and which he has no right to alienate, pledge or mortgage except with the collective consent of the family. The community of interest and unity of possession is so much ingrained that even the Karta or the manager of the family has no power to transfer by will or *inter vivos* the joint assets. The devolution of estate is determined by survivorship rather than succession and the idea of partition is throughout tabooed. Equally characteristic is the economic organisation of the guild or the *sreni*, whose corporate existence is not affected by the recalcitrance or resignation of the members composing it. Above all the Hindu spirit expresses itself in the domain of religion in a very peculiar phenomenon, which Prof. Maxmuller called 'Kathenotheism.' Each god—Indra, Mitra, Varuna, Agni, Pusan—is separately worshipped and exalted above all others, with the result that a mere onlooker is bewildered with this strange contradiction. But to a Hindu it is not at all difficult to conceive or appreciate, for, to him these gods are the different nuances of the same Essential Absolute, looking variously in the foil of diverse moods and states of consciousness. The Veda itself explains this multiplicity in the following words :

> "They call him Indra, Mitra, Varuna, Agni and that celestial noble-winged Garutman. Sages name variously that which is but one ; they call it Agni, Yama and Matarishvan."[4]

Indeed, the Hindu God is not a personal Being, creating and ordering the universe at his own sweet will and determining the destiny of man according to His own pleasure and predelictions. He, in some respects like the 'sitticheit' of Hegel, represents the eternal cosmic force of which the universe including man are various manifestations as well as component ingredients. He is not independent of Karman—the principle of action and retribution—which must of necessity evoke a response from him. Thus man, far from being subservient to the arbitrary dictates of a Superior Being, is the creator of his own, the architect of his world, which he is gradually shaping by his action in accordance with his comforts and necessities.

Generally a Hindu starts from unity towards diversity. The concrete thought and phenomenal conscience, *Buddhi* and *Manas,* comprehended under Prakriti and propelled by the impersonal and neuter subconscious force, the Purusa, evolve ceaselessly from an indistinct or subtle state (*Avyakta*) to the gross state *i.e.,* from the homogeneous to the heterogeneous in

perpetual movement towards differentiation and individualization (*Ahamkara*). This is the substance of the Sankhya doctrine. But the Hindu is equally conversant with proceeding from diversity towards unity. Conscience, from this standpoint, results from the psycho-physical processes.[5] This accords with Marxian principle of Being preceding consciousness. Thus starting from any point and following any way of inquiry—monism, dualism or pluralism, the Hindu reaches the same goal. A Sanskrit text places these words in the mouth of God :

> "Some prefer monism, others like dualism. But they all know My reality which is beyond dualism or monism."[6]

We now come to another characteristic of Hindu civilization, which it hardly requires mention follows from the one we have just considered, *viz.*, the conciliation of individual and community. On the one hand there is unbridled individualism tending to throw the world into chaos and confusion ; on the other is the strangling rigidity of social order, which stifles the real and peculiar individuality of man in an attempt to force it in the social framework. The modern world has not yet been able to provide a way out of this Scylla and Charybdis. The Hindus approached the problem in their own way. As Manu says :

> "Sacrifice yourself for your family ; the family for the village ; the village for the State ; and the State for your conscience."

It means that the State is the custodian of common good and everyone should be ready to sacrifice his interests for those of the state. But after all the sovereignty of the State is a function of the quality of life that it makes for the individuals. The only state to which one owes allegiance is the state in which one discovers moral adequacy. The first duty of man is to obey his conscience. Hence if one feels convinced that his conscience is being killed by subservience to the state he is entitled and also duty-bound to go against the state and follow his conscience. This principle lies at the basis of the contractual conception of Hindu soverignty according to which the king is the paid officer of society to avoid chaos and Matsyanyaya. History informs us that even the great Asoka was dethroned when he proposed to give his empire to the Buddhist Sangha[7] and as late as the seventh century, the sudra Gopala was elected by the people as the king of Bengal.[8]

Such conflicts are not likely to arise where the spirit of humanism and toleration give ample opportunities for the fullest display and development of individual potentialities. Even in civilized Greece, Socrates was poisoned for preaching a new doctrine and the religious history of the world is red with the blood of martyrs. But in India different cults and creeds diametrically opposite beliefs and practices, conflicting religions and ideologies existed side by side in an atmosphere of peace and amity. The Buddha, his contemporaries and his followers tore up the very fabric of Vedic sacerdotalism, by denying the Vedas, God, soul and sacrifices and by levelling the caste distinctions on which the citadel of Hinduism chiefly rested.[9]

Thus India has been a crucible of races and cultures, amalgamating them in common humanity. The Dravidians with their doctrines of caste and transmigration and their Saiva and Krishnaite cults have become a part of Hindu society. Their cacuminal dentals have become a peculiarity of Indian languages.[10] Traces of Munda dialects have survived in a great number of geographic names from Kashmere up to the heart of the Peninsula[11] and the aboriginal fetishes still survive in the elephant face of Ganesha. Similarly the Greeks, puffed up with Hellenic culture, bowed before the spiritual might of India. The Besnagar inscription of Heliodoras, the Nagari remains of a *yajnasala* constructed by Demetrius, the caves and inscriptions of Kanheri on the Western Coast, the *Milinda Panha*, the Martanda temple in Kashmere, the little Iconic temple of the Parthian period at Jandial and above all the Gandhara School of Indo-Hellenic art, where Buddha appears in the garb of Apollo—all suggest the close amalgamation of the two cultures. Likewise, the barbaric Yen-chi tribes of Central Asia were thoroughly Indianized. The representation of Siva on the coins of Kuzula Kadphises, the interest taken in Buddhism by Kanishka, the self-contained, walled-in and rectangular *sangharama*, with kitchens and dining-rooms, of the Kusana period found in the North-Western regions and lastly the marked Mongoloid features with tangential eyebrows of the Buddha statues of Mathura—amply demonstrate the change which overtook the Kusanas. Later on the Abhiras, Hunas,[12] Jats[13] and many other outlandish people were admitted to the fold of Hinduism. The myth of the Agnikulas, invented to explain the origin of many Rajput families simply shows that they were converted and gradually Indianized. Last but not the least in importance are the Mohammedans. Generally it is believed that they remained untouched with Indian influences, but the most cursory glance at medieval history is sufficient to dispel such belief. Under the influence of the Hindus the Mohammedans of India strayed so much from the orthodox Islamic fold, that Taimur regarded them as heathens and considered his Indian invasion as a real *jehad* against

what he calls the infidels and polytheists of India.[14] Similarly another orthodox ruler Sultan Firoz Shah Tughlak made it a point to punish the Mohammedans of India, who were generally adopting the customs and practices of the Kafirs.[15] But despite all his attempts the tide of Indo-Islamic cultural synthesis could not be checked. Samsus-siraj Afif informs us of a Brahmana who perverted the Mohammedan women of Delhi and led them to worship a wooden tablet "covered within and without with paintings of demons and other objects."[16] The Hindu fashion of pilgrimages found favour with Mohammedan women for as Firoz Shah writes :

"On holy days women riding in palanquins or carts or litters or mounted on horses or mules or in large parties on foot, went out of the city to the tombs."[17]

Al-Badauni tells us that Emperor Akbar used to recite the hundred names of sun-god with face turned towards it.[18] Sir Thomas Roe noticed that on his birthday, Emperor Jahangir used to touch curd and the rohita fish on his first entry in the *darbar*.[19] Even Aurangzib consulted the astrologers in his Deccan-campaigns and once in Kashmere he carried out the supposed heir of the prophet in a grand procession.[20] Gujarat we know was the seat of the Sufis, who presented the teachings of Vedanta in Islamic garb. Besides Saikh Nizamuddin Aawliya, Saikh Salim Chisti and others—an illustrious series of Mohammedans, *e.g.*, Kutaban, Majjban Jayasi, Noor Mohammad, Raskhan, etc., wrote fine poetry in Hindi. In Deccan Hindu metres and Hindu poetical motifs very early entered into the Muslim vernacular literature and an Adil Shah wrote dhrupads, a Qutab Shah acted in his palace the antics of Krishna with the milkmaids of Vrindavan. Marsia and Ras-Lila and spring carnival (*Vasanta*) were equally popular as themes of poetry and equally yielded a prolific crop of verses in Rekhta.[21] Thus Hinduism, though quite decadent, did not fail to affect the Mohammedans.

FORGOTTEN CAPITALS OF MEWAR

By Prof. G. N. SHARMA, M.A.

I. Nagada

Nagda or Nagahrada of inscriptive records or Nagadraha of bardic literature was the first capital of the Guhilots of Mewar. It is nearly fifteen miles north of Udaipur, its ancient site comprises Nagda proper and Eklingji of these days ; for during those days there was no separate existence of the Eklinga village. Much of it vanished under water when Mokal constructed Baghela tank. The place under review affords a deserted sight with scattered ruins of monuments, though from variations in design we may still locate different parts of the city such as palaces, market-places or workmen's quarters.

It was founded in the sixth century by Nagaditya. The justification of its name Nagadraha is attached to the mythological story of the burning of snakes by Janamejaya, the son of Parikshit. A class of Brahmins still call themselves Nagda, as their ancestors conducted the entire proceedings of this Yajna of snakes. The story referred to above is also associated with the Yajnapura, now called Jahazpur and the river Nagdi, near the modern town. Khyata writers ascribe the importance of Nagda to the birth of Bapa (son of Ramlavati) who was entrusted to a Brahmin Vijayaditya. Several MSS. of Sanskrit literature record its foundation by Takshaka, the lord of serpents who paid his visit to God Eklinga. There is a Taksha Kunda to commemorate his visit.

Nagda happened to be the capital city of Mewar right from the sixth century A.D. to the thirteenth century A.D., though sometimes Aghatpur or Ahada and Chitor also enjoyed the credit of being the seat of Imperial Guhilots.

As the first capital of Mewar happens to be in the heart of mountain ranges, it had not to face so many invasions as other capitals had to do. The only important invasion mentioned is the invasion by Altutmish who was boldly faced by Jaitra Sinha.

There are two kinds of structures to be seen in a fairly good state of preservation ; one of Jain and another of Vishnu. The existence of the first kind clearly shows that Nagda must have been a most flourishing part of the country from the point of view of trade and commerce, as the trading classes, usually Jains, inhabitated this locality. Shivite temples and Vishnu temples appear to be largely the enterprise of the rulers or others who mainly belong to the Shiva Cult.

Padmavati Temple : In the northern side of the deserted capital there are several ruins of which the Padmavati temple is the most striking. It is partly built into the rocks and partly into the open. The only image in the shrine is of Chaumukha. The two small inscriptions of V.S. 1356 and V.S. 1891 indicate the time of its construction.

The Tank : It is the main tank of the village

CC-0. Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which had the entire habitation on its three sides. There are two important temples of Vishnu, one of a simple kind and the other of ornamental design, in which there are a large number of images collected from the ruined shrines of the locality.

Adbhutji's Temple : It is a Jain temple with lesser antiquity. The only interesting object is the image of Shanti-Nat, nine feet high. It was built by Saranga during the reigning period of Kumbha in V.S. 1494.

Khuman Raval's Temple : Just near Adbhutji there is a temple with series of smaller shrines of Parsanath, built in V.S. 1486 by a certain trader of the Porwad community, though people wrongly call it Khuman Raval's Devra.

Sas-Bahu Temple : These two temples are associated with Sas and Bahu, mother-in-law and daughter-in-law ; the smaller in the north is called Bahu's temple and the larger one in the south is called Sas temple with a Hindola Toran or a swinging arch in the front. The former is plain in design while the latter is profusely decorative. Their period of construction is about eleventh century.

II. Ahar

Ahar or Aghatpur of the inscription is the second most important capital of Mewar. It is near Udaipur Railway Station in the north-eastern corner of Udaipur city. The ancient Aghatpur appears to be very extensive as its colossal ruins can be seen scattered ten miles around the modern town which has developed during the last two hundred years. Of the many of such materials taken out of the ruins are the inscriptions of Allat of V.S. 1008-1010 at Sarnath temple and two of the inscribed slabs used as staircase or steps in one of the Jain temples and Hastimata temple. Numbers of beautiful sculptures, images and carved screens and stones have been used indiscriminately in the body of several modern constructions of temples, houses and wells in and around the modern town.

Gangodbhav : It is the most ancient of the remains of Ahar. It comprises a platform, where formerly stood a four-columned Chhatri, and a reservoir of water running round it. But the whole locality referred to above has been deprived of its antiquity by modern repairs, though the materials used for its repairs here and there give the idea of an ancient style of sculpture. Such pieces are the images of Shiva and Parvati, Surya and Vishnu in the profile. Several stories are still repeated about its antiquity. One is that the river Ganges bubbled up here through the strength of the devotion of a lady who was left here by her father-in-law. Since then it is termed as Gangodbhav. In memory of the sacred river every year people throng here to take a pious dip in the water of the reservoir. The other version is that it is a memorial spot of Gandharva-Sen, the father of Vikramaditya.

Shiva Temple : Just in its south there is another reservoir sufficiently smaller, though bearing antique appearance with a Shiva temple constructed partially over a bridge. It is in a depressed area with galleries on three sides of narrow width where several images of Shiva, Parvati, Surya, Brahma, Varaha, etc., finely sculptured appear. Though this part has undergone repairs not in recent days, but centuries ago, it affords a better antiquated look for the lovers of fine art, though much of its beauty has been lost on account of its smoky appearance and ungainly objects, as this part is used as a kitchen by the devotees, who come to pay a visit to this sacred place.

Cenotaphs : The eastern parts of these reservoirs consist of the royal cenotaphs area commonly called Maha-Sati or 'Great Place of Sati', set aside, since the abandonment of Chitor, for cremating and erecting cenotaphs in memory of the Maharanas, members of the ruling family, and some of the nobility and principal officials. The first of such cenotaph belongs to Rana Amar Singh, who was the first of his line to die at Udaipur. Udai Singh, in whose time Chitor ceased to be the capital of Mewar, died in the Aravali Mountains at Gogunda, while the next Rana, the famous warrior Pratap Singh, Amar's father, expired in the wild country of the Bhils at Chawand, his last act being to make his nobles swear that no palaces should be built in Udaipur until Chitor had been recovered. As one goes up a few steps and passes through a door, the Chhatris of Jagat Sinha I and Karan Sinha I appear, whose names are worth remembering for the construction of Jagdeesh temple and cementing friendly relations with the Mughals in 1615. Passing a narrow doorway one's sight is attracted by the cenotaphs of Sangram Singh II, Amar Singh II, Raj Singh II, Pratap Singh II, Swaroop Singh, etc.; of all these structures, the fifty-six pillared cenotaph of Sangram Singh II is the finest. By the side of these edifices there appear some huts usually called 'bungalows' in which the ashes are always kept for two days after cremation before being sent to the Ganges.

Dhul Kot : Further, there are mounds and ruins of a village called Tambravali Nagari. A narrow path passes through it leading to a neighbouring village with heaps of dust on both sides which constitute collectively a small hillock of sand. It is believed that it was a flourishing town during Vikramaditya's time. In and around the mound occasional discovery of large stone bricks, pieces of sculpture, and fragments of pottery, coins, etc., confirms the existence of a rich store of historical objects enveloped underneath the great heap of the ruined habitation.

ENGLISH

THE WORLD FEDERATION AND THE AUGUST RESOLUTION OF THE INDIAN NATIONAL CONGRESS : *By Maurice Frydman. Aundh Publishing Trust. Distributors, Padma Publications Ltd., Bombay. 1944. Pp. 33. Price twelve annas.*

Readers of the *Harijan* and of Gandhiji's Seventy-fifth Birthday volume hitherto knew Mr. Maurice Frydman as a practical engineer and a thinker, in that line, of distinction. But in the present very valuable pamphlet, a new light is thrown upon his mind and activities. During the fateful days of 1942 and 1943, he had consistently been trying in his own way to educate Indo-British public opinion with regard to the true nature of the Congress demand for Independence, which was to form the basis of a voluntary inter-dependence between states enjoying equal status. Mr. Frydman accordingly addressed letters to various people, and also issued pamphlets ; and the present brochure contains a reprint of some of them, as well as his correspondence with an important member of the mercantile community in India.

The letters of that British gentleman makes strange reading. On the one hand, we find Mr. Frydman tries again and again to draw the attention of his correspondent to one most important aspect of the August Resolution, and the need of expressing through some tangible step Britain's sincerity of purpose with regard to India's future status. On the other, his correspondent goes on repeating that the heart of Britain is all right; all that is needed is a unity betwen the Hindus and Muslims of India ; while, outside, he feels that the time is not yet ripe for either English or American public opinion to vote for a dissolution of sovereign states, and their merging in a world-federation. We have, according to him, to yield to the reality of the present situation. Nobody can quarrel with that. But the most curious fact is that where war-interests are concerned, and when Britain needs certain things for her Empire's safety, public opinion as expressed in the Congress's Quit-India resolution or the popular disturbances when the Congressmen were put behind prison bars, does not seem to count with him at all. Then his 'public' dwindles into an insignificant number of interested supporters of the *status quo*. Then it becomes necessary not to look for direction of future events in publicly expressed opinion, but to gag it and *shape* things in a way that the ruling class, who are responsible to nobody in India but to the British Parliament, thinks best. 'In the meantime', writes the correspondent in one of the letters, 'we must at all costs (and I mean all costs) keep the classes who supply recruits to the Army as happy as possible and this consideration must in my opinion take precedence over all others.' (P. 24).

This, we believe, represented the real British attitude during the War and does so even today ; a plea for democracy when that comes in handy, and a determination to see that Empire interests will remain unjeopardised, public opinion or no public opinion.

Mr. Frydman was right in his persistent attempt to educate British Indian public opinion ; but we believed then, as we do now, that something more is needed to break the crust of selfishness which screens the truth from British eyes. The people of England are not inherently selfish ; only the crust of selfishness which the institution of Empire has built round their mind, needs to be broken before the door is opened for an appeal to reason. That way does not lie through punishment or fear, the War has already proved the futility of the violent method for those who have eyes to see. The door must therefore lie through an appeal to the nobler sentiments as evoked through non-violent non-co-operation. In the meantime, educative propaganda, as exemplified by the present very valuable pamphlet, should be carried on with untiring effort.

NIRMAL KUMAR BOSE

PRACTICE AND PRECEPTS OF JESUS : *By J. C. Kumarappa, with a foreword by M. K. Gandhi. Navajivan Publishing House, Ahmedabad. 1945. Price Re. 1-8.*

If religion has been unfortunately, and to the great sorrow of mankind, a factor in mutual recrimination on many occasions, undeniably it is at the same time a cementing bond, and if we ignore the fact of formal conversion, we may take note of the changes of heart in so many ways in all time and throughout the earth caused by the saints and prophets who do not live and move for any particular community or narrow sect. From this viewpoint a religious book emerges into greater prominence than is given to it at first—it becomes a book of universal importance and we are again and again reminded of the saying : *ekam sat vipra vahudha vadanti* (The One is, the Brahmins speak of Him as many).

Shrijut Kumarappa's book has done the same service for Christianity. He has thought aloud on the lessons of the life of Jesus and his pronouncements, the supremely valuable guidance he has given to men at crises of life. These valued observations and comments in the light of modern ideas and today's needs deserve widespread publicity—and they come very pat on the hour. The liberal and revolutionary teaching of Jesus., standing against all exclusiveness and racial arrogance, will benefit the world in its present condition.

Shrijut Kumarappa's preface, recalling his mother's way of treating her sons (the book is dedicated to her in reverent memory), is touching. It has an independent interest, and so has Gandhi's foreword, revealing a glimpse of his life in South Africa.

The book is printed on handmade paper ; a printing error on the very first page and in Gandhiji's foreword was not expected of the Navajivan Press.

P. R. SEN

THE LATEST FAD (Basic Education) : *By Acharya J. B. Kripalani. With an autographic Foreword by Mahatma Gandhi. Vora & Co., Publishers Ltd..3*

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri

Digitized by Arya Samaj Foundation Chennai and eGangotri

Round Building, Kalbadevi Road, Bombay 2. Second Edition. January, 1946. Pp. 107. Price Re. 1-8.

Mahatma Gandhi is the most dynamic personality in India today. He occupies a unique position in the domain of Indian politics for his neo-ideology and methodology in the struggle for India's freedom. His life has been dedicated to the cause of political liberation of the country and regeneration of the people achieved through non-violent means. True to his spirit Gandhiji has evolved a comprehensive programme of fight and constructive work for the guidance of the individual and the nation. As the author writes: 'Beginning with truth and non-violence in political life Gandhiji has evolved his scheme of *charka* and *khadi*, removal of untouchability, Hindu-Muslim unity, emancipation of women, . . . the revival and introduction of new village industries.' From these he has proceeded on to his new scheme of education. Education has come last. And hence in a lighter vein it has been styled by Acharya Kripalini the *Latest Fad* of Mahatmaji. But contrary to suggestions that the title of the book is likely to inspire in the minds of unwary readers, the learned author is serious about his job and has brought into play his wealth of scholarship and inimitably racy style in vindication of the *fad* of the 'old man at Segaon.'

The novel aspects of the scheme are emphasis on craft and manual work and financial self-sufficiency of Basic schools. The scheme upholds that all education should be woven round a craft and that the produce of the craft should be economically remunerative so as to meet the teachers' salary. With ample reference to educational reformers from Rousseau down to John Dewey the author has shown that the first idea, *i.e.*, learning through activity is psychologically sound. As for the second idea, it adds zest to the whole working of the Basic School and points to a solution of the big problem of finance in organising universal national education for the whole of India.

The preface to the second edition is of particular interest as herein have been culled, in fragments, the results of experiments with this scheme carried on in some Indian provinces and States. Facts and figures assessed and complimentary observations made on their basis by educationists have added weight to the arguments of the author. For an ounce of experimental truth is worth a ton of hopeful theory.

In the last and longest chapter the writer has elaborately discussed the place of Basic Education in Gandhiji's philosophy. The expositions are brilliant, cogent and logical. According to the author, Basic Education is in complete consonance with Mahatmaji's aims, ideals and life-mission: it is a part and parcel of his constructive programme as an organic whole, nay it is the 'coping stone of Gandhiji's socio-political edifice.'

The publishers have done a distinct service to the country by bringing out the book at a time when post-war educational reconstruction is in the offing and clarifications of Gandhiji's ideas on national education are so greatly needed.

NARAYAN CHANDRA CHANDA

THE RELIGION WE NEED: *S. Radhakrishnan. Published by Benares Hindu University. Pp. 25. Price eight annas.*

This is just the sort of a book that was called for by the need of the hour. By disproving some of the dogmas that had passed for religion, science has undoubtedly reduced the hold of traditional religion on the minds of the people. "It has become a sign of good breeding to avow disbelief in traditional religion."

Some have tried, while admitting that God is a fiction, to defend religion on the ground of its utility. 'We can *use* God though we cannot know him' is their view. But as the learned professor rightly observes, "We can not believe a thing simply because we wish to. We can not worship what we know to be a mental fiction." Nor is it possible, as the Fundamentalists would have us do, to turn our back on all advancements in the sphere of science and stick to our old beliefs blindly for the sake of enjoying religious bliss.

None of these ways of escape is however necessary. The scientific temper will help rather than hinder the understanding of true religion. The author's belief that "the growing dissatisfaction with established religion is the prelude to the rise of a truer, more spiritual, and more universal religion" will be shared by all thinking men. The transformation we have witnessed in the lives of some of the modern intellectuals like Aldous Huxley points to the same conclusion. Scientific quest about all that happens in this universe brings us at last to a point where science fails to throw further light. Almost all who have reflected on the implications of evolution agree that there is a mysterious reality at the back of it all. It is the desire to come into contact with it that is at the root of all religions—from lowest fetishism to the highest absolutism. In the concluding portion of the booklet Dr. Radhakrishnan analyses the nature of the true religious life and shows how, unless self-perfection, which is the aim of religion, takes hold of society as a whole, the world is not safe for civilization and humanity. This is a fitting reply to those who would relegate religion to the position of a private affair between man and his Creator. "The world is in dreadful need of these heroic spirits (religious souls) who have the courage of their vision of human oneness to assume new leadership."

What with the richness of its contents, what with the clarity of its statement the booklet is bound to make a great appeal to our young men who share the anti-religious feeling of the age.

P. B. SANYAL

THE SYRIAN CHURCH OF MALABAR: *By Rev. Fr. I. Daniel (Cheppad, Harippad, Travancore). Published by the Diocesan Press, Madras. 1945. Price Re. 1.*

In this book, the author, a priest in Holy Orders of the Orthodox Syrian Church of Malabar, has given in a condensed form the principal facts relating to the growth and development of the Syrian Church from its foundation to the present day. He traces its origin from St. Thomas (52 A.D.), and characterises the traditions and legends relating to the Apostle as genuine. He also quotes historical evidence from the writings of early European travellers to the East, like Cosmos Indicopluestes (547-60 A.D.), Marco Polo (1288 A.D.) and others, who have made reference to the existence of Christians on the Malabar coast in the early centuries of the Christian era. He has thus endeavoured to prove an apostolic origin to this ancient church in South India.

The Syrian Christians are, at present, split up into various sects, such as, Chaldeans, Nestorians, Orthodox and Reformed Syrians, besides there are also numerous Roman Catholics and a good number of Protestants. The author has enumerated the schisms that took place in the church resulting in secession from the parent body, as well as in the formation of minor sects distinct from the Syrian Church. To one who is familiar with the various forms of Oriental Christianity, a romantic glamour surrounds these forms, and he would therefore be pre-disposed to peruse the book of Fr. Daniel with great expectations; if he did so, his pleasurable anticipations would, indeed, be well fulfilled.

An easy readable book, of good typographical execution, it ought to be welcomed by all interested in the history of the Indian Church. Rev. Fr. Daniel de-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

serves congratulations for this short history of his church so well presented.

P. O. MATTHAI

A STUDY OF MUSLIM INSCRIPTIONS : *By V. S. Bendrey. 8¼ × 6¼. Karnatak Publishing House, Bombay 2, 1944. Pp. 197, (exclusive of foreword and preface). Price Rs. 7.*

It is a useful work that V. S. Bendrey has done by sorting out, summarising and arranging chronologically the inscriptions published in the Epigraphia Indo-Moslemica (1907-1938). It is divided into two parts, of which the utility of the second part, (being the summary of the inscriptions) would hardly be questioned by anybody but whether the first portion containing the author's whimsical and rambling discussion on sundry points connected with the study of inscriptions, *e.g.*, location, dates and dating, transcriptions and transliteration, names and titles, translation, kinds and nature, application of evidence, would be of guidance and use to the reader, is doubtful.

From the notice of works mentioned under the author's name at the end of the book, it is evident that the author's study ranges over a very wide field from *Raja Ram Charitam* to *Dandanitiprakaranam*, shorthand and stenography. This diversity of interests and sweep across various fields of study probably account for the lack of coherence, clarity and precision of language in his windy introduction which covers 92 pages. There is no need to say anything about the author's quaint idiom and style after the remarks made in *J.R.A.S.* of 1945, but suggestion to cut down the first portion and recast it thoroughly in the second edition with the help of scholars like Mr. P. K. Gode mentioned in the preface is gratuitously offered.

N. B. ROY

EVOLUTION OF PROPERTY : *By Paul Lafargue. Published by Sreekali Prakasalaya, 14-B Sankar Ghosh Lane, Calcutta. Price Rs. 2-4.*

This is an Indian reprint of Lafargue's famous work on private property. In it, Lafargue shows how property actually arose from a state of primitive communism, how its forms have gradually changed from ownership of chattels to feudalism, from feudalism to capitalism, which has destroyed the crude and simple communism of the early times. Lafargue argues that in spite of this apparent victory of capitalism over communism, the former contains in itself the germ of the latter and the inevitable tendency is towards an international communism. He asserts that communism exists in a latent form in the bourgeois society and that unforeseen circumstances will cause it burst forth for re-instatement as the inevitable form of the future society. The book is one of the classics of the socialist literature of the world. The publishers deserve thanks for bringing out an Indian edition of this valuable work on social science.

D. BURMAN

LIFE OF W. C. BONNERJEE : *By Miss Sadhana Bonnerjee, 66, Lansdowne Road, Calcutta.*

The life of W. C. Bonnerjee, first President of the Indian National Congress is of special interest to every Indian. Miss Bonnerjee, a grand-daughter of the first President, has done a service by bringing out a handy volume on the occasion of the first birthday centenary celebration of this great man. W. C. Bonnerjee was born in the year 1844 and died in 1906 in London where he settled after having retired from practice at the Calcutta High Court. Mr. Bonnerjee sacrificed a good deal of his time and money for the cause of the Indian National Congress at its earliest stage. As a lawyer, he occupied a place in the Bar, which no one before him had occupied. He was the first representative of the Calcutta University at the Legislative Council (1894-95). In the words of Gokhale, "In a self-governing country, he would, without doubt, have attained the position of Prime Minister." He presided over the Indian National Congress twice—in 1885 and 1892—and thus received the highest honours from his countrymen. Dr. Kalidas Nag has written a preface to the book.

A. B. DUTTA

BENGALI

RAY RAMANANDER BHANITA-YUKTA PADAVALI : *Edited by Mr. Priyaranjan Sen, Lecturer, Calcutta University. To be had of Messrs. Sen, Ray & Co., 15, College Square, Calcutta. 1352 B.S. Pp. 26 + 66. Price Rs. 2.*

Ray Ramananda is a famous name in Bengali Vaishnava literature. He was a minister of State of Prataparudra Gajapati of Orissa. He had become an intimate companion and devoted follower of Chaitanya in his later days. Ramananda was a good scholar and critic of music and dramatic art. He was the author of a Sanskrit drama ; a Brajabuli poem by him is quoted in Krishnadas Kaviraja's biography of Chaitanya. The poems published by Mr. Sen narrate Krishna's daily activity in Vraja. The story narrated closely follows the *Govindalilamrita* of Krishnadas Kaviraj. It is quite true that such *Dandatmika Lila* was known before Krishnadas. Still it cannot be gainsaid that some poems at least definitely presuppose Kaviraja's work (*e.g.*, vide, p. 11). Mr. Sen in his learned Introduction has attempted to show that there is nothing in the poems that precludes the authorship of Ramananda Ray. But somehow the tone and the style is not old enough. The poems are written in Bengali and show quite a number of Oriya forms and inflections. They were written by an Oriya who knew Bengali thoroughly well or by a Bengali from Bengal-Orissa border. For aught we know Ramananda Ray was a Bengali. We know that two of his grand-nephews, Nityananda and Manohara, had settled in Radha when they had lost their lands in Orissa. It may be presumed that Ramananda's father Bhavananda originally hailed from Bengal.

The Sahajiyas or esoteric Vaisnavas utilized the name of Ray Ramananda in furtherance of their creed, as they did with the names of Vidyapati and Chandidas. I have in my possession a small Sahajiya tract bearing the name of Ramananda Ray as the author.

Mr. Sen has done good services to the medieval Vaisnava literature by editing and publishing this interesting little volume. The glossary of selected words appended at the end will be helpful in understanding the text.

SUKUMAR SEN

RAJNARAYAN BOSE : *By Jogesh Chandra Bagal. Sahitya-Sadhak-Charitamala 49. Published by Ramkamal Sinha, Bangiya Sahitya Parishat, 243/1, Upper Circular Road, Calcutta. Pages, crown 16 mo. 1—112. Price twelve annas.*

Rajnarayan Bose was a great son of Bengal. He was a man of ideas and ceaseless activities. His contributions to the life and culture of Bengal in the nineteenth century were manifold and important, though not widely known and remembered. He was one of the pioneers who tried to infuse among the people of the country a spirit of nationalism in every sphere of life. Mr. Bagal who was made a special study of Bengali life of this period has given an interesting and valuable account of the work done by Mr. Bose in different fields, educational, literary, social and religious.

HINDI

JEEVAN KE TATTWA AUR KAVYA KE SIDDHANTA : *By Lakshminarayan Sudhanshu. Yugantara Sahitya Mandir, Bhagalpur City. Pp. 337. Price Rs. 3.*

Life is poetry. But, is poetry also life? The author of the book, under review, has attempted an answer to this poser. It is an intriguing analysis of what is, more or less, not amenable usually to any analysis; namely, the source and spirit of poetry, or, for the matter of that, of all art. In ten chapters he has lifted the veil over this great mystery and explained critically and comprehensively as far as possible the several stages, interesting between the artist's experience or intuition of the pith of the penorama or poetry of life and its being clothed into such a style of expression as conveys delight to oneself as well as to others and through the window of that delight lets in the light of truth. The last chapter is an interpretation of the spirit and style of the poetry of some of the leading modern Hindi poets. The author has achieved, indeed, a difficult task in a praiseworthy manner. His book has filled up a great and gaping void in critical literature in Hindi.

G. M.

RASHTRABHASHA KI SAMASYA AUR HINDUSTANI ANDOLAN : *By Ravishankar Shukla. Published by Ganga Granthagar, Lucknow. Pp. 248 + 45. Price Rs. 2-8.*

The growing vehemence of the demand *Quit India* in India's political field is being synchronised with a similar cry of 'Quit English' in the field of languages. Most of us are one that English should be replaced as a common or inter-provincial language by a language of our own. But few agree as to what should be the nature and form of *our* language, the *Lingua-Indica*. Till recently Hindi has enjoyed the unique privilege of being called and propagated as *Rashtrabhasha*. Its claim to this position has been indisputable looking at the vast tracts of the country in which it has been read, written and spoken. The number of people speaking Hindi or some form of it has been the greatest in comparison to any other single language-group. But since the inception of the appeasement policy of the Congress under the guidance and inspiration of Mahatma Gandhi, a move has been afoot to give concessions to the Muslims even in the field of language. But Gandhiji's advocacy of Hindustani, which is the direct result of this tendency, has gone a long way to confuse matters rather than simplify them. The type of Hindustani he advocates and presses for adoption as *Lingua-Indica* is not accepted by the Hindi-writers nor by those of the Urdu.

The book under review exhaustively surveys the whole field of the language question and suitably supports the cause and case of Hindi. But where the advocacy of Hindi has been a little more anxious than scientific, the criticism of Hindustani and its supporters has been somewhat overdone. Yet the book contains a lot of information for the general reader.

M. S. Sengar

MARATHI

AMCHEEN AKRA VARSHEN : *By Leela Patwardhan. Published by Y. G. Joshi, Poona 2. Price Rs. 4.*

The name of 'Madhav Julian' otherwise known as Prof. M. T. Patwardhan is one to conjure with in the world of modern Marathi letters. He was a poet of rare merit as also a literary critic. His wife, Mrs. Leela Patwardhan, has described his domestic life with quite intimate, humourous touches in this book covering their married life of eleven years. It makes quite absorbing reading for all who are acquainted with the late poet-critic's literary and intellectual achievements. Some of his idiosyncracies and eccentricities also make amusing reading, because in a man of his calibre the reader is in a tolerant frame of mind.

PALAKANSATHI (four booklets) : *By Mrs. Tarabai Modak, M.L.A. Published by Padma Publications, Pherozeshah Mehta Road, Bombay. Prices ten annas, twelve annas, Re. 1-8 and Re. 1-4.*

In these four booklets an experienced woman teacher of Maharashtra has packed practical instructions for the edification of parents and guardians. Replies to questions like why children are quite often obdurate, why they become turbulent, how even they have pride and self-respect are sympathetically given with the skill of an experienced psychologist and psychiatrist.

T. V. Parvate

KANNADA

GALGANATH : *A critical estimate of the late Venkatash Tirako Kulkarni Galganath, pioneer novelist of Karnataka. Published by Karnataka Vidya Vardhak Sangha, Dharwar. Pp. 3+59+13. Price Re. 1-8.*

This is a collection of four essays written on the occasion of a symposium arranged under the auspices of Samyukta Karnataka Sangha of Bombay on 22nd April 1945. Prof. Jagirdar's preface has added to the utility of the book in that it gives a lucid exposition of Galganath's contribution to the development of Kannada. At a time when Kannadigas were oblivious of their great literary and cultural heritage Mr. Galganath appeared on the horizon and by his steadfast devotion to the muse for over three decades inspired people with a love for their language and literature. Since then his method of winning public approbation for his literary output has become a matter of envy for the reputed writers of today. The four critical essays in this book bring out the salient features of Galganath's greatness as a man of letters. Mr. V. M. Inamdar has tried to probe into the background of environmental impulses that influenced and moulded the pattern of his writings. Mr. Neglur has attempted the analysis of his greatness as a writer and an individual and has ended it by saying that Galganath lived a life of dedication to the Kannada muse and self-culture. That the writings of Galganath bear the indelible imprint of indigenous Kannada life and culture is the critical verdict of Mr. Kallur. His works reveal his noble personality is the estimate given by Mr. Patil. The book like its hero appears to be small in size but is indeed great in its influence over the outlook of posterity in understanding the past. The essays are attuned to the intellectual capacity and taste of modern students of Kannada literature and are worth a perusal. The price appears to be rather disproportionately high looking to the size and utility of the book. The style of the essays is easy and limpid.

V. B. Naik

GUJARATI

GHAR NI AG : *By Ramanik A. Mehta. Published by the Gujarati Printing Press, Bombay. 1944. Cloth bound. Pp. 207. Price Rs. 3-12.*

Ever since 1886 the weekly *Gujarati* has been presenting its readers every year with a historical novel. This is the sixty-first. Its writer is familiar with the aspects of Indian history and he has chosen for his subject, the political condition of Rajputana from about 1786-87 A.D. The distrust that prevailed amongst Hindu Rulers themselves is portrayed here and it was this internecine state of affairs that led to India's downfall. has been made clear by means of excerpts from various historical works. The close and wide study of the writer is shown by the Bibliography and extracts taken from documents bearing on the subject. How the Marathas and specially the Brahmin officers of the Peshwas robbed and looted their own Hindu brethren and their religious places, need not be related but the burden of the song sung by the author is their behaviour. It is a graphic picture.

THE MIRACLE MAN WITH UNRIVALLED POWER

India's Greatest Astrologer & Tantrik-Yogi

RAJ JYOTISHI, JYOTISH-SHIROMANI PANDIT RAMESH CHANDRA BHATTACHARYYA, JYOTISHARNAV, M.R.A.S. (London) of International fame, President—World-Renowned All-India Astrological & Astronomical Society. (ESTD. 1907 A.D.)

He is the only Astrologer in India who first predicted the Allies Victory in the present world war on 3rd. Sept., 1939 within 4 hours the very day of the declaration of war which was duly communicated to and acknowledged by the Secretary of State for India, the Viceroy and the Governor of Bengal and who is also the consulting Astrologer of the **Eighteen Ruling Chiefs of India.**

It is well-known that the Astrological predictions of this great scholar, his wonderful methods of redressing the pernicious influence of evil stars, his power to bring success in complicated law-suits and also to cure incurable diseases are really uncommon.

Many Ruling Chiefs of India, High Court Judges, Commissioners of Divisions, Advocate-Generals, Nawabs, Rajas, Maharajas, etc,, and also many reputed personalities of the world (of **England, America, Australia, Africa, China, Japan,** etc.) have given many unsolicited testimonials of the great Pandit's wonderful powers.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji. He is a great Tantrik." **Her Highness The Dowager 6th Maharani Saheba of Tripura State** says :—"I am feeling wonder at the marvellous Tantrik work and excellent efficacy of his Kavachas. He is no doubt a great personage with miraculous power. **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt.,** says :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son."...**The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt., says** :—On seeing my son, his prophecy about my future is true to words. He is really a great Astrologer with extraordinary power." **The Honourable Justice Mr. B. K. Roy of Patna High Court** says :—"At a glance on me, he began to disclose my mental thoughts and he predicted marvellously many things. He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot** says :—"The wonderful power of calculation and Tantrik activities of Panditji on several occasions have struck me with greatest astonishment. Really he is unique in his line." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court,** says :—"Panditji has bestowed the life of my dead son. I have never seen in my life such a great Tantrik-Yogi." **Mr. J. A. Lawrence, Osaka, Japan,** writes :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2724, Popular Ave., Chicago, Illinois, U. S. America** :—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mrs. F. W. Gillespie, Detroit, Mich., U. S. America** :—"I am wearing your special Dhanada Talisman and so far my luck has been with me a great deal better than in the past." **Mr. K. Ruchpaul, Shanghai, China** :—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Eita, Govt. Clerk & Interpreter in Deschang, West Africa** :—"I had orderd some Talismans from you that had rendered me wonderful service." **Mr. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon** :—"I got marvellous effects from your Kavachas. I have had transactions with you almost every year for the last 20 years for about Rupees three thousand." Etc., etc. and many others.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. It will give even a beggar the wealth of a king (as written in Tantra). **Price Rs. 7-10.** Special and capable of giving immediate effects **Rs. 29-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special and capable of giving immediate effects **Rs. 34-2. (The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha).**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-8.** Special **Rs. 34-2.**

ALL-INDIA ASTROLOGICAL & ASTRONOMICAL SOCIETY (Regd.)

(The Biggest, Most Reliable and Oldest Astrological Society in India and the Far East).

Head Office:—105 (M.R.), Grey Street, "Basanta Nivas" (Sri Sri Nabagraha & Kali Temple) Calcutta.

INDIAN PERIODICALS

Need for Development of University Schools of Geography in India

Geography, as its name indicates, is the scientific study of the Earth and its inhabitants which should include not only men but animals and plants. *Science and Culture* observes :

It is this science that synthesizes the findings of other allied sciences like geology (structure of the Earth's crust), pedology (science of soil) and hydrology (study of water) to provide us with a clear picture of our present and potential resources of all kinds and also tells us how best the country's resources could be utilized and conserved in the national interest. India is on the threshold of revolutionary changes, and in order to build up a new India, a prosperous India, it is essential to have a clear picture of the elements which form the different geographic environments in different parts of the country.

The concept of regionalism is a distinct contribution of geographers. For example, the block of land surface which covers Bengal, Bihar, Orissa, and Assam, with its rich deposits of coal and metallic minerals, possesses a distinct regional personality, and hence its economic development should be planned conjointly in spite of artificial division into provinces. In India, we have through ages, and even in modern times, failed to realize the importance of regionalism in our national life with the result that the growing ideas of Indian nationhood show signs of early disruption due to the cancerous growth of feelings of provincialism and communalism. If this is allowed to grow in free India, our national progress will be crippled. This is the time to have a clear blue-print drawn up on scientific lines for a territorial re-grouping of India for administrative convenience, based on the regional concept.

In any plan of economic regeneration, geographers have distinct role to play. Geographers can help to visualize the extent and distribution of different classes of land available for different uses and can trace out the causes of low yield per acre in respect of most of our cultivated crops. For want of a proper geographical knowledge, some 70,000 square miles of arable land (nearly forty-five million acres) still remain to be brought under the plough in India. In a country like India where over 70 per cent of the population get their living from agriculture, these are vital problems.

Geographers will also be useful in drawing up plans for the rational location of industries, for the purpose of achieving maximum efficiency at a minimum social cost.

And until that is done it will be very difficult to transform India from a backward agrarian country to an important industrial country. Rivers of India blessed with abundant rainfall during the monsoon season and considerable breaks in the *thalwegs* ought to have been harnessed not only for storing water for irrigation, but also for navigation, flood prevention, and for generating cheap power both for cottage industries and large-scale industrial establishments. Very little has been done so far on these lines, and we have even failed to collect sufficient basic hydrological data relating to the topographic characteristics, and maximum, minimum and average discharge of our rivers, a knowledge of which is the *sine qua non* of any scientific planning.

We are also losing some of our mineral resources like manganese, illmenite at such an alarming rate that when the time will come to utilize them in national interest we may find ourselves completely bereft of our rich heritage. It is for the geographer to focus the attention of the general public to this ruthless exploitation of some of our exhaustible but irreplaceable national resources like coal which not only makes us poorer as time passes on, but also has a devastating effect on agricultural operations by giving rise to soil erosion and overburdening the drainage channels with sands and gravels.

The transport system of India also needs a thorough overhauling from the geographic point of view. In Bengal alone, thousands of miles of trunk roads which once connected all the historic towns and trade centres are today in disrepair; many a river like the Damodar and the Ajay in West Bengal or the rivers in Central Bengal, which used to carry merchandise in the past, have become unnavigable today. On the other hand, the railway system which was developed at the expense of roads and waterways hardly serves even one-third of the populated areas in most of the provinces and States, and the railway embankments in a low-lying province like Bengal have unnecessarily interfered with the natural drainage channels, causing untold sufferings to the millions who live in villages In fact, the rivers of Bengal and people of rural Bengal were sacrificed in the atar of capitalistic Mammon which brought the railways to existence, and though the Mammon has given way to State-ownership, the evil remains.

In social and political spheres we also need the help of the geographer.

In the social field, geographers have a special part to play in effecting a balance between urban and rural aspects of our national life. In the political field the geographer's job is to bring about a consciousness among the people of India about the ideal geographic position of the country in relation to the countries and seas bordering it. A specialized geo-political study on the German or American lines can reveal strength and weakness of the Indian State in relation to world powers, enabling our political leaders to plan beforehand.

India's Unity in Diversity

In every aspect, Indian national life has been, through the ages, a synthesis and an integration of different parts into a single whole. V. R. Ramachandra Dikshitar writes in *The New Review* :

India is a sub-continent of different races, tribes and peoples. She is a land of different religions and philosophies, different languages and dialects. She is also a land of varying climates and temperatures. But with all this diversity, there is an underlying unity in her. This unity is something wonderful, arresting, continuous and thought-provoking. This unity is a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fundamental one, a puzzle to the foreigner and a paradox to the superficial observer.

Let us first take up the geographical aspect of India.

India is a vast country stretching nearly 2,000 miles either from the north to south or from the east to the west. In spite of these huge distances, she has through the ages continued to be, a geographical unit. Encircled by impassable barriers of mountains on the North, Northwest and Northeast, and surrounded by the sea on other sides, she is a geographical unit. The Common talk of the people was to regard India as one indivisible whole by the expression *a-setu himacalam* meaning from Cape Comorin to the Himalayas. It has been well known in Hindu literature as Bharatavarsha and Bharatakhanda. Even today in the Hindu *sankalpas* which are preliminary to our rituals of various kinds, we describe a geography of India, beginning with Bharatavarsha and Bharatakhanda.

In addition to these, the mountain systems, the river systems, and the position of towns and cities went to give a finish to the geographical unity which was already there in relief. The Hindus speak of important hill-ranges as Kulaparvatas. The Himalayas, the Vindhyas, the Malaya Hills among others were great mountains to which the whole nation paid reverential homage.

Besides the great hills, the majestic rivers of India have their tale to tell in rousing a national conception of the whole motherland. The Vedic Indian burst into patriotic fervour when he sent forth his prayer to the rivers of India of which he had a knowledge. In the post-Vedic period it was the common prayer of the Hindu bather, whether of the south or north, wherever he bathed whether in a river, a tank or well to invoke the great rivers of India to be present at the bathing place so as to attain purity physical and mental. The well-known verse invoked is

Gange ca Jamune caiva Godavari Saraswati
Narmade Sindhu Kaveri Jalesmin Sannidhin Kuru.

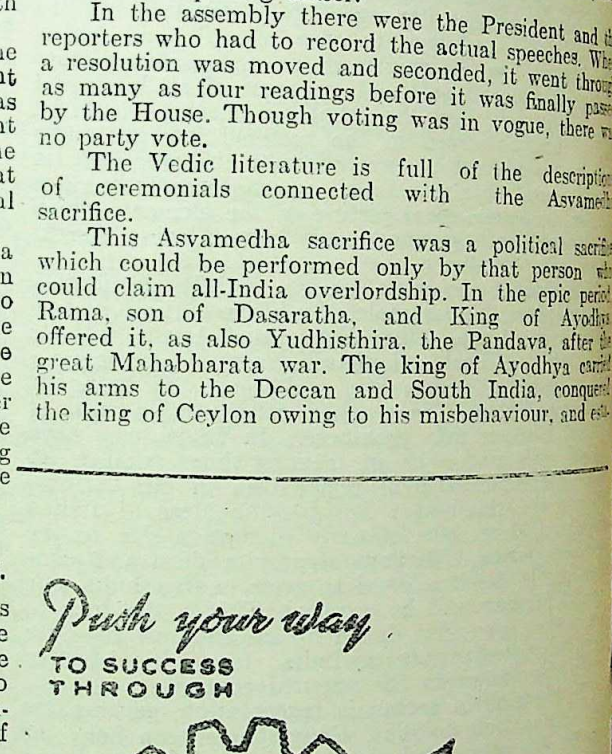
The southerner wanted very much to go to Benares and have a dip in the sacred Ganges or the still more sacred confluence of the Ganges and the Jumna. In the same way a religious spirit pervaded the northerner to visit Ramesvaram and Kanyakumari in the southernmost part of India. The Kaveri was the noblest of rivers.

A critical study of India's history bears full evidence to the fact that India was not only a good geographical but also a political entity.

India realised a democratic form of government from the very earliest times.

That the Vedic king was no arbitrary ruler is proved by numerous facts—his election to the throne by the people, the oath at his succession to the throne and the advice and guidance he received from the Samiti, the popular assembly. The Sabha which is said to be a sister of the Samiti was another popular assembly which had judicial and other functions to perform. It is said that the Vedic king went to the Samiti and Sabha for consultation and deliberation. It may be noted in passing that these two assemblies were presided over by a President, a man of unique ability and character. Possibly he was a non-official president.

The same state of affairs continued in an advanced state in the epic age. The Sabha and other popular assemblies continued. The political institutions had much developed and we hear of a cabinet in which the major communities were represented.



In that age there was also a new departure in the political evolution. This was the republican form of government inaugurated and worked with signal success.

Fortunately for us the Buddhist books have preserved the detailed working of the different republics in ancient India. Among them the Licchavi republic seems to have been very ancient and this constitution appealed to the Buddha so much that he introduced that organisation in his religious Sangha and at the same time encouraged these political republics, laying stress on full assemblies to be convoked frequently and to vote nothing that went against the established usages and conventions. Most interesting in this connection is the procedure. Each assembly had its hall and voting was secretly done on pieces of wood, and there was a polling officer.

In the assembly there were the President and the reporters who had to record the actual speeches. When a resolution was moved and seconded, it went through as many as four readings before it was finally passed by the House. Though voting was in vogue, there was no party vote.

The Vedic literature is full of the descriptions of ceremonials connected with the Asvamedha sacrifice.

This Asvamedha sacrifice was a political sacrifice which could be performed only by that person who could claim all-India overlordship. In the epic period Rama, son of Dasaratha, and King of Ayodhya offered it, as also Yudhisthira, the Pandava, after the great Mahabharata war. The king of Ayodhya carried his arms to the Deccan and South India, conquered the king of Ceylon owing to his misbehaviour, and esta-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

blished his overlordship from the Himalayas to Ceylon. This was also the case with Yudhisthira after the victory in the war at Kurukshetra. The political unification of all India was an accomplished fact in the time of the Epics, the Ramayana and the Mahabharata.

The monarchy as a form of government gained strength. It became a constitutional monarchy where the king should rule the land as a father would behave towards his children; he was *Chakravarti*, meaning an emperor. He was guided by checks, like the *paura* or citizen assembly and the *janapada* or the assembly representing the interests of rural parts. Hence the whole of India was politically known by the technical term *Chakravartikshetram*, as is definitely seen in the Kautilya Arthasastra. This was the idea underlying the very significant passage in the Ramayana put into the mouth of Rama speaking to Vali : *Iksavakunam ayam bhumi sa-saila-vana-kanana.*

Thus Rama claims an all-India overlordship and justifies thereby his punishing all with death. It includes the whole of India with its mountains, forests and plains. In the passage in the Arthasastra (9th Ch.) the term is *Tiryakcakravartiksetram* or the country that stretches between the Himalayas and the Ocean. This is India proper, *tiryak* apparently denotes east to west.

The concept of an all-India empire and consequently the political unity of India is envisaged by the Arthasastra.

In the historical period the first all-India empire was under the Nandas, then were the empires of the Mauryas, the Sungas, and the Guptas. Chandragupta Maurya, Asoka, Pusyamitra, Samudragupta were all imperial kings. Some of them performed *Asvamedha* sacrifice.

The Guptas were historically speaking the last imperial sovereigns of Hindu India. The latter kings attempted to perform the horse sacrifice and to wield high-sounding titles, but their sovereignty was limited to smaller areas, and no longer was India a political unit until we come to the great Mughal emperor, Akbar, and his immediate successors.

Even the hardest of critics has to admit the cultural unity underlying India's vast and varied history spreading over millenniums.

To start with, unity of culture is to a great extent based on language. There was in India one sacred language, and one sacred literature. This language was Sanskrit or Sanskrit, and the literature was the Vedas. All India paid homage to this language and this literature and zealously preserved them through the ages, carrying them literally by oral tradition from the master to the pupil. Thus the Sanskrit language and the Vedic literature led to a common mode of thinking and the growth and development of common ideas and common ideals.

Thus the unity of India, as has been already said, has its origins in ancient Hindu culture. People may speak different dialects but they attach a national significance to Sanskrit as the sacred language and attach divinity to the huge mass of Vedic literature. Hindu life is regulated by the injunctions laid down in this literature.

The singleness of the mother country was stressed by the distribution of rivers, mountains and sacred places of pilgrimage. The distribution of these centres was arranged in such a way that one's purpose in life was not complete if one had not visited them, worshipped at their shrines and bathed in their river ghats. Religion proved the surest way to the goal of national unity. The pilgrim felt that to whatever place he went, it was truly his home.

In this land, centuries back was sung the soul-stirring line :

Janani Janmabhumisca Svargadapi Gariyasi
(Mother and motherland are greater than heaven).

The conception that society is an organism in which the various functional groups are the limbs was well realised in ancient India. One group actually supports and supplements the other groups and by so doing helps all the groups to visualize a fundamental unity within diversity. The society was built then on a religious foundation of mutual aid, mutual understanding and mutual advantage. If men had not lived as brothers and if men of higher castes had always treated the lower castes with inhumanity and cruelty as is being pictured today, civil wars would have overtaken this vast land and left black pages in her history. The absence of these shows that peace and contentment and the consequent prosperity generally reigned in the land.

Whether religion instilled patriotism into Indian minds or patriotism got itself refined into religion, the fact is that both operated in such a way as to bring about one mode of thought and one form of life among the masses.

There were other factors of equal importance which brought together the diverse communities for common purposes stimulated by common ideals. There were the national festivals, national forms of entertainment as reflected in the music and dancing.

Again music and dancing had their religious touch apart from the secular. It is the divine music of Lord Krishna that enchanted the then Indian world with beaming love, while the eternal dance of Siva as Nataraja sent a thrill from the Himalayan Kailasa to South Indian Chidambaram, filling one and all with fervent devotion.

This takes us to examine another aspect of Indian civilisation, the marvel and glory of India's heritage, *viz.*, architecture and sculpture. The majority of classical ruins are concerned with carving in stone the incidents of the Ramayana and the Mahabharata, besides the legends transmitted in the Puranas. One finds on the different panels of the huge temples, on their walls and gopurams, the national heroes and their heroic deeds sculptured. The mute monuments of India bear witness to the solidarity of an Indian nation. Royal craftsmen of Magadha and the master craftsmen of all India joined together in erecting huge edifices scattered from Cape Comorin to the Himalayas. Our builders did not lose their individuality as a nation, even when they left for alien countries in search of territory and settlement for purposes of trade.

One can confidently ask whether we could have flourishing centuries of unbroken art-tradition in this

land if we had had century-long struggles between one community and another or between the north and the south, if we had not lived by common consent, and if we had no political unity.

Thwarting Nature

Vaikuntha L. Mehta writes in *Gram Udyog Patrika* :

At the last meeting of the Governing Body of the Imperial Council of Agricultural Research approval seems to have been accorded to schemes for the introduction of power farming and for an extension of the use of tractors for purposes of cultivation. Provincial Governments have been advised to purchase and own tractors for being leased to cultivators. Before any such step is taken it is to be hoped that these Governments will examine the economics of tractor cultivation in general and for its suitability to Indian conditions in particular. When they do so they may well ponder over the observations contained in Sir Albert Howard's *An Agricultural Testament*, the fourth impression of which has been published lately. According to him, it is doubtful in the first place, whether ordinarily the turning over of the soil of the type which tractor ploughing involves is helpful to the soil in preserving its fertility. The urine and the dung that the plough animals yield are invaluable constituents of the farmyard manure which, more than any other single factor, is essential for keeping the fertility of the soil. Besides, as he puts it, if we speed up growth we must accelerate decay.

In recent discussions on agricultural improvement, the experts, official and non-official, set much store by the use of chemical fertilizers. Sir Albert Howard's thesis is that the application of artificial aids to production impairs the fertility of the soil, which can be retained only by ensuring conditions in which humus flourishes. Nature has ordained that the soil must live and the mycorrhizal association must be an essential link in plant nutrition.

Renewal of humus in the soil is ensured by the adoption of methods of cultivation such as those in vogue in China and India which supply to the soil the dung and the urine of plough cattle and enable large quantities of farmyard manure to be collected without much trouble and cost.

With the spread of artificials and the exhaustion of the original supplies of humus carried by every fertile soil, there has been a corresponding increase in the diseases of the crops and of the animals which feed on them.

Equally emphatic is Sir Albert Howard in his condemnation of the artificial methods employed lately in processing and preserving foods and fruits. The Food Department of the Central Government seems to contemplate the encouragement by the State of industries for food processing and the preservation of fruits and vegetables. By dehydration, canning, and resort to similar methods, food may be preserved for a time but none pauses to inquire what the effect of the use of these foods is on the life of the community over a long period. The use of white bread, canned fruit, tinned salmon, dried milk—all sophisticated foods—creates conditions which lead to infant mortality and general debility such as can be countered only by reversion to the right kind of food—natural, fresh, home-grown and hand-processed.

MARXIST-LENINIST BOOKS

SELECTED CORRESPONDENCE OF MARX AND ENGELS :

500 pp. Cloth bound. **Rs. 5**

The character and contributions of two correspondents give this book an extraordinary fascination. They discuss their practical work in the labour movement, comment on current political events, elaborate their REVOLUTIONARY THEORY, and discuss in outline their fundamental books.

A TEST BOOK OF DIALECTICAL MATERIALISM :

By DAVID GUEST. 90 pp. **12 As.**

Written by a brilliant young English philosopher who was killed in Spanish Civil War in 1938, the book deals briefly and lucidly with such aspects of dialectical materialism as the general nature of dialectics, dialectics and society, and the philosophical struggle today. It also includes suggestions for further reading.

FASCISM AND SOCIAL REVOLUTION :

By R. P. DUTT. 390 pp. Nicely bound. **Rs. 4-8**

This is incomparably the best book on Fascism that has yet been written. It is not too much to say that it is the duty of every anti-fascist in the world not only to read but master thoroughly every word of it.

V. I. LENIN :

A BRIEF SKETCH OF HIS LIFE AND ACTIVITIES

Prepared by

Marx-Engels-Lenin Institute, Moscow.

284 pp. Nicely bound. **Rs. 3-8**

This is a text-book of Marxism as put into practice by Lenin and can best be compared with the "Short History of the Communist Party of Soviet Union (Bolshevics)". It will appeal to the academic mind which wants to make a thorough study of Lenin's work. It is a concise, well-documented account of Lenin's life and work as revolutionary leader and man of action, and as thinker and philosopher. It is a piece of research, the work of people who are thoroughly acquainted with the subject, and who are at the source of all information available.

Teachers on Strike

The New Review observes :

Thousands of teachers are on strike, and many more thousands are threatening to join them. The case is symptomatic of post-war maladjustment. Yet the case should not be judged according to the ordinary rules. Usually strikes affect producers of commodities, employers and employees ; here the conflict engages not only teachers and school authorities, but it directly affects the pupils who are like an innocent third party, and who have all the rights of little human persons even when they are not vociferous about their right to schooling. Their right is voiced and protected by their parents. There exists a contract between parents and school authorities, a contract directly related to the pupils ; there is then a second contract between school authorities and teachers. A breach of the second contract directly affects the first, and implies damage to a third party, which complicates all strike or lock-out issues.

In the present strikes, it is difficult to say which is more surprising, the long suffering patience of the teachers or the apathy of parents and their elected representatives. Nothing can tell how low we have fallen more than the miserable pay of many full-time teachers. Rs. 15 a month, to be, in a supreme effort of social sense, raised to a magnanimous Rs. 20 ! And the rise is granted without apology. Have the Government, the municipalities, the school authorities, the parents lost all sense of justice and decency ?

A little arithmetic will go a long way to stir our social conscience, and show how far we have to proceed if we want to give our teachers the minimum family wage which is their right. In India the normal family counts five members among which we may assume one is an infant so that family resources must meet the requirements of four adults. The consumption of rice per head per month easily reaches 20 seers, so that this sole item of food amounts to 80 seers a month. Where are we going to get that amount for Rs. 15 ? The expenditure on other staple food would hardly differ. Now from many studies on family-budgets, it may be taken that the total expenditure for families just above the poverty-line is more than double their expenditure on foodstuffs. In short the minimum just family wage should be made to cover the costs of more than 160 seers of rice.

This method of calculating the minimum wage by doubling the cost of foodstuffs to the employees gives an approximation remaining below what we believe to be the human standard of life and may help us to revise the salaries and wages of all who are in our employ. It should be especially welcome by those who know the Papal Encyclicals by heart but feel shy of attempting to give them an arithmetical application. Our estimate of what real minimum wages should be, approximates the standard put forth by Mr. Frank Anthony during the discussion of the last Railway Budget in the Central Assembly ; he claimed Rs. 60 as the lowest wage on railways and suggested that this would be fair basis for wages all over India. The Railway member countered with the objection that the railways could not afford that amount ; the objection will be repeated all round and is probably valid in many cases. It does not dispense authorities from studying a fair redistribution of the national income on behalf of teachers and others. If the Central Government, for instance, did not need the Excess Profit Tax, could they not have changed it into a Primary Education Tax on behalf of our famished teachers ?

And to the teachers, we can only say : 'Have due regard for the school kids, and mind your own ; do not rest until you reach Rs. 60 a month. Those who can't pay you that much owe you an apology and . . . funeral expenses.'

We have opened a "Clinical Department" under the direct supervision of qualified and experienced physicians and surgeons. All persons suffering from loss of vitality and vigour, premature old age, lack of stamina, married and personal hygiene problems, MENTAL AND NERVOUS DISORDERS (psychoanalytic and suggestive therapeutics under deep hypnosis), OBESITY (planned diet, re-educative exercises, electro vibratory massage and hormone vitamin mineral feeding). ALL CONSTITUTIONAL CHRONIC DISEASES WHICH HAVE DEFIED ALL TREATMENTS, etc., can now secure personal individualised treatment and expert guidance. Latest laboratory equipment to facilitate exact diagnosis available. ELECTRO-THERAPY (diathermy ultra short wave therapy, electro surgery, deep X-ray therapy, actino therapy, ultra violet and infra red radiations, electric ionisation etc., etc.,) with latest, modern apparatuses is a SPECIALITY at our CLINIC. Consultations free. Strictest privacy and confidence guaranteed. Consult in person during 11 a.m. to 2 p.m. and 4 p.m. to 6-30 p.m. on any week day. Saturdays 11 a.m. to 2-30 p.m. If you cannot visit us personally, send the full history of your case in detail, (if possible, ask your family physician to send us a detailed report) and a STAMPED SELF-ADDRESSED ENVELOPE for "diagnosis and suggested treatment" of your case.

Send Rs. 2 (postage 8 as. extra) by Money Order or Postal Order, (or by V.P.P. for Rs. 2-10) for a copy of the latest revised and enlarged 3rd edition of "Health and Vitality by Modern Methods." Contains over 450 pages and 200 illustrations. Everything you want to know about hormones, vitamins rejuvenation, etc., etc., is described in minutest detail in this handbook. Nothing like it ever published before. ASK FOR OUR FREE CIRCULAR DESCRIBING MOST OF OUR OUTSTANDING PRODUCTS.

The Poet Iqbal—Indian

In an article in *The Aryan Path* Gurdial Mallik writes of one of the greatest of India's modern sons whose death anniversary falls on the 21st of April. Iqbal was a lover of his country as well as of the Divine. A poet, a philosopher, an ardent Muslim, Sir Muhammad Iqbal was also an Indian patriot :

Over half a century ago, at Lahore, at a poetic symposium where poets, probationers as well as past-masters, had foregathered to recite their respective compositions, there was enacted a scene which has been preserved in the memory of the public. After the programme had been well-nigh concluded there sprang to his feet a stripling of hardly twenty summers, who had been seated among the audience. And in a voice that was resonant and with a face wreathed in radiance, he burst forth in an Urdu couplet that, rendered into English, would read :

The drops from my tears of repentance were
picked up by divine grace
And regarded as pearls.

All looked up in utter amazement. The eyes of not a few were wet with tears. But one, advanced in age, experience and aspiration, went over to where the young man stood, stroked his head in token of blessing and said to him, "My lad, you *are* a poet in the true Indian tradition."

It is a thousand pities, indeed, that Muhammad Iqbal—for the youth who had startled the audience at the poetic symposium was none other than he—should have had the Indian aspect of his poetic genius and personality placed in the background, for several years past, by quite a larger number of his admirers who have represented him as the parent of Pakistan.

This essay aims at emphasising the Indianness of Iqbal.

An Indian, whether a pedlar of wealth or of wisdom or a poet who wings his way through life on visions, is a person who has, deep down in his consciousness, a strong sense of his oneness with all Life : more concretely, with his fellow-men. He rejects racialism, religiosity and ritual which impede the unfoldment of this oneness in his ideals and activities. And so sings Iqbal :

He who will make distinctions of colour and
blood will perish—
He may be a nomadic Turk or a pedigreed
Arab.

Again, in his song which has come to occupy the honoured place of our national anthem :

We are Indians.
India is our country.
Religion never preaches mutual animosity.

In world-wide fellowship lies the secret of human fulfilment and freedom.

The arch-enemy that stands in the way of the individual's association with or affection for all is his instinct of separateness in the name of self-preservation. It is this which assumes in the aggregate the nature of nationalism. And nationalism gives birth, before long, to a brood of barrier-building creeds like churchianity or untouchability and credoes like the colour-bar, or race-superiority. What is, then, an antidote to this engineered antipathy between man and man ? It is the sovereign solvent of Love :

If you realize it, the secret of freedom lies
in love,
And slavery is the result of distinguishing one
from another.

It is because the West, he thought, had set up a shop, so to speak, for selling the counterfeits of love—for her many "isms" in politics, economics and ethics have often resulted in the breach, if not the abrogation of the law of mutual aid and aspiration—that he warned her, long ago, that her civilization would commit suicide one day, with the very weapons which she had invented for conquest and carnage. And today, as we survey the scene around us, our eyes can read the writing on the wall.

Now love is a creative principle as well as a power. It is at once daemonic and dynamic.

It is ever a secret, because the source whence it emanates and on which it draws in its work of self-integration, is beyond the intellect of mortal man. It is like the tree, the roots of which are enveloped in invisibility ; one can see only the foliage, the flowers and the fruit.

In the heart of love there dwells the desire to give itself to another, be this other a person's *alter ego* or his community, his church or his country.

When an individual attaches himself with a
group,
The drop in its quest for expansion becomes
an ocean.

And it is to clothe and consummate this self-prompted, self-imposed "bondage" into beauty that man craves to create art, literature and other vehicles of his self-development. If Nature is God's art-gallery, man likes to match it with one of his own. For, love can be made luminous only through the script and symphony of joy "in widest commonalty spread." In the measure in which man is creative, he is a son of God.

One who does not possess creative power,
To us is naught, but an infidel and a heretic.
Thou didst create night and I made the lamp.
Thou didst create clay and I made the cup.

The beatitude of the individual is his uniqueness. His being King in his own right is his greatest glory.

Do not demean your personality by imitation,
Preserve it as it is a priceless jewel.

Love is like the bird's unquenchable longing for flight, away from its limited nest on earth into the illimitable empyrean above. For it, self-sufficiency is death, as stagnation is death for the stream which is ever speeding to meet the sea.

Life is naught but a love for flight,
A nest is not the place for it.

In the syllogism of the Spirit, love and life become convertible terms.

What makes the former fallacious is a derogation or denial of the latter. Truly did the Teacher of Nazareth say, "God is Love" and "Love is God." It is in the integrity of this spiritual equation that man can claim his kinship with the Creator of the Universe. And equally what cancels out this equation is fear in one of its myriad forms, from abasement to awe. What is permissible, perhaps, is "fear of God," in the sense of one's awe of Him, induced by one's intuitive, emotional or intellectual conception of His existence and attributes.

Fear of anybody except God is inimical to action.
It is a robber of the caravan of life.

And it is in the context of this comprehension that even death loses its sting of suffering, or of self-effacement for man. He can smile at its approach and eventuation, for he knows, through his luminous love for God, that every time he dies, physically or figuratively, he is being drawn nearer and nearer to his flaming faith and fulfilment in Him, the Ever-present Eternal. Death, in other words, is to him a call to pledge himself to God and say to Him, "I am ever Thine. Thine for ever and for ever."

I tell you, the sign of a super-man :
When death comes there is a smile on his lips.

And if the last utterance of a man, before he passes out of the body, be any correct clue to his heart's ultimate yearning—as they say it is—then there is no doubt that the strongest undercurrent of Iqbal's self-expression was a seeking after the Supreme Reality. For, it was the winged Word of the ages, "God," that was on his lips as he breathed his farewell to the world in April, 1938.

Thus in his outlook on life, as in his attitude, Iqbal was an Indian in the long line of this country's lovers of God. These have all along set greater store by the transmuting touch of divine grace than by their energy or the achievement of their own exertions. And yet their dependence on that grace has not been akin to that of a slave on his master, but similar to child's love-dictated dependence on his parents. Further, this dependence is of a dynamic type, because Love is an active incentive and inspiration, as it is also aspiration.

Be a lover constant in devotion to the beloved,
That thou may'st cast thy noose and capture God.

Iqbal's ceaseless search was for the Super-man, the Divine Man, the man in whom the beauty of love and the love of beauty shine forth in all their splendour.

It is the quest of the Brahmin for Brahma. (Was it in this spirit that he once referred to himself as "a man of Brahmin extraction, versed in the mystic knowledge of Rumi and Tabriz?") *Apropos* of this, and to conclude, the story (a favourite of Iqbal's and one rendered by him poetically) of the Master with a lantern, roaming everywhere in search of Man may be succinctly told :

The Master said, "I am tired of devil and beast. I desire a man."
"He is nowhere to be found," they replied.
He said, "A thing that is not to be found—that is what I desire."

Wells and Shaw : Two Independent Socialists

Victor S. Yarros writes in *Unity* :

Several Anglo-Saxon and American generations have been molded and guided, to a very considerable degree, by Herbert G. Wells, novelist, radical social thinker, and independent Socialist, and by George Bernard Shaw, brilliant, paradoxical, indefatigable playwright, critic, essayist, and independent Fabian Socialist. Neither of these gifted, influential and famous reformers can be claimed by any party, faction, or school. Both have had, and have preached, ideas of their own. Both have freely, sometimes aggressively, criticized their respective comrades and co-workers. Both, however, have done much to promote the evolutionary Socialist movement. We owe them much, but we cannot blink at their weaknesses and aberrations. Both have posed as sober realists, and both have indulged in Utopian dreaming and erratic philosophizing.

Wells has assailed Marxian Socialism bitterly and savagely. Lenin called him, contemptuously, "a little bourgeois." Wells has also ridiculed the Fabian leaders; he has railed at their timidity and dread of insecurity and of danger of social disorder and strife. They are mostly, he pointed out, civil servants, living on small but regular salaries and expecting pensions in old age. Such men—shy, nervous—according to Wells, do not shake the world, do not lead or inspire masses of disinherited and discontented victims of privilege and injustice.

But, while Wells has been a champion of radical changes, of internationalism, of world-government, of thoroughgoing economic democracy, he has never had clear, definite opinions regarding the means, processes, machinery, and type of leadership and generalship required to effectuate the necessary and desirable reforms in economic, political, and social relations. From the people he has said frankly, we can expect no help whatever, since they are too ignorant, too amiable, too gullible, too unreliable.

The truth is, Wells is not a genuine democrat. His own humble birth appears to have given him an inferiority complex, and he admires the British aristocracy while rationalizing his feeling by assuring himself that it is the aristocracy of intellect, nobility, and service that he cherishes, not the actual aristocracy of Britain.

How, then, would Wells transform and elevate the society he condemns, and to what groups does he look for effective leadership ? He has at different periods had different notions. At one time he counted upon the engineers, technicians, and industrial managers who—he thought with Veblen—are not interested in the profit motive, have no low ambition, do not worship success, believe in efficiency of the right kind, and might undertake the reconstruction of the present system for the good of the whole community. He was not long in discarding this hope or expectation. At another time he was disposed to think that elderly and prosperous men of affairs, experienced and broad-minded executives, when contemplating retirement, would resolve to turn over their plants to co-operatives formed by their employees, and rejoice in the opportunity thus granted them of conferring great benefits on faithful employees without sacrificing anything worthy or important. The actual example of an Irish industrialist and peer suggested this solution to Wells, as he subsequently disclosed. But he soon realized that very few men of affairs are at all likely to follow the example of the altruistic and enlightened peer. Finally, Wells reached the conclusion that only in the most liberal and humane kind of education, would social salvation ultimately be found. The race, he has said many times, "is between education and catastrophe," and there is little time to be lost. But now, in his old age and rapidly declining health, Wells has despaired of humanity, and is extremely pessimistic. The atomic bomb spells the end of civilization, he thinks, and all he now recommends is stoicism and resignation. Like Tolstoy, perhaps, he would prescribe universal suicide for the wretched, irredeemable human race.

Wells may not be long remembered as a novelist, as he fully realizes. Yet he has written several very remarkable novels : *Tono-Bungay, Ann Veronica, The World of William Clissold,* and others. In these he has expounded his personal views on society, education, government, the economic system, theology, history, letters, and the ignorant treatment of sex in modern pseudo-Christian civilizations. Many of his specific opinions are as sound as they are vigorously expressed. In fact, his vitality and literary power are extraordinary. He is better as an analyst, a dissector, a challenger and agitator, a destroyer of conventions and superstitions than as a positive and constructive philosopher. There can be no doubt, though, that he has won many converts to Socialism and rationalism.

George Bernard Shaw, another prolific and amazingly versatile writer and thinker, has always been a law unto himself. He has been a sort of *enfant terrible* of

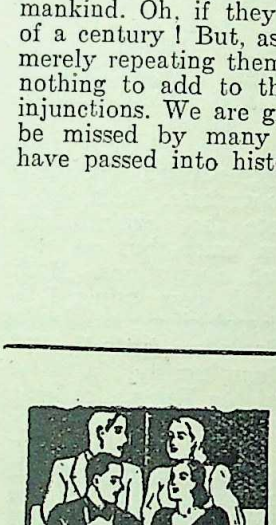
the radical reform movement. A co-founder of the Fabian school he has never been a consistent Fabian. He disagreed with some of their beliefs. For example, he has insisted, until lately, upon equality of incomes under Socialism. That is Communism, not Fabian Socialism. In recent years, he has advocated the abolition of gross and scandalous inequalities in income only. His new "practical" test is the possibility or likelihood of intermarriage between classes. The very rich and the poor do not intermarry, he says, and that separation is fatal to intellectual and moral progress. prevents eugenic mating, creates deep class antagonisms. Few Fabians share this view.

Shaw has been for several decades an earnest Socialist, but he has not made many converts. He is too whimsical, too erratic. He has even found merit in Mussolini and Fascism, because these "have done things." He has denounced Parliament and government by discussion because these institutions are slow, uncertain, incapable of dealing energetically with emergencies. He has, by implication, favored dictatorships. He has often played the part of a clown. His extravagances and exaggerations have made people smile or laugh, but he has paid a penalty—he has not been taken seriously.

Even in his perfectly sober moods, Shaw has, as he confesses, "habitually and deliberately overstated [his] case." This, in essays or books meant to be persuasive, is invariably detrimental. Shaw is a keen economist, and no one has written on rent and interest more profoundly than he, but he spoils his argument by lapses into eccentricity and caricature. Wit is not enough. The propagandist of new ideas must never forget the role of good sense in controversy. Shaw has often outraged common sense—especially in his treatment of the first World War. He cannot resist the temptation to bewilder and shock the middle class and the politicians.



As a playwright, Shaw has been uniquely successful. Several of his comedies—drama he cannot manage—are a permanent feature of the world's theatrical repertory. His *Candida, Pygmalion, Caesar and Cleopatra,* and others, are delightful and flawless. Some are dated rather badly, and others have been too verbose and "talky" to hold audiences. Max Beerbohm called his plays Platonic dialogues. In his plays Shaw never preaches sermons. Where a social moral is discernible, it is not obtrusive or obvious. Shaw cannot be vulgar or coarse. He has never offended against civilized taste. He is essentially a Puritan. He is not a Christian, but his ideas on religion are conservative. He refuses to put the Agnostic label on himself. He believes in the "Life Force," another name for vitalism. He says he is too old to examine critically the newer religious concepts. About his attitude toward marriage and the family there is nothing heterodox or unconventional. He has had no sympathy with the fads and fancies of the recent art schools. He has been a sound critic of music and the drama, and a penetrating one. But his interpretation of the Wagner Ring of the Nibelungen is fantastic and little short of absurd. He thinks it is a Socialist tract, an indictment of capitalism, greed, and commercialism. Few musicians or writers agree with him in this odd notion.

Certainly the Nazis did not agree!

Shaw's dislike of the United States, repeatedly proclaimed without rhyme or reason, is a striking illustration of sheer "crankiness." He finally condescended, after much coaxing by American admirers, to "stop over" in New York for one day and deliver one address, in belated acknowledgment, as he said, of his profound debt to Henry George, the single taxer, whose book, *Progress and Poverty,* it appears, first opened Shaw's eyes to the iniquity of land monopoly and the imperative necessity of getting rid of it as the principal obstacle to human advancement. Now, Shaw never adopted Henry George's theory, never advocated the single tax on rent, never shared George's objections to Socialism. He read George, but he joined the Fabian Society, with which George had no sympathy whatever. Decidedly, here is a double paradox, typically Shavian. But Shaw has boasted of his independence of, and superiority to, logic. What his substitute for logic is we have not been told. It is not common sense. He has so puzzled and irritated people that many have doubted his intellectual integrity and have just declined to take him seriously on *any* question. This is a pity, but he has no one but himself to blame. The radical reform movement can use satire, irony, humor, invective, in addition to sober argument, but it is not aided by trifling and clowning. Shaw complains that no one has really understood him. Has he understood himself?

Both Wells and Shaw have bemoaned the brevity of the human span of life. Both think that they have not said all they have to say and would like to say to mankind. Oh, if they only could have another quarter of a century! But, as a matter of fact, they have been merely repeating themselves in recent years. They have nothing to add to their respective instructions and injunctions. We are grateful to them, but they will not be missed by many forward-looking people. "They have passed into history."

Kaethe Kollwitz

She became the voice of misery, the unshed tear in the eye of every mother who cannot feed her child. She protested the devastation and ruin of war. She is the voice of the voiceless and the champion of the downtrodden —and her art is timeless. Dorothy H. Klein writes an introduction about the art and career of Kaethe Kollwitz in the *Jewish Frontier*:

"What about Kaethe Kollwitz?" I added. I looked around the room and was surprised to find everyone looking as if they were asking "Who is she?" I was surprised because in the room were people discussing the Breughel-Goya-Daumier "school," and they did not know of Kollwitz, who certainly deserves mention with these artists.

Kollwitz has long been recognized as a master in Germany and Russia. Her influence on Chinese modern art is great, and in Palestine almost every collective has one of her works hanging on the wall. Why she has remained in comparative oblivion in America? Her first exhibit here was held at the New York Public Library in 1912, but it met with a cold reception. I think the only explanation can be found by examining the fashions in American culture in the late nineteenth and early twentieth centuries, which were established by local standards. The trend was to shy away from any object-centred significance, let alone social protest. The trend was towards technical perfection, towards formalism. Kollwitz's art rejects formalism. She uses method and form to enhance meaning and her entire work is concerned with the righting of social wrongs. Thus, though she was recognized in Europe as early as 1897 as a vital force and influence in the art world, it was only in the past decade, when she was nearing seventy, that she became known in this country, through too few exhibits of her work.

Kaethe Kollwitz was born in 1867, the daughter of a master mason and an artist mother, in East Prussia. She became interested in the downtrodden of the earth at an early age and devoted her life to portraying their misery in numberless drawings and prints. She became the voice of misery, the unshed tear in the eye of every mother who cannot feed her child. She protested the devastation and ruin of war, lashed out against the slums in Berlin, against syphilis, alcoholism, for equality and justice. She is the voice of the voiceless, the champion of the downtrodden—and her art is timeless. Kollwitz is never afraid to look death or revolt in the face, yet her tenderness and love for humanity is clearly evident in her drawings of mothers and their babies. When she was sixty-five, she tried a new medium—sculpture, because her eyesight was failing and she could not do the close work that graphic art entailed. It is interesting to note here that her choice of medium, lithography, woodcuts, and charcoal drawings, and her choice of line and form, simple and unadorned, makes reproduction very easy and we like to believe that this was deliberate, that she wanted to have as widespread a circulation of her work as possible among those who under ordinary circumstances cannot afford to own prints.

During this month, there is being held a memorial exhibit of Kollwitz's work at the Galerie St. Etienne, located at 46 West 57th Street, New York. It is a fairly complete and representative exhibit, with more than sixty pieces of her work.

The exhibit is not arranged in any period order, but one might start with an etching done in her early youth, as a part of the series *Ein Weberaufstand* (The Revolt of the Weavers). She created six etchings in this series between 1893 and 1897 when, as a girl of seventeen, she was inspired by Hauptman's *Weavers*. Of her work, Hauptman wrote: "A cry of pain such as was never heard in ancient times." These six etchings are a story of German cruelty, violence, and horrible death. In 1898, she was awarded a gold medal for the *Weavers*, which, one year later, Wilhelm II vetoed. We pass before *Storming the Gates* and see the mass of people, their thin, weary arms and their gaunt but purposeful faces—see the hope, the faith, the compassion of Kollwitz for the dignity of man.

We moved to the etching *Prisoners* of her second series *Bauernkrieg* (The Peasant's War) based on the Peasant's War of 1524-26. These are seven etchings in this series, which she did between 1903 and 1908. We see the mass of people, yet each figure is an individual bound to the next by one purpose, a purpose which has been arrested before it was spent. We see the despair in some of the faces, the beaten look of defeat, and yet we are reminded of the old story about the bundle of wood—there is strength in solidarity, and even as these prisoners are bound by cord, so are they bound to their belief, their faith, their determination for a better life. *The Call to Arms* might be any of our present-day guerrilla bands in violated countries; *The Battlefield* looks like a scene in modern Greece or Yugoslavia where women searched by night among the massacred for their sons and husbands after the Germans had passed.

Blood-vita is synonymous with vitality, energy and good health, which means resistance to disease and infection.

THE MODERN REVIEW OFFICE,

120-2, Upper Circular Road, Calcutta.

Of her next series of seven woodcuts, *Krieg* (War) created between 1920 and 1923, we stop before *The Volunteers* and at first glance it seems to be too black but then we notice that the emphasis is deliberate. Kollwitz was communicating a high pitch of emotion—there are no grays in the defeated Germany she pictures. Here too there are faces emerging with startling clarity from the blackness—faces that have suffered, but faces with purpose.

And we see some of her self portraits (for some reason which we have not yet been able to fathom, she executed a self portrait each year from 1897 to 1927). As we look at them, we see a life filled with close contact with human tragedy and anguish ; see her pride, her stoicism, her humanity ; her dedication to righting wrongs by belief in man, by her love for man.

We were charmed by her charcoal drawings and lithographs of mothers and children, for here we saw her tenderness, her glorification of motherhood. Here her lines were brief and pure. As we looked at her *Mother and Child*, we thought : Is this a Jewish mother? a Russian mother? a Chinese or French baby? And we found an answer—these are the faces of all mothers who want a brighter world for their babies, a brighter world which may at the moment be symbolized by a cry for milk, for bread. Her children are all babies who do not know the joy of sunshine and food, whose faces have the somberness and peakedness of birds. Her figures are weary, tragic, because there is no joy in the hungry. Her faces are the faces of all of us who want shelter, who want sunshine for our children in overcrowded filthy slums of New York, Paris, London, Berlin. But she never draws with mere pity, Kaethe Kollowitz. There is always hope in her faces and figures because Kollwitz believed in man, in his right to live ; and in her compassion for the downtrodden, she gives them voice and strength and purpose.

After World War I, she was elected to the Prussian Academy, the first woman to receive this honor, and she became one of the leaders of the social revolution in Germany in 1919.

In 1928, she was made director of graphic arts in the Academy, a post she held until the advent of the Nazis. For some reason, however, the Nazis permitted her to live and work in Germany, even permitted some of her work to leave the country. What the explanation of that is, I think only a psychiatrist can give, I think they were anxious to keep their "Aryan" artists in Germany and wanted her to "play ball" with them. But after seventy years of combating just those things that the Nazis represented, she did not want to learn new games and fled to Switzerland where she died in July at the age of seventy-eight, probably at her drawing board, for though her eyes were failing, her hand never faltered and her life's vision had to be recorded for the generations that would come after her.

Her death received little notice. She was mourned in Palestine, where articles about her appeared in *Davar* and *D'var Hapoalet*. The rest of the world? Well, the world was busy fighting a war to eliminate just those things that Kollwitz had been crying out against.

Closely as Kollwitz's work is bound to her subject matter, it is always art, never mere propaganda. She demonstrates how art may deal with reality and be a powerful weapon for social change, yet lose no aesthetic merit. We didn't turn away from what we saw shudderingly, as we do at some other artists' violent representations. On the contrary, we were forced to study and deeply ponder their implications.

Kollwitz's protest is passionate. Her art is real and magnificently human. Her art is alive because it is life.

Posed against a mountain slope are wild Rocky mountain sheep, popularly known as the bighorn, because of their immense horns, which curve backward, outward and downward in a majestic spiral swoop

The sloping profile is the distinguishing feature of the canvasback duck, the wild North American waterfowl. This picture is a painting by John Audubon, the famous American ornithologist of the 19th century

THE MODERN REVIEW

JUNE 1946

VOL. LXXIX, No. 6 WHOLE No. 474

NOTES

On the Threshhold

India is at the cross-roads. We are now at a period of our history when the utmost of realism and deliberation is called for. The question before us is, "Are we prepared for freedom or are we not?" This is no time to indulge in the fineries of the quibbling legal mind—which has brought more lasting sorrows on mankind than any plague—rather it is the time for taking stock of our resources, mental, physical and material. Responsibilities are about to devolve on us, the like of which we have not been accustomed to shoulder for centuries past, though it is true that it was not so because of our own volition. Are we ready with our plans for the Army, the Navy, the Airforce, and other warlike means of defence; the tariff barriers for halting the economic aggression of International finance with its cartels and mergers; the plans and blue-prints of a programme by which this country can march forward without getting involved into internal or external strife; the extensive and exceedingly complex organisation of international politics and diplomacy necessary for maintaining foreign relations, and so on and so forth? In short, are we prepared to lift our gaze beyond the narrow limits—mostly provincial or communal—to which it is accustomed?

Take the case of the armed forces, for example. What are our plans for controlling, directing and maintaining a standing army, very many divisions in strength with the exceedingly complicated machinery for continuous training and limitless adaptation of latest technique and the latest arms to keep the fighting forces up-to-date. The Science of War means Specialists for every branch and a highly trained General staff composed mainly of tried veterans. And the same is true of the Navy and the Air-forces. There is no shortage, it is true, of staunch and intelligent men and officers in this country. The fighting record of the Indian army in this war has proved that to the hilt. But what about the specialized training needed for mechanization, artillery and the manifold branches of modern warfare inclusive of higher strategy? What about the production of armament and its safe-keeping and the guarding of defence secrets?

We have had sufficient training in the matter of internal affairs and some provincial administrations under the Congress were considerable successes, but the case is quite different in the matter of foreign affairs. It is true that the coming of freedom cannot be halted by these or any other consideration, since all these would take considerable time, but is it not time to think how we are going to take over and to plan for a transition without leaving any part *in vacuo* and without causing any chaos in the affairs of the nation? That the transition period is at our door we have no doubt, despite all idle and frothy talk, for the Cabinet Mission's willingness to treat for the handing over seems to be transparently sincere to the best of our judgement and observation.

Features of the Declaration

The Cabinet Delegation's Declaration has been received in this country with mixed feelings. The Congress and the League have reserved their official views, which will be known in a few days' time. The utmost importance is, however, attached to Gandhiji's opinion on it. He was in touch with the negotiations all through and he had the best of opportunities to learn the British mind. He believes in Britain's sincerity about the proposals and thinks that the Declaration contains seeds which, if properly nursed, can transform this land of sorrow into one of prosperity and happiness. We fully agree with Gandhiji's view and believe that Indian statesmanship has been put to test. Posterity will judge how they have utilised this Great Charter for securing full freedom for 400 millions of human beings.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Documents provide a basis for building up the constitutional system of a free and independent India. Final judgment has been pronounced on the reactionary demand for dividing India into two sovereign states. The Declaration makes it clear that Britain will enter into Treaty negotiations only with the Central Government of a United India.

The principle of MacDonald Award has also been rejected. The Constituent Assembly will be elected on a population basis, one representative for one million of the people. No weightage for any community has been proposed. The newly elected Provincial Legislative Assemblies will be the electoral colleges for the Constituent Assembly. The idea of electing the Constituent Assembly on adult franchise has been dropped in view of the fact that it will take much time to bring the Assembly into being.

The proposed Grouping of Provinces has come in for the largest measure of criticism. Some have seen in it a backdoor to Pakistan. Two things must be kept clear: the provinces have been classified into three Sections for the purpose of drafting the provincial constitutions and after that is done they are free to form groups among the members of these sections only if they so choose. Belonging to the sections for the purpose of constitution-making has been said to be compulsory but it has been made quite clear that formation of Groups is absolutely voluntary. The proposal for framing of provincial constitutions in three sections has taken the realities into account but at the same time has blunted off the edge of Pakistan dagger. Had the provinces been given the power to draft their own constitutions, the Hindu and Sikh minorities in Bengal, the Punjab and Sind would have been at the mercy of the League. The separate grouping of eastern and western Muslim zones into sections have made it impossible for the League to combine these two zones under any system of administrative Group. A close study of the B and C sections will show that this device has increased Congress strength.

Adequate provision for the safeguard of the interests of smaller minorities has been made by setting up an Advisory Committee which will go in detail into all minority questions and present its report first to the Union Constituent Assembly. This full session of the Assembly will decide whether minority protection should be left to the Centre or to the Provinces and how the allocations will be made.

The question of the States has been left for future negotiations, but the fundamental issue has been made clear. The British Government has declared that paramount power will no longer remain with them, but at the same time, they do not propose to surrender it either to the Indian Government or to the States themselves. The States, therefore, cannot claim to remain as so many Ulsters in India but must join the Indian Union and become part and parcel of a United India. The details will be worked out by a Negotiating Committee.

The procedure of the Constituent Assembly has come in for some amount of criticism by the Congress. The Congress wants that in the preliminary session of the Assembly, the powers of the Union Centre should be defined. This will simplify the constitution-framing to a great extent. The powers of the Union Centre will be primarily three, *viz.*, Defence, Foreign Affairs and Communications and powers to raise finance or meeting the expenses of the three. This finance [illegible] obviously ought to be currency and tariff. If the preliminary session of the Constituent Assembly decides about these knotty problem, much complexity will be simplified. If the sovereign power of the Constituent Assembly is recognised, this alteration in the procedure of constitution-making should provide no difficulty.

The Congress had demanded Fundamental Rights and Planning as Union subjects. The proposed alteration in the procedure of constitution-making may clear up this issue. The inclusion of Fundamental Rights in the constitution itself ought to be a proper safeguard if the remedy be enforceable at law with a right of appeal to the Supreme Court. It is better to leave Planning to the Centre, and if that is not agreed upon an Inter-provincial Planning Commission may be set up on the model of the U.S. Inter-State Commerce Commission. If eight Congress provinces push forward the recommendations of a National Planning Committee others cannot certainly stay off.

Finally, there is the problem of an Interim Government. It has been demanded that the Interim Government and the Constituent Assembly must be viewed together and not as separate entities. To this we agree. The interim Government must function as the Provisional Government with unfettered powers to guide constitution-framing. If the desire to transfer power be genuine, there ought to be little difficulty in declaring the interim Government as Provisional Government of Free India responsible to the present Central Legislature. The question of the withdrawal of British Army has, we believe, been set at rest after the last declaration of the Cabinet Mission clarifying certain issues raised by the Congress and the League President. We hope the Interim Government will come into being by the middle of June and we see ample signs for believing that both the Congress and the League joining it. The policy of going in to the wilderness should now come to a final end. The Document provides ample basis for working out the salvation of this country of ours.

International Bill of Rights

Attempts are now being made to set up an organisation for safeguarding human rights all over the globe. The United Nations Charter itself calls for universal respect for and observance of human rights and fundamental freedoms. The Social Security Sub-Committee of the UNO has recetly discussed this important subject. Means must now be found for mobilising the peoples of the world in the cause of human rights.

During the first World War, the American Civil Liberties Union grew up and it has flourished ever since. The union was supported by small contributions and it became famous for the law suits it conducted, dramatising the sacredness of civil liberties as they are laid down by law. The Civil Liberties Union defended parties it thought to be right before the law, regardless of the popularity of the defendant. Its policy is set forth in five brief objectives:

(1) To defend civil rights by legal aid, publicity and organised protests to officials.

(2) To proceed against public officers violating these rights.

(3) To test ordinances or laws in conflict with constitutional guarantees of civil liberty.

(4) To organise protests and publicity on every significant issue of civil liberties.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(5) To promote legislation to extend civil rights and oppose legislation restricting them.

One sociologist has written that Civil Liberties Union was the only truly non-partisan impartial organisation fighting for civil liberties between the two wars. Now, however, such organisations are numerous, numerous enough to call for a congress to unify the many campaigns now being waged.

In Bengal, during the thirtees, a Civil Liberties Union, supported by small individual contributions, had been established at an intese sacrifice by its promoter. It was short-lived but during its short career it was of immense service to India. It was through the efforts of this Union that the rest of India came to know of the staggering repression and ruthless suppression of civil liberties in Bengal during the revolutionary movement in this province in the thirtees. It has also been proved through this valuable experiment that a Civil Liberties Union cannot flourish in a subject country.

The Cloth Shortage

The Textile Commissioner issued on May 17 a directive to the textile mills and power-loom factories ordering them to stop the production of cloth for export purposes forthwith and not to resume it till the end of July. According to the Press Note issued in this connection, the measure has been taken in order to meet domestic requirements. This makes us pessimistic about the prospects of cloth production. In all likelihood, it seems, a serious cloth crisis has come upon us. Our apprehension becomes even more stronger by the Textile Commissioner's decision to cut down regional cloth quotas by 10 per cent.

But why this serious cloth shortage? In one of its special articles, the *Eastern Economist* discusses the problem with elaborate details. As a matter of fact, it was only about two months back that Sir Vithal Chandavarkar, addressing the Annual General Meeting of the Millowners' Association, Bombay, contended that the supply of cloth available for domestic consumption had been restored to pre-war levels. A few days later Mr. K. M. D. Thackersey gave a similar assurance. He said:

> The net available supplies of mill-made cloth for civilian consumption in 1945 amount to 3,883 million yards as compared with 3,794 million yards in 1944. Including handloom production it is estimated that the cloth available for the civilian population of India in 1945 is approximately 14 yards per head per annum for India's population of 400 millions. In 1946, I will not be far wrong in forecasting that if the production of Indian cotton mills continues on the same scale as in 1945—which it is hoped it will—the quantity of cloth which will be available per head of the population of India will be increased, following a reduction in the Government takings against military requirements, which are not likely to exceed 100 million yards as compared with the takings in 1945 of 417 million yards.

It was only less than two months back when the above speech was given. Why is it then that within two months' time there should be a serious cloth crisis? The production of the Indian cotton mills in the first four or five months of 1946 has failed to keep to the 1945 level; very likely it has declined sharply. In the present circumstances, the suspension of exports is a most wise step. But care must be taken to stop the sinister traffic by which cloth is illicitly smuggled out of the country over its land frontiers in the east and the north. The *Eastern Economist* has made also another suggestion for tiding over the cloth crisis which we consider to be essential at the present juncture. The chairman of the Textile Control Board estimated that Defence Services requirements would fall to 100 million yards in the current year. We do not know if this expectation has been satisfied. In any case the Defence H. Q. must revise their indents in a downward direction to the utmost extent, and at the same time the disposal of surplus military stocks should be hastened in order to relieve civilian scarcity.

But what are the reasons for this decline in textile production. Irregular arrivals of coal must have seriously affected the work of the mills. There is another reason which has been dilated upon in the said article. The frequent outbreaks of strikes in the various textile centres and the high degree of absenteeism have been largely responsible for the meagre production of textiles. In Bombay city alone, Sir Vithal Chandavarkar points out, 577 million spindle-hours and 13 million loom-hours were lost on this account in the calendar year 1945, involving a loss of production approximating to 78 million yards of cloth and 24 million pounds of yarn. The situation in this respect has not improved since, it has rather become even worse.

This illustration of absenteeism is very disquieting. It shows that labour politics in Bombay has been grossly mishandled. It is a fundamental principle of economics that with the standard of living remaining the same, if wages go up absenteeism will increase. It has been alleged by *Commerce,* Bombay, that the textile workers there are probably the highest paid at the present moment. The reasons for Bombay labour unrest have been dealt with in a separate note. Here we want to draw the attention of the Congress authorities to the very important revelation of Sir Vithal Chandavarkar. It should immediately be ascertained whether it is a fact that real wages in Bombay have gone up disproportionately with the present standard of living. We certainly support increase in wages but what we want to emphasise is that increase in wages must keep pace with a rise in the standard of living. In the event of a more than proportionate increase, absenteeism is bound to appear. Such increase in real wages do not help the worker, but injures the country by reducing production.

U.S.-India Lend-Lease and Surplus Property Agreement

The U.S. State Department has announced that an agreement was signed on May 16 by the representatives of the Government of the United States and the Government of India on U.S. lend-lease to India, reverse lend-lease by India ard U.S. surplus war property located in India.

In view of the approximately equal benefits received by India and the United States from this interchange of mutual aid, it was agreed that no payments would be required from either country in the settlement of obligations, except that India will return the 160 million dollars worth of silver which the United States had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

advanced to her during the war for coinage and industrial purposes.

The following is the text of the announcement supplied by the *USIS* :

Representatives of the Government of the United States and the Government of India signed on May 16 an agreement representing an overall settlement of lend-lease, reciprocal aid, and surplus property questions between the two countries. The agreement was signed on behalf of the Government of the United States by the Acting Secretary of State, the Hon. Dean Acheson, and on behalf of the Government of India by the Hon. A. A. Waugh, Member for Industries and Supplies in the Viceroy's Executive Council.

Discussions between the Department of State officials and the Government of India lend-lease delegation have been in progress in Washington since the first week of April. The agreement with India is a comprehensive and final settlement for lend-lease, reciprocal aid and surplus war property located in India, and for the financial claims of each government against the other arising as a result of World War II.

India served as a supply base for the Southeast Asia Command during the war and, while a great volume of lend-lease supplies were shipped to India, the larger part were for the use of the British Government in India and Southeast Asia. India supplied reciprocal aid liberally to the United States both in the forms of supplies and services to United States armed forces in India, and in raw materials shipped to the United States for war production.

In view of the approximately equal benefits received by the United States and India from this interchange of mutual aid which aggregated over 1,000 million dollars in value, it was agreed that no dollar payments would be required in the settlement between the two governments and all obligations arising out of lend-lease and reverse lend-lease were balanced against each other and cancelled, except for the pre-existing agreement under which India will return to the United States 160 million dollars in silver received during the war for coinage and industrial purposes.

Under the agreement the United States receives full title to all articles received from India during the war under reverse lend-lease and unconsumed. India agrees to cancel the outstanding obligation of the United States to pay about 45 million dollars in cash for supplies delivered to the United States armed forces in India after V-J Day.

Surplus U. S. Property Turned Over to Government of India

The agreement further provides that India receives full title to all articles in the civilian lend-lease inventory as of V-J Day and to a relatively small quantity of articles which were in the lend-lease "pipeline" for delivery after V-J Day. The articles in the Indian military lend-lease inventory which were acquired by the Indian forces when serving with the British Army, and other articles delivered to the Indian Army by the British forces in India, are retained by India subject to a right of recapture by the United States. The United States, however, has stated that it does not intend to exercise generally such right of recapture.

The agreement replaces the previous understandings relative to the disposal of United States Army and Navy surpluses in India. The title to all unsold United States surpluses passes to India, and India agrees to dispose of them on an equal basis with war surpluses of Indian and United Kingdom origin.

As part of the over-all settlement, the United States will receive one-half of all proceeds in excess of 50 million dollars realized from such disposals. The United States share of such proceeds will be available for the acquisition of real estate and buildings for United States Government agencies in India and for cultural and educational purposes of mutual benefit to the United States and India. In the disposal of United States surpluses by the Government of India, United States veterans, Government agencies, businesses, and UNRRA will be accorded the same priorities as are accorded to other buyers in India of a like character.

The bulk disposal of United States surpluses to India has greatly speeded the final evacuation of United States troops from India. It will also result in very substantial savings to the United States by elimination of the operating costs of the United States Army in India at least a year earlier than would have been the case if the United States had handled the actual sales itself.

This settlement is especially significant because it is the first formal agreement between India and the United States, and its harmonious completion is an auspicious opening for relations between the United States and an India now on the verge of independence. The successful conclusion of these negotiations augurs well for the future relations between the United States and India.

Indian Food Plan

A comprehensive five-year plan to overcome the Indian food deficit has been proposed by the National Planning Committee. The Committee says, "India can easily be made self-sufficient in the matter of food-grains if proper planning is advised and carried through." The Committee rightly concludes that import of foodgrains need not be necessary in this country if our own resources are properly developed. The proposed programme lays considerable stress upon the formation of agricultural co-operatives particularly for bringing uncultivated land under the plough, upon improving agricultural and fishing techniques and upon planned breeding as a means of increasing the supply of animal foods. The Committee also envisages the elimination of "parasites like zemindars, talukdars, absentee landlords and mere rentiers of all kind and description."

The programme is as follows :

(1) Bringing additional cultivable land under cultivation which now lies uncultivated.

(2) Adding or improving facilities for adequate regular water supply for lands already under tillage or those to be brought under the plough.

(3) Providing better manure so as to add to the quantity and quality of food crops, this to include artificial fertilisers where necessary and practicable.

(4) Better seed with a view to increasing the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

yield and quality of hybridization and other development.

(5) Introducing better implements or machinery for tilling, sowing, harvesting and the like.

(6) Improving the technique of cultivation by better tools and implements, power-driven machinery, suitable rotation of crops and similar measures.

(7) Reforming the general organisation of all land in cultivation on the co-operative basis so as to avoid the needless waste of available land in the shape of barriers and make the labour devoted to land more productive per unit of cultivation.

(8) Consolidation of holdings "which are today excessively fragmented and scattered, and so gravely impede economic tillage or increased productivity."

(9) Control of pests, weeds, etc., which reduce the yield per unit as well as in the aggregate.

(10) Protecting the soil against floods and erosion.

(11) Review of the cash revenue demand which is open to periodical revision and enhancement by the State so as to approximate and revenue to income-tax, with exemptions from any revenue demand of such units as raise only the minimum needed for the subsistence of the cultivator and his family.

(12) Organisation of proper storing, grading and marketing facilities to guard against periodical failures of crops as well as to provide exchange of surplus or speciality.

(13) Reduction of the unproductive debt burden of the cultivator by a wholesale reorganisation of the nation's banking service.

(14) Proper adjustment between the commercial crop or raw materials of industry produced from agricultural land and food crops.

(15) Proper attention to the development of horticulture, fruits and vegetables, or market gardening, in order to supplement the standard diet, and provide indispensable vitamins.

Noting that the use of cattle for ploughing, haulage and transport as well as milk production has resulted in "breeding for mixed purposes which serve neither object satisfactorily," the Committee proposes proper organisation of cattle breeding for specific purposes and particularly for increasing the milk yield.

The agricultural reclamation plan is estimated to cost about Rs. 50 crores. It has been proposed to find this money through a Government-sponsored national loan spread over a ten-year period under the proposed programme.

The most important feature of the plan is its unitary character. The Committee proposes that all the various modes of adding to the food supply from agriculture "must be tackled simultaneously and not one by one." Every State or Provincial Government would prepare its own programme for carrying out the general policy under the Plan as formulated by the Central Government and given effect to as laid down in the basic national programme. In the Committee's view, the State should assume as a common obligation the supply of water by irrigation, the large-scale collection and distribution of manure and measures for protection of soil against erosion, floods, pests and the like.

Food for India

While the food situation in the country continues to deteriorate at an alarming rate, the authorities seem to be still tinkering with the problem of adequate food allocation. A rapid survey of the last month's food allocation talks will convince one of the sinister political game that the Combined Food authorities are playing with world's food. In the confusion of this game India's plight is worsening miserably.

On May 2, the Combined Food Board recommended a second quarter rice allocation of 146,000 metric tons for India in announcing sharp curtailment of supplies available for export during the current quarter. The Board said that only 581,000 tons of rice were available from all sources for export during April, May and June, compared with the essential world requirements of 2,100,000. The Board explained their inability to make greater allocation with an account of the widespread crop failure. The curtailment of supplies was indeed a shock to the hungry millions. Speaking at a Press conference Sir J. P. Srivastava asserted that "the Combined Food Board has not kept its promises." Sir Robert Hutchings added: "I am not complaining about the Combined Food Board but surpluses should have been known to them." Sir J. P. Srivastava further warned: "We will be in the hard grip of famine by July if we are unable to get what we have asked for." But the strongest criticism was made by Sir Manilal Nanavati who, speaking at a conference in London, said: "The Americans are not behaving themselves." He added, "The Americans feel that India suffers from starvation and famine so frequently that this year's famine is nothing new and it does not matter if a famine overtakes India once more." In Washington, the Indian officials told the Combined Food Board in a formal memorandum that any attempt to cut May wheat shipments to India below the requested half million tons would imperil the country's rationing system by the third week of June and expose "by one stroke" 100,000,000 people to a sudden and catastrophic threat of total starvation by the end of that month. Even Mr. La Guardia, UNRRA Director-General, accused the Board of "trifling with human lives."

A few days later it was learnt that India had informed the C. F. Board that she flatly rejected the tentative May wheat allocation of a little more than one-fifth of the originally requested 500,000 tons. Dr. V. K. R. V. Rao informed the Board that his government considered such allocation entirely inequitable and unfair. The Board increased the allocation to 265,000 tons, but Sir Girija Sankar Bajpai commented, "This allocation falls far short of our legitimate and minimum requirements."

However, at last President Truman spoke out and gave one of his old sops. In reply to Lord Wavell's personal message, he assured the Viceroy that India's crisis was "thoroughly recognised" by the U.S. and was receiving "the most sympathetic consideration on the highest levels of the Government." In the report he submitted to President Truman, Mr. Herbert Hoover estimated 2,886,000 tons as "Indian Ocean Area's" minimum cereal requirements in the critical period from May 1 to September 30. He listed the following imports needed in the various Indian provinces affected by famine: Bombay 330,000 tons; Mysore 114,000 tons, Madras 890,000 tons, Travancore

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

58,000 tons, Cochin 36,000 tons, Deccan 119,000 tons, Bihar 93,000 tons, U.P. 144,000 tons, Bengal 302,000 tons, other provinces 250,000 tons.

In spite of these criticisms, statements and assurances, shipments for India did not improve at all. A decisive step was taken by the British Government when Mr. Herbert Morrison was sent to America on a food mission. In a broadcast on May 15, he categorically stated : "Famine is not inevitable. It is in our power to prevent it." Referring to India he said that if the Anglo-U.S. powers failed to keep India's food distribution system from actually breaking down, India would become a prey not only to famine but to political extremism. Mr. Morrison's efforts produced some good results. India had so long been regarded as a British responsibility. Now during Mr. Morrison's conversations it was agreed that India should be treated as a separate entity in the world food programme. Returning to London, Mr. Morrison stated that allotments of wheat to India which the United States and the Canadian Governments had agreed to support, would secure to India shipments in 1946 at a very much higher rate than in any previous year despite the acute world shortage of all cereals.

However, it augurs well that through the efforts of the British mission, the U.S. authorities of the C. F. Board are showing at least some consideration for India's plight. But even now we are far from being optimistic about outside help. Sir J. P. Srivastava revealed that the Government of India had been advised that loadings of wheat and wheat supplies for May and June would total 314,700 and 182,200 tons respectively. Sir Robert Hutchings further gave the dark warning that if the promised food supplies from abroad did not arrive in time, rationing in India would break down in August for lack of supplies.

U. S. Aims at Exporting 10,700,000 Tons of Wheat From Its 1945 Crop

President Truman, in a message to the opening meeting of the special session on urgent food problems convened by the United Nations Food and Agriculture Organization, appealed to the countries in a position to help to heighten their efforts to avert the food crisis threatening the world in the critical weeks just ahead.

Following is the text of the President's message :

In meeting at this critical period you have heavy responsibilities and great opportunities. What this conference accomplishes or fails to accomplish will make its mark not only in areas where people are hungry as an aftermath of the war, but in all parts of the earth and for a long time to come. Any step toward feeding the world's families better and making the fullest use of the products of farms and fisheries is a step toward winning and securing the peace. Food touches everyone in the world directly and more keenly than most boundary settlement and other primary political actions that are often local or regional in their effects.

It is not necessary in a message to this group to go into the details of the serious world food situation. Everyone realizes now that the world-wide scarcity of cereals cannot be completely overcome with the 1946 harvest and that deficits in livestock products will continue for a long time. The remaining weeks before the 1946 grain harvest in the northern hemisphere are especially critical, and the United States and other countries in a position to help must continue and heighten their efforts.

In this country we have raised progressively our export programs as world needs became more urgent, reducing progressively, at the same time, our own consumption of wheat. In this wheat marketing year we already have shipped more than 300 million bushels (about eight million tons) of wheat, which is close to 40 per cent of the total world exports of wheat. Our export program covering 400 million bushels (about 10,700,000 tons) of wheat for the entire marketing year represents over a third of our total production from the 1945 crop. The people of this country have shown an admirable willingness to do their share in the great humanitarian task of preventing famine in other lands.

During the war we have learned valuable lessons in co-operation with the rest of the world. What the people of this country have done is ample evidence that they recognize the necessity for progressive and effective action in achieving for the world freedom from want, that they are conscious of the world's needs and are ready to co-operate in a program to meet them.

In my message to the conference at Quebec where FAO was established last fall, I said that my country's delegation came "prepared to work together with the delegations of other nations for the good of all, and to bear their full share of the responsibility for a successful outcome." We bring the same spirit to this conference, which I view as the first great test for FAO.

Can India ask what proportion of this 8 million ton export has been directed for saving million of famine victims in this country ? The unsympathetic and niggardly treatment that India received at the hands of the Truman Administration will not be easily forgotten. India will remember that her resources have been fully exploited for saving Europe and America from disaster, but when she herself was in need, she was basely deserted.

Indonesian Rice for India

The combined effect of red tape, bureaucratic inefficiency, and political self-interest was responsible for the unnecessary delay that has been made and is being still made in accepting the rice offer made by Dr. Shariar, the Indonesian Republican Premier. Pandit Jawaharlal Nehru has long been trying to derive the full benefit that is likely to accrue from the new communion and unity among Asiatic nations. When Dr. Shariar made the offer, the Dutch Government persistently maintained that Java had no surplus to offer to India. But Dr. Shariar emphatically stated that Java had surplus food which she would be glad to send to India in exchange of textiles for herself.

The India Government showed little enthusiasm about this rice offer but after repeated comments in the Press made a move for carrying on talks with Indonesian Premier. Soon afterwards it was announced that Dr. Shariar's talks with Mr. K. L. Punjabi, a British India civil servant had reached a stage in which it was now up to India to provide the necessary transport and exchange of goods for 500,000 tons of rice offered to India by Indonesia. As far as Indonesia was concerned, the first shipment could be made towards the latter half of June, Dr. Shariar said. The delivery of the entire 500,000 tons would take five months at the rate of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

100,000 tons monthly. In a letter to Pandit Nehru Dr. Shariar asked him to visit Indonesia to negotiate on textiles and machinery in exchange for the promised rice or to send a personal representative on the same behalf.

Dr. Shariar has cabled that the rice is ready for shipment. Now it is a question of India Government making proper arrangements for shipping facilities. We are afraid a lot of delay will be made because of transport difficulties. One is constrained to observe in this connection that there would have been no such difficulty had it not been the consistent policy of the British Goverment to oppose Indian mercantile marine in its attempt at expansion. If the Indian shipping companies were given a fair opportunity for growth, they could have rendered signal service at this moment of crisis.

However, we hope rice from Indonesia would soon reach India. Apart from the invaluable help that this act of exchange will offer to the famished millions of India, it will also be a token of the future relation between the neighbouring countries of Asia. Pandit Nehru has rightly observed : "It is by such acts that nations and people are bound together. Indian people will not only feel grateful but will remember this in days to come. I hope and trust it will be precursor of closer friendship between the two nations and advantageous to both." After the overthrow of the foreign bondage India will be the centre of this new Asian awakening and unity.

Famine in Bengal

Bengal is once again in the hard grip of a terrible food crisis. In one of our previous editorials we showed how due to the neglect and inefficiency of the Bengal Government, the spectre of a second Bengal famine was casting its shadow over the land. Our apprehensions have come true. People in the district of Bankura, to take a single example, are already drawn to the last straits of their miserable existence. Hungry and naked, a large section of the famished population is slowly making imperceptible steps towards the fatal end. And, if one example would suffice, a mother tried to kill her child to avert the painful process of slow death that was coming upon it. The whole picture is reminiscent of the tragedy of 1943.

But what is the attitude of the Bengal Government. It poises one precariously between laughter and agony when one hears Mr. S. K. Chatterji, Bengal's Director-General of Food, declare over the radio as late as on the 30th May : "Government wish to make it quite certain that there shall be no famine this year." He wanted to explain the rise of price as a result of "local panic." But, may we ask, did the people get panicky with no sufficient reason for panic ? The whole discussion would mean arguing in a vicious circle. But empty discussions apart, one thing is quite certain. The panic was caused first because of the abnormal rise of prices and secondly because of the lesson the people learnt from the disastrous bungling of 1943.

The Food authorities have declared that there will be only 7 per cent shortage this year. But we are afraid this estimate grossly errs on the side of optimism. There is no reason whatsoever why there should be such an abnormal rise of prices at this time of the year with only 7 per cent shortage. Last time it might have been due partly to the lack of proper rationing. But this year the prospects are much the same even in spite of the elaborate rationing system.

The Government maintained that the situation will be kept under control through the machinery of control and rationing. We do believe that when the price of rice soars up in a locality the only way to combat the upward rise is to sell rice from Government stocks. But will it be ever possible for the Government to fight black-market prices with the help of the reserve that the Government maintains at its disposal ?

The procurement policy of the Bengal Government is remarkably defective. Even the Woodhead Commission opined that purchase of rice through agents entails unnecessary expenses. Because of the elaborate chain of profiteering middlemen, a Government agent can easily show that the cost price of paddy originally purchased from the cultivator at Rs. 5 is ultimately Rs. 20. When the Government wants to sell rice at Rs. 15, 'cost price' being Rs. 20 due to this process, there is a huge loss on its part.

The Government has lately introduced a rationing system for six million people of Bengal. The people of Calcutta and other big towns know full well the achievements of this system. Anyway, this apology for rationing is the only system that the Government is maintaining with all its much-advertised departments.

But what about the larger section of the people who live in villages ? There is a curious system functioning in villages which is called "modified rationing." But a typical example of this system will reveal its true nature. The population in a union in Vikrampur (Dacca) is 17,041. The total ration cards in circulation amount to 30,966 units (adult 2 units, child 1 unit). The local Food Committee received the following stuff for distribution through these ration cards during the year April 1945 to April 1946 :

Paddy	675·5	mds.
Sugar	429·3	„
Kerosene	1426	
Coal	505	„
Mustard oil	176·8	„
Coconut oil	3	„
Salt	1192·8	„
Flour	32	„
Saree	3359	pieces
Dhoti	7829	„
Bed cover	16	„
Blankets	18	„
Lungee	100	„
Umbrella	18	„
Shirtings etc.	260211·5	yds.

If the figures given above be truly typical of this "modified rationing," we do not know how we can congratulate the Government Food Department on its astounding success ! The statistics reveal that the people of the above Union received one seer of sugar, half a seer of mustard oil and one seer and a half of coal per head during the whole year !

The Government authorities have admitted on occasions that procurement of rice is not going on in a very satisfactory way. The reasons, we believe, are more than one. For one thing, the people have absolutely no faith in the Government procurement policy. Secondly, the cultivator has reasons to believe, due to the disparity between the price at which he sells the rice and the price at which the agent sells it to the Government, that the Government itself is bent on exploiting the poor folk. Thirdly, it is common experience that although the agents purchase the best rice, the Government distributes the rice of the worst

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

quality. So long as the confidence of the public is not restored, the system of control will not work satisfactorily.

Food and Famine 'Exposition'

The gloomy food prospect of 1946 bids fair to push famine incidents of 1943 into the background. While it is necessary to think of measures for bringing food to those faced with starvation, it is also necessary to supplement the diet of the ill-fed and ill-nourished people so that they may work and earn and thus live more healthy. If the chronic famine conditions, patent to India, are to be removed, agriculture, industry and animal husbandry should combine and make a joint effort for providing better food, including protective diet derived from milk, meat and eggs, and surplus money for the procurement of the barest necessities. The Calcutta Corporation, did the right thing in organising, with the help of the Government of Bengal, an "Exposition" on Food in the Commercial Museum in the second week of May. Exhibits relating to agriculture, industrial hints and products of cottage industries, food preserved by the age-old methods and modern scientific means and several educative charts, characteristic of the Commercial Museum, were features of the Exhibition. Lectures on food and famine were arranged and were delivered by experts of the Provincial and the Central Governments.

Faridkot and Kashmir

There is a strange irony in the recent disturbances at Faridkot and Kashmir occurring at a time when the very structure of the Princely Order is going to be radically transformed. The rulers of these States have not only failed to read clearly the signs of the times but have actually taken up an ostrich-like policy of blinding themselves to the patent facts of the day.

Disturbances started in Faridkot about a month back when a large section of the people began to observe *hartal* against the repression of the State. Praja Mandal workers and non-violent Satyagrahis were beaten and maltreated, civil liberties were suppressed, the national flag was insulted. Even the enquiry committee appointed by the Provincial Congress Committee was banned entry into the State. As Pandit Nehru observed, Faridkot from being just a backward State where the authorities had misbehaved, suddenly became a symbol of misrule and incompetence in the States. The situation reached a climax when he gave a stern warning to the State authorities that he himself would defy their prohibitory laws and enter the State. When the situation remained much the same even after this, Pandit Nehru defied Sec. 144 promulgated at Faridkot, entered the State and addressed a huge gathering of 10,000 people. After two hours' talk with the Raja of Faridkot an amicable understanding was arrived at and it was decided (1) to repeal Registration of Association Act, (2) to withdraw orders under Sec. 144 Cr.P.C. and 56 of the Defence of India (Faridkot) Rules, (3) to release the remaining twelve undertrials now in custody and (4) to constitute an impartial public enquiry by the Chief Justice of Faridkot State into excesses, if any, committed against law during the last movement.

The happenings at Kashmir are more ghastly and shameful. Whatever might have been the origin of the trouble,—people's attempt to secure responsible government or Mr. S. M. Abdullah's personal intrigues to make the Maharajah quit Kashmir—the struggle took the form of a popular resistance against the brutal repression of the State. And it seems that the slogan of *Quit Kashmir* was not devised to serve the personal interests of Mr. Abdullah, it was the voice of the oppressed people of Kashmir who wanted to see the overthrow of the stooge of the British Government now that the Government itself is being asked to quit India.

However, the excesses knew no bounds. Police and the military opened fire on unarmed processions and the actual death-roll was much higher than that given in official statements. What is more shocking, the people were forced to utter humiliation and were made to clean the streets with their turbans and to shout *Maharaj-ki-Jai* at the point of the bayonet. It has been alleged that even mosques were occupied by the military and this was likely to foment communal trouble. In a long statement on the events, Pandit Jawaharlal Nehru strongly warned the authorities and said that no State could exist with these disgraces clinging to it.

Grave turmoil continues in Kashmir. Death-roll has already mounted above sixty. A number of policemen were taken in custody because of their refusal to lathi-charge on their "brothers and sisters." This significant development should have been an eye-opener to the authorities. Do they feel very complacent about their might pitted against the stubborn resistance of the people which may burst out in a revolutionary outburst?

Assam Eviction Policy

The agitation against the eviction policy of the Assam Government has been intense and wide. While we were not completely free from misgivings as to the real nature of things prevailing at the spot we maintained from the beginning that the cause of encroachers had been made a nice peg for Muslim League propaganda against the Congress Ministry. The recent Press *communique* issued by the Government of Assam will bring the issues into a clear relief and show that the eviction of encroachers is neither a new scheme nor an unreasonable one. The statement gives a terse history of the whole policy of eviction and its relevant antecedents.

The surplus population, mainly Muslim, of neighbouring Bengal districts like Mymensingh has been pouring into Assam in search of land for the last few years. The interests of the indigenous population naturally suffered to a great extent from this influx of immigrants, who were neither conspicuously peaceful nor particularly adaptable to new modes of life. So restrictions had to be imposed and boundaries were marked beyond which the settlers should not be allowed to penetrate. The operations were described by the phrase "Line System."

Describing the encroachment on grazing reserves the *communique says*:

> Very considerable areas, amounting to lakhs of bighas have been settled with immigrants in the last twenty years, but the demand for land continuously outstripped the progress or ordered settlement, and the immigrants have for long been encroaching on and in some cases completely occupying lands set apart from settlement as professional grazing reserves, where the graziers (who pay grazing tax to Government at Rs. 3 per buffalo), keep the large herds of animals which was essential for the milk supply of the province as well as for the provision of draught

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

animals. The district authorities found it very difficult to cope with these mass encroachments, and during the period of war emergency, when the growing of as much food crops as possible was a vital necessity, no decisive steps were taken to clear the reserves, and the then Muslim Ministry was unwilling to incur the odium of undertaking a vigorous policy of eviction of persons who are mainly their co-religionists.

The Coalition Ministry which came into office in March, 1945, decided to stop the encroachment on grazing reserves but concessions were granted to those who had been in occupation of land in the reserves since 1938 or earlier, and those who had lost their land either by reason of military acquisition or by erosion. The Congress Government is now only pursuing the policy of the Coalition Government and the policy is also being implemented in practice. The clearing of the "unprotected" encroachers from professional grazing reserves in Kamrup, Darrang and Nowgong has begun. The *communique* also states that the programme of eviction of encroachers which will affect some two or three thousand encroachers in all, will not be continued during the monsoon. The whole operation is expected to be complete before the end of the next cold weather. It also adds that the Government have instituted enquiries as to the amount of waste land available in the province and when these have been completed, they propose to plan an ordered settlement of these waste lands, in which immigrants will be allotted a share after making due reservation for the needs of the indigenous population.

This statement on behalf of the Congress Government is exhaustive and outspoken. It lays down the policy and history of eviction which, we think, has become an indispensable item of reform in view of the requirements of rehabilitation of the people of Assam. The irresponsible spokesmen of the Muslim League are spreading fantastic reports to excite the fanatics of the Muslim community. Even Sir Sadullah has lent his malevolent voice to this concert of organized slander against a policy which was followed even by his own ministry. Mr. Gopinath Bardoloi has plainly stated that this eviction policy was originally started by the Muslim League Ministry of Assam. He has also stated that the immigrants observed no bounds of law or decency and lived a life of invading marauders on these grazing lands. The League Ministry gave secret support to these turbulent people.

As a matter of fact, the influx of Muslim immigrants had been started as a definite item of League programme against the Hindu majority of Assam. The Muslims thought that by adding to the Muslim population of Assam and thereby counterbalancing the existing ratio they would be able to make a strong case for Pakistan. Their scheme has been partially successful so far. The population of the Assam Valley (excluding the Garo Hills) in 1911 was 355,320. The number shot up to 585,953 in 1921, to 943,252 in 1931 and to 1,303,902 in 1941. In the light of these statistics it is not difficult to see the game the Muslim League is playing.

Railway Strike

The General Council of the All-India Railwaymen's Federation decided on May 5 to give the Government of India a notice on the 1st June that railwaymen on all Indian railways including the Indian States would go on strike on the 23rd unless their demads are conceded by that date. In its resolution, the General Council strongly condemned the attitude of the Government in not acceding to the demands of the Federation and in refusing to settle the dispute by the appointment of an adjudicator to go into the main points in the dispute, namely, (1) no retrenchment, (2) revision of scales of pay, (*a*) unskilled Rs. 36—3—45, (*b*) semi-skilled Rs. 40—4—60, (*c*) skilled subordinate and administrative Rs. 60—5—100—10—200, (3) adequate dearness allowance as per the recommendation of the Rau Committee and (4) three months' pay as bonus for all.

The resolution further stated that although an adjudicator to go into the question of leave rules and working hours had been appointed the situation remained unchanged because the decision only side-tracked the main issues. Therefore, it resolved to non-co-operate with the adjudicator until the Government agreed to refer the vital points to adjudication.

The meeting directed all Unions to build up the following machinery to conduct the strike : (1) To raise a strike fund. (2) to establish station shops and departmental committees, (3) to form a voluntary corps, (4) membership drive, (5) election of strike committees on each railway, (6) wherever more than one Union of action should be formed, and (7) regional committees in each area.

We do not know if the efforts at reconciliation will be successful before the announced date. The disaster can be averted only by a cautious and wise move for settlement from both parties. Maulana Azad has written to Lord Wavell urging upon him to intervene in the matter and avert a serious crisis which a strike of railwaymen at the present juncture is bound to cause. He has also urged upon the Viceroy to prevail upon the Railway Board either to meet the demands of the railwaymen or at least agree to refer their demands to adjudication so as to reassure the men that their demands are not being neglected. Mr. V. V. Giri has made a similar request to the Viceroy in a letter written after the decision had been taken by the General Council.

But the strike threat did not cause any surprise in the official quarters in New Delhi. And the statement issued by the Railway Board on the resolution of the A.-I. R. F. is disappointing and not much convincing. The most deplorable evasion is the unwillingness to refer the vital issues for adjudication. Regarding the most important question, namely, the revision of scales of pay, the Board admits that this "complicated matter" has been under consideration "for a long time." The effects of red tape and bureaucratic inefficiency are scandalous, and the delay shown by the Government makes one doubt the *bona fides* of the authorities. The Railway Board has assured the public that the revision of scales of pay is to be considered in respect of "all" Central Government servants. As a matter of fact, this is the invariable answer which the Government of India has given to all sections of its employees as an excuse to refuse the demands of all severally and collectively.

The Rao Committee recommended a D.A. of Rs. 45 per month for those drawing pay up to Rs. 250 per month. The demands of the Federation have gone no higher. But the Railway Board has tried to cloud the issue by raising the question of the total expenditure. But the question cannot be avoided by talking of crores of rupees. Even the figures presented by the

CC-0. Shree Vidyanand Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Board show that the average Railway employee in the lower scales of pay draws not more than Rs. 26-8 to 34-8 per month inclusive of everything. Lastly, the Railway Board has raised the bogey of increased establishment cost and the consequent necessity of raising rates and fares to something like 40 per cent. The Board knows full well that they can counteract people's sympathy for the railwaymen only with the menace of increased fare.

The moment of crisis is approaching and the time for decision may be lost in vain by the Railway Board. But while we reiterate our full sympathy with the cause of the railwaymen, we make no apology in sounding a clear note of caution and tact. It cannot be denied that in the present context of India's political development any serious disturbance may retard the progress of our emancipation. Apart from the exigencies of political tension, there is also the overriding issue of the terrible famine ahead. Suspension of communication and transport will vitally affect the food situation and by one stroke will throw the famished millions of India into the pit of actual starvation and death. Maulana Azad rightly observed in a statement issued on May 3 :

> The railwaymen of India should, however, remember one thing. They are a part of the nation and, therefore, what concerns the nation concerns them equally. They know that at present delicate negotiations are going on for a settlement of India's political problem. They must realise that there can be no real solution of their own difficulties till the country is free. They also know the acute food situation in the country. May and June threaten to be the most difficult period and any dislocation in transport during this critical period may prove to be disastrous.

Some have argued that famine would occur even if there be no strike and the strike does not much worsen the case. This is indeed puerile logic. It will be folly to take any precipitate action at this stage and we hope that the railwaymen wil not sacrifice reason in a frenzy of emotional excitement. The people will naturally think that those who could wait during the six years of war, when they did not strike for even one hour to protest against the mass-slaughter of their innocent countrymen, can certainly afford to be patient for a few months more.

Labour Problems in Bombay

Commerce has given a graphic account of the Bombay Labour politics and the unrest in the Bombay Cotton Mills. It says that one of the strange developments that have occurred in the sphere of industrial labour soon after the Congress returned to power has been the spread of the strike wave. Bombay witnessed one of the worst strikes—the sweepers' strike—practically on the very next day of the assumption of office by the Congress Ministry. It is now threatened with a strike of the textile labourers who, the *Commerce* says, are probably the best paid at present. This threatened strike is already having a very bad effect on the already acute cloth position of the country, a 10 per cent cut on the very slender supply of cloth has been announced.

On an examination of the undercurrents, the *Commerce* gains the impression that the sole motive behind these moves is not a genuine desire to raise the economic standards of the workers. There appears to be a clear move on the part of the Congress elements to gain the affections of the labourers by trying to do something spectacular for them and thereby outwit the communists who have been endeavouring to gain the loyalty of labour by putting forward extravagant demands and have, in fact, won successfully with the Congress in Bombay in the recent provincial elections. From its own knowledge and observations, *Commerce* believes that recent instances in Bombay provide sufficient ground to warrant such a conclusion. Many other observers will also incline to the same view.

A little detailed study may be necessary to understand the position. There are two labour associations in Bombay, namely, the *Rashtriya Girni Kamgar Sangh* (also known as *Rashtriya Mill Mazdoor Sangh*) and the *Girni Kamgarh Union*. The former body has its leanings towards Congress while the latter owes allegiance to the Communist Party. Between the two, the *Girni Kamgar Union* is known to have a greater following among the workers than the *Mazdoor Sangh* and this fact was more or less established at the last election to the Bombay Legislature in which, Mr. S. A. Dange, the representative of the *Girni Kamgar Union* was elected. Both the Unions, however, have no *locus standi* under the Bombay Industrial Disputes Act as neither of them possesses the requisite minimum membership. Strictly speaking, therefore, neither of the unions can put forward demands on behalf of the workers. In the absence of any recognised trade union, if the workers have any grievances, they should be presented by the workers themselves to the employers and a dispute will arise only if the employers refuse those demands after a reasonable time-limit. Such, it should be noted, is the position under the Bombay Industrial Disputes Act which is a measure passed by the Congress Ministry in 1938.

The *Commerce* has traced the origin of the present dispute and has used the word dispute within quotation marks because according to a strict interpretation of the B.I.D. Act there is no dispute between the workers and the employers. No specific grievances or demands have been placed before the employers as required under this Act. Even if it is assumed, such has been done, albeit in a round-about manner, no reasonable time-limit has been given to them to consider the demands, and the employers have not said "no" to any such demand. The Congress Ministry assumed office on April 3. Two days later, on April 5, the *Mazdoor Sangh* sent a representation to the Commissioner of Labour, Bombay, putting forward certain demands in regard to revision and standardisation of wage rates in the cotton textile mills of Bombay, payment of adequate dearness allowance, and of unconditional and adequate bonus. The representation also stated that the Board of the *Sangh* had passed a resolution deciding to give notice under the B.I.D. Act and also a strike notice of fourteen days, but refrained, according to the Government Press Note, from giving such a notice to enable the Government to arrange an early settlement of the matter. No direct demands were addressed to the Mill-owners as required under the Act. In referring the demands of this *Sangh*, the Government have dropped one of the demands, namely, that for "unconditional and adequate bonus."

About ten days after the *Mazdoor Sangh* had sub-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mitted its demands to the Labour Commissioner, the *Girni Kamgar Union* followed suit ; and as is only to be expected, it pitched its demands even higher. The demands of the Union are : Restoration of the 13 per cent wage cut which remained unrestored in 1936-37, payment of bonus equivalent to one month's earnings, increase of 12½ per cent in basic wages, introduction of a living wage standard as recommended by the Textile Labour Enquiry Committee, standardisation of wages, and introduction of eight hours' duty without any reduction in the present level of wages and earnings. The Union also demands the immediate introduction of three shifts of 7½ hours each with the same remuneration as for 8 hours in view of the urgent need to increase the supply of cloth and of the necessity to provide greater employment. Yet another demand of the Union is an extra-allowance of 15 per cent of the wages as night-allowance.

The Bombay Government have referred to compulsory arbitration by the Industrial Court only the demands that have been placed by the *Mazdoor Sangh*. The same facility to the *Girni Kamgar Union* has not been afforded and this act of the Bombay Government has been interpreted in some quarters as a seemingly partial treatment. It has also made some feel that the *Majdoor Sangh's* representation might have been a pre-arranged move of the Congress Party to reinforce and extend its hold on the mill-workers.

Apart from the political manoeuvrings of the Labour leaders, for whom, it seems, their own interests in maintaining hold on the workers take precedence over national welfare, the actions of the Government also have come in for a good deal of criticism. The *Commerce* expresses the view that by taking sides in labour party politics, the Government might precipitate labour trouble. What concerns the industry most is the manner in which the Bombay Government is handling the demands of a section of the workers. First of all, the Government have overlooked the fact that the Union which has put forward the demands has no *locus standi* under the Trade Disputes Act. In having done so, it has bye-passed the Act which owes its existence to the very members of the present Government. Secondly, the Government has compulsorily ordered the arbitration of the issues raised under Section 49-A of the B.I.D. Act. This section empowers the Government to refer any industrial dispute to arbitration, without obtaining the consent of either party to the dispute, only under conditions where a serious outbreak of disorder is threatened. There is enough room for doubt whether the situation is so serious as to warrant invoking the aid of this section. Under such circumstances, the question has openly been raised, whether by patronising a particular union, whose claims to speak for the majority of the workers are questionable the Government has not provoked the *Girni Kamgar Union* to put forward extravagant demands in order to retain its hold on the workers. The Government, in our opinion, should not by any of its acts raise the suspicion that it is open to partial treatment. The important question of standardisation of wages has already been examined by the Textile Labour Enquiry Committee and its findings are there for the Government to proceed with. Why should not the Government, instead of going to the Industrial Court, discuss the issue with the employers or raise it in the Legislature with a view to implementation ?

Conference on Planning

The provincial ministers in charge of post-war reconstruction recently met at Delhi at a conference on Planning. Great changes are expected to occur in our political life and they are sure to determine the nature of India's post-war economy. But whatever be the future constitution, the importance of co-ordinated and planned reconstruction will never be minimised. So the Planning conference deserves the attention of all economic and sociological experts of the country.

Plans had already been drafted for individual provinces and the object of the conference was to co-ordinate the different plans and to determine the precise nature of the relation between the Centre and the Provincial units, particularly in the exercise of controlling power and the allocation of Central grant.

It has been proposed that the Central Government would grant Rs. 500 crores for financing the first five-year plans. It would grant Rs. 500 crores out of revenue surplus and also raise another 500 crores for financing the plans. Out of the Rs. 500 crores from the revenue surplus, Rs. 300 crores will go to the provinces.

But the most important thing to be decided at the conference is basis of distribution of this Central grant. It seems that the recent Conference at Delhi is in favour of allocation on population basis for initiating the interim schemes. In the meantime Mr. V. Narahari Rao, Secretary, Finance Department, will be studying the Australian system of grants and his recommendations will vitally affect the final decision on the apportionment of grants. The Conference has always laid proper stress on the special needs of the backward areas like the N.-W. Frontier Province and provinces like Assam which have been particularly affected by the war. As a matter of fact, special conditions obtaining in different provinces should naturally mould a uniform policy of allocation on a population basis.

As yet no details regarding the plans of expenditure by the provinces of Rs. 83 crores sanctioned for interim schemes have been published. The new Ministries will, of course, be free to alter the plans of previous administrations. But whatever be the plans of individual provinces, some basic principles of national planning must be always given due consideration. For one thing, the maintenance of the economic unity of India is an essential condition of any effective planning. But unfortunately the economic repercussions of dividing India are not always adequately realised. Vital questions such as communication, irrigation, public debt, sterling credit, national army, etc., should be taken into consideration before any discussion on dividing India. Provinces like N.-W. F. P., Sind and Bengal have received subventions from the Central Government without which they would have been in a bad plight with their provincial economy. Baluchistan is a responsibility of the Central Government. Above all there is the important issue of trade relationship which with its accompanying problems of tariff, currency, exchange, river navigation, coastal shipping, rail and road travel, and commercial discrimination make a strong case for a vigorous Central planning. In nothing was the importance of economic unity of India so evident as in the food crisis during the war.

But a strong national economy does not rule out the possibilities of regional planning and decentralisation of industries. In the U.S.S.R. some of the most ambitious projects were intentionally launched in back-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ward Republics. A basic principle of the third Five-Year Plan was the utmost possible distribution of productive forces over the wide territory of the Soviet Union with industry located near sources of raw materials and consumption wherever possible, to level out national economy and to eliminate unnecessary haulage. Such decentralisation of industries is essential for a country like India where regional planning is necessary to prevent excessive concentration and ensure equitable distribution of wealth. But regional planning never precludes the free flow of different factors of production between regions. India's economic development depends on a strong Central economy with ample elasticity on sound socialistic lines.

Future Ports of India

The Ports Technical Committee which met in Bombay is reported to have made far-reaching recommendations to the Government of India regarding the country's future port policy. The Committee is strongly of the opinion that the following considerations should govern the formulation of an all-embracing progressive port policy for India :

> Economic indivisibility of British India ; evolution of a sound policy of defence for the whole country ; geographical position and importance of India in the Indian Ocean and the strategic importance of India in the development of the world order in the Far East ; desirability of the dispersal of industries.
>
> The committee then recommended that Vizagapatam's east coast should be developed as a sheltered deep sea port which can accommodate ships at least 650 ft. in length.
>
> As regards Madras, the committee recommended that the wet dock scheme for four berths should be completed within the period of 10 years.
>
> The committee further emphasised the need for a major port between Karachi and Bombay in the gulf of Cutch and recommended 'Sika' for the purpose.
>
> The committee felt that the development of Bhatkal as a major port is essential for providing an outlet for the large and rich hinterland of the Mysore State.
>
> Lastly, the committee scrapped a proposal for developing the Cocanada harbour into a major port in the interests of defence strategy and disapproved the proposals for a ship and canal scheme and river training works as suggested by the Calcutta Port Commissioner.

In the meantime, the construction of a thirty-mile ship canal from Calcutta to Diamond Harbour has been announced and it is understood that the work has been taken in hand. We do not yet know under whose authority this decision has been taken ; in the press report of the Ports Technical Committee's proceedings we find that such an idea was disapproved. We are fully agreeable to support the proposed Calcutta ship canal if we are satisfied that such a canal is really needed to maintain Calcutta as a first class port. It appears in this case that the Port Commissioners have ostensibly gone against the recommendation of the Technical Committee and as such deserve no support. The matter is important and urgent. The activities of the Calcutta Port Commissioners have not always been in the national interest. They had persistently opposed the establishment of the Scindia Ship-building Yard in Calcutta and it was due to their intransigence that they had to go to Vizagapatam. We consider it a fit subject for the issue of a *communique* by the Government of India.

Building of a New Egypt

Reuter's staff correspondent from Cairo reports the big national reconstruction plan adopted by Egypt which is admitted to be the biggest in the Middle East.

Egypt's three main enemies—poverty, ignorance and disease—are being brought to battle by a Higher Council under the Chairmanship of Ismail Sidky Pasha the Prime Minister.

The Higher Council is under no illusions as to the magnitude of the task it is tackling. Not much more than 10 per cent of the entire population of about 17,000,000 are literate, and only a small proportion of the fallaheen (peasant) escape the two most common diseases—Bilharzia, caused by a small parasite in the River Nile, and Trachoma.

The plan against PID, the diminutive by which the three enemies are known, envisages many projects.

One of the biggest of these, is the building of 1,200 social centres to care for mothers and children, and provide baths and washing places and lecture halls. Each centre, it is estimated, will cost £7,000 and all are due to be completed within the scope of a ten-year plan. The Government is including a credit of £500,000 in the forthcoming budget to start this £8,400,000 scheme.

Another project is the construction of six centres for industrial workers, including one in Cairo and another in Alexandria, which will have sports grounds, lecture halls, libraries, medical clinics and restaurants. These centres will cost from £40,000 to £100,000.

Malnutrition problems will be tackled by the building of public restaurants in "people's quarters" where nourishing meals will be served cheaply.

Reformatories costing from £40,000 to £100,000 each will be established throughout the country to deal with child vagrancy, a big problem in Egypt.

Already the Higher Council has approved a scheme for workers' insurance providing for medical aid in cases of sickness, old age pensions and compensation on the death of workers.

Government, employers and workers will each subscribe one-third of the cost of the scheme, which will be applied experimentally first in Cairo, Alexandria, Port Said, Suez, Ismailia and Damietta and then gradually extended throughout the country. The Chairman of the Social Insurance, Department of the International Labour Bureau, is expected in Egypt shortly to make a final revision of the scheme and give advice on its application.

Travelling cinemas with instructional films will tour the country to show the people how they can help the Government and themselves in raising their standard of living. Every effort will be made to encourage the fellaheen themselves to participate in the administration of the new scheme, which is one of the biggest and boldest ever launched in the Middle East.

With the withdrawal of British Army from Egypt, she has begun to breathe the fresh air of complete independence and have immediately launched its bold and ambitious reconstruction plan.

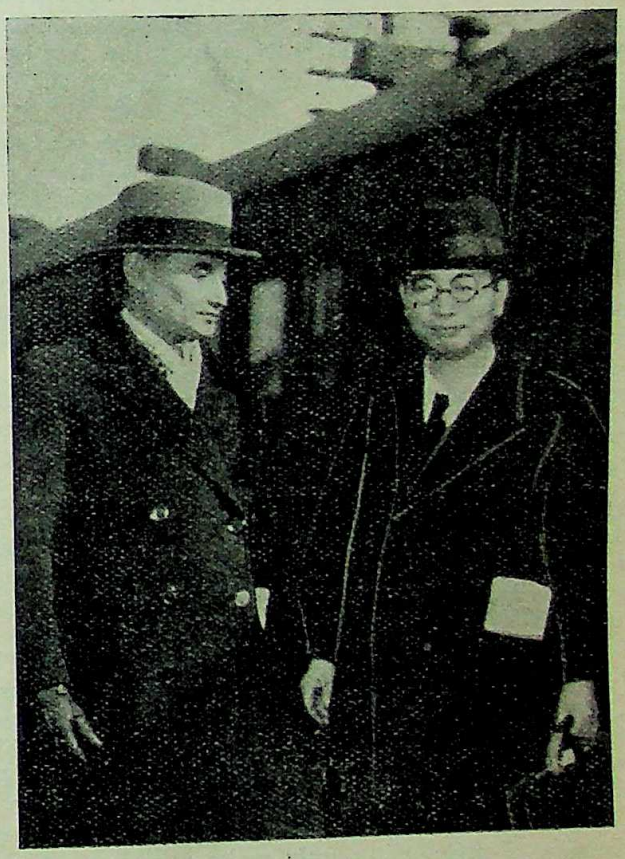
Technical Terminology in Indian Languages

Modern education in India, especially in scientific subjects, is greatly dependent on Western terminology and it is very difficult to express modern thoughts and scientific ideas through the medium of Indian languages. This difficulty is sought to be removed through the preparation of a comprehensive English-Indian Dictionary for use in the various Aryan and Dravidian languages of India and Ceylon. Thus, Bengali, Gujarati, Hindi, Kannada, Malayalam, Marathi, Nepali, Oriya, Punjabi, Sinhalese, Tamil and Telugu equivalents of English terminologies will be included in the Dictionary. Dr. Raghuvira of the International Academy of Indian Culture, Lahore, has undertaken this stupendous work and deserves all support. Prof. V. K. Mathur of the Academy gives the following plan of the Dictionary :

The plan of this Dictionary consists in the substitution of about two million words of Western terminology, covering nearly six hundred special branches of knowledge, by Indian words derived from Sanskrit roots and stems and appearing in four scripts—Devanagari and Bengali for Northern India and Canarese and Tamil for Southern India.

Since time immemorial, Sanskrit has been the fountain-head from which all languages of India have drawn their learned and technical vocabulary and by providing Sanskrit terminology for all the Indian languages, an attempt is made to build up a common and uniform technical vocabulary for the whole of India. The principle followed in forming technical words is mainly to make each word self-expressive, *i.e.*, to make its etymology explain its meaning and connotation. For instance, a number of words of English scientific terminology begin with a proper name. Such words have been translated in Indian languages on the basis of their properties and qualities to make their meaning clearer than it is in English. This feature, coupled with the fact that the students of various sciences will now be enabled to learn them through the words of their own languages, without the need of having first learnt a difficult foreign language will, it is estimated on the basis of experiments, shorten the course of scientific education by three years. Bacteriology for instances cannot be taught to Indian students below the age of 18 in India (16 in Western countries), but they can now be made to start at 15.



In order to make the Indian terminology as perfect as possible the task is being performed with the co-operation of some of the most eminent scholars of East and West who are specialists in various branches of knowledge. Besides, all possible materials necessary in the building up of the Dictionary from both Indian and Western sources are being exhaustively utilised.

So far the Great English-Indian Dictionary has come out with its first volume on Inorganic Chemistry and the third volume on Chemical Apparatus. The second volume on Organic Chemistry, and allied Sciences is passing through the press ; so also the fourth volume on Chemical dyes. The work is being done on Bacteriology, Biology, Anatomy and other Medical Sciences. The preparation of the entire Dictionary is expected to cover a period of ten years.

Dr. Sudhindra Bose

In the death of Dr. Sudhindra Bose India has lost one of our few cultural ambassadors who made it their mission to work for the cause of India in a foreign country all over their life. For the last forty years he had been in the United States of America working for the furtherance of Indo-American cultural communion as also for the social and political regeneration of his mother country.

Dr. Bose hailed from the district of Dacca and received his early education at Comilla. It might be incidentally remembered that his elder brother late Sj. Satyen Bose was Principal of the Victoria College. The conventional pattern of the life of an average Bengali boy could not satisfy the ardent spirit of Sudhindra who was destined from his birth to build up his own life along an untrodden path. The path was the path of daring adventure, and as early as when he was a schoolboy Sudhin left for America to find his own career.

Dr. Sudhindra Bose and Dr. Toyohiko Kagawa

At Iowa Sudhin settled finally and received his school and university education. After completing his academic course he obtained a doctorate in Political Science.

Even when he was a student there Sudhin made an extensive tour of the western and southern states of America and delivered public speeches on India, her problems and her message. Thus Sudhin earned a lot by these lectures while satisfactorily prosecuting his studies in the University. Again this touring brought him in close contact with every aspect of American life in both rural and urban areas.

Sudhin became a lecturer at the Iowa State University by the year 1914. He used to lecture on the politics of the Far East, the Middle East and the Near East as well as on the problems of Africa and Latin America. These parts of his courses included other general colonial questions too. As a lecturer he was eminently

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

successful and his remarkable grasp of his subjects was recognised in American circles. An episode will show how his scholarship and worth were recognised by the American people. When discussions were going on about the legislation regarding the exclusion of the Japanese, Chinese, Indians and other Asians from settling in the United States, Dr. Bose was invited by the Federal Government at Washington to give evidence. He always worked for international affinity and tried to promote the unity of inter-human relationships.

Sudhin did all he could to create facilities for Indian students in America. He worked a great deal for the establishment of the Hindusthan Students' Association of America. The Association published a journal for the Indians staying in America and the journal became one of the links between people of America and the students from India. It is difficult to estimate the importance of the work that Dr. Bose did for India through the medium of this journal and similar other activities. It moulded to a great extent the American attitude towards India and considerably helped the Americans to have a correct view of the true state of affairs in India.

Dr. Bose used to contribute regularly to Indian journals. His connection with *The Modern Review* was of long standing and he always kept in touch with it even from that distant land. The articles that he regularly contributed to Indian journals, specially to *The Modern Review*, were on the social, economic and the constitutional developments of America and these came out in a book form under the title, *Fifteen Years in America*. It was about 1920.

It was largely due to the efforts of our late Editor that the ban against Bose's entry into India was lifted and he was permitted to visit his motherland.

Dr. Bose paid a visit to India in 1928 as an American citizen accompanied by his American wife. He utilised his visit by gathering the latest first-hand information about India and her problems. He had a mind to make another visit—a wish which was never fulfilled.

The British Government put a restriction on his visiting India and it was after much ado that he secured the permission of visiting it once. However, the work he did for India on a foreign soil will make him remembered as one of the ablest sons of India. His articles published in *The Modern Review* will remain as a record of his deep intellectual attainments. The future historian of India will surely make a proper estimate of the worth, integrity and courage of this exile son of the country.

Bhulabhai Desai

The death of Bhulabhai Desai will be mourned by all; it has inflicted an irreparable loss on our public life. With him passed away one of the ablest lawyers of India and one of the very best parliamentarians of this country. A brilliant speaker, a formidable constitutionalist and a shrewd adviser, Bhulabhai was above all a true patriot to whom the cause of the country as a whole was above the limitations of party, creed or group.

Born on October 13, 1877, at Bulsar in Bombay Province, Bhulabhai started his career as a professor of History and Economics at the Gujarat College at Ahmedabad. After a few years he gave up the academic vocation and joined the Bar in Bombay and built up an extensive practice within a very short time. The record of Bhulabhai's legal career is a glorious one, and he became one of the leading lawyers of India by virtue of his forensic skill, marshalling of arguments and convincing eloquence.

The successful lawyer was flung into the vortex of India's political struggle when he appeared on behalf of the peasants of Bardoli in 1928 and 1931. Since then he made himself one with the cause of the Congress and even if he occasionally differed from the Congress programme as in the case of Desai-Liaquat Pact, his association with the Congress ideal remained as close as ever. He did his last service to the cause of nationalism when he defended the I.N.A. prisoners; and his unforgettable closing address will remain as a monument of magnificent legal acumen.

At this critical moment of India's history the loss caused by the death of a man of Bhulabhai's calibre cannot be overestimated. We record our deep sense of grief and regret at this sad event.

Text of the Statement Issued by the Cabinet Mission and the Viceroy

The following is the full text of the statement issued by the Cabinet Delegation and the Viceroy yesterday (May 16):

1. On March 15th last just before the despatch of the Cabinet Delegation to India Mr. Attlee, the British Prime Minister, used these words:—

"My colleagues are going to India with the intention of using their utmost endeavours to help her to attain her freedom as speedily and fully as possible. What form of Government is to replace the present regime is for India to decide; but our desire is to help her to set up forthwith the machinery for making that decision."

"I hope that India and her people may elect to remain within the British Commonwealth. I am certain that they will find great advantages in doing so."

"But if she does so elect, it must be her own free will. The British Commonwealth and Empire is not bound together by chains of external compulsion. It is a free association of free peoples. If, on the other hand, she elects for independence, in our view she has a right to do so. It will be for us to help to make the transition as smooth and easy as possible."

2. Charged in these historic words we—the Cabinet Ministers and the Viceroy—have done our utmost to assist the two main political parties to reach agreement upon the fundamental issue of the unity or division of India.

After prolonged discussions in New Delhi we succeeded in bringing the Congress and the Muslim League together in Conference at Simla. There was a full exchange of views and both parties were prepared to make considerable concessions in order to try and reach a settlement but it ultimately proved impossible to close the remainder of the gap beween the parties and so no agreement could be concluded.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Since no agreement has been reached we feel that it is our duty to put forward what we consider are the best arrangements possible to ensure a speedy setting up of the new constitution. This statement is made with the full approval of H.M.G. in the U.K.

Unity Of India

3. We have, accordingly, decided that immediate arrangements should be made whereby Indians may decide the future constitution of India and an Interim Government may be set up at once to carry on the administration of British India until such time as a new Constitution can be brought into being.

We have endeavoured to be just to the smaller as well as to the larger sections of the people; and to recommend a solution which will lead to a practicable way of governing the India of the future, and will give a sound basis for defence and a good opportunity for progress in the social, political and economic field.

4. It is not intended in this statement to review the voluminous evidence that has been submitted to the Mission; but it is right that we should state that it has shown an almost universal desire, outside the supporters of the Muslim League, for the unity of India.

5. This consideration did not, however, deter us from examining closely and impartially the possibility of a partition of India; since we were greatly impressed by the very genuine and acute anxiety of the Muslims lest they should find themselves subjected to a perpetual Hindu-majority rule.

This feeling has become so strong and widespread amongst the Muslims that it cannot be allayed by mere paper safeguards. If there is to be internal peace in India it must be secured by measures which will assure to the Muslims a control in all matters vital to their culture, religion, and economic or other interests.

Pakistan

6. We, therefore, examined in the first instance the question of a separate and fully independent sovereign State of Pakistan as claimed by the Muslim League. Such a Pakistan would comprise two areas, one in the north-west consisting of the Provinces of the Punjab, Sind, North-West Froneir, and British Baluchistan; the other in the north-east consisting of the Provinces of Bengal and Assam. The League were prepared to consider adjustment of boundaries at a later stage, but insisted that the principle of Pakistan should first be asknowledged.

The argument for a separate State of Pakistan was based, first, upon the right of the Muslim majority to decide their method of Government according to their wishes, and secondly, upon the necessity to include substantial areas in which Muslims are in a minority, in order to make Pakistan administratively and economically workable.

Non-Muslim Minorities

The size of the non-Muslim minorities in a Pakistan comprising the whole of the six Provinces enumerated above would be very considerable as the following figures (latest census of 1941) show:—

	Muslim,	Non-Muslim.
North-Western Area—		
Punjab ..	16,217,242	12,201,577
N.-W. F. P. ..	2,788,797	249,270
Sind ..	3,208,325	1,326,683
Br. Baluchistan ..	438,930	62,701
	22,653,294	13,840,231
	62.07%	37.93%
North-Eastern Area—		
Bengal ..	33,005,434	27,301,091
Assam ..	3,442,479	6,762,254
	36,447,913	34,063,345
	51.69%	48.31%

The Muslim minorities in the remainder of British India number some 20 million dispersed amongst a total population of 188 million.

These figures show that the setting up of a separate sovereign State of Pakistan on the lines claimed by the Muslim League, would not solve the communal minority problem; nor can we see any justification for including within a sovereign Pakistan those districts of the Punjab and of Bengal and Assam in which the population is predeminantly non-Muslim. Every argument that can be used in favour of Pakistan, can equally in our view be used in favour of the exclusion of the non-Muslim areas from Pakistan. This point would particularly affect the position of the Sikhs.

Bengal And Punjab

7. We, therefore, considered whether a smaller sovereign Pakistan confined to the Muslim majority areas alone might be a possible basis of compromise. Such a Pakistan is regarded by the Muslim League as quite impracticable because it would entail the exclusion from Pakistan of (a) the whole of the Ambala and Jullundur Divisions in the Punjab; (b) the whole of Assam except the district of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sylhet; and (c) a large part of Western Bengal, including Calcutta, in which city the Muslims form 23.6% of the population.

We ourselves are also convinced that any solution which involves a radical partition of the Punjab and Bengal, as this would do, would be contrary to the wishes and interests of a very large proportion of the inhabitants of these Provinces. Bengal and the Punjab each has its own common language and a long history and tradition.

Moreover, any division of the Punjab would of necessity divide the Sikhs leaving substantial bodies of Sikhs on both sides of the boundary. We have therefore been forced to the conclusion that neither a larger nor a smaller sovereign State of Pakistan would provide an acceptable solution for the communal problem.

Points Against Pakistan

8. Apart from the great force of the foregoing arguments there are weighty administrative, economic and military considerations. The whole of the transportation and postal and telegraph sytsems of India have been established on the basis of a united India. To disintegrate them would gravely injure both parts of India.

The case for a united defence is even stronger. The Indian armed forces have been built up as a whole for the defence of India as a whole, and to break them in two would inflict a deadly blow on the long traditions and high degree of efficiency of the Indian Army and would entail the gravest dangers. The Indian Navy and Indian Air Force would become much less effective.

The two sections of the suggested Pakistan contain the two most vulnerable frontiers in India and for a successful defence in depth the area of Pakistan would be insufficient.

9. A further consideration of importance is the greater difficulty which the Indian States would find in associating themselves with a divided British India.

10. Finally there is the geographical fact that the two halves of the proposed Pakistan State are separated by some seven hundred miles and the communications between them both in war and peace would be dependent on the goodwill of Hindustan.

11. We are therefore unable to advise the British Government that the power which at present resides in British hands should be handed over to two entirely separate sovereign States.

Congress Plan

12. This decision does not however blind us to the very real Muslim apprehensions that their culture and political and social life might become submerged in a purely unitary India, in which the Hindus with their greatly superior numbers must be a dominating element.

To meet this the Congress have put forward a scheme under which Provinces would have full autonomy subject only to a minimum of Central subjects, such as Foreign Affairs, Defence and Communications. Under this scheme Provinces, if they wished to take part in economic and administrative planning on a large scale, could cede to the Centre optional subjects in addition to the compulsory ones mentioned above.

13. Such a scheme would, in our view, present considerable constitutional disadvantages and anomalies. It would be very difficult to work a Central Executive and Legislature in which some Ministers, who dealt with Compulsory subjects, were responsible to the whole of India while other Ministers, who dealt with optional subjects, would be responsible only to these Provinces which had elected to act together in respect of such subjects. This difficulty would be accentuated in the Central Legislature, where it would be necessary to exclude certain members from speaking and voting when subjects with which their Provinces were not concerned were under discussion.

Apart from the difficulty of working such a scheme, we do not consider that it would be fair to deny to other Provinces, which did not desire to take the optional subjects at the Centre, the right to form themselves into a group for a similar purpose. This would indeed be no more than the exercise of their autonomous powers in a particular way.

Indian States

14. Before putting forward our recommendation we turn to deal with the relationship of the Indian States to British India. It is quite clear that with the attainment of independence by British India, whether inside or outside the British Commonwealth, the relationship which has hitherto existed between the Rulers of the States and the British Crown will no longer be possible. Paramountcy can neither be retained by the British Crown nor transferred to the new Government. This fact has been fully recognised by those whom we interviewed from the States. They have at the same time assured us that the States are ready and willing to co-operate in the new development of India. The precise form which their co-operation will take must be a matter for negotiation

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri 76410

during the building up of the new constitutional structure, and it by no means follows that it will be identical for all the States. We have not therefore dealt with the States in the same detail as the Provinces of British India in the paragraphs which follow.

The Solution

15. We now indicate the nature of a solution which in our view would be just to the essential claims of all parties, and would at the same time be most likely to bring about a stable and practicable form of constitution for All-India.

We recommend that the constitution should take the following basic form:—

(1) There should be a Union of India, embracing both British India and the States, which should deal with the following subjects: Foreign Affairs, Defence, and Communications; and should have the powers necessary to raise the finances required for the above subjects.

(2) The Union should have an Executive and a Legislature constituted from British Indian and States representatives. Any question raising a major communal issue in the Legislature should require for its decision a majority of the representatives present and voting of each of the two major communities as well as a majority of all the members present and voting.

(3) All subjects other than the Union subjects and all residuary powers should vest in the Provinces.

(4) The States will retain all subjects and powers other than those ceded to the Union.

(5) Provinces should be free to form Groups with executives and legislature, and each Group could determine the Provincial subjects to be taken in common.

(6) The constitutions of the Union and of the Groups should contain a provision whereby any Province could, by a majority vote of its Legislative Assembly, call for a reconsideration of the terms of the constitution after an initial period of 10 years and at 10 yearly intervals thereafter.

16. It is not our object to lay out the details of a constitution on the above lines, but to set in motion the machinery whereby a constitution can be settled by Indians for Indians.

It has been necessary, however, for us to make this recommendation as to the broad basis of the future constitution because it became clear to us in the course of our negotiations that not until that had been done was there any hope of getting the two major communities to join in the setting up of the constitution-making machinery.

Constitution-Making Machinery

17. We now indicate the constitution-makig machinery which we propose should be brought into being forthwith in order to enable a new constitution to be worked out.

18. In forming any Assembly to decide a new Constitutional structure the first problem is to obtain as broad-based and accurate a representation of the whole population as is possible. The most satisfactory method obviously would be by election based on adult franchise; but any attempt to introduce such a step now would lead to a wholly unacceptable delay in the formulation of the new Constitution.

The only practicable alternative is to utilize the recently elected Provincial Legislative Assemblies as the electing bodies. There are, however, two factors in their composition which make this difficult. First, the numerical strengths of the Provincial Legislative Assemblies do not bear the same proportion to the total population in each Province. Thus Assam with a population of 10 millions has a Legislative Assembly of 108 members while Bengal, with a population six times as large, has an Assembly of only 250.

Secondly, owing to the weightage given to minorities by the Communal Award, the strengths of the several communities in each Provincial Legislative Assembly are not in proportion to their numbers in the Province. Thus the number of seats reserved for Muslims in the Bengal Legislative Assembly is only 48% of the total, although they form 55% of the Provincial population.

After a most careful consideration of the various methods by which these inequalities might be corrected, we have come to the conclusion that the fairest and most practicable plan would be—

(a) to allot to each Province a total number of seats proportional to its population, roughly in the ratio of one to a million, as the nearest substitute for representation by adult suffrage.

(b) to divide this provincial allocation of seats between the main communities in each Province in proportion to their population.

(c) to provide that the representatives allotted to each community in a Province shall be elected by the members of that community in its Legislative Assembly.

We think that for these purposes it is sufficient to recognise only three main communities in India—General, Muslim, and Sikh, the "General" community including all persons who are not Muslims or Sikhs.

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

As the smaller minorities would, upon the population basis, have little or no representation since they would lose the weightage which assures them seats in the Provincial Legislatures, we have made the arrangements set out in paragraph 20 below to give them a full representation upon all matters of special interest to the minorities.

19. (*i*) We, therefore, propose that there shall be elected by each Provincial Legislative Assembly the following numbers of representatives, each part of the Legislature (General, Muslim or Sikh) electing its own representatives by the method of proportional representation with the single transferable vote:—

TABLE OF REPRESENTATION

SECTION A

Province	General	Muslim	Total
Madras	45	4	49
Bombay	19	2	21
U. P.	47	8	55
Bihar	31	5	36
C. P.	16	1	17
Orissa	9	0	9
Total	167	20	187

SECTION B

Province	General	Muslim	Sikh	Total
N.-W. F. P.	0	3	0	3
Punjab	8	16	4	28
Sind	1	3	0	4
Total	9	22	4	35

SECTION C

Province	General	Muslim	Total
Bengal	27	33	60
Assam	7	3	10
Total	34	36	70
Total for British India		..	292
Maximum for Indian States		..	93
Total		..	385

NOTE.—In order to represent the Chief Commissioner's Provinces there will be added to Section A the Member representing Delhi in the Central Legislative Assembly, the Member representing Ajmer-Merwara in the Central Legislotive Assembly, and a representative to be elected by the Coorg Legislative Council. To Section B will be added a representative of British Baluchistan.

(ii) It is the intention that the States should be given in the final Constituent Assembly appropriate representation which would not, on the basis of the calculations adopted for British India, exceed 93, but the method of selection will have to be determined by consultation. The States would in the preliminary stage be represented by a Negotiating Committee.

IMMEDIATE MEETING

(*iii*) The representatives thus chosen shall meet at New Delhi as soon as possible.

(*iv*) A preliminary meeting will be held at which the general order of business will be decided, a Chairman and other officers elected, and an Advisory Committee (see paragraph 20 below) on the rights of citizens, minorities, and tribal and excluded areas set up. Thereafter the provincial representatives will divide up into the three sections shown under A, B, and C in the Table of Representation in sub-paragraph (*i*) of this paragraph.

(*v*) These sections shall proceed to settle the Provincial Constitutions for the Provinces included in each section, and shall also decide whether any Group Constitution shall be set up for those Provinces and, if so, with what provincial subjects the Group should deal. Provinces shall have the power to opt out of the Groups in accordance with the provisions of sub-clause (viii) below.

(*vi*) The representatives of the Sections and the Indian States shall reassemble for the purpose of settling the Union Constitution.

COMMUNAL ISSUES

(*vii*) In the Union Constituent Assembly resolution varying the provisions of paragraph 15 above or raising any major communal issue shall require a majority of the representatives present and voting of each of the two major communities.

The Chairman of the Assembly shall decide which (if any) of the resolutions raise major communal issues and shall, if so requested by a majority of the representatives of either of the major communities, consult the Federal Court before giving his decision.

(*viii*) As soon as the new constitutional arrangements have come into operation, it shall be open to any Province to elect to come out of any Group in which it has been placed. Such a decision shall be taken by the new legislature of the Province after the first general election under the new Constitution.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Fundamental Rights

20. The Advisory Committee on the rights of citizens, minorities, and tribal and excluded areas should contain full representation of the interests affected, and their function will be to report to the Union Constituent Assembly upon the list of Fundamental Rights the clauses for the protection of minorities, and a scheme for the administration of the tribal and excluded areas, and to advise whether these rights should be incorporated in the Provincial, Group, or Union constitution.

21. The Viceroy will forthwith request the Provincial Legislatures to proceed with the election of their representatives, and the States to set up a Negotiating Committee. It is hoped that the process of constitution-making can proceed as rapidly as the complexities of the task permit so that the interim period may be as short as possible.

Treaty With Britain

22. It will be necessary to negotiate a Treaty between the Union Constituent Assembly and the United Kingdom to provide for certain matters arising out of the transfer of power.

23. While the constitution-making proceeds, the administration of India has to be carried on. We attach the greatest importance therefore to the setting up at once of an Interim Government having the support of the major political parties. It is essential during the interim period that there should be the maximum of co-operation in carrying through the difficult task that face the Government of India.

Besides the heavy task of day-to-day administration, there is the grave danger of famine to be countered; there are decisions to be taken in many matters of post-war development which will have a far-reaching effect of India's future; and there are important international conferences in which India has to be represented. For all these purposes a Government having popular support is necessary.

The Viceroy has already started discussions to this end, and hopes soon to form an Interim Government in which all the portfolios, including that of War Member, will be held by Indian leaders having the full confidence of the people.

The British Government, recognising the significance of the changes in the Government of India will give the fullest measure of co-operation to the Government so formed in the accomplishment of its tasks of administration and in bringing about as rapid and smooth a transition as possible.

Appeal To People

24. To the leaders and people of India who now have the opportunity of complete independence we would finally say this. We and our Government and countrymen hoped that it would be possible for the Indian people themselves to agree upon the method of framing the new constitution under which they will live. Despite the labours which we have shared with the Indian Parties, and the exercise of much patience and goodwill by all this has not been possible.

We, therefore, now lay before you proposals which, after listening to all sides and after much earnest thought, we trust, will enable you to attain your independence in the shortest time and with the least danger of internal disturbance and conflict. These proposals may not, of course, completely satisfy all parties, but you will recognise with us that at this supreme moment in Indian history statesmanship demands mutual accommodation.

We ask you to consider the alternative to acceptance of these proposals. After all the efforts which we and the Indian Parties have made together for agreement, we must state that in our view there is small hope of peaceful settlement by agreement of the Indian Parties alone. The alternative would therefore be a grave danger of violence, chaos, and even civil war. The result and duration of such a disturbance cannot be foreseen; but it is certain that it would a terrible disaster for many millions of men, women and children. This is a possibility which must be regarded with equal abhorrence by the Indian people, our own countrymen, and the world as a whole.

We, therefore, lay these proposals before you in the profound hope that they will be accepted and operated by you in the spirit of accommodation and goodwill in which they are offered. We appeal to all who have the future good of India at heart to extend their vision beyond their own community or interest to the interests of the whole four hundred millons of the Indian people.

We hope that the new independent India may choose to be a member of the British Commonwealth. We hope in any event that you will remain in close and friendly association with our people. But these are matters for your own free choice. Whatever that choice may be we look forward with you to your ever increasing prosperity among the great nations of the world, and to a future even more glorious than your past.

Other relevant statements and documents relating to these proposals are given elsewhere in this issue.—Ed. M. R.

SQUARING THE CIRCLE IN PALESTINE

By St. NIHAL SINGH

I

Ask anybody, anywhere in the world :

"Of what sport are the English the fondest ?"

Or

"What is the most characteristically English sport ?"

Some may answer "Rugger." Others "Soccer." Some may say "Tennis." Others "Racing." A few may even venture "Hunting."

Most persons will, however, plump for "Cricket." They will immediately proceed to reel off proverbs : "This is not cricket." Or "You are not playing cricket." Some of them will remind you of the Duke of Wellington's famous saying that the battle of Waterloo was won on the cricket fields of Eton.

My own view is different. Slightly different—as an Englishman would say, meaning thereby of course, very much different.

"Squaring the circle" is, I hold, the game of English games. According to the definition they themselves give, it is an attempt to "perform demonstrable impossibility" or simply to "attempt impossibility."

They are at it morning, noon and night. They are at it in their own baby's bib of a land. They are at it in other countries into each of which many a Britain can be put and lost. They are at it even in a land like ours, fit to support the Lord God's foot-stool.

II

Within my sight one such game was begun. Not quite thirty years ago, when it was started, only the prophets could have foretold that it would still be going on and that it would even today prove to be of absorbing interest.

Almost from the very commencement it has not been going on very well for the English. Every year it, in fact, has been going from bad to worse. So parlous, indeed, has it become that any player would be justified in giving it up in disgust.

Not the English, however. They go on and on, come what may. Theirs is the bull-dog grip that never loosens its hold, once the teeth snap.

Of late I am beginning to discern a disposition upon their part to try to coax another player to lean over their shoulder as they play and to give, once in a while, a word of advice as to the move to be made, if not actually take a hand at it. An ingeniously worded, though a tentative, timorous, invitation has been actually extended to their cousins across the Atlantic. The Americans are, however, a canny people and they may fight shy of attempting to "perform demonstrable impossibility."

III

The board upon which this "squaring of the circle" was begun is known to the world as Palestine. Flisteen, it is called by the people who predominate there—the Palestinian Arabs.

They are in conflict with another people—the Beni Israel, or sons of Israel, or Hebrews, commonly called Jews, who would name this very land Zion, if only they could make their will prevail. This they would do because of a hill in the heart of the principal city in that land—Zurooshalam (Jerusalem). To them it—Zion—is the hill of hills in all the world—a magnet that draws them thither.

This holy hill attracts the Jews as irresistibly in modern times as it did in days of old. They fain would have their life revolve round it as it once did—as it did before the rulers of the day (the Romans) drove them out of the land and the great dispersal of their nation began about 1700 years ago. This tragedy they insist upon ending—ending once for all.

Back to Zion—Zionism, or the Zionist movement—has, therefore, two facets for the Jews whose hearts pine for it. On one side it shows the final scenes of a tragedy. On the other it displays the golden glory of an era of reunion that is ready to dawn.

IV

To turn the gleam of hope into the golden glory of fact, the squaring of this circle was begun in the first week of November, 1917. It was begun in London—not in Jerusalem. So it was, at least, in the first instance.

That moment seemed to be singularly propitious for turning one particular "demonstrable impossibility" into possibility. The problem resolved itself into three parts :

Part I : To make Palestine "a National Home for the Jewish people." This was meant to satisfy the Jewish longing for Zion. That was clear enough despite the very guarded language used. It was clear :

First, because it was something in the nature of a reward for a Zionist—Dr. Chaim Weizmann—who had rendered inestimable service to the British and their allies by finding a way to supply an indispensable ingredient for making the most powerful type of explosives. He would take nothing for himself—neither money nor dignity. Being desirous of ending his people's 1700-year exile from Palestine, he did not, however, object to their profiting from his labours. Such, indeed, was the view entertained by the head of His Majesty's Government—the Rt. Hon'ble David Lloyd George. He should have known if anyone did.

Secondly, the declaration concerning "a national home for the Jewish people" by His Majesty's Government was put in hands that "itched" for this boon to the sons of Israel—the greatest of boons that could be bestowed upon them. Lord Rothschild, the recipient, had given liberally of his substance—no small substance, to be sure—to the Zionist cause.

Thirdly, Zionists all over the world and particularly in the United States of America, accepted the proposition as such.

Part II : Turn Palestine into a "National Home for the Jewish people" yet save it for the Arabs. Save it

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by refraining from doing anything "which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine."

V

How could Part I of the problem be reconciled with Part II? Therein lay the squaring of the circle—the attempting of the "demonstrable impossibility."

The war—World War No. I—was then raging. It was going none too well for Britain and her allies. The pledge for the creation of "a National Home for the Jewish people" was, in fact, expected to unleash forces that would strengthen the allied hand.

Especially in the U.S.A. There the Jews had money. Lots of it. Also influence. Heartened by the declaration, they would pour both money and influence into the prosecution of the struggle. So the optimists fondly hoped.

The revolutionists who had managed to get the upper hand in Russia were, "in the highest stage," Jews. This wondrous pronouncement was expected to have a favourable effect upon them, too.

Both expectations proved illusory. In the fog superinduced by the war, expectations, if attractively tinted, pass however for realities. These did. That is what matters—at this stage of my narrative.

VI

Certainly that first week of November, 1917, was well chosen for rallying the Jews to the allied cause. It appeared, indeed, as if that moment had been specially ordained by the Unseen Powers for this particular purpose. Let me recall the situation to the reader's mind:

The campaign launched in Palestine soon after Turkey joined Germany in World War No. 1, was then nearing its climax. Another few days would see the enemy down on his knees. At the head of the victorious columns General Allenby would triumphantly enter Jerusalem.

The booty belongs to the victor. This has been the rule since man began to contend with man before the dawn of history. With that which he has wrested from his adversary, he has done as he pleased.

VII

At least the victor did so till Pandit Woodrow Wilson appeared on the scene. He was all right when he was teaching political philosophy at Princeton University in New Jersey, not far from New York City. He had, however, ceased long since to fill that chair of learning. At that moment he was at the head of the United States of America. Without the man-power, material-power and money-power of his people, the war in Europe could not be won—at any rate, won by Britain and her allies. Wilson must, therefore, be humoured in his "highfaluting" ideas.

Not all the people in the United Kingdom—very disunited at that moment, for the Sinn Feinners were up in arms across the Irish Sea—were realists. Some were idealists. Even many of the realists prattled about idealism. Had they not said from the outset of the war that they had unsheathed the sword in defence of the freedom of small nations?

It doubly suited Britons, therefore, to fall in with Wilson's idealistic patter. No. They were not in the war to gain anything for themselves. They would not add a single square mile to their territories. Had they not, in any case, an Empire over which the sun never set?

VIII

There was, of course, Haifa. It was exceedingly well-placed by Nature to serve certain British purposes. Its water-front would tempt even a nation not possessing their maritime skill and experience—their vast and varied interests. What better terminus could there be than this for the pipe-line bringing oil?

'Oil.' Yes. There was oil in that region. Quantities of it—quantities not yet assessable, for only the sketchiest geological surveys had yet been made.

Had not Winston Spencer Churchill, with his God-given vision of the future, predicted that oil would be the world's most precious commodity especially during war? Had he not made an immensely rich oil-bearing area in the neighbourhood secure for his people?

Even so high an authority on the Middle-East as Sir Ronald Storrs has publicly stated that the British had their eyes on Haifa. Having been reared in diplomacy since his early manhood, having devoted to it his working years principally in Egypt and Palestine, his language is a little guarded, yet, I think, not unrevealing. "Those who had heard of the Sykes-Picot negotiations in 1916," he wrote in his essay on Zionism and Palestine, "cherished vague hopes of Great Britain being awarded Haifa as a British possession."

That "award" would, indeed, have completed the turning of the Mediterranean Sea into an English lake. Near it was Cyprus, that the Romancist-imperialist, Benjamin Disraeli—Lord Beaconsfield—himself a Jew, had added to the Empire. Then there were Malta and the Suez Canal, in complete British control. At the other end was "Gib" (Gibraltar)—the Rock, constituting the basis of British communications with the Empire—British Imperial strategy—Empire trade and what not.

Control over Palestine would, indeed, secure British imperial communications that ran through it eastwards—and westwards. It would, indeed, enable Britain to close the strategic and economic circuit—to borrow a figure of speech from the electrician's lingo.

IX

But . . .

There was not one "but" only. There were many "buts," in fact.

Certain promises had been made to the Arabs. Not specially to the Palestinian Arabs. But to the Arabs in Arabia. Still there were racial and religious ties between all Arabs. Till the opening of hostilities there were political ties, too. This tie was supplied by subjection to Turkey—subjection common to them all.

There were also the Muslims in India to be taken into account in this connection. They had not hesitated to fight the Turks any more than the non-Muslims from India had done.

In the zeal to please the Jews, nothing must be done to upset any of these elements. This was said and printed in Britain again and again. By all sorts of people. Of that I can bear witness, for, as I indicated before, I then lived there.

X

Here was a circle. A vicious circle it looked in most

Especially in the eyes of a Jew. Edwin Samuel Montagu was the very antithesis of the other two Jews I have mentioned. Unlike Weizmann (who had been born in Russia and educated upon the continent of Europe) and Rothschild, he was not a Zionist. Left to himself, he would, in fact, forget that, racially, he was different from the fellows among whom he had been born. He had been brought up as an Englishman. As a boy he was sent by his immensely rich father to an English public school at Clifton, near Bristol. He became quite "pally" with Josiah Clement Wedgwood, who was a student there at the time. Thence he went to Cambridge, where he shone particularly as a debator, becoming the president of the Union. Entering politics, he had not the slightest difficulty in obtaining office. Until the summer of 1917, it had been minor office. Then he saw an opportunity to hoist himself into the position of Secretary of State. The opening was made by the scathing minority report that his former schoolfellow Wedgwood had indited as a member of the Mesopotamia Commission.

Montagu seized the opportunity with both hands. He directed a withering fire upon the Government of India. It scorched every vestige of efficiency in which it had always garbed itself.

Lloyd George did the one thing that he could. He invited Edwin Samuel Montagu to step into the breach made in the cabinet ranks by the resignation of Austen Chamberlain. This was regarded as a stroke of genius upon his part. The critic was charged with the task of removing the grounds for criticism.

This was precisely what Montagu desired. Within a short time of taking over the Indian portfolio he went to India. With the Viceroy and Governor-General of the day as his principal companion he perambulated India, met officials and non-officials, apologists of the administration and its critics. Not long after his return to London, with the Montagu-Chelmsford Report in his satchel, he had to give his colleagues of His Majesty's Government the benefit of his advice upon this Zionist adventure with which some of them were then fascinated.

XI

Now that the principal figures that started this game of squaring the Palestinian circle are dead and the lapse of time has made it possible for us to view their performance in perspective, we may well ask, did Montagu help or hinder his countrymen—did he save them from falling into peril's pit or did he, in fact, push them into it? To me he talked, from time to time, with freedom unusual for a man in his responsible position. My intimate association in those years with a London daily, presumed to be fed from the party funds under Lloyd George's personal control, and my acquaintance with the Prime Minister and several members of his family have often raised these questions in my mind.

Montagu meant very well, indeed. That was abundantly realised by even those who regarded him as something of a nuisance—L.G. for one and his neighbour across the Downing Street, Arthur James (later the Earl of Balfour), at the time the Secretary of State for Foreign Affairs, for another. They were bent upon supporting the Zionist cause for purposes of their own, some of which I have already mentioned.

It is difficult for me to believe that but for Montagu there would have been no warning. No. The warning would have come from India, if not also from the British Agency in Cairo.

Montagu or no Montagu, the circle would have been there. The British would not have supported —at least supported in the open—the Zionist cause without giving some sort of assurance for the protection of the Arab Palestinians' rights. Montagu's zeal in the Indian interest might have resulted in the placing of a little stronger accent upon the proviso designed for this purpose. Hardly more.

XII

I take this view because of the English—or, I might even write, the British—fascination for checks or counter-checks, or, as some of them themselves would put it, because of their desire for balance, a desire feeding, at least in their own view, upon their sense of justice and fair-play. Cricket, in fact.

Then, there is the disposition of the principal figures to be considered. No one loved quibbles more than did Lloyd George or, for that matter, Balfour.

Phrase-making was L.G.'s strength as well as his weakness. No child took greater delight in lisping his first articulated word than did this great Welshman in turning off a neat figure of speech. What a genius did he have for it, too! With his mind stored during his childhood with the facts and fables chronicled in the two Testaments and the maxims and proverbs scattered through the pages of the Bible, he could always find—find apparently without searching—some name or incident, some episode or verse—that would hit off the occasion and, possibly, make his opponent look cheap in every one's eyes and even writhe and squirm. I have seen him doing it.

Balfour had a finer mind and certainly a better trained one. Philosophy fascinated him. Also philosophers. He delighted in entertaining Bergson. A Jew of course but in some ways the greatest thinker of his time.

I am convinced that Balfour's dialectical skill could draw upon causistry to greater purpose than could the verbal agility of any other contemporary of his—not excepting L.G.'s.

XIII

These master-minds produced, between them, the Zionists' magna charta—popularly known as the "Balfour Declaration." Though I have given its purport already, I now set it down in its entirety, especially because brevity is one of its many qualities:

> "His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country."

Was there ever a greater masterpiece of vague phraseology. Delightfully vague at the time of publication. Not destined to be so delightful later on, however.

Why "a" national home? Why not "the" national home? Was it meant that there was to be another

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

home or, perhaps, several other homes, for the Jewish people?

What is a "national home," anyway? Were the Jews transplanted in Palestine to be masters over it? If not, what security would that home have for them? Who was to give them security? The British? Were the British to be for ever Palestine's rulers—at least its overlord? If not, who? How?

On the other hand, what did the phrase "the civil and religious rights of existing non-Jewish communities in Palestine" signify? Was "civil" used in contradistinction to "military." If so did it include "political" rights?

What of the "military" rights and responsibilities? Who was to shoulder the responsibility for defence? Britain?

Who were these non-Jewish communities? Did they have no name or names of their own? Or else why were they so negatively, so unceremoniously, if not actually somewhat derisively, lumped together? What ratio did their numerical strength bear to the Jews then in Palestine? What ratio would it bear after that land had become "a national home for the Jewish people?"

About the only thing in the "Balfour Declaration" that was not vague was the last proviso in it. It made it clear that "the rights and political status enjoyed by Jews in any other country" would remain untouched even after the establishment of this particular "national home" for them in Palestine. They were to gain something—a great deal, in fact—in Palestine without running the risk of losing anything in any quarter of the globe.

XIV

Questions of the kind I have asked here must have occurred to the framers of the Declaration. They did at least to some of us interested in Middle Eastern affairs. We had been told by the British that Germany coveted India—that Germany's road to India lay through this very region. We had seen our soldiers fighting in Mesopotamia (now Iraq) and neighbouring countries. We then had no idea that within another quarter of a century they would again be fighting in parts of this region. Confusion and contention in Palestine were, in any case, not merely of academic interest to us. The resultant conflict might easily react upon us—even involve us in sanguinary strife.

The war was, however, on. It was a jealous jade. It would not permit attention to wander away from the mud and blood that were being thrown up.

With the entry of Allenby into Jerusalem in the second week of November, 1917, Palestine became remote to persons not interested in it for some special reason. The phraseology employed in the "Balfour Declaration" was smooth and reassuring. It lulled even intelligent persons into the belief that the problem was solved. For them the only problem was the eviction of the Turk, unless they happened to be Zionists. For Zionists the problem was the entry of the Jews into Palestine and the Zionisation of Palestine.

XV

The Zionists seemed to be supremely happy. They had had their charter. This charter needed the imprimatur of Powers other than the one that had given it. With their riches and influence, support from the remaining allied powers was easily and quickly secured. A Jew, Dr. Nahum Sokolov, was instrumental in having the French and Italian governments adopt the Declaration and even in securing the Pope's blessings for the scheme. He was later to appear at Versailles and have the plan accepted by the Peace Conference. He begged that the mandate over Palestine be given to the Power that had promised to facilitate the establishment there of "a national home for the Jewish people." The mandate was not signed till July, 1922: but Britain had been in effective control all along—the control that comes through the triumph of arms, and not through any "chit" issued by an international authority.

Just what talks Weizmann, Sokolov and other Zionist leaders had had with Lloyd George, Balfour and other British statesmen, for the implementation of this pledge, are not known to me. They seem, however, to have gone about their business as if the eventuation of the Palestine "national home" was only a matter of time.

To them "national home" meant just one thing. It was synonymous with the Jewish State. This State would be run by themselves. Its language would be the ancient Hebrew, kept alive and progressive by the pertinacity of the Lord's Chosen People.

In their mind's eye the non-Jews had already been reduced to a minority. That minority might call itself Arab. Was it not, however, largely Jewish, racially speaking?

I heard many a Zionist make that suggestion. Looking into the future he or she saw that minority content and even happy. While its "civil and religious rights" were respected, it had, for the first time in its history, a real opportunity to obtain plenty of work at remarkably high wages and to enjoy amenities of life that it could not have dreamt of. The work, wages and amenities were theirs because of the money the world Jewry had poured into Palestine and because of the intellectual, scientific and technical resources concentrated by the sons of Israel upon draining marshes, washing salt out of the saline lands, bringing waste areas into cultivation and building up exhausted acreages, harnessing waters for irrigation, hydro-electric and potable purposes, and initiating programmes of multifarious nature.

XVI

It looked for a time as if this vision splendid was in process of translation into reality. Allenby's first official proclamation was couched in Hebrew. Soon afterwards the foundations of a Hebrew University were laid in Jerusalem. The Commander-in-Chief (Allenby) was present on the occasion. The Jewish Commission, which had been in the country for some time, had ordered the Jews to use Hebrew exclusively in every day intercourse.

In this matter zeal certainly overrun prudence and created no little irritation in the Arab mind. To the Arab-speaking Palestinian this regulation looked like an order for the eventual submersion of his mother-tongue. It certainly did not make for good-neighbourliness.

The Muslim attitude in respect of the "Noble Sanctuary" (Haram-al-Sharif) came as a rude shock to the Zionists. Known to them as "the Wailing Wall," its foundations dated, in Jewish eyes, from at least Herod's time, if they did not go back to Solomon's day. Neither money nor diplomacy availed in the attempt upon Weizmann's part to secure ownership

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the wall or the pavement adjoining it. A species of "passive resistance" organised by the Jewish community served no purpose other than to add to the bitterness.

XVII

The promise held out by material improvements following in the wake of capital sent in by the world Jewry lulled the Arabs into quiescence, even into satisfaction—for a short time. The sale of land to these monied people at inflationary rates did bring in the shekels to the Arab owner. The gain, however great, was only of a temporary nature. Even when the sum received was not frittered away, as it often was, the man who had been a peasant proprietor became a landless worker, utterly at the mercy of some small or large capitalist whose chattel he must of necessity remain to the end of his days.

As this realisation came, all joy went out of Arab life. The coming in of money in a steady, full stream lost its charm. The changing of land from hand to hand at unbelievably high prices became as wormwood and gall. The expropriation was not forced. No. Quite the contrary. it was recognised, however, that the lure of the Jew gold was irresistible. Only the good Lord could deliver the Arab from its witchery. And it looked to the Arab as if, for the nonce, the Lord God had gone to sleep.

The Jew and his partisans and propagandists may go on counting and recounting the advantages that had been flowing into Palestine in the wake of the Zionist immigration and settlement, at least so far as the Arab was concerned. There were . . .

True. There was, however, something else too. The Arabs were becoming landless serfs. In ratio to the Jews, with the ever-rising tide of immigration, their numbers were shrinking. What guarantee was there that, in time, there would not be as many Zionists as there were Arabs? Or for that matter, what assurance was there that these people, alien in speech, social structure and culture and resolved to remain aliens, would not, at some date, and probably no distant date, outnumber them—them, whose patrimony Palestine was?

If the Jews could have their way they meant to go on increasing in numbers and in political might. Everything that the Jews said or did conveyed that impression to the Arabs. They, therefore, insisted upon knowing what was to be their status in their own country. They had been there for 1,200 years. Was that fact of history going to be ignored? Or were they to be given political security—the political security that was their due, that in fact was to them overdue.

Or was it intended that the Arabs were to remain eternally adolescents—charges of the Mandatory Power —of Britain appointed mandatory at the express Jewish wish and through Jewish lobbying.

Or worse still, were the Zionists, in time, to preponderate—preponderate numerically and politically? The very thought was revolting to the Arab soul.

XVIII

As stated earlier, nor were the Zionists pleased. Pleased they might have been at one time. Even in the early stages, they, however, were not satisfied. Their population was not growing at anything like the rate they wished. If immigration continued to be regulated —if only a trickle were allowed from the outside—their concept of Zion would remain merely a concept for at least this generation of Zionists and probably for many generations yet to come.

What was there to assure them, anyhow, that Palestine was to be their National Home in the only sense in which they wished it to be? They could see no signs of the laying of even the foundations for the Jewish State. Naught else was good enough for them.

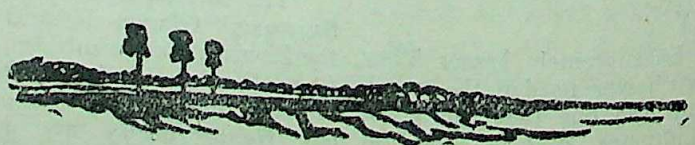
Whatever the Mandatory did in his effort to placate the Arabs as the Arabs became openly rebellious set the Jews on edge. They were enraged particularly by the restriction and later the suspension of immigration.

The proposal to partition Palestine, as the one way of settling the dispute enraged both parties. That proposal was rejected by Arab and Jew alike.

Resentment stopped long ere now finding expression simply in verbal protests. The Jew, erstwhile noted for his slinking, shuffling, submissive ways, took to armed resistance and even to acts of terrorism. What he could not achieve by legal—pacific—means, he began obtaining by violence. He did this despite the admonitory shaking of heads by the elders, who continued to detest the use of force for such purposes.

XIX

No wonder that the Mandatory shied at the American insistence upon the admission of 100,000 Jews, hunted out of home and country and in the last stage of extremity. The nimble-witted Government of the day in London got Washington to consent to a joint enquiry. Two purposes were thereby accomplished:



(1) Suspension of the issue for a few months; and

(2) joint deliberation—joint deliberation that might become the fore-runner of joint action.

Will it, however? If I am any judge, there seems to be a disposition in the U.S.A. to regard Palestine as Britain's war-baby. In American eyes it is, in fact, joined on to the British Empire as Siamese twins are.

Still Jewry over there is rich and influential. Some scheme of wet-nursing Britain's war-baby may yet be evolved that many secure relief for the Attleean government, worried—almost anguished—at the way the Palestinian issue is upsetting people all over Middle Asia and India.

All this talk and all the proposals for joint consultation and action show, nevertheless, that Britain has failed to square the Palestinian circle, for all the lightheartedness with which it took up that game in the midst of the first World War.

SOUTH-EAST ASIA IN WORLD POLITICS AND THE FUTURE*

By TARAKNATH DAS, ph.d.

Watumull Foundation Visiting Professor of Public Affairs, Institute of Public Affairs and Regional Studies, New York University

I

Those who are earnestly interested in getting a full understanding of the role of South-East Asia in world politics should study the much neglected history of the peoples of Asia and their place in the past history of the world. This is imperative, because world politics, like other phases of world history, has a continuity and inter-relations. The peoples of Asia have contributed their share to the world culture and progress; and possibly their share, before the advent of European domination of Asia, was greater than those of Europe even in the fields of pure and applied science. In passing I wish to emphasise that the ancient Jews of Asia, the peoples of the Near East (mostly Semitic in origin), the Persians, the Hindus, the Chinese, the Arabs and the Turks were far more civilised at certain periods of world history than the peoples of the West. This I say, not to claim any superiority of the peoples of Asia over the peoples of Europe; but to remind some of the western peoples and even scholars that the peoples of Asia did build empires, ruled themselves and even subjugated the peoples of Europe and thus they are not inherently inferior to them and they can govern themselves, unless they are deprived of the opportunity through some peculiar civilised devices which are termed as training them for self-government.

Furthermore, it must be also remembered that because the peoples of Asia have been subjugated by the peoples of Europe, that does not imply that the peoples of Asia are to remain permanently enslaved. To clarify the significance of this statement I wish to point out that the Arabs or the Saracens as they were then called, conquered Spain, and ruled over that land for several centuries, but the Arabs were not only expelled from Spain, but Spain developed one of the largest empires in the world which spread in Europe, Africa, Asia and the Americas for several centuries. The Turks also ruled over a vast portion of Europe, including the large portion of Central Europe and Southern Russia, but these subjugated peoples have attained their freedom, after several centuries of loss of independence. At least for four centuries parts of Russia were under Asian domination but to-day Russia has developed into one of the greatest and ever-expanding inter-continental empires of the world. What has been true for Europe and certain peoples at certain periods of world history, the same thing might become also true for other peoples under the same peculiar world forces. What I am trying to emphasise is this: No people has a special monopoly for continuous domination over other peoples—the rise and fall of nations has been the history of the world; and in studying world history, we find only one constant factor and that is the phenomenon of "constant change" for progress or for fall.

II

The history of the region that is known today as South-East Asia—Burma, Malaya, States, Indonesia, Siam, Indo-China—may be divided very broadly into several historic periods: (*i*) pre-Hindu period, (*ii*) Hindu period, (*iii*) advent of Islamic incursions specially in Indonesia, (*iv*) the period of European expansion and domination, and (*v*) the period of struggle for Freedom from Western Powers.

Even during the pre-Hindu period the original inhabitants of South-East Asia, specially those of Indonesia, according to such Dutch authorities as Kern and others lived in democratic village communities in which there existed joint-responsibility of the members of the community for the common welfare and public order. —(*History of the East Indian Archipelago* by Prof. Bernard Vlekke, Harvard University Press, page 8).

The period of more than a thousand years from the fourth century B.C. to the eighth and ninth century A.D. may be regarded as a glorious period of Hindu History when Indian immigrants colonised various islands of South-East Asia; and Hindu influence became the most predominant factor in cultural as well as political and economic life of the region which now is known as Indo-China where the monuments of Angkor are the best expression of Hinduised local dynasties. In Siam, in Malaya and Burma, there are undisputed evidences of Hindu and Buddhist influence. Regarding Indonesia, it is a fact that descendents of the Hindu immigrants and Hinduised Indonesians formed *the upper class of society* for several centuries. They flourished in Java, Sumatra, Borneo and even in Celebes. They established states and empires. The greatest of all the monuments of the Hindu period (Sailendra period between 760-860 A.D.) is the temple of Borobudur in Java. From the eleventh century on, the Hindu-Indonesian civilization became more Indonesian than Hindu.

Arab expansion into East Asia began through India. Before the rise of Arab seapower, *in the Indian Ocean, Hindu sea-power as well as shipping was predominant; and merchants from Gujarat and Cambay from the western coast of India used to be the leaders in trading between India and the islands of South-East Asia.* When the Arabs made incursions into Gujarat, they became interested in spice-trade between India and South-East Asia and through India they came to Indonesia and China in search for trade. This happened about the twelfth century A.D. Arab commercial penetration later developed into political and cultural one, although they did not succeed in completely destroying independence of Indonesian States. *For instance, Gaja-Medha, the founder of the Javanese Empire and sea-power ruled for more than thirty years 1331 to 1366 over a unified empire spreading in various islands.*

The next period of history of East Asia, starts with European expansion in Asia which began with the discovery of the Sea route to India by Vasco de Gama in 1498. This followed a period of Arab-Portuguese

* A lecture delivered before International Affairs Discussion Group of the Society of Ethical Culture, New York City, on December 17, 1948.

rivalry for the control of the trade routes and trade of the regions of Indian Ocean, including Eastern Asia. The Portuguese Empire under the leadership of Albuqurke established its headquarters at Goa as early as 1511; while the Spaniards who were expanding in America, arrived in Asia and established themselves in Manila in 1571. The Portuguese dominated East Asian trade and controlled many islands and even established themselves at Macao in China and sought for trade with Japan. As time will not permit us to get into details of the sixteenth century European expansion, it may be summed up as Arab-Portuguese rivalry in world trade and world politics; and South-East Asia, with the spices and also Indian textile trade with these islands played an important part.

In the seventeenth century we find the advent of Great Britain, Holland and France towards the Orient to search for trade and to overthrow Portuguese trade monopoly. From this time on, we find certain fundamental features in relation to world politics of Eastern Asia. These can be summed up as follows: (*i*) Quest for wealth of Asia by European Powers through commerce and political subjugation of oriental countries by various means, specially by fomenting civil wars and using one faction of oriental ruling group against the other and using oriental man-power whenever possible; (*ii*) While these European Powers were in agreement in exploiting and subjugating the countries of the Orient, they were not unanimous about their shares of trade and conquered countries. This developed into rivalry among European Powers in the Orient; and in this game of Power politics oriental countries became mere pawns. For instance, Anglo-Dutch rivalry against Portugal led to elimination of Portugal as the predominant power in Asia while the Dutch in South-East Asia—the present Indonesia, Ceylon and even in South Africa, took the place of Portuguese supremacy, and the English began to spread their commercial influence in India. After the elimination of the Portuguese, we know that the history of the seventeenth century in East Asia may be characterised as Anglo-Dutch rivalry in this region and the Dutch assumed supremacy by ousting the British, the Danes and others from equal trade opportunity, by 1680 Netherland controlled the whole of East Indian archipelago. Seventy years later about the year 1750 only two major islands remained free from the dominating power of the Dutch.

The eighteenth century as a whole and a part of the nineteenth century until the Napoleonic War, might be characterised as the period of Anglo-French rivalry in world politics and this rivalry was keenest in India. It resulted in British ascendancy and elimination of France in India. During the nineteenth century, Britain not only consolidated her mastery over India, but she from India began to expand in many directions and so far as East Asia is concerned she expanded in Malaya Archipelago, conquered Burma, fought China in the opium wars and imposed extra-territorial jurisdiction over China. France during the nineteenth century also expanded in South-East Asia and established her Indo-Chinese colony through stages of conquest. Siam also lost her territories both to France and Britain due to the existence of Anglo-French rivalry in this region during the latter part of the nineteenth century, while during the twentieth century Siam again became a victim of Anglo-French concert.

I hold that there has been and still is a kind of European concert to maintain European supremacy in East Asia at the cost of freedom of Asian peoples. However, during the last century, *i.e.*, the middle of the nineteenth century there has been an effort for re-assertion of Asiatic states to regain their freedom. This effort did not have any appreciable success until the victory of Japan over Russia at the Russo-Japanese War, 1904-1905. This victory became a psychological factor in giving greater impetus to all nationalist movements which began in various Asian countries during the latter part of the nineteenth century. Imperial powers like Britain in India and the Dutch in East Indies and the French in Indo-China had to make concessions to the peoples of these lands so that they may have some share in the government of the country. In International politics, the new trend took the form of efforts for eliminating European control of Asia—Japan taking the leadership in this activities. By the time the World War I broke out, Asian Powers—China and Japan in particular—decided to act with the primary objective of eliminating German influence in East Asia in which they succeeded. This war and the Russian Revolution had their repercussions in all Asian countries in the form of nationalist movements taking the form of revolutionary character. The Imperialist Powers had to make concessions to the moderates of these countries and used severe repressive measures against the so-called extremists who were asking for independence and not reforms. This struggle for Asian Independence is one of the most important and the third phase in world politics of East Asia.

III

To be sure Japan's attack on Pearl Harbor was the immediate cause of American-Japanese war. But the war was in the process of development for many years specially since the days of the Washington Conference. Japanese southward expansion which began after the Sino-Japanese War when she got possession of Formosa and the Pescadores Islands was at first not regarded as a menace to the Anglo-American Powers. When Japan after the World War I secured German rights in China and German islands in the Pacific, above the equator and when the Japanese economic expansion began to menace commercial supremacy of the British, Dutch and also the Americans in Eastern Asia, Anglo-American Powers and Holland adopted concerted economic and political and defensive measures against Japan's southward expansion. Imposition of special tariffs and quotas on Japanese goods in British and Dutch colonies and the Philippines was nothing but the result of economic rivalry. Building of Singapore naval base was also directed as a protective measure against possible Japanese expansion to the south. As early as the days of the Washington Conference, the United States Government by a note to the Dutch Government gave a guarantee of security of Dutch possessions in South-East Asia. We know that long before Pearl Harbor, *i.e.*, early in 1941, Anglo-American-Dutch military and naval officers had discussions at Singapore over measures to be taken to check Japanese expansion to the South. In fact it is now established beyond doubt that Japanese march through Indo-China towards Siam brought about a condition menacing British and Dutch possessions in South-East Asia which led to sharpest protest from the United States and became a contributory cause of the inevitable conflict between Japan and the United States. Japan wanted to eliminate Western Powers from controlling the vast and rich regions of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

South-East Asia, of course primarily for her own benefit; but she was conscious of the opposition from a "concert of Western Powers" dominating the region. Japan in order to counteract the "concert of Western Powers in Asia" devised the programme of creating a Greater East Asia Co-Prosperity Area in which Asian peoples would act in a concert under Japanese leadership against their Western masters. Japan was utilising nationalist movements in East Asia to her advantage. To be sure Japan has been eliminated as a political and economic rival of those Western Powers which control East Asia; but the movement for Asian Independence has not been eliminated. On the contrary it is asserting its power in various parts of Asia, particularly in South-East Asia. It is interesting to note that a new type of concert of Western Powers is asserting itself to crush these Independence movements and a new type of concert of Asian peoples is also trying to bring about a new solidarity. This is manifest in every part of Asia specially in South-East Asia in connection with Indonesian and Indo-Chinese struggle for freedom.

IV

The Attitude of Great Powers

What is the attitude of the great Powers which have become victorious over the Axis Powers—with great help from Asian peoples in men, materials, etc.—towards Asian freedom and freedom of the peoples of South-East Asia?

Of course we know that the United States of America was committed to establish a free Philippine Republic, even long before the outbreak of the last World War; and there is not the least doubt about carrying out this solemn promise. Regarding other Powers and other Asian countries which are not free, the situation is somewhat and radically different.

We know that there is not very great difference in substance about British Foreign and Colonial Policies during the Tory and Labour administrations. The great British Tory Imperialist Patriot, the ex-Premier the Rt. Hon. Winston Churchill, for whom I have great respect for his frankness in matters of imperial concern, told the whole world that the principles of Atlantic Charter would not apply to India and other British colonies. He made it definitey clear to his late friend President Franklin D. Roosevelt who respected the wishes of his friend "Winston" more than he cared for the principles upon which the great republic of the United States was founded. Of course, as a great statesman and war-President, he was concerned with winning victory over the Axis Powers first and to him it was clear that Anglo-American co-operation might have been ruffled, if he insisted that there should be any international guarantee for the Freedom of the subject peoples. After all, the principal concern of the United States was 'its Survival' which was assailed by the Axis Powers and also the necessary destruction of Axis Powers which pursued a policy of world conquest. Mr. Churchill also made it clear to the Soviet Russian statesmen that Anglo-Soviet Agreement (the so-called Churchill-Molotov Agreement) was based upon the fact that Soviet Russia would not meddle in Britain's "private affairs"—of course affairs of India and colonial affairs are according to the recognised principles of international relations among the Great Powers are Britain's private affairs. Mr. Churchill took up the question with General Chiang Kai-shek before and at the time of Cairo Con-

ference, and made it clear to him that His Majesty's Government would not tolerate any form of Chinese interference with Indian and British colonial affairs in the East; because they were Britain's exclusive and private affairs. Mr. Churchill, I was told by a reliable Chinese spokesman, was indignant with General Chiang, because he suggested to President Roosevelt to take the initiative in settling Indo-British problems through mediation of the United States or United States, China and Russia. Mr. Churchill also made it clear that Britain would not give up her control over Hongkong.

The British Government has extended fullest support all along to the Dutch Government-in-exile to the proposition that Holland must not be deprived of her colonial empire in which Britain has a very large share of economic interest; and this British support to Dutch Imperialism is the corner-stone upon which the edifice of Anglo-Dutch co-operation in world politics is based—the Dutch Government is committed to Anglo-Dutch co-operation in European politics.

The position of the French Government-in-exile under General de Gaulle and the present French Government is to maintain its empire in Asia, Africa and America. Although the British Government had some difference of opinion regarding French position in the Near East and Africa, it was always ready to support the French claims to the recovery of Indo-China as a part of the Empire. The Government of the United States did not wish to take the initiative in opposing French Imperialism in the Far East and held that the question of Indo-China's freedom should be settled in such a fashion as may be agreeable to the Chinese Nationalist Government. But as the Chinese Government was forced to concede at the Cairo Conference Britain's right to retain control over Hongkong, it could not very well oppose French claims to Indo-China, unless she received support from the United States as well as Britain. But it is needless to add that British policy was definite that no European Imperialist Power be deprived of control over its colonial possessions in the Far East, because that might serve as a precedent against British Imperialism in India, Burma, Malaya and other quarters.

Thus it may be safely asserted that at the Cairo Conference, by secret written or unwritten agreement, the question of freedom of the subject peoples of South-East Asia was adversely decided; because the United States sided with Britain while China, dependent upon Anglo-American Powers for her very existence, had to concede to the unholy decision.

V

At Teheran Conference, the question was not so much what would be done with the Far East, but what should be done in Europe and the Near East. Soviet Russia was pressing the Anglo-American Powers to open up the Second Front and also to concede to her claims to the border states in Eastern Europe from the Baltic to the Black Sea. She was also interested in maintaining her position in Persia. We do not know the texts of the agreements of Teheran, but from the subsequent developments in world politics we can surmise that Russian claims were conceded to, not because Anglo-American Powers were interested in augmenting Russian Power in Europe and the Near East in place of the Axis Powers, but they felt that if they did not concede to Russian demands, Germany might make

CC-0. Panini Kanya Maha Vidyalaya Collection. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more lucrative offers to Soviet Russia for a separate peace which should be prevented at any cost. Thus we think Soviet Russia did not raise any objection to decisions arrived at Cairo, regarding continuance of colonial imperialism in the Far East, so long as Anglo-American Powers were agreeable to her demands for the Baltic States, partition of Poland, domination over the Balkan States and recognition of her rights in Persia. Of course Teheran Agreement guaranteed independence of Persia, although Persia never asked for it ; and historians know that such agreements are often made regarding a country which might be partitioned by the protectors. Today Persia is being partitioned through a revolt inspired and supported by Soviet Russia. Thus it must not be forgotten that Soviet Russia was a silent partner in upholding European Imperialism in the Far East, provided these imperialist nations agreed to Soviet Russian demands in other parts of the world.

At Teheran Conference, the concern of Anglo-American statesmen was that Soviet Russia should be appeased to prevent any remote possibility of a German-Russian peace or Soviet Russia not continuing to fight Germany for receiving compensations in territories in the Eastern Europe and Balkans. But at Yalta Conference, the concern was that Soviet Russia should be induced to give up her neutrality against Japan and join the Anglo-American Powers and China so that America and Britain would not have to make great sacrifices in men to fight the Japanese land forces which were virtually intact. Here began the question of Soviet demands in the Pacific in more concrete form. There is no doubt that at Yalta it was agreed that Soviet Russia would get Kurile Isles, Shagalien, and part of Korea at 33 parallel, Port Arthur (as a compensation, because Britain was retaining Hongkong) and virtual dominance over Manchuria.

The decisions at Yalta which might have affected China were to be re-negotiated with China and Soviet Russia. It may be recalled, even at the Dumbarton Oakes Conference, Soviet Russia did not participate at the same conference with the Chinese representatives of the government of General Chiang Kai-shek. It was through the good offices of Washington Government, Soviet Russia and Nationalist China began to discuss problems affecting their interests in the Far East after the defeat of Japan. When the Potsdam Conference was in progress, at Moscow Soviet Russia was negotiating a treaty of alliance and friendship with China and making her decision to get into the Pacific War against Japan, so that she would be entitled to get her share of division of territories in East Asia. We do not know of all the secret agreements that were made at Moscow, but it is certain and definite, that China had to give up her claims of suzerainty over Inner Mongolia as well as Outer Mongolia which is virtually a part of Soviet Russian Empire in the East. We know that Soviet Russia is not satisfied with what she has acquired in the Far East and she wanted to occupy northern Japan—Hokkaido—adjoining Shagalien Island, and she has been so far prevented from doing so and thus there is the lack of Soviet Russian co-operation in the Far Eastern Commission. *What I am trying to making clear that Soviet Russia at the present time is more interested in getting as much for herself in the Far East with the consent of the Anglo-American-Chinese Powers than freedom of the subject peoples.*

VI

After the death of President Roosevelt and fall of Mr. Churchill as British Prime Minister, President Truman took the initiative in reconciling France and bringing France back on the side of the Anglo-American Powers, to carry out the programme of formation of a bloc of Atlantic Community of Powers within the United Nations Organisation. De Gaulle was invited to Washington and several economic agreements have been made with France and Washington. De Gaulle decided to co-operate more with Anglo-American Powers than with Soviet Russia, and the price paid to France was Anglo-American support fully so that France will again secure control over Indo-China.

After the surrender of Japan, when the Indo-Chinese nationalists (who are regarded by some people as pro-Japanese) declared their independence, it was decided that both China and Britain would send their forces to disarm the Japanese forces in that region. Indo-Chinese Republicans wanted to have their regime recognised ; but the British forces entered Indo-China and is holding the country for the French to re-occupy. This act of co-operation by the British to uphold French imperialism in the Far East has paid a very great dividend to British diplomacy, which has succeeded to have an Anglo-French alliance in the Near East on British terms about which Mr. Sulzberger of *New York Times* has given the information in the issue of December 14, 1945.

After the question of Indo-China being settled in favour of France, it is quite natural that Britain should take an aggressive control over Siam which has been a bone of contention between the British and the French for nearly a century. Siam was allowed to exist as an independent buffer State because both Britain and France agreed to the continuance of its independence after they rounded out their territories at the expense of Siam and concluded the Anglo-French Entente of 1904. Siam has been a pawn in the game of international politics ; but the dangerous significance of Siam controlled by a Power which may be opposed to British control of South-East Asia, has been fully demonstrated by Japanese control of Siam and through Siam the conquest of Singapore to Burma, threatening the very heart of the British Empire in India. Thus it is quite natural to the interest of Great Britain that Siam should be free to the extent it would serve her imperial interests and there must not be any dominating influence of any other Power in Siam which may be hostile to British interests. It has been reported, according to the *New York Times*, that the British Government has presented to Siam some ten demands, the compliance of which would reduce that country to a dependency of Britain. The British authorities deny any such intention, but it wishes to hold Siam accountable for not putting up sufficient resistance against Japan and also for annexing certain territories which were under British control, but which originally belonged to Siam.

The truth of the situation is that as "Atlantic Charter" does not apply to an enemy country and the British do not wish to have a government in Siam which is not approved by the British (the present Government is headed by former Siamese Minister in the United States—Seni Promaj) they have adopted the measures suitable to them. Those who wish to criticise the Siamese situation should think of this

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

precedents established by Soviet Russia in having only such governments in neighbouring countries which must be wholly agreeable to her—following common foreign economic and defence policies. Siam may remain independent, but its government will have the same kind of independence as the government of Iraq or the government of Hailie Selasie, under the dominant influence of Great Britain. There are Americans who may be opposed to such an arrangement, but we do not know whether such an arrangement was not agreed upon by the late President Roosevelt and the ex-Prime Minister Churchill.

VII

The Situation in the Dutch East Indies

What has happened and is happening in Indonesia during and after the Second World War has some significant historical parallels of what happened during and after the Napoleonic War and the Congress of Vienna. To make the story as simple and as brief as possible, I wish to emphasise the following points which may not be known to many of you and which are not emphasised even by average historians and students of international affairs.

The Napoleonic War was surely an important chapter in Anglo-French rivalry in world politics which lasted for a century. It was a world war and it had its African, Asian and American as well as European aspects. India was the centre of Asian aspect (Napoleon made an alliance with Tippoo Sultan of Mysore to drive the English out of India and to re-establish French influence there, if that was possible). The South-Eastern theatre of conflict was in Dutch East Indies—in the island of Java and its environs.

During the Napoleonic War, French forces overran Holland and the Prince of Orange fled from Holland and established a "government-in-exile" from 1795 to 1810 at Kew, near London. The Government of Holland was taken over by a puppet government, headed by one of the brothers of Napoleon. This Dutch Government made an alliance with France against England. After this happened, the combined forces of the French Republic and the puppet Dutch government took steps to strengthen their position in Java, menacing British interests in South East Asia, even constituting a possible menace to India. The combined French and Dutch forces under the command of General Janssens were no less than 17,000 men with 250 guns. Lord Minto, the Governor-General of India, under the East India Company, in 1810, on his own authority decided to send an expeditionary force from India to take possession of Java. This force "numbered 12,000 combatants, conveyed on fifty-seven transports, and conveyed by more than forty ships of war, great and small." Needless to say that the majority of the forces was Indian and India through the East India Company footed the bill. The military command was under General Sir Samuel Ahmuty, while Sir Stamford Raffles, the later founder of Singapore, was entrusted with the task of conquest of Java and its administration.

To make the story short, the British defeated the superior forces of General Janssens; and on September 18, 1811, the latter surrendered to the British. The East India Company directors were not interested in occupying Java permanently, but they were interested in destroying French power in the island and ordered Lord Minto to give up occupation of the island. But Lord Minto, disobeying the order from London of the British Parliament such as Mr. Sorensen. But continued its occupation, because he was afraid that the native population of Java, which was infuriated with the Dutch policy of exploitation might have injured the Dutch inhabitants. This control of Java by the British broke up Dutch monopoly of the spice trade of that region. At least for five years the British ruled over Java and later on after the Congress of Vienna, transferred the island to the Dutch, with certain understandings that Britain would gain possession of Cape of Good Hope and surrounding Dutch possession and also Ceylon. Of course, the British favoured Dutch occupation of South-East Asian islands, because Holland in Europe was disposed to follow a foreign policy favourable to British interests and Dutch occupation of South-East Asian islands was a factor in Anglo-Dutch co-operation in world politics and a guarantee against any form of independence of the people of these islands which would have been detrimental to the cause of 'bearing whiteman's burden' and 'civilising the heathens' with the boons of 'imperialist and exploitative government!'

VIII

During the Second World War, the main cause of which might be termed as "Anglo-German Rivalry in World Politics," which began during the latter part of the nineteenth century and continued until the fall of Hitler, the situation in the Dutch East Indies has resolved into the following: It was Hitler, in place of Napoleon, who in 1940 overran Holland and menaced Great Britain; and Queen Wilhelmina established the "Dutch-Government-in-exile" in London. It was Hitler's ally Japan which in 1941-42 after defeating the combined forces of Holland, British and the United States occupied Java. In 1945, Japan surrendered to the United States, but the Japanese forces in Java were to be disarmed by the British and the Dutch, and the Dutch Government was to be re-established. In 1811 the people of Indonesia were not in a position to assert their independence by opposing British arms; but in 1945, the Indonesian nationalists who want their country to be free and independent have proclaimed the establishment of a Republic of their own. They are of course regarded as extremists (because they do not want to have Dutch rule re-established under the protection of Anglo-American support, and they are of the same type of extremists as George Washington and his followers in the United States were and who refused to make compromise on the issue of absolute independence).

As in 1810-1811, the British landed forces from India to conquer Java for the Dutch, so this time Indian soldiers are also playing the major role in subjugating the nation of 70,000,000, supposedly led by extremists who want freedom of their country from a foreign yoke. It has been reported that the Dutch soldiers equipped with American arms and trained in America, after landing in Java, shot down many Indonesians violating all civilised methods of warfare. (I for myself, in these days of Atomic Bombs, do not know the limits of civilized methods of warfare). This has led to reprisals and counter-reprisals to the extent of burning Indonesian villages by Indian soldiers, of course, led by British officers. Much criticism has been heard from statesmen, newspapermen, radio commentators and others in the United States about the existing situation in Java. There has been some criticism of the British policy in Java even in England by some members

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the British Labour Government spokesmen have made it clear that Britain is going to hold the Indonesian islands for Holland.

IX

The criticism of British policy in Java has reached in the United States to the extent that no less a person other than the British Ambassador Lord Halifax, the great Churchman, on December 14, 1945, speaking before the twenty-fifth anniversary dinner of the English-speaking Union, held at Washington, made the significant and illuminating statement, defending *British policy as Anglo-American policy*. The great Christian gentleman said :

> "Some people in this country are inclined to blame us (the British) for what is happening [in Java]. But what are the facts ? We did not send our troops to Java on our own initiative. They went there to carry out work which had been assigned to them by the combined chiefs of staff. *The decision is not British, but Anglo-American.*"—*N. Y. Herald Tribune,* Dec. 15, 1945.

This statement makes sense ; and it makes the deep-rooted policy of the victorious powers in Asia clear. In China, the United States has been assigned to a certain task and American forces in co-operation with the Chinese Nationalist Government is carrying out this task. In Indonesia, possibly in the region, south of the Philippines and beyond China, the task of enforcing the decision of the Anglo-American statesmen has been assigned to Anglo-Dutch forces, which also constitute Indian and Australian forces.

The question has been raised by Captain Harold Stassen and other statesmen, who must be regarded as most visionary and impractical from the standpoint of Lord Halifax and other Anglo-American statesmen who also talk of the United Nations and Trusteeships for the subjugated peoples, etc., that there should be an immediate armistice in Java and the whole question should be settled by a committee of the United Nations which must be binding to all the members of the United Nations.

However, on the 14th December, Dr. Hubertus van Mook, Acting Governor-General of Netherlands Indies, on the eve of his departure from Batavia to Holland for a conference, has declared that

> "The Dutch Government believes that the Indonesian Revolt should not be tossed in the lap of the United Nations Organisation. . . ."—*N. Y. Herald Tribune,* December 15, 1945.

It may not be out of place to mention that Indonesian Nationalist leaders have repeatedly asked for mediation by the United States, China and Soviet Russia or any of these powers ; but of course no mediation is possible unless both parties in dispute agree for such a procedure. The Dutch Government holds *that Dutch sovereignty over Dutch Indies is acknowledged by Anglo-American governments as well by France and other nations ; and it does not wish to prejudice its right to dominate over these islands in any form. This was also the position of the British Government regarding Indian nationalist demands and the situation in Burma and elsewhere.*

X

What will be the outcome of the situation in South-East Asia, especially in Indonesia ? It is conceivable and apparent that the Concert of Western Powers are already in agreement that French, Dutch and British colonies in South-East Asia cannot have absolute independence even to the extent what has been accorded to Albania. It seems that in near future certain concessions towards self-government will be made to these dependencies ; but these countries with immense raw-materials of oil, rubber, sugar, zink, coffee, etc., must remain under the control of dominant Western Powers on the ground these Asiatic peoples are not qualified to govern themselves !!

Will such a solution be satisfactory to the Asiatic peoples as a whole ? It may be that the peoples of Asia and their feelings do not count ; because there is a double standard of international morality among the statesmen of the West who are so determined to create a new world order for the benefit of humanity ! But one should probe into the situation as student of history. The seed of the future history lies in the present developments. History is not determined by 'rubber' 'tin,' 'oil' or by 'machines'. Human elements or psychological aspect of history cannot be ignored by any true historian or a statesman, when we hear today so much of 'psychological warfare' and 'propaganda weapon.'

At the very outset let us consider what have been the Indonesian feelings about the Second World War. Indonesians did not, as a whole, act as Japanese puppets, but were for their freedom. In fact they were opposed to Japanese imperialism no less than they have been opposed to Dutch Imperialism. They are fighting for their own freedom as well as Asian freedom. The following passage from Mr. Hallet Abend's book which was based upon an interview with an Indonesian patriot early 1941, will throw light on the possible attitude of the Indonesians to the future developments :

> "Obviously, if the Atlantic Charter is to be made genuinely effective, then the close of this war cannot see the perpetuation of a system whereby 8,000,000 Netherlanders, most of them living half the world away, rule and exploit 70,000,000 of the peoples of these islands. We know that our only hope for the future lies in a victory of democracies, and we know that Japan as well as Germany and Italy must be defeated if we are to enjoy any existence short of political and economic slavery. . . . Some of the Dutch say we shall eventually have dominion status equivalent to that of Canada. For instance, you United States admits Canadians or Australians—but you would not admit us on an equal footing because of your exclusion laws against orientals. Does the Atlantic Charter mean the demolition of such barriers all over the world ? We doubt it, and yet if it does not, then the Atlantic Charter betrays us. . . . We are willing to help the white man now with our lives and our blood and our treasure, but if the races with colored skins are not given justice at the end of this war, then an even more terrible war must follow within two or three decades.
>
> "Count us up and think it over. We shall be formidable. There are 450,000,000 Chinese ; 340,000,000 natives of India (390,000,000 now) ; in Thailand and Indo-China are another 32,000,000 people ; Burma and Malaya have more than 20,000,000. We in the Indies are 70,000,000, the Japanese are 70,000,000, and the Koreans nearly 25,000,000 more. We total more than one billion people, not counting the Arabs, the people of Iran, the Egyptians and others who might side with us, if the white man does not give us real justice.

nomic and social—which the white races have inflicted upon the yellow and the brown, then we would be on Japan's side. If we are betrayed by the eventual peace, then some Asiatic nation will arise as a genuine and unselfish emancipator, and the ensuing conflict will make the present war seem like only an amateurish rehearsal."—(*Ramparts of the Pacific*, Hallet Abend, New York, 1942).

What is the Chinese attitude to the situation ? The Chinese nationalist government is in a very peculiar situation. Asian independence is one of its creeds. Dr. Sun Yat Sen held that Chinese independence will never be secure, unless the subject peoples of Asia are freed, through Chinese help, from oppressive foreign yoke. This view is shared by all responsible Chinese, of all political parties, specially Communists. But at the present crisis in China in the midst of Civil War, the Chinese Nationalist Government cannot and must not take any stand in international affairs which might be opposed to the decisions of the "chiefs of Staff" or Anglo-American Powers whose active support in the field of international relations, finance and defence is essential for survival of China. China cannot take the active part in the liberation of Indonesians or others now; but there is no doubt China's voice and actions will be felt in due course of time.

What is the attitude of Philippines regarding the struggle that is going on in South-East Asia ? The Filipinos are not only in favour of Indonesian freedom but are for freedeom of subject peoples of Asia. The following news-item sent by Mr. Mc-R. Johnson, on December 10, 1945, from Manila to the *N. Y. Herald Tribune*, will throw some glaring light on the situation :

"Indication of the foreign policy of the Government of the Philippines, when it becomes a republic next July, is seen by many in the passage by the Senate here (Manila) of *a resolution of sympathy of the Filipino people for the Indonesians in their fight for independence*.

"Although the problem of their own independence comes first, there is no doubt that political and governmental leaders would like to present an independent Philippine republic as a model for Pacific peoples who seek to break French, Dutch, and British bonds. Nationalistic Filipinos want to see their new nation achieve pre-eminence over any others which may be born as a result of political unrest and revolts in Netherlands East Indies, French Indo-China and India.

"The Senate resolution approved unanimously, was introduced by Mariano Jesus Cuenco. He pointed out racial ties between the two peoples and the inherent right of a people to be free from any foreign domination.

"He said the Indonesian people had proved by their culture and civilization their capacity to govern themselves, although Holland's attitude is 'understandable.' In introducing the resolution, however, he declared that the 'civilized world' should energetically protest against the intrusion of Great Britain.

"A considerable number of Filipino guerrillas agitated a month ago for the formation of a column to go to Java to aid the Indonesians in their fight for independence."

This makes abundantly clear that under ordinary circumstances the Filipinos will actively support the cause of Indonesian independence which is only a part of Asian independence.

What is the Attitude of the People of India ?

Indian soldiers, specially Gurkhas, are being used by the British authorities, to crush the Indonesian Republican Government and to restore Dutch Imperialism in South-East Asia. The use of Indian soldiers against the Indonesians should not be regarded as an indication of Indian support to the cause of Dutch Imperialism, championed by the British Labour Government, under the cover of various pretexts of restoring law and order as well as disarming the Japanese soldiers. Even the Gurkhas in India are opposed to the use of Indian soldiers against the Indonesian people. The *Hindusthan Standard* of Calcutta in its issue of November 2, 1945, gives the following news-item :

"Kurseong, October 31, 1945.—Mr. Shiva Kumar Rai, General Secretary, All-India Gurkha League, has sent the following telegram to the Viceroy and Commander-in-Chief of India :

"We vehemently protest against using Gurkha troops in Indonesia. There is no justification. We urge you to recall the Indian troops immediately."

From various news-items published in the same issue of this Calcutta Nationalist Daily, it becomes clear that Indian protest against the use of Indian soldiers against Indonesians is a part of a far more significant movement affecting the future of South-East Asia and the future relations between the East and the West. Under the leadership of All-India Congress (Nationalist) Party mass meetings—South-East Asia Day—in sympathy with the cause of the Indonesian people are being held all over India, particularly in the province of Bengal. *Nationalist India, responding to the call of Nationalist Burma, has taken up the constructive suggestion of a South Asiatic Countries Conference, leading to "future federation of Asiatic nations."*

From the following extracts from the editorial published in the *Hindusthan Standard* of Calcutta, one will get a clear idea of the possible future developments :

"The Congress President (Maulana Abul Kalam Azad, the President of All-India Congress Party) has endorsed the suggestion of the leader of the Burmese nationalist movement, U Aung San, for holding a South Asiatic Countries Conference, with the addition that *the Conference be held in India*. Srijut Sarat Chandra Bose (Nationalist leader of Bengal) has also approved of the suggestion and visualised the unity of the subject countries of the East as the foundation of the future federation of the Asiatic nations. This undoubtedly is the fitting complement to the recent celebration of all over India of the South East Asia Day to demonstrate India's feelings about nationalist aspirations and movements of the subject countries of the East.

"The oppressed and the exploited are all one irrespective of the geographical distance that separates one from another. Science has almost annihilated space and time. The war has completed the demonstration of the futility of isolation that might have been considered sometime ago as security against the flood-tide of aggression from distance. True as the dictum is in its general application, it is truer still in respect of the countries of South East Asia that for centuries have been groaning under the iron-heels of the European imperialist nations. Burma, Malaya, Siam, Indo-China, Java, Borneo, Sumatra, Philippines are indissolubly linked with India on one side and China on the other. They have been so all along even in the distant past when space used to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be a formidable factor to reckon with and distance not as easily negotiable as now. Historically most of the countries of South-East Asia have been one alike in good and evil days. In the golden days of India these countries formed parts of the Greater India that had laid down the ideal of conquest without bloodshed and subjugation—of unification of races and creeds with the golden cement of the principle of the brotherhood of man. In the dark days of India's subjection as well, these countries have been organically united with India, linked through with the common chain of slavery of the European nations. In all ages they have stood or fallen together. The bloodiest war in history that has just ended, has also demonstrated the unity of these countries. Each one of them served as the stepping stone for the aggressor in his march towards the next. The subjugation of one at once constituted a threat to the nearest neighbour if it did not actually ring the death-knell of its freedom. It has, indeed, been obvious to the meanest intelligence that the countries of South-East Asia have been arranged by destiny to be one great unit in the organization of the world.

"One in freedom in the distant past and one in slavery in the current present, these countries must be one in slavery in the current present, these countries must be one also in the day that is about to break. In spite of local variations the problems of all these countries are fundamentally one—the problem of subjection to the imperialist Powers of Europe. The European imperialists have throughout looked upon and treated these countries as one unit and therefore those Powers too regard themselves as one unit, so that these countries may be kept under common European subjection. In peace as well as in war, these countries, for their rich natural resources, have always served as the strongest fortress of their conquerors. They have, indeed, been utilised for upholding Imperialism itself resulting in intolerable misery and unredeemable degradation of millions of men and women all over the world. It is imperatively necessary, therefore, that at this psychological moment in the history of the world, when the future of humanity is in the process of being forged, the colonial countries of South-East Asia must stand side by side in their just fight for liberation. U Aung San has sounded the clarion call just in time for unity among the subject countries of South-East Asia. His suggestion that a conference of these peoples should be held in order that a common plan for collaboration to obtain freedom for all the affected countries might be drawn up, is eminently sensible. The Congress President's suggestion that the conference be held in India, has given it a more concrete form. We have no doubt that such a conference will considerably strengthen the subject countries in the East in their fight for freedom and may lead to the formulation of a common plan of action as well as to the foundation of what Srijut Sarat Chandra Bose calls "a gigantic Asiatic Federation which will be proof against the machinations of Western Imperialisms for all time to come."

In these days of Atomic bombs, jet-propelled planes and super-bombs, fire-bombs from aeroplanes, tanks, etc.—the latest developments of civilised warfares—which are not possessed by the subject peoples and some of them are being used without any restriction even upon civil population of the Dutch East Indies, Indo-China, Malaya, Burma and India by British forces, mere holding a conference of subject nations of South-East Asia including India, may not be very effective now; but it has revolutionary potentialities of no less significance of European underground movements against the Axis Powers. This proposal and the attitude of India makes it conclusively clear that India is going to take the leadership in the field of Asian politics, *i.e.*, in world politics of tomorrow. It indicates that isolation of Nationalist India in the field of world politics is over; and in future Indian strategic position man-power, resources, political and economic support will not be so freely available to any power—Anglo-American powers not excluded—which will be opposed to Asian independence. This negative position may be changed to a positive Foreign Policy for India and it may take the form that the people of India and those of South-East Asia will actively ally themselves against the anti-Imperialist Powers and in favour of any Power that will co-operate with them in achieving their freedom.

XI

Conclusion

In conclusion, I wish to point out that for the future of South-East Asia there are three alternatives: (*a*) Continuance of colonial imperialism of Western Powers, under various pretexts, with full support from Anglo-American Powers; (*b*) Consequent rising tide of revolt in all countries of South-East Asia, with the possibility of a Concert of Asian Powers and their alignment with any Power or any group of Powers opposed to colonial imperialism, leading inevitably to the next World War; (*c*) Emergence of free and independent nations in South-East Asia, ending colonial imperialism, under the enlightened leadership of Anglo-American Powers within the frame-work of U.N.O. Naturally, I for one, hope for the last development although there is no special reason for the immediate success of such a programme.

Every American citizen has a moral responsibility in this matter, because the future development in South-East Asia will largely depend upon Anglo-American policies, in the formation of which the United States will have the greatest moral responsibility. In this connection it would be well for us all to ponder over what General MacArthur, one of the wisest of American leaders fully familiar with the situation in the Orient had to say after the liberation of P.I. from Jap on July 4, 1945, while giving an interview to Mr. Cedric Foster at Manila:

> "When we win the war, as we will win it, I hope to God that we win it in a spirit of humility and that never again will the white race walk through Asia in the same spirit of arrogance which they have exhibited in the past. What right have we to assume that the present white ascendency is anything more than one drop of water in the ocean of time. If we perpetuate that, if we would hand it on to our posterity, if we would give it untarnished to future generations, then we must so conduct ourselves that we will not jeopardize our security. The sooner we grant political freedom and liberty to all peoples of the world, the quicker there will be peace and stabilization."

This ideal can be fulfilled, if there be a single standard of international morality among Great Powers and the highest conception of ethical and religious life be practised in world affairs.

THE EGYPTIAN PROBLEM

By Dr. PRAKASH CHANDRA, M.A., LL.B., Ph.D. (London), F.R.Hist.S.

Newspaper reports make it abundantly clear that Great Britain is in for trouble in Egypt as in some other parts of the world. The fact is that Egypt though nominally an independent country preserves to this day some of the vestiges of her former British vassalage. Despite her wishes, British forces continue to be stationed on her soil and it is the demand for their withdrawal which is the immediate cause of unrest. The relations between England and Egypt are of long standing and a brief account of their development is essential for understanding the present position. Indeed, Anglo-Egyptian relations constitute one of the most interesting chapters in the history of Imperialism and are worth recounting for their own sake.

Egypt lies at the cross-roads of the maritime world. No international conflict can spare her. Hence her great strategic importance. The story, how the British got a foothold in the country, is well-known. The ruler, Ismail Pasha (1863-79) was a man of original ideas and a restless disposition. He introduced many admirable reforms and did much to make Egypt into a modern country. It was due to his enterprise that the Suez Canal was opened. All these grandiose schemes, however, cost money and his extravagance eventually landed him in serious financial difficulties. To extricate himself he offered to sell to the French the 176,602 shares which he held in the Suez Canal Company. These were promptly bought by Disraeli on behalf of England. He realised the immense importance of the Canal as a highroad to India. Further loans followed which culminated in the establishment of the dual control of British and French bankers over the Egyptian finances. The wedge having once entered went deeper and in 1882 Egypt came under the sway of Great Britain.

Bonds and the Suez Canal had made it inevitable for the British to occupy Egypt. About £30,000,000 of Egypt's debt was held in England and the stockholders feared that the Egyptian nationalists who had begun to resent foreign interference in their affairs would repudiate the debts. The Canal, perhaps, bulked larger in the estimation of public men who took the decision. Sir Charles Duke, the Under-Secretary of State for Foreign Affairs, put the position clearly when he said :

"The Canal is the principal highway to India, Ceylon, the Straits Settlements, and British Burma, where 250,000,000 people live under our rule, and also to China, where we have vast interests and 84 per cent of the external trade of that still more enormous Empire. It is also one of the roads to our Colonial Empire in Australia and New Zealand."

From 1882 to 1914, Egypt though it continued to form a part of the Turkish Empire and to be ruled by a Khedive was really in the hands of the British. A sort of constitution was drawn up by Lord Dufferin which provided for a council of ministers and a legislative assembly, but the real government was a more or less invisible system of British 'advisers', supervising and controlling every branch of the administration. These officials took their orders not from the Khedive but from the British Consul-General at Cairo. This office was held by Major Evelyn Baring, the celebrated Lord Cromer, a man of masterful personality, who combined political sagacity of a high order with consummate financial ability. For quarter of a century, from 1883 to 1907, Cromer ruled over Egypt as a monarch. He gave the country a sound system of administration and put its finances in order. British engineers constructed dams for storing the waters of the Nile so as to prevent famines and Col. Kitchner reorganised the army. The peasants benefited greatly under the new regime and the area under sugar and cotton crops leapt up. The population rapidly increased and the import and export figures showed a steady rise.

But though Egypt prospered materially under the British aegis, foreign rule was soon felt to be vexatious and galling. In his monumental work entitled. *Modern Egypt,* Cromer laments that, "the want of gratitude displayed by a nation to its alien benefactors is almost as old as history itself." He forgets, however, that such benefits have been almost always accompanied by a contemptuous disregard of popular sentiment and by a denial of opportunities to the people to take their due share in government. There were instances of overbearing arrogance, and unfortunately in some cases, notably in the Denshawi incident, some Englishmen went out of their way to be needlessly ruthless in stamping out local opposition. But the chief and obvious source of trouble was the growing sense of national consciousness which European influences themselves had done much to foster. This spirit was intensified to the point of religious fervour by the Mahommedan hatred of Christianity.

In the Great War of 1914, Turkey joined on the side of Germany. The cloak of Egypt being a Turkish province was then cast aside and Great Britain openly declared it to be a British protectorate. The pro-German Khedive was deposed and a new ruler with the high-sounding title of the 'Sultan of Egypt' was installed upon the throne. During the war, the national movement was suppressed with a heavy hand. The sessions of the Legislative Assembly were suspended, the press was muzzled and popular literatures vanished into thin air. If the idea was to smash up opposition, it failed miserably, for the influence of Zaghlul Pasha, the venerated national leader, grew tremendously. At the conclusion of the war, Egyptians appointed a delegation to put their country's case before the Paris Conference. The eloquent speeches of President Wilson and Mr. Lloyd George about the right of self-determination of every nation had filled them with hope and led them to believe that their hour of liberation was near. But before the delegates could embark on their errand, they were quietly arrested by the British police and spirited off to Malta. In March, 1919, the agitation for independence reached fever-heat and bloody riots occurred in Cairo and other places in which many British residents lost their lives. To root out the rebellion, England appointed Lord Allenby, fresh from his exploits in the Near East, as the Special High Commissioner.

Allenby took steps to restore order. A number of Egyptians were sent to prison and Zaghlul Pasha was exiled. Then Britain sent a mission headed by Lord Milner, a veteran colonial administrator, to enquire into the Egyptian problem. In the appointment of members of this Committeee, England committed the fatal mis-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

take which she was to repeat on the occasion of the appointment of the Simon Commission, of including only Englishmen. The insult was deeply resented and the arrival of the mission became the signal for boycott and riots. The delegation was, however, convinced of the genuineness of the national feeling and in its report admitted that, "the spirit of Egyptian nationalism cannot be extinguished." Accordingly, in February, 1922, Egypt was recognised as an 'independent sovereign State.' But this independence did not amount to much considering the reservations by which it was hemmed. They were (1) the right of Britain to defend the Suez Canal and to use the Egyptian territory for military operations, if necessary ; (2) the right to defend Egypt against all foreign aggression or interference ; (3) the right to protect foreign interests in Egypt ; and (4) control of the Anglo-Egyptian Sudan. British troops were not withdrawn and the Egyptian army continued to be commanded by a British General, Sir Lee Stack, Governor-General of the Sudan.

The Egyptians scorned the gift and they were unmoved when the Khedive, to signify approval of Britain's proposals, proclaimed himself King in March, 1922. Nevertheless, Egypt seems to have obtained the semblance of constitutional monarchy when the new constitution came into operation in 1923. It provided for the government of Egypt as an independent territory with King Fuad as sovereign, a cabinet responsible to parliament and a parliament popularly elected. But the revolutionary fires were not quenched and the continued presence of the British troops remained an eyesore. In September, 1923, Zaghlul Pasha returned from his exile and in the elections which were held, his party swept the polls. The Wafd captured 188 seats while the combined gains of all the other groups were merely 29. Zaghlul became the Prime Minister and lost no time in declaring from the floor of the assembly that a foreign officer in command of the Egyptian army was inconsistent with the dignity of an independent Egypt.

The advent of Labour Party to power in England kindled fresh hopes which were, however, soon dissipated when Zaghlul found that Mr. Ramsay Macdonald was not prepared to modify the existing arrangement. Though the signs of growing discontent were visible on the surface, Britain continued to insist that the campaign for complete independence was the work of a few extremists who misled a simple, non-political people. Their self-complacency received a rude jolt when Sir Lee Stack was murdered by the Egyptians in November, 1924. The British decided on quick reprisals. An apology and an excessively heavy indemnity were demanded, all the Egyptian forces were driven out of the Sudan and Zaghlul Pasha was compelled to resign. These demands were enforced by the forcible occupation of the Customs house at Alexandria. But an even harsher measure was the fiat that in future Britain alone would decide how much of the water of the Nile, which has its source in the Sudan, was to be retained for irrigation purposes. This meant the power of life and death over 'independent' Egypt. The Egyptians retorted by letting off the murderers of Sir Lee, only one being awarded the death punishment.

As may have been expected, the retaliatory action of the British Government only served to inflame public opinion and at the subsequent elections the Wafd was again returned with a clear majority. The King who had a fancy for autocratic rather than constitutional rule, thereupon dissolved the parliament and appointed as Prime Minister a person of his own choice. This has been the bane of Egyptian politics. The party which really counts is the Wafd, but on account of the machinations of the King and the subtle support of British representatives, it has been repeatedly kept out of office. The inevitable consequence has been the instability of Ministries. In the past 27 years, there have been 28 Egyptian governments.

But to resume the story, Allenby was succeeded as the High Commissioner by Lord Lloyd, a convinced Imperialist and cast in the mould of the grand pro-Consuls. He encouraged the King to set up dictatorial rule and openly interfered with the formation and dismissal of Ministries. The mildest demands for reforms were enough to provoke him to summon British warships to Egypt. At length the constitution was suspended and the British High Commissioner now possessed all effective legislative power. Lord Lloyd's triumph ended when the second Labour Government assumed office in 1929. Arthur Henderson, the new Foreign Secretary, stood for more conciliatory methods. He recalled Lloyd, abolished the protectorate and offered to make a new treaty with Egypt as between two equals. Egypt, however, remained unsatisfied.

Following the widespread ferment during the Anglo-Italian crisis of 1935-36, London felt obliged to make greater concessions. On August 26, 1936, a treaty of alliance was signed by which Egyptian sovereignty was recognised. Britain undertook to withdraw her troops but was given the right of maintaining a garrison of 10,000 and 400 aircraft on the Suez Canal, of using Alexandria and Port Said as naval bases and of moving troops across Egypt in case of war or threat of war. Britain also shouldered the responsibility for the defence of Egypt. In token of Egypt's new status, ambassadors were exchanged between the two countries and Egypt was accepted as a member of the League of Nations.

Soon after the Anglo-Egyptian relations became cordial, World War II started. Egypt severed diplomatic connection with the Axis but did not go to the extent of declaring war. Nevertheless, permission was granted to Britain to use Egypt as a base for military and naval operations. The point to be noted is that during the dark days of the Libyan campaign when the cause of the United Nations seemed lost, Egypt did not waver in her moral support and no disaffections broke out.

With the coming of peace, it was natural that the national embers should stir again. If the purpose of war is to banish tyranny and secure freedom, all the nations suffering from foreign domination should raise their heads. The present turmoil in Egypt started about three months ago when the Egyptian Government applied for a revision of the treaty of 1936. The whole of Middle East is seething with discontent. On the top of the incidents in Persia, Syria and the Lebanon, and Palestine have come the anti-British riots of Cairo and Alexandria. Serious clashes have occurred between the student demonstrators and the British soldiers. The Egyptian national demands are mainly two, (1) Full independence for Egypt including the evacuation of all foreign troops and (2) Egyptian control of the Sudan, now under British rule. The British reply to the note though couched in friendly language and written with extreme caution, carefully avoids committing the British Government on these vital issues.

What the problem is extremely difficult nobody would deny. As long as Great Britain is determined to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hold her Empire together, it is imperative that she should keep her forces at Suez which is a focal point in the Empire's life-line and defence system. And there is the word of Mr. Bevan, the British Foreign Secretary, who declared before Parliament only a month ago, "I am not prepared to sacrifice the British Empire."

Indeed, according to English statesmen, there is nothing inconsistent in the presence of British troops in Egypt and Egyptian independence. In a remarkable despatch of October 7, 1924, Mr. Ramsay Macdonald said :

"The effective co-operation of Great Britain and Egypt in protecting these communications might in my view have been ensured by the conclusion of a treaty of close alliance. The presence of a British force in Egypt provided for by such a treaty freely entered into by both parties on an equal footing would in no way be incompatible with Egyptian independence, while it would be an indication of the specially close and intimate relations between the two countries and their determination to co-operate in a matter of vital concern to both. It is not the wish of His Majesty's Government that this force should in any way interfere with the function of the Egyptian Government or encroach upon Egyptian sovereignty. It is not the intention of His Majesty's Government to assume any responsibility for the actions or conduct of the Egyptian Government or to attempt to control or direct the policy which that Government may see fit to adopt."

While this may be the British view, it is clear that it is not shared by the Egyptians who regard the continued presence of British soldiers as derogatory to their self-respect and limiting their freedom of action. Every Egyptian, no matter what his class or creed, is agreed on one point—'not one foreign soldier on Egyptian soil.' If then a British army is maintained, it can be done not with the people's goodwill but by sheer force of arms. The Egyptian argument is that any threat to the security of the British Empire must be dealt with by the United Nations Organisation and that it is no longer necessary for British forces to be billeted on territories belonging to other peoples. Total and immediate evacuation of the British soldiery—that is Egypt's demand No. 1.

Demand No. 2 is for the unification of Egypt with the Sudan. Here the situation is no less complicated. The Sudan is a vast expanse of territory covering about a million square miles and lying to the south of Egypt. In diplomatic language, the country is under a condominium, *i.e.*, it is jointly ruled by Britain and Egypt. The Governor-General is appointed by Egypt on the recommendation of the British Government ; the British and Egyptian flags are both used, and all laws promulgated by the Governor-General are notified to the British Consulate at Cairo. Virtually it means British rule. Egyptians claim the amalmagation of the Sudan on the ground that it is an integral part of their country. Hidden behind this political argument, is the stubborn fact that as explained above the upper reaches of the Nile valley lie in the Sudan territory. The British, on the other hand, have built up vast interests in this region. They have poured money, talent and engineering skill into this land and evolved order out of chaos. Since their arrival, they have invested some $125,000,000. In spite of the assertion of the Egyptian Prime Minister that "it is the aspiration of both Egypt and the Sudan to bring about a real union of the entire valley of the Nile . . . We are one community, one people, and our interest is one," it may be doubted whether the Sudanese themselves are keen about the contemplated fusion. It is only in the northern Sudan that the Egyptian agitation for union has met with a favourable soil ; the south is wholly different in traditions and interests. Remarking on the Egyptian demand first forcefully made in 1922, Parker Moon in his *Imperialism and World Politics* has the following interesting comment to make :

> "So exuberant were the newly emancipated patriots, that they even ventured to insist in firm tones, that the Sudan must be turned over to Egypt as her rightful heritage ; one backward people hardly freed from alien rule, demanded its right to rule another backward people—such is the circular path of human logic."

A political merger with Egypt may or may not be in the interest of the Sudan but there is no doubt that so long as a first class foreign power maintains its hold in that country, there is potential danger to Egypt.

The situation in Egypt is made graver by the personal ambitions of the King who in return of being recognised as the Caliph of the Moslem world is willing to lend his support to the Arab League. This league has long been the dream of Ibn Saud, who seeks to weld a powerful Pan-Arab Federation with Saudi Arabia and Egypt as the principal powers. The federation would embrace 33,000,000 people, control the fourth largest petroleum deposits in the world, stand sentinel over Suez and the routes to the East and revive once more the fiery zeal of Islam for world conquest. In the face of such a confederation, it will no longer be possible for the Imperial powers to pursue their old policy of divide and rule. What is even more sinister from the British point of view is the interest which the Soviet Union is taking in the developments in this quarter. She has expressed herself in sympathy with the formation of the Arab League and demanded the withdrawal of British troops from Egypt. According to the British, this attitude of the Soviet is explicable in terms of her struggle to grab as much oil-land as possible. But whatever the motives, an alliance between the Soviet Union and the Arab League must mean a major disaster to British diplomacy.

The negotiations for the revision of the treaty between England and Egypt are to start soon. The Egyptian Government has appointed a delegation of twelve to participate in the discussions. But the circumstances for the success of the negotiations do not appear to be propitious. It should be emphasized that the Wafd, the only party in Egypt which can deliver the goods, is not represented on the official committee. The conditions on which it was prepared to co-operate were turned down by the Prime Minister. These conditions were, (1) that Nahas Pasha, on whom the mantle of Zaghlul Pasha fell on his death should lead the delegation ; (2) that the Wafd members should be in the majority on this body and (3) that an assurance should be forthcoming that new elections would be held at the earliest possible date. It should be borne in mind that the Wafd does not find a place on the present legislature, having decided to boycott the last elections.

IRAN IN OUR TIMES

By Prof. SUDHANSUBIMAL MOOKERJI

Iran, official name of Persia since 1934, and its people the Irani, are derived from the well-known term *Arjan*. The name Persia is an accident of history which made the province of Pars or Fars—the 'Parsis' of the Greeks—predominant in Iran when the attention of the Greeks was attracted to the country for the first time. One of the most romantic wonderlands on our planet, Iran calls up in the mental horizon a galaxy of romantic and hoary names like Zoroaster, Darius, Naushirvan, Firdausi, Omar Khayyam, Saadi, Hafiz and the like. Every generation in Iran has had its prophets and the country has raised and reared a number of religions—Zorastrianism, Mithraism, Manichaenism, Mazdakism and Shiism.

Iran became one of the most powerful States in the world under Cyrus in the sixth century B.C. and her empire extended from the Punjab to the sands beyond Egypt. Under Darius she grew into an empire still vaster, which included the whole of the known world and a good deal of territory unknown till then, and "stretched from the burning sands of Africa to the ice-bound borders of China," vast but obedient. For a very long time to come Iran retained the power and eminence thus acquired. Cambyses, Darius and Xerxes are the names at which once "the world grew pale." Iran grew into a great land and naval power under them and was within an ace of wiping out the nascent civilisation of Hellas. But then "the paths of glory lead but to the grave" and Iran was no exception to the general rule. Decadence set in under the successors of Xerxes and the Empire was finally overthrown by the Arabians in the seventh century A.D. Iran lost for ever her place of honour in world-politics.

The emergence of Iran to the forefront from the backwater of world politics dates from 1925 when an obscure military officer Reza Khan after a successful *coup d'etat* in 1921, did away with the Imperial Kajar family and set himself up as the ruler of the country. Under Reza Khan, who after his elevation to the throne assumed the name of Reza Shah Pehlevi, and his son Mohammad Reza Pehlevi on whom his mantle has fallen, much that was old Iran has been swept away. The process of modernisation is well under way and is daily nearing 'completion'. The country pulsates with a new life. New horizons have been discovered, new avenues opened.

Iran in modern times was upheld, so to say, by the rivalry between England and Russia. When the rivals left the country after the first World War in 1920, Iran left to herself, was tottering to fall. As Gunther puts it in *Inside Asia* :

> "Tension between the two great powers supported her ; when the tension was withdrawn she collapsed. Corruption ruled Teheran, and banditry all but ruled the country."

It was at this critical juncture of Iranian history that Reza Khan, Commander of the Cossack Division of the Imperial Army, came to the limelight. A group of youngmen under a journalist Sayyed Zia-din aided by Reza Khan effected a bloodless *coup d'etat*. The authors did not want to dethrone the Imperial Kajars but to revitalise the government by reforms long overdue. The Fates, however, had decreed otherwise. Reza Khan henceforward knew no stopping. War Minister in 1921, he became Prime Minister in 1923 and 'Shah' —which, by the way, is the title of the Emperor of Persia—in 1926. A measure rushed through the Majlis (Parliament) in October, 1925, deposed Ahmad Shah, the last of the Kajars. Reza flirted with the republican idea for a time and thought of establishing a Republic. The idea was subsequently abandoned and he was crowned as Reza Shah Pehlevi on April 25, 1926.

Even the bitterest critics of Reza Shah admit that he had in abundance the gifts of courage, vitality and vision. He succeeded in putting an end to the weakness of the old regime and breathed new life into a decadent country. A patriot to his finger-trips, Reza Shah was much in advance of his time, and his sole ambition was to put the country in working order. He achieved much in this direction. Hospitals, orphanages, welfare houses and free milk bars were established to check death-rate, specially among the infants. The establishment of schools and colleges and the introduction of scientific methods of teaching have gone a long way to instruct the people in the simple rules of hygiene and self-protection. The Medical College at Teheran has done and is doing much to fight diseases in the country. The work begun by Reza Shah is being continued by his successor Mohammad Reza Pehlevi. "A modernised and industrialised Iran, a happy, contented and prosperous nation, and a cultured and healthy generation" are the ideals the present Shah has set before himself.

The Government aims at the industrial self-sufficiency of the country among others. A great impetus has been given to local industries through protective tariffs, monopolies, etc. Carpet-making, silk-weaving, embroidery, metal-working, wood-carving and miniature-painting are the more important cottage industries of Iran. Iranian carpet is famous all over the world for its fineness and superior quality. The Government wide-awake to the need of maintaining the standard of this industry has imposed an embargo upon the export of carpets of an inferior quality. Weaving schools have been established to teach and to maintain as well the workmanship and the well-tried methods of the industry. The administration of Industrial Supervision endeavours to increase the domestic output of handcrafts. As Iran consumes more cotton piecegoods than she produces, the Government encourages textile-weaving in all possible ways.

So far as the organised industries are concerned, the Government encourages the country craftsmen and local bodies to make the best use of Iran's raw materials like cotton, wool, silk and sugar, instead of simply exporting them to foreign lands. Factories have been started at various industrial centres with the object of supplying requirements of the country. Silk industry

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has received the special attention of the Government, which shows a keen interest in the production of silk and in reviving the old silk industry of the country. The efforts in this direction have not been altogether barren of results. In 1943-44 Iran exported 641,785 kilograms (1 kilogram = 2·205 lb.) of silk. There are well-managed flour-mills near the silos of Teheran, Tabriz, Quazvin, Hamadan, Meshed, Isfahan and Shiraj. The rice mills turn out about 14,000 tons of rice per year for domestic consumption. The three beer factories in the country—2 in Tabriz and 1 in Teheran—manufacture about 2½ million bottles of beer per year. For the last few years dry fruits are being collected, packed and exported from the country and there are good markets for them abroad, specially in Europe and America. A number of factories all over the country, particularly in Khurasan and Ajerbaizan areas, store and select dry fruits, treat them scientifically and pack them in up-to-date fashion for export to foreign lands. Distillation industry is also rapidly growing and there are nine distilleries in the country. Sugar industry is yet in a nascent stage and does not meet the requirements of the country. There are eight sugar factories in Iran which produce about 22,500 tons of sugar annually, hardly meeting 33 per cent of the country's requirements. Iranian sugar, it may be noted, is manufactured chiefly from beet roots. Some tea and vegetable oils too are manufactured.

Cotton, silk and wool are available in abundance and Iran has in consequence a very flourishing industry. Isfahan and Chalus are the silk-weaving centres. The best calico-printing factories are located at Du Shahr Shahi and Bi Shahr. There are textile mills at Teheran, Kerman, Quazvin, Meshhed, Tabriz, Shiraj, Kashan, Bandar Abbas, Simnan, Qum and Ahwaz. The biggest hosiery mill in the country is situated at Teheran. The jute mill industry seems to have a bright future. The Caspian region produces jute on a fairly large scale and there are jute mills at Resht and Shahi, their total annual outturn being about eight to ten million metres of gunny and about 4,000 kilograms of strings and ropes.

Due primarily to the comparative poverty of Iran in iron ore and coal, Iranian iron and steel industry has not been able to make much headway. Some progress is noticeable nevertheless. Teheran today boasts of an iron factory for making iron-rails, boilers, locomotives, etc., an aeroplane factory and a copper-melting work. All these factories are state-managed. There are besides private foundries and iron works in Teheran and other cities. These latter manufacture articles of everyday use like vessels, lamps, braziers, iron beds, tricycles, perambulators, etc.

The development of mining is one of the most ambitious schemes before the government. A large number of coalfields and iron, manganese, lead and copper mines have been located already by the Government experts and leased out to interested parties on contract basis. Oil is one of the principal mineral resources of Iran. It is the fourth greatest oil-producing country in the world, the annual yield being eleven million tons in 1940. The oil of Iran, it should be remembered, constitutes a potential threat to the world-peace in future years.

The wood industry of Iran is yet in its early teens. It was introduced only in 1932 primarily to meet the requirements of the Trans-Iranian Railway then under construction. There are at present two factories which annually produce, among others, 300,000 sleepers, 6,000 tons of tar and a considerable quantity of machine oil, grease and benzene. Cement, match, tanning, leather, glass, soap, glycerine, and cigarette industries are also making rapid headway. The cigarette industry is a State monopoly. Teheran is the centre of the tobacco industry where several thousands of persons are engaged in manufacturing cigarettes, and pipes and other kinds of tobacco. Tea and tobacco, by the way, are new items of production in Iran.

The Government is wide awake to the need of developing agriculture, which has received its due share of attention. A number of Agricultural schools and experiment-stations have been established for this purpose. The Government adopted a five-year agriculture plan in 1940. The plan "provides for an increase of 500,000 tons in cereal crop and 200 to 500 per cent increase in tea, sugar, beet, jute and flax. Further projects include the erection of fertiliser plants, more irrigation schemes, the importation of merino sheep to be crossed with native breeds, and extensive afforestation." To emphasise the importance of the last, March 15 is observed as the tree-festival day.

That fully developed transport facilities are the *sine qua non* of economic and commercial prosperity has not been missed by the Iran Government. The difficulties of communication have been considerably overcome by the construction of railways and metalled roads and by the development of air and water transport. The idea of constructing railways in Iran was mooted during World War I. But the matter ended there. In 1925, Ahmad Shah proclaimed that he would plan his own railway with purely national ends in view. It was decided to finance the project from taxes on sugar and tea. The work began on October 19, 1927, and the first train left Bandar Shah for Teheran on February 19, 1937. The Trans-Iranian Railways totals 1864·50 kilometers (about 1150 miles) in length and is divided into two main sections, *viz.*, the Northern Section which runs from Bandar Shah to Teheran and the Southern Section, connecting Teheran with Bandar Shahpur on the Persian Gulf. It has a number of branches as well. More than a dozen of good motor roads run from the metropolis to different points on the frontiers. The total length of telegraphic lines in existence on March 20, 1944, was 18,153 kilometers (about 11,255 miles). There were at the time 429 Post Offices in Iran. The country boasts of ten Government radio-telegraphic stations. Only two, however, there at the metropolis and Lingah, work regularly. 185 towns have telephonic connections. There were 14,933 telephone receivers in Iran on March 20, 1944,—6,000 being in Teheran alone. The Casp-Flotte Company's ships carry passengers and merchandise from Iranian to U.S.S.R. ports and vice versa. The vessels of no less than seven navigation companies ply in the Persian Gulf area.

Most spectacular has been the social and cultural progress of Iran during the last two decades. Kemal Ata Turk declared Turkey a Republic in 1923 and disestablished the church. The cue was taken by Reza Khan Pelhevi, till then the Prime Minister. But the ground that he had to tread, was more hostile, the elements that he had to tackle were more obdurate, than the Turkish. The Muslim divines of Iran rose against the Prime Minister and the parliament for their reformative propaganda and the hand of the reformer was stayed though only for the time being.

The first act of Reza Khan on his elevation to the throne was the promulgation of a commercial code which took away from the divines their right of deciding commercial disputes according to the Quranic law. Followed a new penal code. The compulsory Military Service Law of 1927 was the signal of the first open conflict between the forces of progress and those of reaction, the latter represented by the Mullahs. These latter, however, were won by a number of vague assurances. A decree of December 28, 1928, introduced uniformity of dress by making compulsory the wearing of European costume. The traditional Iranian garments *Ammama* and *Kullah* were banned.

A great change has been brought about in the status of women during the last two decades. Reza Shah's name has come to stay and will stay in history for the emancipation of women in Iran, if not for anything else. The Government launched upon a propaganda for this in 1927, the second year of late Shah's accession. Women in Iran till then were looked upon as objects of sensual pleasure. They were nothing but so many child-bearing machines. Hidden behind the black veils for centuries, women were men's social inferiors in every respect. It was enacted in 1931 that all marriage contracts and divorces must be registered with a civil official and not with a Mullah. The movement for the emancipation of women, however, came into full swing four years later in 1935. On June 28 of that year the Prime Minister gave a garden party at the Iran Club to which all the members of the Cabinet and other high officials were invited with their wives. It was unprecedented in the long centuries of Iran's chequered history. The appearance of women in public was thus officially recognised. The veil was tabooed and women were elevated to a status of equality with men. No woman was henceforward allowed to move under a veil. Shopkeepers were forbidden to cater to women in veils and bus and taxi-drivers to admit them on board their respective vehicles.

Education too has made considerable headway under the Pehlevis. Schools have been graded into kindergarten, primary, secondary and higher. The Ministry of Education prescribes text-books and prepares syllabus for all school classes. Schools are equipped with modern furniture, apparatus and well-qualified teachers, mostly trained. The National Assembly passed the Teheran University Act in 1934 and the foundation stone of the University was laid by the Shah in the following year. The University has at present six faculties—Law and Political Science, Medicine, Industry, Science, Arts and Theology. For professional studies there are courses in modern painting, sculpture, mosaic, carpet-weaving, miniature work, dress-designing, interior decoration and fancy work. The University is well-equipped and well-staffed. The curiculla of the University classes seem to have been drawn upon the lines of the French residential universities.

There are three first class theatres at the metropolis —Theatre Farhang, Tamashe Khan Teheran and Tamashe Khane Hunar—besides a number of others of an inferior type. About a hundred of plays have been staged in course of a few years. The cinema is one of the greatest obstacles in the way of the progress and development of the theatre and the Iranian theatres possessing neither the resources nor the capital to compete with films, the latter are quickly acquiring greater and greater popularity. Though the first picture-house was started in Iran only some 30 years back during World War I, Iran today can boast of a number of good cinemas scattered all over the country. Teheran alone has about a dozen. There is, however, no film-producing concern in the country and Russian, English and American films have to be imported.

Broadcasting too has attained considerable popularity in recent years.

All these have been achieved during a comparatively short span of two decades. This proves, among others, that given political freedom and the will to act much leeway can be made up at a speed commonly thought impossible.

Iran was thus forging ahead along the path of peace and progress when World War II broke out. The Izvestia had commented after the conclusion of the Soviet-Persian Treaty of 1921, "Persia is no longer the old Persia, on whose territory were roving foreign troops and diplomats." But the situation changed and British and Russian troops marched into Iran to earadicate Nazi influence and to facilitate and speed up the sorely needed American supplies to the Red Army. She passed under the virtual occupation of the 'Big Three.' Iran's territorial integrity was, however, expressly guaranteed by the 1942 treaty among Iran, Great Britain and Russia. The Teheran Conference (December, 1943) agreed upon the withdrawal of all foreign troops from the country, six months after the conclusion of the war. At the request of M. Molotov of Russia, the date was extended to March 2, 1946.

That all was not well with Iran began to be known to the world outside even during the war. Teheran turned down Moscow's request for oil concession in October, 1944. Russia fomented public agitation against the then Premier Mohammad Said, who was forced to resign on November 10, 1944. The Government subsequently formed by Ghavam-es-Sultaneh has been more accommodating and Moscow has succeeded in extorting the much-coveted concession from Iran. The Russo-Persian Oil Corporation has been granted extensive monopoly oil concessions in Iran. The latter has solemnly pledged herself not to grant to foreign companies or to any company which either employs foreign personnel or includes foreign capital oil concessions in the territory allotted to the Corporation. During the first 25 years 49 per cent of the shares of the Corporation will belong to Iran and 51 per cent to Russia. For 25 years after this, the proportion will be 50 : 50.

Iran was prominently in the news when the Azerbaizan autonomy movement flared up towards the end of November, 1945. The 'rebels' made spectacular progress and within a short time Murtaza Qualikhan Bayat, the Governor of Azerbaizan, was asked to quit Tabriz by Jafar Pisheravi, President of the newly formed provincial government and leader of the Democratic Party. It might be noted in passing that the Shah's Government has since recognised the revolutionary Tabriz Government. Prime Minister Ghavam-es-Sultaneh recently anounced measures offering partial autonomy short of recognising national government in Azerbaizan. His statement forms the basis on which future discussions are to be held with a view to greater concessions by Teheran.

There seems to be a consensus of international opinion that Russia had had a finger in the Azerbaizan pie. Nor can the grounds of suspicion be brushed aside altogether, the more so in view of the Russian policy towards Iran in the past—proximate and remote.

According to the Tripartite Pact of 1942, all foreign troops were to be withdrawn from Iran by March 2, 1946. When the time came for implementing the pledge, Russia far from being agreeable actually reinforced her troops in the country. She justified the retention of troops beyond the time-limit agreed upon on the strength of the Russo-Persian Pact of 1921. She, however, subsequently changed mind and has since evacuated her troops from the Persian soil. Quietus has been thus given to the Persian affair after it has given many an anxious moment to the Security Council where tempers of the Big Three, who run the whole show, were frayed over the Iranian tangle on several occasions. Heads, thank God, have yet to be broken.

Time is not yet to say if the curtain has been finally rung down upon the Iranian drama. History makes us doubtful. Iran in the past has been the happy hunting-ground of power-politics of the nations of the West. Iran's 'black gold' together with her strategic advantage makes it extremely unlikely that the power-mad and lust-blind nations of the West will ever slacken their stranglehold on that country. Who can say definitely that World War III is not brewing in the simmering cauldron that Iran is? Moscow's policy to her, both during and after World War II may rightly be construed as an indication of the shape of things to come.

Iran today is a pawn in the tense game of international power-politics. A free and modernised Iran will, however, be a potent factor in the maintenance of world-peace. Iran thus transformed can immensely benefit herself and help the other struggling Asiatic nations to put their houses in order.

Will she be given the time and opportunity necessary for the purpose?

———:O:———

OUR FOOD PROBLEM

By Prof. S. VENKATRAMIAH, M.A.

In a country like ours, where more than 70 per cent of the population depends upon agriculture, the problem of increased food supply and its equitable distribution forms the crux of her economic planning. The growth of the population during the last two decades is unprecedented in the history of the world. It has been estimated that of the present population a full one-third are under-nourished while a still larger portion are ill-nourished, for lack of a balanced diet. The Famine Enquiry Committee recently made some suggestions with regard to the increase of cereals and it came to the conclusion that self-sufficiency in cereals is not only feasible but practicable and advocated that there should be a large increase in protective supplementary foods, such as pulses, vegetables, fruit, and fish. At present as we are all well aware of the fact that the lack of adequate purchasing power is the root cause of malnutrition. Sir John Woodhead's Commission found that among the upper and professional classes, the birth-rate is falling steadily and it is indeed one of the encouraging features in the otherwise gloomy horizon of population growth. The food situation has taken a serious turn from the last two months for various reasons. The failure of the monsoons is not the least to contribute to the already deteriorated food position. Before dealing with the present crisis it is beneficial for us to review the situation in brief from the beginning of this war.

The war has ravaged many food-producing countries and consequently there is a world shortage of food-supply. We used to import large quantities of rice from Burma prior to war; nearly from the last five years the imports of rice from Burma stopped because of its occupation by the Japanese troops and the failure of the crops there also.

Dr. Radhakamal Mukherjee pointed out that the pre-war period of food-grains in India even when supplemented by imports and protective foods fell short of the nutritional requirements of the country. According to him, assuming the daily calorie requirements of the average Indian to be 2,800, India in 1935 fell short of food for 48 million of her average men. The average deficit was 423 calories in each man's daily ration. The composition of a well-balanced diet for an adult according to the calculations of Dr. Aykroyd is as follows:

	Balanced Diet (*Ounces per day*)
Cereals	15
Pulses	3
Vegetables	6
Fat oils	2
Fruits	2
Milk	8

This balanced diet yields approximately 2,600 calories which are necessary for the maintenance of normal health. But unfortunately the Indians cannot afford to have a balanced diet, for the per capita income is too low, and therefore, the immediate as well as the urgent task is to see that the per capita income is raised. The Bombay Plan envisages the doubling of per capita income but we know fully well that it is not possible to raise the level soon. There should be besides a systematic planning and improvements in agriculture. Crops have to be planned with special reference to their nutritive value.

During the few years preceding the outbreak of the war the net imports of food-grains into India averaged 1½ million tons a year. With the continuation and progress of war imports were cut off. In 1942-43 actually India exported 3,61 000 tons of food-grains. Realising the gravity of the situation the Government of India launched the Grow More Food Campaign. Though it made some strides the progress achieved is not remarkable. At this time again there was shortage of the energy foods. There was a heavy slaughter of cattle for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the military. And again as Dr. Radhakamal Mukherjee points out, there has been a continuous increase in the production of inferior food-grains at the cost of rice and wheat during the last two decades, a tendency ominous to the general food position. Some of the factors responsible for the gravity of the food situation were failure of monsoons in the different parts of the country, war-time curtailment of transport facilities, government purchases for the military requirements, hoarding and profiteering on the part of some merchants. There are some other reasons for which the Government of India has to take the sole responsibility, they being the inflation which increased the prices of foodstuffs and thereby rendered the purchases by poorer classes difficult and the haphazard and half-hearted controls of the Government over food-grains and food-products, lack of co-operation between the Central and Provincial Governments and the countrywide activities by the profiteers. The Provincial Governments cannot be exonerated from the blame as some of them especially Sind and U.-P. made enormous profits in the sale of food-grains to the deficit provinces. As a result of the grow more food campaign, there is an increase of only 12 million acres or about 6 per cent in India's food supply as compared with 70 per cent increase in Great Britain during the wartime.

There is a need for mixed diet. The people of South India are habituated to rice-taking but due to scarcity it is not possible for the Government to get enough rice. Even if rice is imported from Siam which has been promised to us by the Combined Food Board still we shall be short of the minimum requirements. The Combined Food Board sanctioned us more wheat and the people should be trained to take besides wheat also. It will be advantageous and beneficial not only from the point of view of supply and equitable distribution but also from the standpoint of nutritive value.

The absence of foresight and planning has been revealed in the Bengal Famine. The Government of Bengal devised no stringent regulations against hoarding or measures of price-control or rationing while its efforts to purchase food-grains from outside were unsuccessful due to the apathy of surplus provinces or the limitations of transport. Due to the stress on Provincial Autonomy under the Constitution for 1935, the surplus provinces like the Punjab and Sind have been able to refuse to part with their wheat surpluses at reasonable prices. The Punjab at first stood out against the Government of India's policy of All-India Price Control, Rationing and Requisition of surplus stocks for deficit areas. This again stresses the need for an all-India Food Policy to be followed by the Government of India in consultation and co-operation with the Provincial Governments. It is the duty of the Government of India to see that the Provinces do not block the way. "Fixation of ceiling prices and rationing in all provinces including surplus provinces backed by grain reserves at the centre can alone ensure proper procurement and equitable distribution and at the same time abolish profiteering as well as high class consumption."

The Gregory Committee have recommended the need of India's importing 1·1·5 million tons of food-grains per annum. The Food Grains Policy Committee also recommended that at least 1·5 million tons of food-grains should be imported from abroad. But we must remember that imports could serve only as a palliative. India should be in a position to produce all the food required by her without depending on other countries. The Indian farmer should be helped with manure, seeds and enough water. On the distribution side, the Food Grains Policy Committee recommended the introduction of rationing in all the large cities which will involve proper procurement, machinery, and honest administration. It further recommended the institution of statutory price control over all the major food-grains in all provinces and the states. It is refreshing that the Government of India has carried into effect these recommendations. Exports of food-grains from India were altogether stopped in 1944, thanks to the Government of India's belated recognition of the gravity of the food situation.

During this year unfortunately we are again faced with a grave food situation. The world shortage of food-supply, the failure of the usual monsoons, and the havoc wrought by cyclone are responsible for this position. Besides, there is a rice famine in Asia. In pre-war years Asia produced 95 per cent of the total production of rice. There was a decline in production in the three principal exporting countries, Burma, Siam and Indo-China. From August 1944 to July 1945, the world production of rice was estimated to be as high as 90-95 per cent of the average pre-war output. This estimate reflected the very substantial increase in the cultivation of rice in the United States and Central and South America, but the increase did not offset the decline in production in Burma, Siam, and Indo-China. All the factors in the production and supply situation in Asia combined to suggest that the post-war shortage of some duration is quite inevitable. The London *Economist* suggests that the only step which could be taken in the short run to ease the situation is increased shipments of other grains from the Western Hemisphere so far as supplies and shipping permit.

Sir J. P. Srivastava, the Food Member to the Government of India said recently :

> "We have been allotted in 1945, 1,60,000 tons of rice from Burma and Siam. This year we have several factors in our favour. The demands of the defence forces will be reduced, internal movements by rail will be easier, and rationing has been well established."

But unfortunately his predictions regarding favourable position to India became false due to the reasons already mentioned.

Speaking on the food situation, His Excellency the Viceroy dealt on the gravity of the position and appealed for co-operation. His Excellency mentioned that we are short of some 3 million tons of food-grains of our requirements and cautioned us that because of the world shortage of food-grains we should not hope for the imports of this magnitude. Two plans are suggested: (1) That we should maintain our present basic ration of one pound a head, (2) To cut our consumption now and make sure that our deficit is spread over the whole year and over the whole country. Mahatma Gandhi has also appealed to the people to observe strictest economy possible. He said :

> "Every person should confine his or her daily wants regarding food to the minimum consistent with his or her health requirements . . . All flower gardens should be utilised for growing edibles. Reduction should be taken up not merely by civilian population but equally by military."

In order to meet the situation, the Government of India should immediately take the following steps.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

First, there should be a nationwide rationing. The use of wheat should be encouraged. In other words, a mixed diet should be given; secondly, the Government of India should immediately stop and prohibit all exports of food-grains and oil seeds including groundnut; thirdly, the Government of India should make strong representations to the Combined Food Board for getting the minimum requirements of ours. Already the food delegation has come home though disappointed. Mr. Attlee speaking in the House of Commons assured us that rice will be imported from Siam. Fourthly, the Government of India should intensify the Grow More Food Campaign. It should provide cheap loans to the cultivators. All the land tenure and tenancy laws should be modified and the Government should provide other necessary facilities to the cultivator. Fifthly, the growth of commercial crops should at once be discouraged. Already Sir S. V. Rammurty announced that the Government of Madras is in favour of this proposal. Sixthly, there should be an All-India Food Board consisting of the representatives of the provinces and the States. This Board should follow a uniform policy.

As regards the long-range view, the following steps can be taken.

The Government of India should extend the irrigation facilities. No more should agriculture depend upon the vagaries of nature. The Government should besides encourage scientific farming. Unfortunately, the tendency for the small size of agricultural holdings has not been stopped. The subdivision and fragmentation of land, is responsible for the low yield of the crops and a standing block for the introduction of mechanization in agriculture. The consolidation of holdings on a voluntary or a compulsory basis through co-operative societies should be done. Further, some steps have to be taken with regard to the liquidation of the debt of the agriculturists. Thanks to the war a substantial portion of the debt is wiped out but the tendency to borrow persists and it is the duty of the Government to educate the cultivators on this point and if they are in need of money to provide them cheap loans.

Moreover, the population problem has to be tackled side by side. In spite of the great increase in food supply it is not possible to provide nutritive food if the present growth of population is unchecked. The Government should forthwith carry the post-war plans and raise the standard of living. The per capita income should be increased so that the people should be in a position to purchase the nutritive food. The Bhore Committee's recommendations are worth trying. The Committee favoured the introduction of birth-control in order to check the growth of population. But we must remember that this is not possible due to the illiteracy and the social and religious conditions of the people.

It is again necessary as Lord Hamilton stated that

"We must vary the occupations of the people for so long as 80 per cent of population is engaged in agriculture the danger in the recurrence of famine is all the greater."

The Government of India has proclaimed a new food policy:

"This includes the responsibility for providing enough food for all sufficient in quantity and of requisite quality. For the achievement of this objective high priority will be given to measures for increasing the food resources of the country to the fullest extent and in particular to measures designed to increase the output per acre and to diminish dependence on the vagaries of the nature. Their aim will be not only to remove the threat of the famine but also to increase the prosperity of the cultivator and raise levels of consumption and create a healthy and vigorous population."

But mere policies will not take us anywhere. If some of the above suggestions are taken into account, the food problem can be tackled successfully with great ease. There should be absolute co-operation among the people, provinces and the centre. Only then the Government of India's steps would bear fruitful results. There has never before been a greater necessity for the establishment of National Government than now. Only a National Government will be able to deal squarely the problems confronting us. Already popular ministries are coming into existence and we have to see how far they will be able to tackle the immediate issues facing us.

It has been recently contended by some that there is no remarkable world shortage of food and the available food supply is more than enough to feed the entire population of the world provided it is properly distributed. It has also been asserted that the main cause of world cereal shortage was not drought but the feeding of animals with grains and use of grains for industrial purposes. Of course, we cannot altogether deny the truth of these statements. If we take into account the United States of America, we find that it had a record crop in 1944-45, some 1079 million bushels. Considerable quantities of wheat are consumed in the United States for alcohol production and animal-feed. In 1943-44 some 108 million bushels were used for alcohol and this on a double subsidy basis. This quantity is nearly twice the total amount of food-grains demanded by the Government of India in their representations to H.M.G. and the Combined Food Board. It is somewhat amazing that when a large part of the population of the world is faced with famine large quantities of food-grains should be wasted in feeding animals and for producing alcohol. The U.S.A. should realise that human life is more precious than animal life. Also we hear reports from Mr. La Guardia, Director-General of U.N.R.R.A., that he had been reliably informed that American farmers were holding 100 million bushels of wheat. He declared that there was enough food in the world to feed famine-stricken peoples with a minimum subsistence ration which would permit them to work but charged that only 3,47,000 tons of wheat were shipped in March whereas we could ship 7,10,000 tons. Owing to faulty price-fixing it paid the American farmer better to feed wheat to animals or sell it for industrial purposes than let it go for direct human consumption. In Asia only 14 per cent of the total grain crop was used for seed or to feed the animals whereas in U.S.A. the proportion was 75 per cent. This clearly shows that the farmers are more interested in getting substantial profits than in realising their duty to their fellow-sufferers. We do hope that the people of U.S.A. and Canada would care for the welfare of humanity which they are supposed to be aspiring for and act to that effect.

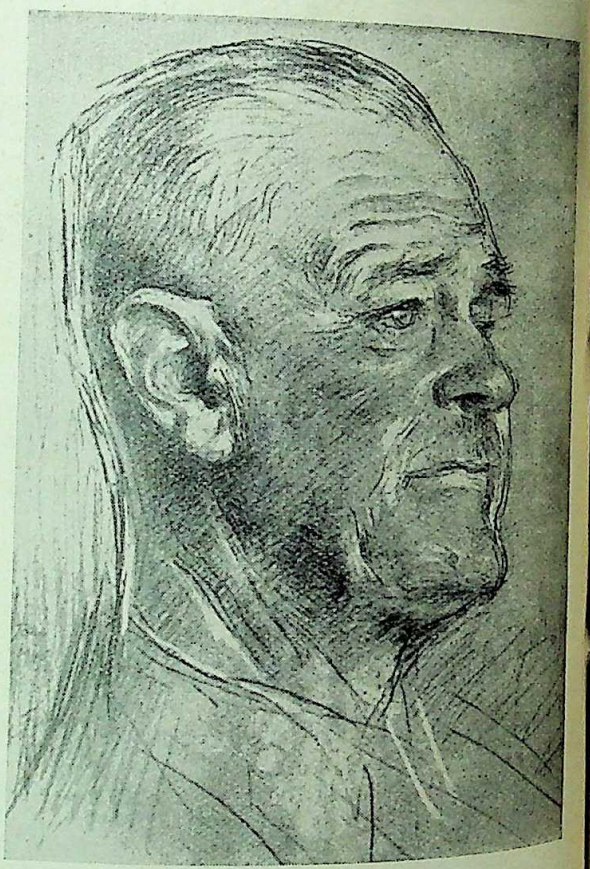
INTERNATIONAL CONTEMPORARY ART EXHIBITION AT DELHI

By AGASTYA

When a nation is really alive, it is alert and active in all phases of existence and upholds the claims of the commonweal. In Soviet Russia, the claims of literacy receive equal attention with the claims of beauty in life. Even in capitalist Britain, the great social and spiritual values of Art are never neglected. And a very handy proof is provided by the issue of a Report on Art and its present condition in the intervals of the booming of guns and air-raids in England, during the last year. It is only in India that political and economic activities stifle the still small voice of Art. Our young



"Portrait" (French School)
By Marie Laurencin

friends are in the habit of citing numerous analogies from Russia to guide us in reconstructing our national life, but they love to ignore the lessons that U.S.S.R. offers for the uses and development of Art for the education of the masses and the patronage of artists. The comparative position is very brilliantly set forth by Rabindranath Tagore in his *Letters from Russia* :

"In our country, whenever there is any talk of comprehensive political efforts, we begin to say that in order to feed the red flame into one supreme conflagration, all other lamps in all other departments of life must be put out, otherwise, distractions may discount the values of our work. Especially, the culture of the Fine Art is the enemy of all manners.

of Stoic resolutions. In order to strengthen the national character, a hard and strenuous programme of acrobatics is essential. The *Vina* of Saraswati, it has to be saved from banishment or extinction, can only be utilized as a regulation *lathi* but not otherwise. One can only realize the hollowness of these false heroics, when one comes to Russia. Here we come across elaborate arrangements to train the minds of those labourers, intended to function as efficient operatives in comprehensive schemes of factories and machineries to approach, with educated sense, the spiritual flavours, the *rasa*-values of pictures. They have realized that those who are

"H. E. the Viceroy" (English School)
By Augustus John

not sensitive to spiritual flavours are barbarous savages, and savages, notwithstanding their sturdy exteriors, are actually feeble in spirit."

The above remarks are designed to announce to our readers the most important Art event of the year in India, which was opened on the 1st March at New Delhi by Lord Wavell. The shadows of the coming famine, and the turbulations and reactions of recent political events have helped to ignore the significance of the International Contemporary Art Exhibition sponsored by Major Henderson, Earl of Euston and Anil Roy Chowdhury of the Delhi Art and Crafts Society. The daily journals have almost systematically

"Uma's Toilette" (Modern Indian School)
By Amulya Gopal Sen

ignored this International Show where, for the first time in India, works of European and Indian masters of modern Art have been brought together for comparison and study. Hitherto Indian artists have been leading an isolated existence—without intimate contact and relations with contemporary European Art. Except-ing the Exhibition of Designs of Kandinsky and a group of German moderns, arranged by the Society of Oriental Art, twenty-five years ago, there has been no represen-tative show of modern European artists in India. And this fact alone lends a peculiar interest to the Delhi International, now attracting a steady stream of art lovers and other visitors. Some criticism has been made on the ground that the Western artists represented—Mathew Smith, Duncan Grant, Harold Gilman, Ivan Hitchins, Spencer Gore, Dame Walker, Robert Bevan, Augustus John and a few others—cannot be labelled as "Contemporary," a majority of them belonging to the last decade of the nineteenth century. But many of them have been associated with various phases of modern movements following the birth of Impression-ism in England shortly after the famous Post-Impressionist Exhibition arranged by Roger Fry in 1910. Thus, Gilman was the first President of the London Group; Walker, created a Dame of the British Empire for her work, was a leading member of the New Eng-lish Art Club; Gore had exerted considerable influence on the trend of English painting during the early years of the nineteenth century, and though not actually belonging to the contemporary phases has paved the way to the latest developments. Though Augustus John kept himself aloof from the radical tenets of Post-Impressionism, he stands in solitary grandeur as the most representative of British artists to-day. A product of the old Slade School of Art, and later, as instructor in Art at the Liverpool University, John has trained more than a generation of young English artists who later broke away from the traditions of Turner and Constable, and led the revolt against academic painting and superficial naturalism on the high road of Modern-ism pointed out by Picasso, Cezanne and Van Gogh. As the trainer of contemporary English artists Augustus John could claim a vicarious share in modernistic Art, without revealing the characteristics of any definite "ism." John is represented by a sketch portrait of Lord Wavell, very sensitive yet strong. Though the position of honour was assigned by the hanging committee to Marie Laurencein's 'Portrait of a Lady'—Dame Walkers' 'Portrait of a Lady' with a cigarette challenged atten-tion with a marvellous bravura of a summary technique. Duncan Grant's "Tulip," a Still Life of exceptional brilliance is, however, put to shade by the unconven-tional angle of a view of a housewife preparing the "Shopping List" to which Gilman has poured all the intensity of his vision. To the brilliance and moving rhythm of Gilman's colour scheme, a very effective contrast, almost a mild rebuke, is offered by the cool harmony of the "Winchester Road" contributed by Bevan. But the most daring innovation of the English modernists pale into insignificance by the half a dozen canvases contributed by the extremists of modernism across the channel. To contact the daring "Nude" of Van Dongen, the most "Parisienne" of Dutch painters, is indeed a rare privilege, and the piece cried out of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

its neglected place in a far-off corner as if to avoid attention. Van Dongen, at one time a great vogue in Paris, with a catchy light sort of modernness, has lost much of his popularity and influence. But in the present show it easily claims a dominating position. It is a pity that the show does not include a Van Gogh and his absence is somewhat compensated by a Raul Dufy, a Pierre Bonnard and above all by the beauty of Marie Laurencein's "Portrait" in a delightful symphony in mauve, blue and white. Marie retains much that is typically, wholesomely, gracefully French. She has given way to modernist pressure to the extent of abandoning truth of aspect. But she has not carried on Cezanne's search for new forms. Her portraits occasionally go back to a simplicity that is Mattisse's or a bit of his still life may catch something of abstract form, but in general, her emotional expressiveness is not very deep in her mannered archaism. Marie's virtues are rather in an adorable feminity and by virtue of this quality her "Portrait" easily dominates the whole section of the European group.

It will be unfair to draw any manner of comparisons between these representatives of English and French masters and the various canvases contributed by contemporary Indian artists devoted to Western technique. We have more than one examples of Indian writers—Toru Dutt, Sarojini Naidu, Ananda Coomaraswamy—who have handled the English language with a mastery equal to if not better than Englishmen. But could we claim that many of our Indian artists have handled brush and oil-paint, with the skill and agility of the Western artists ! The names of Pestonji Bomanji, Lalcaca, and Sashi Hesh automatically come to our mind. But some of our patriotic critics are anxious to claim Sher-Gill, Lalit Sen, J. P. Gangooly, Atul Bose and Sailoz Mukherjee as able exponents of the Western manner of depicting things. Unfortunately, Lalit Sen, the worthy Principal of the Lucknow School, is not worthily represented in the three landscapes shown. But his "Net-work of Shadows" gives a small indication of his daring visions and novel technique. J. P. Gangooly is not represented by a landscape, but by "Red Sari," though not very typical, has upheld his mastery over oil-paint in a masterly manner. But the votes of the visitors were unanimously cast in favour of the remarkable study of "Dhobi Ghat" which brilliantly visualized a typical Indian scene in wonderful technique of great intensity and essential abstraction. No recent example could be cited of such perfect assimilation of non-Indian methods and manners by an Indian artist.

The Indian section was somewhat disappointing as none of the young painters, with a few exceptions, have exhibited any miniatures in Indian manners of outstanding merits. Manishi Dey with a remarkable series of new experiments in brown and Indian red—"Brown Study" and "Cock and Hen"—was delegated to the Western section, though his outlook is fundamentally Indian, his study of Cocks and Hens reminding one of the techniques of the Mughal artists. Sushil Sarkar's much advertised "Abhiman" is a fantastic imitation of Nandalal's symbolic presentation "Kurukshetra." But the poverty of this section was happily covered by a series of cubistic pictures of Gogonendranath Tagore whose vision, originality, and analysis of light easily placed his works head and shoulders above all the exhibits. Yet several minor artists attained in this section signal successes, of which Duvedi's 'Dan Leela,' 'Coconut Day,' Jadav's 'Mothers,' Kulkarni's 'Rain,' Jijja's 'Village Beauty,' and Somlal Shah's 'Comet' earned high commendations. The Exhibition though somewhat hastily planned and hastily organised is a move in the right direction and deserved a success greater than it has actually achieved.

UNUSUAL ANIMALS AND BIRDS OF THE UNITED STATES

The world's largest flesh-eating animal, the largest game-bird, the only poisonous lizard, and the giant sea-eagle which inspired the American national emblem, are only a few of the many living creatures which are found nowhere else in the world except in the United States and neighbouring parts of the Americas.

A herd of American bisons grazing on the central U.S. plains

In the mountains and deserts, the plains and swamps and the rolling hills and fields of the United States which stretch approximately 3,000 miles from the Pacific to the Atlantic Ocean, these creatures are found. Many are common to the sight, while some are so rare they have been saved from extinction by federal protective laws. Some originated in the U.S., and others are distant relatives of animals in other lands.

Among the grazing animals now occurring wild in the U.S. are the bighorn sheep and the mountain goat, both of which have unusually large curved horns. The graceful pronghorn is the only antelope with a branch on its horns. The Grant Caribou, the only native deer in Alaska, (the U.S. territory in the north-western part of North America), is unusual in that the females have antlers. Among the native flesh-eating mammals are the Alaska brown bear, the largest carnivorous animal in the world, and the grizzly bear, the most terrifying North American animal. Both the mountain lion, which is actually a large member of the cat family, and the raccoon, the most valuable fur-bearing North American animal, have no relatives elsewhere. The opossum, a relative of the Australian kangaroo, is the only pouched animal in the North America. The sewellel, found in several western U.S. states, is a rodent without a tail and is structurally one of the most primitive types of living animals. The small fur-bearers include the moodchuck, the largest North American squirrel, and the skunk whose skin makes fine fur coats that American women wear. Figuring prominently is the American bison, popularly known as the buffalo, the only wild ox in the U.S.

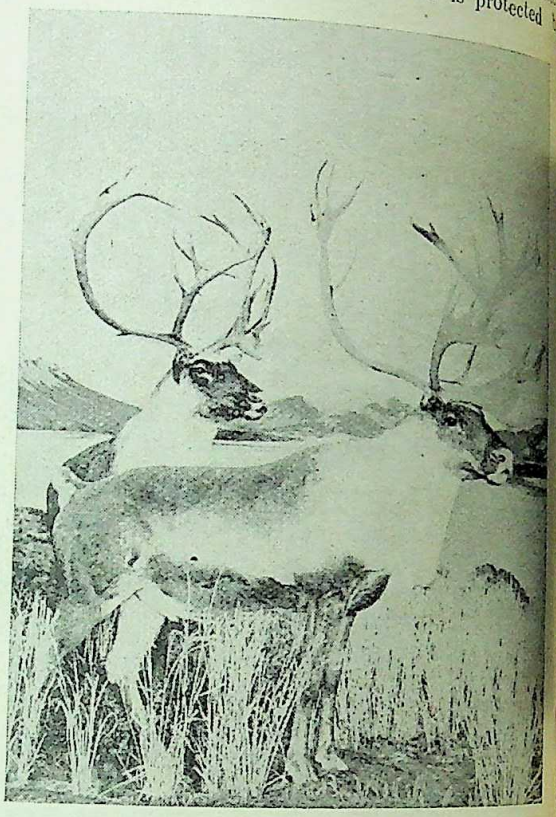
Among the famous birds of America is the wild turkey, the largest game-bird in the world; the domestic species is the only New World domestic fowl found outside of its native region. The canvasback, "king" of North American world ducks, is also noted for its delicious flesh. The birds of prey include the turkey vulture, a helpful scavenger, and the striking bald eagle, the national emblem of the U.S. The gila monster, which inhabits south-western U.S. deserts, is the only lizard in the world with a poisonous bite.

A venomous lizard inhabiting deserts in Arizona and New Mexico, western U.S. states

Today most of the native species continue to exist, although some have diminished in number. The United States which has more laws than any other country in the world for the protection of wild animals, also has numerous national parks and game preserves where wild

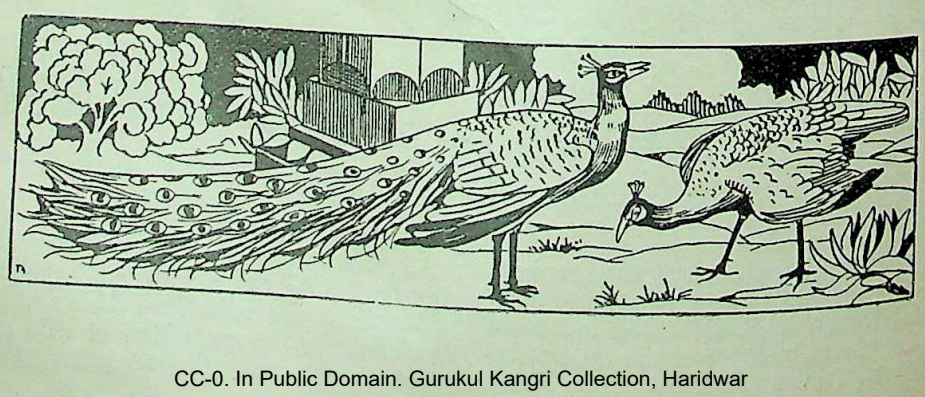
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



creatures flourish unmolested. Beginning with the game laws of 1623 in the colony of Massachusetts, now a north-eastern U.S. state, the American federal and state governments have enacted an immense volume of wild life legislation for over three centuries. Through the establishment of sportmen's journals late in the nine-

The Alaska brown beer, towering dramatically against a background of mountainous peaks in Alaska, U.S.A., is the largest carnivorous animal in the world



teenth century, new impetus was given to game protection. Earlier laws for bird protection dealt with game-birds. With the formation of the National Association of Audubon Societies, non-game birds received extensive notice. The best organized bird-protective organization in the world is named in honor of John James Audubon, pioneer American ornithologist. The society secured the enactment of the Audubon law, which prevents the extinction of non-game birds in nearly [illegible] of the forty-eight U.S. states, and succeeded in establishing government reservations in which breeding colonies of birds are protected.

The U.S. Federal Government has created numerous reservations where wild life is protected by

law. Today it supervises 163 areas comprising 21,569,06[illegible] acres including twenty-six national parks, military and historic sites and reservations in which wild life is preserved. The largest, the Yellowstone National Park located within the boundaries of Wyoming, Montana and Idaho, western U.S. states, was established by an act of the U.S. Congress in 1872. Scattered throughout various U.S. states are 1,701 parks and areas totaling 6,541 058 acres where wild animals and birds are also found.—*USIS.*

VASSAR—A FAMOUS AMERICAN COLLEGE FOR WOMEN

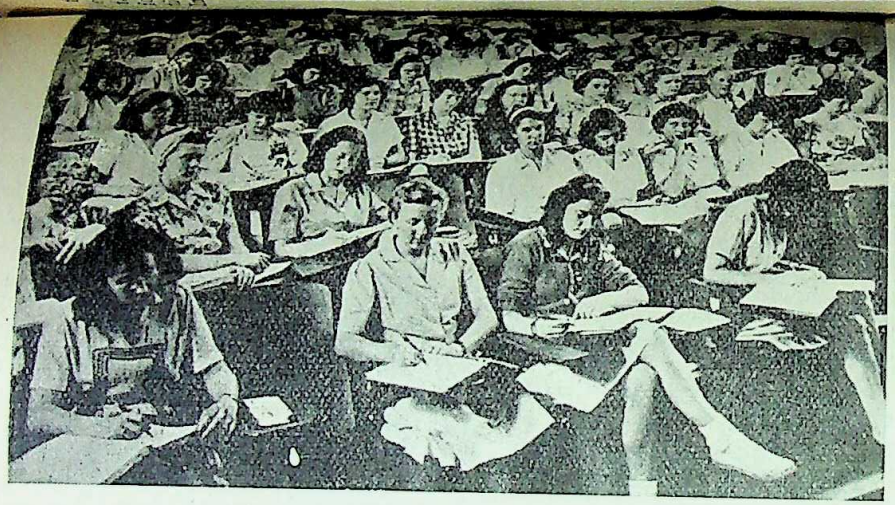
Vassar College, world-famous American women's liberal arts institution, is one of the oldest private women's colleges in the United States and the first to be adequately equipped and endowed. It is located

The main building of Vassar College was erected under the personal supervision of Matthew Vassar, the founder, in 1865

in the City of Poughkeepsie in the eastern state of New York, 75 miles from New York City. Founded by Matthew Vassar, American philanthropist, it was incorporated in 1861 and opened in September, 1865. Since 1915, when Dr. Henry Noble MacCracken was elected president, it has expanded enormously in scope and endowment. Its grounds comprise 950 acres; the endowment has reached approximately 10,800,000 dollars and it offers many scholarships, loans, fellowships and research funds to students and the faculty.

In 1942, there were 223,830 students attending private women's colleges in the United States. Each year, Vassar chooses incoming students on the basis of their fitness for college work. In 1942, 1,200 girls between the ages of 16 and 22 from all sections of the United States and foreign countries were enrolled, living in dormitories on the Vassar Campus. With the adoption of an accelerated program of studies in 1943, more applicants were accepted. They enjoy powers of self-government and participate in discussions on educational problems with the faculty.

Vassar College has a rigid policy in controlling the health of its students, and Kenyon Hall, its gymnasium, is equipped to offer many opportunities for sports and recreation throughout the year. Its clay tennis court permits enthusiasts to play indoors on the same type of courts that are used out-of-doors. There are adjacent courts for squash, basketball and badminton. A bowling alley, archery ranges and a fencing room are also located in Kenyon Hall, as well as rooms for gymnastics, corrective work and class in dancing. An open-air solarium and a swimming pool are part of the equipment. The Department of Physical Education supervises all athletics and cooperates with the Health Department in seeing that each student maintain sound health.



The college emphasizes education for citizenship in a democracy. It confers the baccalaureate degree of arts (A.B.) and a second degree in arts and science (A.M. and M.S.). While remaining within the field of the liberal arts, its curriculum and methods of teaching have always been closely related to contemporary life. Today, Vassar offers courses in the development and culture

The easy-to-use Vassar College Library where the entire collection of books and periodicals is freely available to the students

of the United States, the Romance languages, Greek civilization and Spanish-American culture. Its students analyze problems and principles of reconstruction and prepare for work in teaching, engineering, medicine and public administration, and government service in

foreign lands. A unique feature is the study of euthenics, the application of the arts and sciences to the betterment of living. Its summer institute for euthenics offers a program of adult education to parents, teachers, nurses and social workers. In 1943, a number of Chinese students preparing for

A young scientist at Vassar College is carefully watching an experiment in the synthesis of complex organic compounds

work in China attended the institute, while in 1944, students from Canada and South America were invited.

Students at Vassar College are strongly in favor of the open-shelf arrangement of their library's content, for the system makes the entire collection freely available and they have direct and comfortable access to books and periodicals. Every assistance is given by the trained librarians to the students who need it.

In the war emergency, Vassar adopted a three-year course for the A.B. degree, beginning 1943, and lengthened the academic year. The traditional four-year course is available, the curriculum being adapted to both schedules. In addition, new courses were offered for certain types of war services.

A generous program of informal education, in the form of lectures, concerts and art exhibits supplements instruction in classrooms and laboratories. Under the co-operative living system, adopted simultaneously with the three-year plan, students do some form of housekeeping an hour a day in their dormitories, but still have time to participate in numerous extra-curricular activities, such as sports, dramatics and musical organizations.

Students of the drama courses and oral English participate in the activities of the Experimental Theater, an American women's liberal art institution, as part of their curriculum. Others interested in dramatics become members of Philaletheis, a student society which sponsors three plays a year, one of which is given in the campus Outdoor Theater as a pageant.

One of the extracurricular activities in which Vassar students actively participate is the Dance Group, an organization of students interested in the modern dance and aims to study and develop techniques of movement and dance composition. The dance instruction, part of the physical education course, is taught by the Dalcroze method developed by Emile Jaques-Dalcroze, Swiss composer, whereby music is combined with rhythmatic exercises. The Group meets weekly, participates in dance concerts and gives a performance of its own composition in the spring to which the entire college is invited.

Matthew Vassar foresaw unlimited expansion for the institution he founded. Throughout the years, the college has not only enlarged its physical equipment and facilities, but also extended its scope in uniting, in its curriculum, the field of liberal arts with preparation for contemporary life.—*USIS.*

———:O:———

ART AND THE ARTIST*

By D. P. ROY CHOWDHURY, M.B.E.

The objective of the Conference is to unite artists in a congenial atmosphere and accommodate their convictions so long as they help the cause in which we are vitally interested. I think I ought to enlighten you at the outset that I have no intention to drag my address to various aspects of technical complications through which I strongly feel that technique is the only means through which the artist must convey his emotions to the receptive agent. I have refrained from a comprehensive survey on this point purposely as I am afraid it might be prejudicial before the matter is freely discussed.

Joy is the ultimate end of a creative function. Art is one such function. It infuses life into joy for a longer period than just a fleeting moment. A thing of beauty made, radiates its virtues not only to one who claims to be the creator, but also to those who are endowed with receptive quality. This quality is the capacity to see the truth underlying the beautiful. It is the result of cultivation of sympathy and deeper understanding. It is born of constant contact with the thoughts of the artist and association with his creations as well. To

* Presidential address delivered at the All-India Artists' Conference, New Delhi, on 2nd March, 1946.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

contact the beautiful is an inborn tendency of the connoisseur. He loves to penetrate deeper than the surface on account of temperamental affinity with the artist and profound sympathy for his vocation.

The relationship is almost identical with that of magnet and steel. But the inherent attractive quality of the magnet, however powerful may be, ceases to function when faced with non-receptive agents. Similarly, an indifferent approach to the beautiful will have no better result than a fruitless endeavour, because art is not for all.

I have stressed upon affinity and understanding of pictorial language with regard to assessment of values, because assessment of the true value of a pictorial pattern theme has often come to be confused and diverted from its goal by superficial appeal for the cultural drive manoeuvred by intruders in the field of art. The confusion is inevitable for the reason that the response of the subject-matter becomes so overwhelming that it forces the layman to submit to a total surrender to sentiment. Sentiment, thus fostered, develops into fatal consequences, particularly when initiated by unassimilated motives like religion, politics, nationalism and morals. Whereas subject is not a criterion in a pictorial pattern theme, it is only what is expressed, that is, the driving energy of the emotion, that compels the artist to respond to his calling.

It is only a cause ; as such, cause cannot be valued in place of effect. To be more precise on this point, a few concrete examples are necessary. Let us compare two portraits, one of a king and the other of a beggar. The painter of royalty is a novice and that of the beggar a master artist. Now if the two pictures were compared and their qualities assessed on the intrinsic values of pictorial theme, the beggar's portrait will be held in awe and exaltation and not the king's, though the latter is more entitled to claim appreciation on the ground of the sitter's position.

The logical conclusion behind this estimation is that, though the king is identified in a canvas on account of faithful resemblance, yet what is portrayed is deprived of the majestic characteristics a ruler is supposed to be possessed of. The result is not only due to inexperienced handling but also lack of insight and sanguine execution. In the case of the king, it is the outcome of groping in the dark, and in the case of the beggar, a deliberate exposition charged with sincerity of study, a revelation of rich technical achievement and penetrating vision which found its way deeper than mere superficial resemblance.

Therefore to understand the beauty of a picture in keeping with its subject-matter, contact with the concealed skill of the artist is indispensable—the skill is the language—the vehicle that conveys the spirit of the effect to the receptive. It is the life-giving element which can make a dumb dead flat canvas live and speak, and in the other case resemblance of the living may turn out to be dead.

Here I may add that to make a picture vibrate with life, it requires a life-long study and struggle endowed with confidence and sincerity. The result eventually provides a means to create a thing of beauty which is transformed into a source of joy not only to the one who creates it, but also to those capable of reciprocating sympathetically.

Coming to the standard of beauty, I should say its range is so widely spread that the magnitude cannot be surveyed with a preconceived idea or given formula. For instance, I may say a scene of horror no less beautiful than the altar of a divine service its particular sphere. Slums in their grim poverty agony are no less a pictorial subject than the courtyard of a palace where beautiful damsels decorated with jewels and gems and dance in to please the master. The former is a picture of and the latter is a scene of lust. Each has its the proper receptive agent.

The man of the slums under the grip of and hunger has no time to enjoy the forms of dancing girls. He is in immediate need of food sheer existence. Nor will the man drunk in lust pity to a suffering humanity, the reason being pleasure and agony do not go together.

In the circumstances, value relative and to it is a matter of temperamental affinity. As such merits or demerits of the subject in graphic or art have to be assessed in relation to how theme in keeping with the subject has been revealed.

Now coming back to the objective of the confer it will not be out of place to say that such confer are considered ridiculous by some who hold creative artist must live a secluded life comple isolated from disturbing facts and controver opinions. Contrary to this conviction, the missio the artist is likely to be jeopardized.

In defence of this plea, isolation is urged to en the artist to get into the right depths of medita and ensure accessibility to the royal road to perfe This is a grand retreat towards renunciation. The comes from the fact that the artist cannot get from his commitments, being pledged to society his nation. Renunciation is no good to a man who live in this world with his ego, attachments ambitions.

The modern artist is not privileged to isolate self from disturbing facts as his predecessors Patronage in olden days was assured by kings religious institutions. Contrary to this, the mod artist is not only involved in economic problems is also perplexed by successive invasions of for influence directed by current issues of fashion. are ever changing, ever fleeting in accelerated speed one is accommodated, the other strikes a new note, before the discord of the new is adjusted in tune, found to be out of date. It has to succumb to natural doom no less quickly than it made its adv Hence the question of distinguishing the alive from dead keeps the artist preoccupied rather than per him to pursue the path of his own choice. He has other option because he does not know where he be landed if he failed to submit to fashion.

Engulfed in environment as the artist is, should not feel it strange if he did submit, maybe necessarily in spontaneous response but as a result coercion. The artist has therefore no business to his eyes to facts, nor can he afford it, since it will courting physical starvation.

The problem has to be solved by selling the prod of his emotions. But who is to buy ? Who is prepa to share the joys and sorrows of his struggle ? He g lost in bewilderment in quest of a sympathetic patron

In case his desperate efforts are rewarded success, he soon realises that he has exposed himself before a person whose queer sense of patronage serves to uphold a self-constituted dignity.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

patronage is pity in disguise, a means for the buyer to live on reflected glory.

Similarly, there are critics who, I am reluctant to say, are in most cases no less susceptible to fashion, reinforced by a tendency to exploit the artist, whereas the virtue of a true critic is a helpful guidance in a constructive spirit, to point out the pitfalls that imminently lurk round the corner.

This should not be, for obvious reasons. I need not go into details. But one point I cannot help bringing to the notice of the public, and that is the deterioration that has come to stay as a result of the assertion of perversities in art. It is deliberately designed to frustrate progress. I admit it is an inevitable result of the tremendous unrest in the creative mind which must carve its own path for an easy stride, and to make things easy, it is but natural for him to abandon the complexities, indispensable in academical conventions.

The upheaval in the mind tends to unearth primitive methods. These methods might indeed be bold and executed in an effortless child-like manner, nevertheless the execution was not childish—the reason being that artists of the primitive age were not subjected to conditional approach to art. In the circumstances, it is but natural that their attempts were sincere and innocent of the complications of science that have developed today.

Whether the primitive man felt the painting was a natural urge or a decoration for his cave walls to enhance the beauty of his abode, or just a hobby or an aid to woo his lover, or a fine recreation after the toil of hunt, is not our concern now. What we are interested in, is his art, which was harmoniously adapted with his primitive skill, his cave abode and the wild environment he was obliged to live in.

What suited well a cave, surrounded by gorgeous landscapes and wild ferocious animals thousands of years ago cannot fit in with a city of the modern world, where the way of living, climatic effect and conditions of life today are completely different from what they were then.

It is absurd to imagine that we could revert to the mental equipment of primitive men, having all the benefits and shortcomings of civilization.

The cave-man's sincerity might have been an asset to him considering his peculiar environment. But the same in our times will turn into a liability.

Let me now tell a sad tale—the tale of the fascination at large for a primitive cult. A full-grown adult having all the cunning and shrewdness that higher intelligence confers, trying to be innocent like a child, proves that something is wrong somewhere.

My contention has particular reference to those artists whose struggle for higher technical achievements is frustrated by obvious incapacity. One can understand the resentment against proceeding scientifically for self-expression. What amuses me is the incomplete and funny disguise of the artist who prefers to deny the joy of creation in pursuit of being proclaimed dangerously original—so dangerous as is capable to give the shock of life not only by its contact but also for fear of its virulent type of contagion.

Those who have not succumbed to the contagion of dangerous originality have gone back to tradition which provides for peaceful existence. There is no taxation of brains in the pursuit of art, nor has the artist to bother about original patterns. He is perfectly happy to indulge in repetition just as a trained parrot does.

Tradition has a value of its own. It is a history of the past. But confining oneself to lost glory and exhuming the dead from the burial ground is a job that can lead the artist only to the glory of stagnation, where he must repeat and rot.

Repetition overdone often brings distaste even for dainty delicacies. But this is not accepted as truth because the cry of sentiment voiced emphatically by the mass overrules sense. Though I may say that the mass as a rule have no taste of their own, they have acquired one created for them by the thinker.

I think I have said enough by way of prologue to the Conference and the rest as to where we differ or concur may be left for discussion.

——:O:——

JOURNALISM

Book-Reviewing

By C. L. R. SASTRI

We have been told that some men are born great, that some achieve greatness, and that on some—the most fortunate of the whole lot, undoubtedly—greatness is actually thrust. I have always had a sort of sneaking admiration for the last group. I mean, it must be such huge fun to wake up one fine morning and find oneself mysteriously marked off from the rest of humanity. The rest of humanity on one side, so to speak, and oneself on the other. No income is so sweet as what the economists term the "unearned" variety, and, by the same token, no distinction is so enviable as that which, as Lord Melbourne said of the Garter, has no "d-d merit" about it. Of course, the vast majority of us do not come under any of these categories: we conspicuously fail to touch greatness at any point—the writing profession, commonness being our badge and mediocrity our bane. We may take any amount of thought, but not for all the wealth of the Indies can we add a cubit to our stature—mental, moral or spiritual.

As with humanity in general, so with books. Some books are born great, some achieve greatness, and on some greatness is thrust—almost by *force majeure*. With the passing of days one book no more tends to differ from another than, with the current phenomenal increase of population everywhere, one man can be set apart from another. At a time when books had been fewer than at present they were more esteemed, and, as a matter of fact, they deserved that esteem. Only the really erudite, only those born into the *purple* of took the trouble of writing

books, and, as they invariably wrote them in their hearts' blood, as it were, they were thoroughly worth while.

The Plethora of Books

But that halcyon period was not destined to last long. We have now a plethora of books. They are as common as lip-sticks and powder-puffs. With the facilities of education reaching the remotest cottage-door this is, perhaps, inevitable : the supply *has* to catch up with the demand. Leisure also, owing to the bewildering multiplication of machines, to the employment of two where only one had been in service before (if I may parody Swift), is more abundant. One cannot, with the best will in the world, spend the *entire* day seeking (and ensuing) pleasure whether at cinema-halls or at cabaret-shows, at dog-racing or at pub-crawling. The public library system, too, has kept pace with this widespread advance in literacy. Poverty has ceased to be an insuperable barrier to a close acquaintance with the "Three R's," nor does sex interpose a marked hindrance. By this I do not imply that the man of scanty means necessarily enjoys the same opportunities as his brother of ampler resources. A lean purse has never been exactly conducive to the wooing of the Muses ; but the "March of Time" (thanks be !) is gradually obliterating these ridiculous discrepancies.

The Worries of an Editor

The supply, as I have indicated, has to catch up with the demand. That is one reason for the existing proliferation of books. There are always, however, *two* sides to every question, and I do not overlook the fact that this has its undoubted disadvantages : the principal one being that the much-harassed public cannot see the wood for the trees. One simply cannot cope with this Gargantuan output. It does not, it is true, operate so very disastrously on the individual reader, because, after all, if he does not want to read a book he is under no obligation to go through that painful ritual. He merely turns his back upon the book and goes about his lawful occasions, the book forgetting and by the book forgot. But a newspaper staff *must* find a "way out" of this *impasse*, in the memorable phrase of the redoubtable Mr. C. Rajagopalachari.

Those that are unacquainted with the workings of a modern newspaper office, "in its habit as it lives," can have no conception of the weight of new publications under which an editor's table groans. Not the least of his worries is the (successful) devising of a method whereby he can deal with them in a manner worthy both of the traditions of his paper and of the merits of what Milton has rightly called the "embalmed treasures" of men's intellects. To aspire after perfection in such a state of affairs would be to aim at the starkly impossible : the spirit may be willing, but the flesh is weak.

Whatever his own personal predilections may be he is precluded from cutting the Gordian knot by ingeminating, "A plague on all your (publishing) houses", and depositing the whole undesirable lot in the municipal dustbins. Part (but only a part) of the difficulty was solved, in England and America, by engaging another person as the *Literary* Editor. Two heads are always better than one, and, anyway, there is much to be said in favour of decentralisation. But the difficulty was only transferred from the shoulders of the General Editor to the Literary Editor, it [illegible] the *latter's* turn now to "hold the baby." Indian newspapers, however, do not enjoy even this limited blessing.

The Way Out

It must be admitted that many books are not [illegible] out to be reviewed at all ; and that the few that [illegible] have not usually the luck to fall into capable [illegible] There is a noticeable difference in this matter between the dailies, the weeklies, and the monthlies. The dailies have seldom the requisite space for an elaborate review. I have not encountered in them reviews comparable to those in the weeklies, such as the *Nation*, the *Statesman*, the *Spectator*, and the rest. The *Times* has solved the problem by relegating them to a *separate* publication, *The Times Literary Supplement*. Except for a full-length "leader" (and even this is often a review) it consists only of reviews of books. The *Manchester Guardian* has also its own weekly. But it is not confined exclusively to reviews : it is an *olla podrida*, taking in, as it does, nearly everything that may interest newspaper readers. Other dailies get round the difficulty by providing for a few more pages once or twice in the week, like the *Daily Telegraph* and the *News Chronicle*. That monthly, so ably edited at one time by the late St. John Adcock, *The Bookman*, was, as its name implied, devoted mainly to books. The "Book Page" of nearly all English papers and periodicals is a delightful feature, and, in some instances, the most delightful feature. When the late Mr. H. W. Massingham edited the *Daily Chronicle*, he made the literary section the envy of all Fleet Street. It was the same story when, later, he presided over the destinies of the *Nation*.

Indian Papers

Indian journalism can boast of none of these things. The *Times of India* has, every Friday, a special column reserved for the reviews of books, and it is an eminently readable column. The *Statesman*, in its Sunday edition, contrives to dole out a little more space for this purpose, and that space, it is needless to say, is very eruditely filled. The *Hindu* is even more generous, and it makes a point (which may, with advantage, be copied by other papers) of not ignoring vernacular productions. Many other papers have also their Sunday editions, but book-reviewing is not a conspicuous feature in them. The *Hindustan Times*, which, in my opinion, is our premier daily, and deserves our highest praise in other respects, does not come up to our expectations as far as my present subject is concerned. I need not mention our weeklies in this connexion, because we have so few of them that are really first-class. As for the monthlies, *The Modern Review*, Calcutta, whose name must for ever be associated with that of the late Babu Ramananda Chatterjee, editor, which is decidedly our best monthly, is best in this respect also. It sets apart quite a large number of pages to cope with the new publications. But when this is said, all, or nearly all, has been said.

Fairness

It now remains for me to deal with the most important problem—that of how book-reviewing should be done. It is all the more difficult for me to deal with it, as it is done very prefunctorily in our country.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the outset, however, I may state that we need not take into account what Charles Lamb, in his inimitable way, has described as "books which are no books—*biblia a-biblia*," such as Court Calendars, Directories, Almanacks, etc. But what about the rest? Here, as elsewhere, there is a great diversity of opinion. Let me be understood as treating only of *deserving* books, books where the reviewer is given that "generous amplitude," in the words of our beloved Secretary of State, Mr. Leopold S. Amery, without which, of course, even a modicum of justice cannot be done. Strictly speaking, such publications as *Mother India* and *Verdict on India*, for instance, should not be included in this category. But even here the reviewer would do well to be as fair as possible—going to the furthest limit of giving the Mayos and the Nichols of this world the benefit of the doubt: for, after all, as Shakespeare puts into the mouth of one of his characters, God has made them and we should let them pass. Fairness in the reviewer is a very desirable qualification. To quote Mr. Robert Lynd, a master of the craft, we should gently scorn, not only our brother man, but our brother author or sister authoress. It is true that this dictum makes enormous drafts on our charity, for Mrs. Mayo came to India and discovered that the vast majority of the Hindu male population are impotent and subsist on cow-dung (she did not pause to enquire whether they are impotent *because* they subsist on cow-dung, and Mr. Nichols's left foot sustained some serious damage in the same noble cause of traducing our countrymen right royally. Still, Mr. Lynd's advice should not be despised.

More Than a Mere Portrait

I am to be understood, I repeat, as treating only of deserving books where the reviewer has command of sufficient space to "spread himself" about them. I have insisted on one desideratum—fairness. Another is his obligation to render an *unbiassed* report of the trend of the book. Obviously, the author has a certain object in view in writing his book: *that object must come out in the review*. A review, however, should not be a mere synopsis of the book in question: else, where does criticism come in? But it should not be *all* criticism and no portrait: that would be to err at the opposite extreme. A reviewer is a critic in little. Criticism *must* find a place in the review. But what kind of criticism—destructive or constructive? I have no hesitation in voting for the latter. Destructive criticism is the easiest thing on earth as Miss Mayo and Mr. Nichols ought to know. The reviewer should not say, gloatingly: "I have come to bury Caesar, not to praise him." He should, on the contrary, come to praise him: *all other things, of course, being equal*. Else, let him keep away: there are others who can do the job better than he.

Good Reviewing is Appreciation

I am aware that this has its own dangers. At the present day there is more favourable criticism than unfavourable criticism. Good books, it would seem, are as plentiful as black-berries. They are to be met with in every publisher's window. The world is full to overflowing with, in another immortal phrase of Charles Lamb's, "perpetually self-reproductive volumes—Great Nature's Stereotypes." As Mr. P. G. Wodehouse puts it wittily:

> "There are no good books now-a-days—only superb books, astounding books, genuine masterpieces, books which we are not ashamed to say brought tears to our eyes. Some people (who ought to be ashamed of themselves) say that the reason for this tidal wave of sweetness and amiability is the fact that reviewers today are all novelists themselves. Old Bill, they claim, who does the literary page of *The Scrivener*, is not going to jump on Old Joe's *Sundered Souls* when he knows that his own *Storm Over Britain* is coming out next week and that Joe runs the book column of *The Spokesman*. This, of course, is not so. Nobody who really knows novelists and their flaming integrity would believe it for a moment. It is with genuine surprise that William, having added *Sundered Souls* to the list of the world's masterpieces, finds that Joseph, a week later, has done the same by *Storm Over Britain*. An odd coincidence he feels."

All the same, I hold that adulation is better than vituperation. That is why Pater, as Mr. Lynd has remarked, has called his book of criticisms, *Appreciations*. That is why, in our own day, the late Mr. Chesterton's *Charles Dickens* is the most masterly book that has yet been written on that great novelist.

The Masters

In England reviewing is almost a fine art. The reviews of such distinguished persons as Sir John Squire, Mr. Robert Lynd, Mr. Desmond MacCarthy, Mr. G. W. Young, the late Mr. T. Earle Welby, Mr. Edward Shanks, Mr. R. Ellis Roberts, and others have acquired a significance of their own: they have a rare value—quite apart from the books reviewed. Mr. G. W. Young's reviews, in especial, stand in a class by themselves: "they form a vast species alone," as Cowley says of Pindar's Odes. I cannot do better than counsel my readers to steep themselves in the reviews of those masters. That is real book-reviewing.

I have a strong prejudice in favour of the essay-kind of review. If one has sufficient space at one's command one may let oneself go while reviewing a book, provided always that the book merits such treatment, and that the reviewer is a competent writer himself. If these conditions are satisfied, one may, without any undue risk, write an independent essay on the theme of the book, at the same time keeping an eye on its central point, or points. And why not? A review should not be a mere catalogue or prospectus: *it should throb with a life of its own*. Some of the most reputed reviewers have adopted this mode and have been none the worse for it. Did not Anatole France once observe that "the good critic is he who relates the adventures of his own soul among masterpieces?" This dictum loses none of its force even if the books under consideration are not masterpieces.

I should not like to conclude my article without entering a caveat against regarding book-reviewing as one of the minor branches of journalism. *It is nothing of the kind*. A journalist who is quite competent in the other branches may conceivably come a cropper when, once in a while, he is put on this kind of job. This is no place for mere rule-of-thumb processes: the man must be tolerably erudite himself before venturing to sit in judgment on the erudition of others. Were I an editor I should insist of an applicant for work that he should be an excellent book-reviewer. But this, obviously, needs a lot of stressing in our country.

THE SPIRIT OF HINDU CIVILIZATION

By BUDHA PRAKASH, M.A.

II

Not content with the work of cultural synthesis of which we have given only a few hints, Indian civilization overflew the boundaries of India and impressed its mark on the world. The Tarim basin in Central Asia is scattered with ruins of small Buddhist shrines which contain stucco-images representing objects of Buddhist worship and Buddhist canonical writings in detached pothi leaves of paper. At Rawak, a great Buddhist sanctuary is discovered with an enclosing quadrangular court, the walls of which are lined with stucco images of the Buddha of colossal size. The hundreds of grottos honey-combing the rock-faces of Buddhist shrines, found at Miran and Kucha, reveal a profusion of beautiful tempera-paintings, showing the Bodhisattvas, often grouped in sumptuous settings of celestial attendants or Buddhist heavens with their wealth of mythological scenery.[22] Buddhist influence in Central Asia led to the growth of a new system *viz.* Manichaeism in 242 A.D. which spread in Asia Minor, North Africa, Spain, France and China. Even in Ptolemaic Egypt, Buddhist festivals were prevalent. Indian figures are found in Memphis and an inscription has been discovered at Thehados which is dedicated by 'Solon, the Indian.'[23] Towards the east, the influence that India had on China is manifest from the large number of pilgrims who defying the hindrances of nature and braving indescribable risks, visited India, learnt her language and translated her literature in their own mother tongue. The works of the best brains of India—Ashva Ghosa, Asanga, Vasubandhu, Dharmakirti and Nagarjuna, which are now lost to India, have been recovered in Chinese versions. In Korea, Buddhist figures are hewn out of the living rock in an environment of great natural beauty away from the haunts of man. It is from Korea that Indian art and culture reached Japan in the sixth century A.D. Prince Wumayado, who prepared the fourteen articles of the Japanese constitution, wrote some remarkable commentaries on the works of Nagarjuna. In these works we find a spirit of intense refinement and purity, such as only great religious feelings could have produced. Tibet received the light of Indian culture in the seventh century A.D., under Emperor Srong-Btsan-Sgam-Po (630-698 A.D.) who was converted to Buddhism under the influence of his Chinese and Nepalese queens. Under Khri-Srong-lde-Btsan (802-845 A.D.) who is called the Asoka of Tibet a great tide of art and culture of religious fervour and progress surged over the length and breadth of the land. The great pundits, Kumar, Silamanji, Tuna, Mahadeva and others translated the huge canon of the Buddhists in Tibetan language, the script or alphabet of which was invented by Thom-mi on the model of contemporary Kashmerian alphabets. Lastly, Emperor Muni-Btsan-Po (845-846 A.D.) who was brought up in an atmosphere charged with the extreme form of Bodhisattva ideal, which viewed with great approval even the renunciation of one's own salvation in rendering service to others and removing their sufferings, translated into action the real spirit of Buddhism. He appropriated the wealth of the nation and redistributed it amongst all, thus carrying out to the letter the ideal of equality which Buddhism preached. The innate and fresh energy of the Tibetan people which expressed itself in a great empire stretching over Tibet and portions of Central Asia and China was directed by Buddhism towards the behoof and betterment of man.[24] The result was that even the bloody Mongols under Kublai Khan succumbed to the charms of Buddhist culture and got the whole canon translated into Tukharien language. Similar were the cultural achievements of India in Cambodia, Java, Sumatra, Ceylon and Burma. In Java stands the greatest monument of Buddhism—the stupa at Borobodur, where the naturalism of Ajanta appears in the shape of a veritable classicism.

This great saga of civilizing the world, of which we have noted only a few refrains, vouches for the inherent energy, vitality and vigour of Hindu civilization. It is now high time to jettison the false impressions which scholars like Maxmuller have created in our mind. At one place, the learned father wrote:

> "Greece and India are indeed the two opposite poles in the historical development of the Aryan race. To the Greek existence is full of life and reality; to the Hindu it is a dream, a delusion. The Greek is at home when he is born; all his energies belong to his country; he stands or falls with his party; he is ready to sacrifice even his life to the glory and independence of Hellas. The Hindu enters the world as a stranger; all his thoughts are directed to another world; he takes no part even when he is driven to act; and when he sacrifices his life it is but to be delivered from it."

How erroneous and gratuitous is this view is apparent from the sketch of the role of Hinduism as a civilizing agency of mankind, that we have given above. We take now some other aspects of Hindu life to show the falsity of this view. Let us first take art. Dr. Stella Kramrisch in a lecture delivered at the Calcutta University once said about the art of Bharhut and Sanchi:

> . . . "The symmetry to which Indian art subjects its gods *has nothing of transcendentalism*. Here it is the subtlest vibration of an accomplished state of spiritual existence and still it preserves the faint perfume of life. Life's unbroken continuity is expressed by the revolving ringlets of the lotus-stalk on the Bharhut-railings. This lotus-stalk unswerving and undisturbed, patiently carries the Buddha throughout his former incarnations and rocks each of them with great tenderness between its undulations."[25]

About the art of Ajanta, a great French connoisseur has remarked :

. . . "Jamais, non pas chez Kalidasa, on n'a celebre avec un tel lyricisme la valeur d'art de ses lingges et de ses-attitudes, sa douceur inclinee et pensive . . . Il faudrait enumerer tons les couples d'amants d'Ajanta, dire leur languer volupteuse et leur simplicite raffinee, leur douceur de poses et la earesse restee chaste de leur gestes. Surtent cet abandon spritуel, cette tendresse infinie grace auxquels de tels motifs ne delonuent pas dansun sanctuaire Boudhique . . . "[26]

The same love of life and universe is manifest in Indian literature. Amidst a scene of rare bucolic beauties and sylvan calmness, the poet Bana has portrayed the triumph of the instincts of blood over the capacities of brain. Kadambari's fervour proves as effective as Kapinjala's penance. In Kalidasa, the truest creator of forms and images and a harmonious interpreter of the noblest sentiments of human heart, we notice an atmosphere of rare richness and exuberance. Every aspect of Hindu life in all its aesthetic phases has been painted in brightest colours. Going backwards we witness Ashvaghosa, "poet, musician, preacher, moralist, philosopher, play-wright, tale-teller, satirist. He is an inventor in all these arts and excels in all ; in his richness and variety he recalls Milton, Goethe, Kant and Voltaire. He stands at the starting point of all the great currents that renewed and transformed India towards the beginning of the Christian era."[27] It should also be added that he gave a religious form to the purely philosophic tenets of Buddhism and was thus chiefly responsible for the expansion of Buddhist civilization abroad. Likewise in a multitude of other poets we notice the same elegance of arrangement, richness of colour, luxuriance of decoration, sonority of verse and concinnity of expression. The splendid *padavalis* of medieval Bengal and the stirring *powadas* of Maharastra, the songs of Tamil saints and the strains of Hindu Bhakta poets—all point to the keen interest in life that the Hindu felt.

A passage may pardonably be devoted to Hindu science. Chapter IV of the *Shukraniti* contains highly developed Agri-horti-flori-cultural ideas. So much specialization took place in iron industry that it was divided into three classes—Munda, Tikshna, Kanta, and each into three subdivisions, Mridu, Kunta, Kurar.[28] Ayurvedic Shastras mention humitide and iron pyrites and show familiarity with the process of the preparation of chloride, oxide and sulphide of iron. Shipping was very advanced. Ships were classified according to the position of the cabins as Sarvamandira, Madhyamandira, Agramandira, etc., the last being eminently suitable for long voyages, and *naval warfare*. (R. K. Mookerjee : *History of Indian Shipping*, p. 20.)

Trade with the world was highly developed. Buddhist Jatakas mention sea-borne commerce with the Indian archipelago and land trade with Greece and Babylonia (Yona and Paramyona) in silks, muslins, the finer sorts of cloth and cutlery and armours, brocades, embroideries, drugs, perfumes, ivory and ivorywork, jewellery and gold.[29] Varahamihira in his *Brihat Samhita* refers to the manufacture of dyes, cosmetics, artificial imitations of natural flowers and scents which were exported to Europe. Prof. Laconperie believes that the monopoly of the sea-borne trade of China was in the hands of Indian merchants who transported to China pearls, rubies, sugar, aromatics, peacocks, corals, etc. According to Hamza Ispahan, the ships of India and China could be seen constantly moored at Hira near Kirfa in the Euphrates.[30]

We now take another feature of Hindu mind. The Hindu hates abstractions ; he eschews the dark and the mystic. He loves the concrete and the colourful. But all the same he is intensely deep and thoughtful. This is clear from the familiarity with which the Hindus approached their gods. They never stand in awe of them. A Vedic poet rebukes Indra for his parsimony and declares that had he been Indra, he would have lavished his gifts unstinted. The informality and friendliness with which gods mixed with people is manifest from a line of the *Harivansa-Purana,* which recalls the days when men and gods used to live together.[31] Likewise Asoka to have reunited men with gods : जम्बूदीपसि ये इमाय कालाय अमिसा देवा हुसु ते दानि मिसा कटा —(*M. R. E.* I, Brahmagiri version).

These traits are mostly due to the character of Indian soil. Prof. Sylvain Levi has written in his inimitable style :

> "La terre abreuvee de l'eau par les milles canaux du Gange, s'y pare d'une floraison capiteuse qui trouble l'imagination, mure avaut l'appel precose des seus. L'inepuisable nourriciere semble repondre aux caresses fecondes du soleil par un hymme palpitaut d'amour. Absorbe dours ses-effluves l'homme reve a l'unison de transports et d'extases incessamment renouvetes ; l'esprit veut transformer a son gout les lourdes jonissances de la matiere. L'eternal feminin l'obsede."[32]

But this thoughtful feature should not be confused with pessimism. Another great French scholar warns us against this danger in the following words :

> "Rappelous ce que nous avous dit plus haut sur ce qu'il faut entendre par pessimisme Indien. Ce pessimisme qui n'exist qu'a l'eudroit de l'existance phenomenale se resont eu une inexprimable felicite des que le sage atteint son objectif supra-phenomenal, Brahma-Atman or Nirvana."[33]

The Hindu genius is anthropomorphic. He sees everything in the universe in his own image. Even the abstract qualities of mind, *e.g.*, virtue, sin, kindness, truth, etc., appear to him possessed of human personality.[34] This paganism among the Hindus, is not a fetish

or superstition but a perception of the fundamental asylums.[35] Every trade, commerce and industry centralized in royal monopolies. All land belonged the Crown and was leased to the agriculturaliste for with no rights of alienation, transfer or mortgage. Th who did not till it were ejected.[40] The State kept supervision over the manners and morals and and expenditure of the citizens and both—the vagant and the misers were punished.[41] Citizens made to take active interest in all that relates to affairs. The whole community was thus enjoined to an information bureau, vigilance committee and association for public safety. Citizens passing in streets are to be on the lookout whether the has paid the toll on his commodities at the Custo office or not.[42] The restaurant keepers had to exa the feelings of foreigners and the prostitutes expected to espy and assassinate persons suspected ill-will towards the State. A man not helping others extinguish fires, which were common[43] in wooden ho of those times, were fined. Every man was leg obliged to catch a certain number of mice in cases plague epidemic and failure to do was visited w fine.[44] It may be recalled that this is the ideal true democratic state as laid down by J. S. Mill in book on *Representative Government*. Every one is eq in the eyes of the State, for Asoka says in *P. E.* (Delhi-Topra version) :

इछितविये किति दण्डसमता वियोहालसमता च सिया ति।

These are enough hints to indicate the democ foundations of Hindu society.

Another prevalent misconception in presen educated people is about caste. Sir Henry Maine described it as the most blighted and inhu institution and Sir Jadunath Sarkar has attrib to caste all evils that led to the downfall of Ind culture. I need only submit that the four-fold organization was like Plato's division of mankind men of gold, men of silver and men of copper, pur traditional and theoretical. In actual practice it stood until recently in the way of social progress of Hindus. The earliest instance of a Kshatriya becom a Brahmana is that of Nahusa's son Yati who re quished his kingdom to his brother Yayati and bec

Another characteristic of Hindu civilization is its eminently practical nature. The word *Dharma* which is the pivot of the life and thought of the Hindus is a very wide and comprehensive term and cannot be adequately rendered by any expression as religion, ethics, morality or Mazhab. It is formed from the root 'Dhri' with the suffix 'Man'[36] and literally means that which holds on, which sustains, which keeps together. Hence it means the entire framework of rights and duties in which the fabric of human personality is set. Philosophy in India is a part of Dharma and not a mere mental gymnastic. Thus the very first *sutra* of Jaimini's *Purvamimansa* is, "Athato Dharmajijnasa" and the first *sutra* of Vaisheşika is, "Athato Dharma Vyakhyasyamah." This synthesis of religion and philosophy, or in other words the idea of carrying out the thoughts and concepts of brain into practical action, was the great cement of Hinduism inasmuch as it always kept open the avenue of free thought and always held together the fabric of Hinduism through many a period of stress and strain.

Hindu civilization is founded on a democratic basis and an equalitarian conception of life. According to the Chidrupabrahmavada, taught in 108 Upanisads and enumerated in the *Mauktikopanisat*, every human being virtually represents a "small temple," a "power-house" and a "wireless station" all rolled into one. Any one without distinction of race, creed, caste or sex, can systematically develop the spiritual power within and utilize it to the best advantage, benefit and service of all concerned. Democratic Hinduism or the Sankhya-yoga is entirely free from priest-craft or ecclesiasticism.[37] I do not mean that all Hindus, at all times followed these ideals. The Brahmanas were not quite free from selfish or sordid motives and more than once they tried to imprison the forces of Hinduism in their parochial pretensions.[38] But always Hinduism has been producing great teachers and masters of thought who understood the inner essence of things and proclaimed its real message to the world. The greatest of them was the Buddha whose communistic and somewhat republican ideas, culminated in the Maurya State. This State was responsible for the livelihood of every citizen. The infants, orphans, aged, invalid and addicts were maintained ; addled women and the children born to those in family way were kept in State

35 A poet gives expression to these feelings in the following verse :

मातर्मेदिनी तात मारुत सखे ज्योतिः सुबन्धोजल।
भ्रातर्व्योम निबद्ध एष भवतामन्त्यः प्रणामाञ्जलिः।
युष्मत्सङ्गवशोपजातसुकृतोद्रेकस्फुरन्निर्मल।
ज्ञानापास्तसमस्तमोहमहिमा लीये परे ब्रह्मणि॥

a Brahmana Muni. Others prior to Visvamitra were Mandhatriyauvanasva, Kasya and Gritsamada. Even the Bhagwata-purana (9th cent. work) and an avowedly Brahmana treatise acknowledges the origin of the Urukshaya, Kapi, Gargya, Priyamedha and Maudgalya families of the Brahmanas from the Paurava dynasty. The Nanda kings were of low origin, the Guptas were Karaskara Jats, the Palas were Sudras, the Vardhans of Kanauj were Vaishyas, but their title to rule was never questioned. Then in medieval times Namdeva, the tailor; Raidas, the cobbler; Dadu, the cotton butcher; Kabir, the weaver; and many others hailing from lower strata were recognized as great teachers by all. The Yogis, Tantrikas, Nathpanthis, all eschewed caste. The predominance of Jainism in tenth and eleventh centuries in Gujarat, Malwa and western India liquidated the rigidity of caste. Such being the condition of India when she fell, how are we to attribute the whole disaster to an element, which had a limited scope. If we are to search the causes of the decline of Hindu civilization we shall find it in such things as growing urbanization, narrowing weltanschaung, obliterous mentality of the masses of those times and lastly, enfeebled morale brought about by the feudal order of society.

Lastly, one more fact should be noted. The Hindus are keen about duties rather than rights. They are more adept in giving rather than in taking. Compare, for instance, Hindu cosmopolitanism with that of Rome. The Roman poet Rutilius Namautianus has written in a line, "Urbem fescisti qui prius orbis erat" (what was previously the world thou hast made a city). The Hindu idea of the same is contained in the expression "Udaracharitanam tu basudhaiva kutumbakam" (for the magnanimous-minded the whole world is a family). Thus while Rome conceived of the world as a city, India viewed the same as a family. In the one, the idea of right is predominant, in the other the idea of duty holds the field. This necessarily follows from what we have said above about the spiritual nature of Hindu civilization.

All this was mostly due, as the quotation from Sylvain Levi cited above shows, to the richness and prosperity of Indian soil. In such a country which is a world in itself, the struggle for existence was not very keen. Materially the people were very affluent. Quite content with their lot, they set themselves on a quest for truth and ultimately they succeeded. They were perfectly justified in saying :

चोदयित्री सुनृतानां चेतयन्ती सुमतीनां
यज्ञं दधे सरस्वतिः । *Rig-Veda* (I, iii, 11).

(Condensed from the inaugural address delivered to the History Association, Meerut College, Meerut, on 20th October, 1945.)

———:O:———

THE IMPENDING FAMINE IN BENGAL

By BIMALCHANDRA SINHA, M.A., M.L.A.

The Famine of 1943 was not only one of the most tragic events of history but it was also one of the saddest and most cruel commentary on the British rule in India. But it is still more tragic that before Bengal could recover from the shock of 1943 she is being compelled to face again, within three years, another famine of far greater magnitude and intensity. Conditions, this time, are far worse ; there has been no bumper crop in Bengal this year or last year ; there has been drought in other provinces as well ; not only India but the whole world is facing acute food shortage. Possibilities of import are very slender and chances are that we shall have to depend on our own resources only.

Now, what is the present position ? As usual, the authorities have begun bungling by first trying to suppress facts and then giving out contradictory statements and confusing the issue. On the 26th February last, Mr. Casey, the then Governor, assured us that the situation in Bengal was much better than that elsewhere and he did not admit the possibility of another famine. On the 20th February last, Mr. Williams, the then adviser to the Governor, stated in a Press Conference that there were no reasons to apprehend another famine, for the Government had sufficient stocks. Again, on the 20th April, 1946, Mr. S. K. Chatterji, the Director of Civil Supplies, Bengal, stated in a Press interview that "the food position in Bengal should not give rise to any alarm . . . the worst enemy in regard to the situation in the province is panic, not shortage. If people do not yield to panic and start hoarding, there is no danger of famine in Bengal", But in a Radio discussion (broadcast by the Calcutta Centre of the All-Inda Radio on the 10th May, 1946) in which Mr. V. N. Rajan, I.C.S., Director of Supply, Bengal, Mrs. Renuka Roy, ex-M.L.A. (Central) and myself participated, Mr. Rajan, on being questioned, admitted serious shortage in almost all the necessary foodstuffs and indicated that outside help would not be available so far as rice is concerned.

The picture given by Mr. Rajan is something like this :

(*a*) Rice : Our annual requirement is estimated at 10·5 million tons. The carry-over from last year (427,000 tons) together with total rice production this year less seed requirements (9·3 million tons) will account for about 9·727 million tons. The estimated deficit is about 750,000 tons. No outside help should be expected.

(*b*) Wheat : Our annual requirement is about 300,000 tons per year. This is covered by the Basic Plan of the Government of India and comes mostly from outside Bengal.

(*c*) Dal and Gram : The Provincial annual deficit is estimated to be 35,000 tons of Mug, 37,000 tons of Arhar, 70,000 tons of Masur and 50,000 tons of gram—all of them to be supplied by the Government of India from surplus provinces.

(*d*) Sugar : Provincial requirement is estimated at 200,000 tons per year, but Bengal this year was originally allotted a quota of 149,000 tons which has been recently reduced by 13 per cent.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(*e*) MUSTARD OIL : Bengal requires each year at least 27,000 tons of Mustard Oil and 172,000 tons of seeds (equivalent to 57,333 tons of oil) besides her own production, but in view of the increase in population and the change in its character, a much larger quantity would be actually required. But the Government of India have allocated during the current year (April 1946-March 1947) only 45,700 tons of oil and 56,300 tons of seeds (equivalent to 18,767 tons of oil), thus leaving a total deficit of 19,866 tons in terms of oil or a deficit of 23·6 per cent.

The picture, in itself, is disheartening enough, but on scrutiny the position will be found to be much more serious than what it appears to be. Let us examine the position with regard to these foodstuffs in greater detail.

RICE

It is strange that contradictory and completely irreconcilable statements have been made by responsible men with regard to the rice position in Bengal. Both Mr. S. K. Chatterji and Mr. V. N. Rajan have agreed that the estimated deficit in rice will be 750,000 tons. But in the report submitted to President Truman by Mr. Hoover, it has been stated that according to his calculations, *with which the Government of India are in full agreement*, Bengal would require, this year, 302,000 tons only, to be distributed in the following manner :

May	.. ..	nil
June	.. ..	nil
July	.. ..	90,000 tons
August	.. ..	106,000 ,,
September	.. ..	106,000 ,,

The public have every right to ask why there is such a huge divergence between the two estimates ? Whose fault it is that Mr. Hoover has not been appraised of the true position ? If it is the Government of India, then should not we be entirely in the right to infer that the Government of India are not serious to combat the impending famine, and are deliberately starving the people at least so far as Bengal is concerned ? For, what other meaning this can possibly have ? The Government of Bengal have estimated the deficit to be 750,000 tons and yet the Government of India inform Mr. Hoover that the shortage is not more than 302,000 tons ? This is an unpardonable mistake, if it is a mistake at all ; but it looks more like a deliberate policy to starve us to death than a mistake.

Coming now to the figures of the Government of Bengal, we have reasons to doubt their accuracy also. The estimated requirement of rice has been calculated to be 10·5 million tons. But taking the pre-war jail ration of 7 mds. per head per annum as the indispensable minimum, and taking, on the basis of 1941 census, 4,93,14,000 persons in terms of adults to be dependents on rice, the total requirement comes up to 13·0 million tons. (For detailed calculation, see my *Note on the Present Food Situation in India, Specially in Bengal*, dated, 29.3.43.) In taking 7 mds. per head per annum to be the minimum requirement what we are aiming at is not even the minimum nutritional standard but the bare subsistence level specially for the heavy manual workers in towns and rural areas. On this basis, the deficit, other things remaining the same, at once becomes as high as 3,273,000 tons, and not 750,000 tons. To calculate on the basis of an absurdly small quota of, say, 8 oz. per head per day, and to say that on that basis, there is no deficit at all, is only another way of leading us to starvation and death.

Taking the figures of supplies we find that the carry-over from last year is supposed to be 427,000 tons and total rice production this year less seed requirement to be 9·3 million tons. We first take the question of carry-over. From the final forecasts published by the Government of Bengal we get the following figures :

Production of Rice in Bengal

	1942-43	1943-44	1944-45	1945-46
	Tons	*Tons*	*Tons*	*Tons*
Winter Rice	5,020,500	8,528,100	7,579,100	7,272,700
Autumn Rice	1,693,500	3,041,300	2,654,300	2,110,200

(For Winter Rice Final Forecasts, see *Calcutta Gazette*, 24.2.44, 1.3.45, 21.2.46 ; for Autumn Rice Final Forecasts, see *Calcutta Gazette*, 1.6.44, 18.1.45, 3.1.46).

It will be seen that the crop in 1942-43 was a very thin one, but the crop next year was a bumper crop. Yet in spite of it, the Famine occurred. It may be safely assumed that all carry-over was consumed during the Famine year and the year 1944 began with very small opening balance. But during 1944, the supply position, according to the Famine Commission, was satisfactory and the Government of Bengal were able to accumulate, by the end of the year, a reserve stock of 6,00,000 tons of rice and paddy in terms of rice. It is estimated by the Famine Commission that the carry-over at the beginning of 1945 was in all probability equal to several weeks' supply. But what has happened since then ? Two factors which have reduced the carry-over should be noted. First, the Government of India refused to undertake any further the responsibility of feeding Greater Calcutta through outside supplies and demand had to be made on the Bengal supplies for feeding Greater Calcutta, which, on calculation, comes up to about four lakh tons per year. Secondly, Bengal has given substantial loans to other provinces. According to Mr. S. K. Chatterji, Director of Civil Supplies, the Bengal Government sold 42,000 tons to Ceylon, 9,500 tons to Bihar, 12,641 tons to the U.P. and 29,100 tons to Mysore and Cochin. Bengal Government also gave a loan of 15,000 tons to Bihar. In 1946, we have given a loan of 2,800 tons to Madras. In view of the admission made by Mr. V. N. Rajan that loans due for replacement are not being repaid, we might take it that they will not be repaid, or at least not repaid in time. These figures, taken together, make the substantial amount of 1,11,041 tons. It is easily imaginable that this carry-over, in these circumstances, cannot but be a very small one. That our stocks are gradually becoming depleted and we are consuming our reserves thus every reducing the carry-over is evident also from the fact that while by the end of 1944, the Bengal Government held a *reserve* stock of 6,00,000 tons, the *total* stock (including the reserve) held by the Government of Bengal on the 24th April, 1946, is, according to Mr. Rajan, not more than 3,55,000 tons. The Bengal Government procured only 2,84,900 tons of rice from January to 24th April, 1946 ; the opening balance of the carry-over, therefore, is expected to be only 70,100 tons at the beginning of this year (*i.e.*, 3,55,000-2,84,900 tons). This gives a direct lie to Mr. Chatterji's state-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

meant that the carry-over from the last year is something to the order of 427,000 tons.

Turning to production this year, we find from the Final Forecast that the total supply less seed requirements may come up to 9·30 million tons. On the basis of these figures, the deficit turns out to be much greater than what has been officially estimated :

Bengal, 1945-46	Current supply	Carry-over	Requirement	Deficit
	tons	*tons*	*tons*	*tons*
Official Estimate	9,300,000	427,000	10,500,000	773,000
My Estimate	9,300,000	70,100	13,000,000	3,629,900

If we have to take a practical view of things and do not desire to delude ourselves deliberately by shutting our eyes to realities and calling a starvation diet a sufficient one not from any nutritional standard, but even from the point of view of barely keeping body and soul together, the deficit, then, would be much greater than the official estimate. *Instead of 773,000 tons, it is likely to be as high as 3,629,900 tons, i.e., about five times the official estimate.*

The question of paramount importance, therefore, is how to tide over this difficulty ? Mr. Hoover has said that if we want rice, and not wheat, we have to look to our neighbouring countries for help. As it is not possible for us to change our habits all on a sudden and take to wheat and as imports of wheat are also becoming doubtful, we must think in terms of rice mainly. Mr. Hoover has indicated that Siam has got an exportable surplus of 200,000 tons of rice and Indo-China 50,000 tons. Even we get the whole of this amount (which in itself is an impossible proposition, for even if the whole amount comes to India, it is hardly possible that nothing will be allocated to Madras and South-India and the whole supply sent to Bengal), still it will meet a very small fraction of the estimated deficit, in fact, only 33 per cent of the official estimate. But Mr. Hoover himself has admitted that the duty of the Combined Food Board ends with the allocation of supplies and in actual practice, the surplus countries have invariably failed to supply their allotted quota. So, with so many proverbial slips between the cup and the lip, it would be prudent to leave out of consideration all possibilities of import, while devising ways and means for meeting the shortage. That is why Mr. Rajan, in the Radio discussion referred to above, categorically asserted that "there is little chance of Bengal getting any assistance from the outside in the form of rice." The official suggestions are that we must tide over this difficulty by (*a*) effecting economy in consumption and (*b*) reducing wastage.

It is necessary to examine how far these suggestions will go and to find out whether they are meant to be serious or put forward merely as platitudes. How far can economy in consumption help us in tiding over the difficulty ? In making an objective assessment of the possible measure of economy, it is necessary to distinguish between different classes and different income levels. It is a fact that persons of low income, residing in rural areas,—for instance, the majority of agricultural classes, live from hand to mouth and can afford to be barely on the subsistence level. To say that their rations can be further cut down is to impose starvation diet on them. The Government have not undertaken full rationing in these areas and have shirked their responsibility by initiating only the modified rationing scheme. So, it can be hardly expected that there can be any substantial measures of economy so far as these classes are concerned. It is true that urban people and persons belonging to wealthier classes are generally better off and are in a position to consume more than is necessary. But the Government have introduced full rationing in most of such areas. According to a newspaper advertisement put in by the Civil Supplies Department, (*vide, Hindusthan Standard,* Dt. 31.3.46) the following towns have been put on complete rationing in Bengal, *viz.,* Calcutta and the industrial area, Dacca, Narainganj, Chittagong, Comilla, Darjeeling, Kalimpong and Kurseong. Full-scale rationing will shortly be introduced in eight more towns, Midnapore, Kharagpur and Kharagpur Railway Settlement, Bankura, Kulti and Hirapur. In the same advertisement we find the following information : "The cut in the cereal ration means a saving of approximately 25,000 maunds per week in the Calcutta area alone. This saving will enable Bengal to build up her Food resources so as to be in a position to meet any emergency." How hollow this claim is, becomes apparent even to the most superficial observer. A weekly saving of 25,000 maunds in the Calcutta area means an annual saving of 47,272 tons per year. So far as the other towns put on complete rationing are concerned, the cut will mean an extra annual saving of approximately 12,000 tons only. (The ratio of the population of the Calcutta area to all those towns, on the basis of 1941 census is about 4 to 1). It would appear, therefore, that the recent cut imposed on cereal ration cannot but effect an annual saving of more than 47,272 tons + 12,000 tons, *i.e.,* 59,272 tons. It is, thus, futile to expect that the recent cut in the scale of cereal ration can reduce the deficit in any notable degree. It is rumoured that another cut of the same extent may be imposed from next July. To impose such cuts on people who are habituated to at least a seer of rice daily and whose only food is rice, substitute foodstuffs being beyond their power, is to force them to starvation. That, in itself, would, instead of solving the problem, lead to complications by imposing starvation on those people whom it wants to protect. But be that as it may, even such a cut would not bridge the gap ; for where the deficit is, according to the official estimate 750,000 tons, what does it matter if all our efforts for economy cannot reduce that deficit by more than 59,272 tons (or even double that amount) and that, by starving the people put on ration ?

Bengal's Net Deficit, 1945-46 (*Rice*)

	Estimate of deficit	Saving effected by cut in cereal ration	Net deficit
	tons	*tons*	*tons*
Official Estimate	750,000	59,872	690,728
My Estimate	3,629,900	59,272	3,670,628

Let us face facts squarely. It should be freely and frankly admitted that our deficit cannot be met by economy in consumption alone. The other method suggested by the Government is prevention of wastage. I shall not deal extensively with this matter. Suffice it to say that the Government is the worst offender in this respect. It has been calculated that the total loss, as reported in different newspapers, come up to a total of 19,886 tons of rice and 18,040 tons of atta from July

CC-0. In the Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

1945 to May, 1946. It is up to the Government to prevent such wastage. In fact, had the Government been serious, much deterioration could have been stopped. Instead the usual procedure of setting up a top-heavy department called the Directorate of Inspection and Control, has been adopted and this is being turned into a pretext, as usual, of providing for fat-salaried officers and bringing in foreign experts, though every day we find newspaper reports about deterioration of foodstuffs in Government and private storage. But, however efficient might be the arrangements for preventing waste, one thing is certain : the huge deficit that Bengal will have to face in the coming months cannot be met by such tinkering measures alone.

The conclusion, to which the logic of facts forces us to come, is that if Bengal has to be saved from another terrible famine, there must be imports, and imports on a very substantial scale. At the beginning of World War II , United Kingdom did not grow more than one-third of her annual food-requirement, and through intensive measures she was able to grow two-thirds of her needs before the war ended. But even during those dark days bread was not rationed there and the Government provided sufficient additional food. But here we have spent Rs. 72,65,000 on "Grow More Food" campaign in 1944-45, Rs. 10,300,000 in 1945-46 and the budget for 1946-47 has provided for one crore two lakhs and thirty-five thousands, but what has been the result ? There has been an actual decrease of 6·4 per cent of area under winter rice in 1945-46 as compared to the previous year. But we are not prepared to tolerate that this "Grow More Food" campaign would be turned into "Grow More Officers" campaign and huge sums wasted for that purpose and we have a right to ask if it was possible for the United Kingdom to keep her cereals unrationed during the war and if it is possible for her not to put cereals on ration even now when there is acute food shortage all over the world, why should Bengal suffer from starvation in this way ? Why not vigorous efforts be made for securing outside supplies, more so when such supplies are available in neighbouring Asiatic countries ? Should we take it that such callousness in the face of such an impending calamity is possible only because the lives of subject peoples are nothing worth caring for ?

Other Foodstuffs

I now turn to examine briefly the position with regard to other foodstuffs.

(*a*) *Wheat* : Our requirement stands at 300,000 per year and it is hoped that the Government of India will find it possible to supply the major portion of this requirement. We can only say that in view of the very pessimistic utterances of the Government of India spokesmen, these hopes may turn out to be only pious hopes and nothing more; (*b*) *Dal, Gram, Mustard Oil* : It is the same position with regard to these foodstuffs; (*c*) *Sugar* : Even a superficial observer will be struck by the highly iniquitous arrangements regarding sugar and the very grave injustice done to Bengal in this respect. Under the present system, local production cannot be reserved for local consumption, but must go to the Basic Plan of the Government of India and distributed thereunder. The quota for Bengal has been fixed at 200,000 tons. In the first place, this is a grave injustice done to Bengal, for, if other provinces with a much less population get a proportionately much higher quota, why Bengal should not get what she is entitled to receive? But Bengal has not even received in full [illegible] meagre quota of 200,000 tons; she was, on Mr. Rajan's admission, originally given a quota 149,000 tons, but in view of the drought in other provinces which damaged the sugarcane crop, the quota was cut down by [illegible] per cent. But the matter does not end here. Recently an order has been issued prohibiting the production of *gur* in certain areas neighbouring sugar factories and over a certain period for maximizing sugar production in Bengal. When questioned as to whether Bengal gets the additional sugar thus produced. Mr. Rajan stated that "Government of India distribute the entire quantity produced in all provinces and the Bengal Government cannot take over such extra sugar produced by factories." This is, to say the least, highly unfair. The order not only reduces the production of *gur* but also hits an indigenous industry. But in spite of such sacrifice we are not entitled to get what is being produced as a result of this sacrifice.

Conclusion

It is, therefore, desirable that the gravity of the situation should be properly realised. The first step towards that realisation would be the complete abandonment of the present hush-hush official policy and the usual habit of issuing misleading, if not deliberately false, statements. We had enough of this dangerous habit in 1943, when such statements from responsible quarters ultimately undermined public morale more than anything else. People refused to believe them even when they were true. We are again moving on those dangerous lines. Secondly, no efforts should be spared to have outside supplies, and if the India Government fail to do their duty that is no reason why Bengal Government should sleep over the matter. But, then, the people of Bengal cannot be blamed if they do not feel very optimistic about the Ministry that has been installed in office. Another Muslim League Ministry was in office during those dark days and some of the old faces have reappeared in the present Ministry. But what was their record ? I quote a few lines from the Report of the Famine Commission :

> "Due weight has been given in our report to the great difficulties with which the Bengal Government were faced, but after considering all the circumstances we cannot avoid the conclusion that it lay in the power of the Government of Bengal by bold, resolute and well-conceived measures at the right time to have largely prevented the tragedy of the famine as it actually took place. While other Governments in India were admittedly faced with a much less serious situation than the Government of Bengal, their generally successful handling of the food problem, and the spirit in which those problems were approached, and the extent to which public co-operation was secured stand in contrast to the failure in Bengal."

Where is the guarantee that the tragedy will not be repeated on a much greater scale this time ? It is difficult to find any solace from the composition of the present Ministry or from the complacent attitude of the officials. It is for the people of Bengal to force this guarantee, if they want to save themselves from death and destruction.

NABINCHANDRA'S RELIGION OF HUMANITY

By Dr. ROMA CHAUDHURI, M.A., D.Phil. (Oxon), F.R.A.S.B.,

Professor, Lady Brabourne College, Calcutta

I

Nabin Chandra Sen, one of the greatest of Bengali poets whose Birthday Centenary was celebrated all over Bengal on 12th February last, was essentially a poet of Humanism. He was a prolific writer, but all his works reveal an essential unity of thought,—a fundamental spirit of love and service of Humanity, of universal brotherhood and equality, of unselfish action and ungrudging self-sacrifice. His ideal was the great utilitarian ideal of "the greatest happiness of the greatest number." According to him, God is the sole cause of the Universe, its efficient as well as material cause. As such, He is actually present in every part of the world. So, the world, the image of God, cannot be really impure or unpleasant. As the product of the All-blissful, All-beautiful Being, it too is bliss and beauty in essence, but it is through our own fault that we fail to see this eternal bliss and beauty inherent in the world. All the mundane pains and sufferings are due to our own narrow, selfish outlook, to our misconceived attempt to break ourselves asunder from the rest of the world. We can never be happy in selfish isolation, but we must learn to be happy in the happiness of others—for what is good for all, is good for us also, and nothing else. Hence, the summum bonum of one's life is to dedicate oneself to the unselfish service of humanity. No doubt, our individual natures, capacities, learnings, and destined functions are different. Each has a special destiny to work out, for which alone he is specially fit. This is called his *Svadharma*. But, in spite of these different *Svadharmas*, the general goal, the highest ideal, the summum bonum is the same for all, *viz.*, the ideal of universal love and service. Hence, Nabinchandra conceived of a Kingdom of God on earth in which there will be no distinctions of caste and creed, no special prerogatives for a favoured few, no crushing down of the poor and the lowly. This ideal of equality and fraternity is the keynote of Nabinchandra's philosophy of life. But, alas ! our poet's great dream has not as yet come true, even after a century. The present world, torn between conflicts of nation and nation, community and community, white and black, rich and poor, has a special need for Nabinchandra's message of universal love and brotherhood.

For non-Bengali readers we give below English translations of a few extracts from Nabinchandra's famous epic poem "Kurukshetra." We, further, hope that the Birthday Centenary Committee will undertake a complete translation of his famous works, and thereby propagate his eternal message of patriotism and philanthrophy. This, we think, will be one of the best ways of perpetuating the hallowed memory of one of the greatest sons of Bengal.

II

Ideal of Womanhood

"O hapless one ! would you endanger your health through thus not sleeping and not eating ?"—said Sulochana sorrowfully, when having returned to the camp, tired Subhadra, mercy incarnate, placed her withered, exhausted body on the bed half lying down. The loosened braid came down and the dusky, dust-covered hair fell down in a heap on the bed. Sulochana sat beside her and began to part it gently by her lovely, soft fingers.

Sulochana : "O hapless one ! would you endanger your health through thus not sleeping and not eating ? Days and nights alike you are sticking to the bodies of the wounded like a healing balm. Because of thus roaming through camp after camp in tending the wounded, what a state you have been reduced to ! Your eyes have become sunken, your face filthy and pale, your hair dusky with dust.

"This is the eleventh day of this unfortunate war, and since then I have not seen a smile on your face. I do not know what pleasure you derive through thus dying for the dead day and night !"

Subhadra : "What greater happiness can women have ? Alleviation in disease, mercy in misery, a soothing shadow of consolation in sorrow—such, my sister ! is the heart of a woman in this world. What greater happiness can a woman have ?

"Just as God created both fire and water, so having created, my sister, diseases, sorrows and miseries, He created the feminine heart, filled with infinite love.

"What other happiness can there be, if, alas ! the holy river of a woman's life does not flow on by thus pouring nectar to the dead, alleviation in pain ? Behold ! many a gem of a man are daily sacrificing their lives by doing their respective duties. Are we similarly doing our own duties ?"

Sulochana : "I agree that nursing the sick and the wounded is the highest duty of a woman, but why should one nurse one's enemies ? Let them die for their own deed. Why should you bother yourself with them ?"

Subhadra : "Enemy ! Is the enemy not a human being like me ? Is he not made of flesh and blood ? Is not your and my life just the same as the enemy's life ? Water is the same, only receptacles of water are different. Even he is made of the same elements. He is wounded by weapons all over the body in exactly the same manner. He too suffers the very same pain,—friend and foe alike fall victim to the clutches of the same death.

"Enemy ! the same God lives in all, the One God, without a second, contains all. Who are you, who am I, who is a foe, who a friend ? Whom do you call friendly and unfriendly ?"

Sulochana : "But for that reason should we take even a foe as a friend ? Are Karna and Duryyodhana our friends ? Should we feel sorry in the sorrow of even the wicked ? Should we welcome poison and nectar alike ?"

Subhadra : "He who is virtuous, who does not love him ? What magnanimity is in that ? He who loves

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the sinner, him I love—he really is Love incarnate. Behold ! on the lap of Mother Earth, fragrant and odourless flowers exist alike in exactly the same manner. The endless heap of sand is flowing inside the sea together with the brightest gems. Such is the principle of equality of the world, such is the blissful song of love—what a great example is it to man ! Everywhere the same love, everywhere the same mercy, everywhere what a great unity ! No, my sister ! we women are the living images of the Mother of the World. To us there is no difference between a friend and a foe. Let us go on pouring everywhere this ceaseless mother-love like the rain. He who loves a friend—selfish is such a love, it is nothing but a narrow give and take. He whose heart cries out in the same manner for friend and foe alike—he alone is a god to me.

"The narrow world of a child consists only of the faces of its parents. The child does not know anything else. Gradually the range is widened—the boy and the girl see their families as consisting of brothers and sisters, too.

"During youth, the husband and the wife gush forth in amorous sports, embracing earth and heaven. Gradually, filial love gives them a vision of infinity, the holy place where the river merges into the sea.

"This, my sister, is the mission of love. Yesterday my vision of the world was like that of Krishna and Arjuna. Today, with my heart filled with mother-love, I am looking on every one as my own son and daughter.

"This love of mine does not find full satisfaction in father and mother, brother and sister, husband and son, in this wide wide world. Even beyond this infinite universe, there is something else infinite—my ocean of love flows towards that." (3rd Canto)

III

Ideal of Altruistic Happiness

Bhadra says : "O Sailaja ! the whole world is longing for happiness. Search for pleasure is the prop, the motive force of the world. But this world is full of happiness, eternally full of happiness like its own Creator. Bliss pours down in a ceaseless flow with moonlight, blows both with storms, thunders with the thundering clouds, rains down with rain, sings with the song of cuckoos, breathes forth with the cool southern breeze, fructifies in trees, blossoms borth in flowers, floats on the water, smiles in daylight. Bliss is in forest, bliss is in home, bliss is everywhere. Only man laments, failing to get this happiness. Man's happiness does not lie in home, not in forest ; alas ! he has failed to see that it does not consist in the world, in kingdom, in asceticism."

Sailaja : "Say then, O respected Madam ! in what does the happiness of man consist ?"

Subhadra : "The whole world is replying in one voice eternally. The happiness of the bird consists in being a bird, that of an animal in being an animal, that of a flower in being a flower. Hence, O sister ! the happiness of man consists in being a 'Man'."

Sailaja : "What is that you call 'Humanity'?"

Subhadra : "The summum bonum of a bird lies in the fulfilment of its destined functions as a bird. Say, O sister ! for what is a man a 'Man ?'—Because of his soul, mind and body. 'Humanity' is nothing but the fulfilment of the destined functions of these three. The maxims that promote the physical, mental and spiritual functions of man—of the Humanity of Man—constitute the highest ideal of mankind. The more a man performs his own duties, the more he works out his own destiny in an unselfish spirit, the more he advances step by step the more he attains 'Humanity,' pure happiness, perfect 'Humanity', salvation from sorrows, Heaven, absolute bliss, and God."

Sailaja : "Is it a Vedic Religion ?"

Subhadra : "Yes, Sailaja, it is a Vedic religion. That is the first step in the path to Heaven."

Sailaja : "Madam ! cannot this 'Humanity,' cannot this ideal be attained in the forest ?"

Subhadra : "Sister, home is a better field for this kind of religion. The foundation of this great religion is service of Humanity, its foundation is doing good to all." (13th Canto)

IV

Ideal of Equality and Fraternity

Jaratkaru says : "But I am a non-Aryan woman. An Aryan woman incurs a great sin if she touches even my shadow. We non-Aryans do not get a drop of even that mercy that birds and beasts get from the Aryans."

"No, my sister !" said Bhadra, "the Aryans and the non-Aryans are all sons and daughters of the same father. All have the same blood, the same flesh, the same life, the same soul—the water is just the same, only the receptacles of water are different. Due to differences of place, time and actions in different births this water become impure in some places, pure in others. Through the light of knowledge, remove this impurity by actions—water will become the same water. That attribute in virtue of which man is superior to others is man's attribute of humanity. This attribute of humanity, sister ! is the highest ideal of mankind. The infinite, unknown God pervades the entire universe as the highest culmination of this attribute of humanity. We, small human beings as we are, are rowing in a boat through the river of this attribute (of humanity), proceeding towards infinity. This journey is the eternal mission of man. The more a man, the more a nation advances in the path of this great ideal, the purer is his soul, the higher is his religion. Humanity ! Men differ from one another only in respect of this humanity. The Aryan race has become superior because of this ideal, because of humanity. The non-Aryans have lagged behind because of defect in this respect. Still the Aryan religion is imperfect. The clearest proof of that imperfection is this Kurukshetra. The undisciplined sense-organs are like double-edged swords—if you thrust them at others, you are sure to get a counter-thrust,—Oh ! what a terrible counter-thrust ! Behold ! the proof of that is this battle of Kurukshetra. Know in your mind that if two men hate each other, both have fallen off from humanity. You must have seen how if two stones strike against each other, both come to be powdered and destroyed. Do not grieve, my sister ! By hating the non-Aryans, see how the Aryans themselves are hating one another. See this mass suicide, this rise of sin and fall of virtue. But God is All-beneficent. Even in this great catastrophe, His beneficent ordinance prevails. After this storm is over, what a peace will reign, what a nectar will mankind drink ! God Himself has descended on earth. When after reducing all sins to ashes, this great funeral pyre will come to be extinguished, what a great kingdom of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nectarine bliss,—will come to be established on earth ! Do not grieve, my sister ! Then the Aryans and the non-Aryans, will proceed eternally, like brothers and sisters, through that path to eternal bliss, singing the hymn of Saviour Brahma and the name of Krishna. The Aryans will lead, the non-Aryans follow, the former extending their right hands in love and friendship to the latter, and taking the latter with them with pleasure, meditating on the foot-prints of Krishna. Then men will realise that God exists in all beings, that the greatest and purest religion is doing good to all. Through this new religion, sister, man will gradually become God and the world Heaven." (8th Canto)

V

Ideal of Unselfish Action

Subhadra instructs her son : "Just as the eternal universal ether, moving everywhere, pervades the sky, so all beings exist in Him alone, He alone is God. Just as the ether, being unattached and subtle, pervades all things and is present in them all, so the Supreme Soul, though present in all the bodies, is not subject to changes and is absolutely unattached. God is not responsible for man's agenthood, actions and fruits of actions—it is the individual soul itself that acts according to its own nature. An individual soul, a plant, an animate being or an inanimate being—all have separate natures of their own. God Himself engages Himself in actions according to His own Nature, without being attached to them, *viz.*, in the actions of creation, maintenance and destruction. Similarly, the performance of actions, in an absolutely unselfish manner, according to his own nature is the eternal summum bonum of man. He, who engages himself in actions in an unselfish spirit by dedicating them to Brahman, is not besmeared by sins, like a drop of water on a lotus-leaf. Brahman is present in all beings. Do good to all, and then your actions will be dedicated to Brahman. What is good for the ocean, is good for the drops of water. What is good for the world. my child, is surely good for you too. Having controlled the sense-organs by practice and knowledge, having identified your own good with that of the world, do your own duties according to your own nature, thus dedicating the fruits of actions to Brahman. The trees are fructifying, the clouds are pouring rain,—but what good are they doing to themselves ? The ideal of the world is unselfish action. The trees are producing fruits, the clouds are pouring down rain according to their own natures, and thus they are doing their supreme duties, they are working out their own salvation by doing good to the world. Bravery is your nature, fighting is your duty. To a Kshatriya, there is no higher duty than fighting a just war. So, my child, fight on, without thinking of pleasure or pain, benefit or loss, victory or defeat."

———:O:———

RELATIVE HEROISM OF THE HINDUS AND THE MUHAMMADANS OF INDIA

By JATINDRA MOHAN DATTA, M.Sc., F.R.S.S.

Quid-e-Azam Jinnah is threatening civil war if his demand of Pakisthan is not conceded. The weak policy pursued by the *Indian* National Congress in this matter is well-known. One day Mahatma Gandhi calls vivisection of Mother India to be a sin ; the next day he dances attendance upon Mr. Jinnah to moderate—not to abandon, his demand of Pakisthan. The British Cabinet Mission, true to its *British* character, is most likely to concede Pakisthan in actuality, if not in reality. Ultimately "Hindusthan" and "Pakisthan" shall have to fight each other to make United India possible, and to make it great.

No amount of concessions by the freedom-loving Northern States of the United States of America could persuade the slave States of the South to remain in the Union. The Southerner President, James Buchanon, took advantage of his position, in stocking the southern forts with guns and ammunition too well and leaving the northern forts practically undefended. So when the southern States seceded and formed the confederation of the South, the Federal Government of the U.S.A. found itself weak and almost helpless in spite of its wealth and resources both in men and materials. It took four years of bloody Civil War, and much loss of life and property to weld the U.S.A. into the powerful and progressive State it was to be to-day. That is the lesson of history. If the Hindus concede the Pakisthan demand of Mr. Jinnah even partially Mr. Jinnah will lose no time in utilising his position in a Free India to establish a warring sovereign Muhammadan State. The Hindus will then have to choose between either to submit unconditionally or to fight. Pakisthan, the *Dar-ul-Islam*, will make the lot of the heathen Hindus that of mere helots.

If there is to be a Civil War, it is high time for the Hindus to think whether they will be able to fight the Muhammadans. We are all familiar with the "criminal war" the Muhammadans have been carrying on against the Hindus in Bengal during the last 25 years under the aegis of the British police from picking pocket during daylight, stray stabbing during dusk, to abducting and molesting women in dark. Without the British police, the Hindus are confident of accepting the Muhammadan challenge in "criminal" war. We are speaking of Civil War in the military sense. It is time to think of the relative heroism of the Hindus and the Muhammadans of India in actual warfare. In *The Modern Review* of February, 1938, we tried to find out the Relative Readiness of the Hindus and Muhammadans to defend India. We found that where there should have been 75 Muhammadans actually there are only 36, *i.e.*, a number *less than half* their proper quota, to defend India. For the 151 Hindus and Sikhs who presented themselves for admission to the Indian Military Academy, only 36 Muhammadans offered themselves. They were 19 per cent of those who were ready to shoulder the responsibility of defence.

The Victoria Cross is the highest award for valour in the British Empire. The simple bronze medal is worn before all other decorations. It was instituted in

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri

January 1856 by the late Queen Victoria ; and until March, 1942, used to be struck from the metal of guns captured by the British at Sebastopol during the Crimean War. Formerly the right to receive Victoria Cross was confined to men of European blood only. In 1911 at the Delhi Durbar, His late Majesty King Emperor George V extended the right to receive it to the Indian soldiers also.

The proportion of the Muhammadans to the total population of India is 24 per cent. In the Army on account of the policy pursued by the British Government and the division of population into martial and non-martial races, the proportion of the Muhammadans was much higher. During the First Great War of 1914-1918 it was in the region of about 40 per cent. Yet out of the 11 V.C.'s won by Indians, 3 or 27 per cent were by Muhammadans. They were hardly able to keep up their communal quota. The first Indian to receive Victoria Cross was Risaldar Badlu Singh of 14th Murray's Jat Lancers.

In the last World War 31 V.C.'s have been won by the Indian Army. Of these 3 are by the British officers of the Indian Army, of the remaining 28, only 4 are by the Muhammadans. The recipients are :

4. Sepoy Ali Haidar—April, 1945.

* Those whose names are marked with an asterisk are posthumous awards.

The first man to receive a V.C. in this war is a Hindu ; another interesting thing is that while all Hindu recipients are of all ranks from the commissioned officer to the sepoy to the King's commissioned officer n Muhammadan officer has received the award. But these are minor points. The broad fact remains that the Muhammadans have secured only 14 per cent of the V.C. in the Second World War. This is very much less than their population quota. According to an answer given in the Indian Legislative Assembly on the 1st of September, 1943, the strength of the respective classes in the different branches of the armed services is as follows :

	Combatant I.O.R. & V.C.O's	*R.I.N. officers*	*I.A.F., R.I.N., & I.A.F. officers*	*Other*
Hindu	47%	32·3%	47·6%	59·5
Sikhs	7%	3·5%	11·7%	2·0
Gurkhas	5%	..	..	..
	59%	35·8%	59·3%	61·5
Christians	5%	..	..	..
Muslims	32%	18·1%	16·6%	17·0
Others	2%	..	..	..

	Artillery	*Indian Infantry*	*R.I.A.S.C.*
	57%	41%	55%
	10%	7%	5%
	..	24%	..
	67%	72%	60%
	..	..	..
	28%	24%	36%
	5%	3%	4%

So we find the proportion of Muhammadan V.C.'s to be very much below their strength in the different categories of the armed forces. As the Indian V.C.'s are mostly drawn from the Indian infantry ; and as in absolute numbers the infantry is the largest category we shall assume that the all-round strength of the Muhammadans is not greater than 24 per cent—an assumption which is in favour of the Muhammadans. In this view, the relative heroism of the Hindus and the Muhammadans works out to be in the ratio of $\frac{86}{76} \cdot \frac{14}{24}$ or 1·94 : 1. In other words the Hindus are *twice* as much courageous and brave as the Muhammadans.

The Hindus are *twice* more ready to defend India ; they are *twice* more courageous and brave than the Muhammadans. This coincidence of the measure does not seem to be accidental but fundamental. The same factors and causes which make the Hindu more ready to defend India make him more courageous and brave and heroic to perform acts which merit the award of the Victoria Cross.

Thus the higher the level of heroism the less becomes the number of Muhammadans. Where deliberate and complete self-sacrifice is required—a very high stage of heroism, the number of Muhammadans is likely to be *nil*. Is it for this reason that the number of the Muhammadan "revolutionaries" is so as noticed by the Sedition Committee ?

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

—EDITOR, *The Modern Review*.

ENGLISH

INDIA AND THE INDIAN OCEAN (An Essay on the Influence of Sea-Power on Indian History) : *By K. M. Panikkar. Pp. 109 and five plates. London. 1945.*

In this short but extremely well-written and timely monograph the author who has to his credit a number of important works on Indian politics and economics, has attempted "to trace the influence of the Indian Ocean on the shaping of Indian history and to discuss the vital importance of oceanic control to the future of India." How much need there was for the appearance of a work of this kind is proved by the author's complaint in his Introduction (p. 7) that till now the whole problem of Indian defence has centred on the question of securing the north-west frontier, whereas the verdict of history is that ever since the sixteenth century the future of India has been determined not on the land-frontiers, but on the Ocean encompassing her on three sides. "For 157 years from the departure of Suffren in 1784 to the fall of Singapore in 1941," the author continues (p. 9), "the question of sea-power did not arise as the Indian Ocean was a British lake,"—a fact which accounts for the one-sided outlook of British Indian frontier-policy just mentioned. Now that America is well established in the Pacific and other powerful nations are likely to make their appearance in the eastern waters, the question has to be faced, "Can the Indian Ocean become once again a protective area ?" (p. 15) The author answers this question in the following thoughtful words (p. 15) : "With the islands of the Bay of Bengal, with Singapore, Mauritius and Socotra, properly equipped and protected and with a navy based on Ceylon, security can return to that part of the Indian Ocean which is of supreme importance to India." For effecting this devout consummation, the author frankly looks to the joint co-operation of India and Britain. Addressing a note of warning to his countrymen in this connection, the author says (p. 16) : "The future of India will undoubtedly be decided on the sea . . . India cannot, therefore, afford to take the selfish view that the control of the sea is Britain's job." The author concludes his thoughtful Introduction with the hope that "the un-Indian wave of pacifism (*ahimsa*)" now sweeping over the country will pass away, so that it will be possible for us to realise that "Indian freedom can be achieved and upheld only by firmly deciding to shoulder our share at all costs in the active defence of the areas necessary for our security."

In the following chapters (Chs. 1-6) the author passes successively in review the centuries of Hindu control of the Indian Ocean ("the Hindu period in the Indian Ocean"), the period of Portuguese domination, the years of Anglo-French duel for the mastery of the Ocean and the period of complete British mastery during which the Indian Ocean became "a British lake." Referring to the maritime activities of the Indians and other peoples in pre-historic times, the author says (p. 22) : "The Indian Ocean was undoubtedly the first centre of oceanic activity." Though the early navigators of the coast of the Indian Ocean, the author continues (p. 24), were of all races, Phoenician, Chaldaean and Asiatic Greek, the Hindus had the preponderant share. "Neither the Egyptians nor the Greeks sailed the Arabian Sea as they did not know the routes till Hippalus made the epoch-making discovery of the monsoon winds in 45 A.D. But the Indian navigators sailed across and had discovered Socotra long before their time and navigated the Red Sea." "The Hindus had already in use a magnetic compass known as *matsya-yantra* for determining direction" (p. 26). It would be interesting to have full references to this highly interesting statement. The supremacy of the Hindus in the Bay of Bengal, specially, was naval as well as political, being based on an extensive colonisation of the islands and it ceased only with the breakdown of the Chola power in the 13th century (p. 28). The Portuguese voyages of maritime discovery were of the nature of an innovation, for "till the last decade of the 15th century none of the European nations, except perhaps the Vikings, had ventured into oceanic navigation" (p. 37). Even the voyage of Bartholomew Dias round the African coast to the Cape of Good Hope in 1487 was in no way remarkable in comparison with what the Indian and Arab navigators had achieved in sailing across uncharted seas, though it was an epoch-making event as paving the way for the direct voyage to India (p. 37-38). The Portuguese for the first time claimed a complete monopoly of the seas in peace-time —a claim which led to a prolonged and historic conflict with the Zamorins of Calicut (p. 40). After a short but bitter struggle the Portuguese established their supremacy in the Indian Ocean, but the Zamorin's fleet, thanks to the services of a remarkable family of naval commanders of Malabar Moslem stock, was able for more than ninety years to hold its own in the home waters of Calicut (p. 44). Meanwhile, the foundation of Europe's empire in Asia was laid by the genius and foresight of Albuquerque, the greatest of the Portuguese Viceroys of India (p. 49). In the interval between the breakdown of Portuguese authority and the establishment of British supremacy there was a remarkable revival of Indian naval power under the auspices of the Sidis of Janjira and the great Marhatta Admiral Kanhoji Angria (pp. 58-63). For a time, as an English historian says, Kanhoji, "victorious alike over the English, the Dutch and the Portuguese, sailed the Arabian Sea in triumph." "In the 19th century after the French fleet was annihilated at Trafalgar in 1805, Great Britain was the only naval power in the world . . . So far as the Indian Ocean was concerned it was, even more than all other oceanic areas, a British lake . . . The one development in the 19th century which affected the Indian Ocean, the construction of the Suez Canal, only strengthened British hold on the seas" (p. 72). In the period immediately preceding the Great War of 1914-1918, Great Britain sailed the seas of the Indian Ocean as an absolute mistress. But the major

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

European nations (French, Germany and Italy) had acquired interests in the Indian Ocean by virtue of their territorial gains on the East African coast (p. 76). The war of 1914-18 eliminated Germany from the Indian Ocean, but France built a powerful naval base in Madagascar, while Mussolini not only converted Massowa on the Red Sea coast into a mighty naval station, but planned to unite Abyssinia and Eritrea into a great land empire (pp. 76-77). The World War changed the entire situation in the Indian waters. "After the fall of France and the intervention of Italy in the Mediterranean and the Red Sea, Great Britain was in no position to make her voice effective in the Far East. With the fall of Singapore in 1941, the safety and security of the Indian Ocean, for 150 years a British lake, vanished at one stroke . . . In the critical month of April 1942, the fate of Ceylon hung in the balance" (pp. 80-81).

In the concluding chapter (Ch. VII) the author points out that "the peninsular character of the country with its extensive and open coastline and with a littoral which is extremely fertile and rich in resources, makes Indians entirely dependent upon the Indian Ocean" (p. 82). Again, "the history of the last three centuries has shown that any power which has unquestioned mastery of the sea and strength to sustain a land campaign can hold the empire of India, monopolise her trade and exploit her unlimited resources" (p. 83). From this it follows that "India's lifelines are concentrated in the area [of the Indian Ocean] . . . No industrial development, no commercial growth, no stable political structure is possible for her unless the Indian Ocean is free and her own shores fully protected. The Indian Ocean must, therefore, remain truly Indian" (p. 84). What then are the dangers ahead facing India? "The elimination of Japan from the ranks of naval powers," says the author, (pp 85-89), "will no way solve India's problem, for there is every reason to think that victorious China will embark on a naval career . . . America has developed considerable interests in the Middle East. The possibility, therefore, has to be visualised of America entering the Indian Ocean as a major naval power. . . . [Above all] "the political, industrial and military organisation of Central Asia under the Soviets will obviously demand an outlet into the sea. The lines of traffic developed for the purposes for Lend-Lease aid to Russia in the present war has demonstrated the vital importance of the Persian Gulf to the Soviets." The author concludes with the practical suggestion (p. 95) that "the control of the Indian Ocean must be a co-operative effort of India and Britain and other Commonwealth units having interests on the Ocean with the primary responsibility lying on the Indian Navy to guard the steel ring created by Singapore, Ceylon, Mauritius and Socotra."

The book is unfortunately disfigured by a number of misprints of which we give below a number of examples: Mahen-jo-Daro and Baberu (p. 23), Periplus Maris Erythraei (p. 25), Alexanda, Bir Kassim and eight century (p. 28), Marrvas (p. 32), Chu Fau Chi and Heith (p. 34 and n.), Barthelmy (p. 36), Garrnor (p. 66). Champa is twice (pp. 31, 32) wrongly identified with Siam. The account of Pulikesin (*sic*) II, the Chalukya king leading a naval expedition round Cape Comorin for the conquest of Puri, the capital of the Kalinga kings (p. 32), is a tissue of inaccuracies.

The book is enriched with three appendices and six plates reproduced from ancient historical drawings.

U. N. GHOSHAL

GANDHI: WORLD CITIZEN: *By Muriel Lester. Kitab Mahal, Allahabad, 1945. Eight illustrations. Pp. 201. Price Rs. 5-8.*

The author has not only had the advantage of knowing Mahatma Gandhi intimately for the last twenty years or so, but has also been an active

of the principle of non-violence in the West. This gives her a singularly advantageous position; and she has made ample use of it in her present book on Gandhi and his ideas.

The first part of the book consists of eleven chapters in which she describes Gandhiji's position with reference to questions like Truth or Non-violence, Prohibition or Education, Women and Machinery, and so on. Miss Lester makes frequent use of anecdotes in order to illustrate what she means; and this undoubtedly proves very helpful to the average reader when he has to understand Gandhiji's very original approach to numerous social questions. The second part of the book is a chronicle of Gandhiji's life, which differs from similar chronicles published by others in more ways than one. The author not only gives us her analysis of the chief events which have gone to shape Gandhiji's life; but she also shows very successfully how Gandhiji's non-violence has gradually developed from a technique initially employed to right wrongs in the private sphere, or the narrow sphere of family or social life, to one which may well claim today to take the place of war in the settlement of international disputes.

NIRMAL KUMAR BOSE

THE LAST PESHWA AND THE ENGLISH COMMISSIONERS (1818-51): *By Pratul C. Gupta. Published by S. C. Sarkar & Sons, College Square, Calcutta. Pp. i-v + 117. Price Rs. 6.*

The downfall of the independence and political power of the Marathas is admitted on all hands to be due to the character and doings of the Peshwa Baji Rao II and his regime 1800-1818, forming a sorry episode, is naturally viewed with dislike and disfavour. But we cannot forget that it was his dream and ambition to revive the decaying Maratha Power. True, he lacked many qualities and gifts of a ruler, *e.g.*, far-sighted vision, organising skill, reforming spirit, was nurtured in vices from early boyhood and was even deficient in personal courage but there was one quality in which he excelled—an extraordinary capacity for subtle diplomatic moves and intrigues, "a ceaseless spinning," to use the more appropriate words of Sir Jadunath, "of diplomatic cobwebs" that occasionally peep not merely in the minutes of the G.G.'s but are amply revealed in the volumes of the Poona affairs edited by R. B. G. S. Sardesai as also in the pages of Dr. P. C. Gupta's volumes "Baji Rao and the East India Company" and its successor, the one under review.

The last of the Peshwas showed himself at his best in wiles and subterfuges, dissimulation and the lengthening out of negotiations by endless tricks and stratagems. Concealing the dagger within his velvet glove he frisked and flirted with the British Residents almost with a feline delight but mere feline cunning without the tiger's (paw) always ends in futility, particularly when pitted against the British, superior not only in technical skill but also in public virtues. Yet the interest in him does not diminish altogether, for Sir John makes such a statesman-administrator as Sir John Malcom a victim of his blandishments and coaxes him to hold a brief for him with the G.G. even after all his doings during 1817-18.

Dr. Gupta in the present monography shows us this quality of the Peshwa did not forsake him even in his exile at Bithur; many of the British Commissioners, *e.g.*, Messrs. Low, Cooke and Manson supported the Peshwa's point of view and sometimes pleaded his case before the G.G.; secondly, that Baji Rao led the same life in Bithur as he did in Poona by dabbling in futile intrigues. Naro Pant Aptes' visit to Bithur and then retirement to Gwalior to take up permanent residence, the errands to Aurangabad and Poona for obtaining fruits and flowers, and oil for the

cure of rheumatism, apart from his seditious intercourse with Pratap Singh of Satara were highly suspicious; nor possibly did his desire for annual pilgrimages to Mathura, (why not to Benares?) arise from his religious fervour, particularly when we bear in mind his doings at Pandarpur, Mahad and Nasik during the days of his Peshwaship now revealed in the Poona Residency records. And it is not strange that this annual pilgrimage was suspended in 1825 by order of the Government. We applaud Dr. Gupta's restraint and dispassionate judgment on this matter, p. 103, but beg to differ from him in the view that the ex-Peshwa had really no hand in the many intrigues, but was merely influenced by his designing councillors. He was not, after all, an invertebrate.

The book is the result of much industry and we have no doubt that it will interest not only those who would like to obtain a glimpse into the Peshwa's life, but also others who want to acquaint themselves with the careers of the British officials associated with him during 1818-1851.

N. B. Roy

VERDICT ON SOUTH AFRICA (The Tyranny of Colour): *By P. S. Joshi. Published by Thacker & Co., Bombay. Pages 365. Price Rs. 9-12.*

I must congratulate my learned friend Shri Pranshanker Someshwar Joshi on this fine piece of work which will be valued by all interested in the problems of our people domiciled in the Union of South Africa. No better person could be found to undertake the laborious task, and without labour this great record of Whitemen's tyranny could not have been prepared. Joshiji has spent the best part of his life in the Transvaal as a teacher as well as a leader, and has intimate knowledge of the Indian problems. The book is a clear indictment of the policy based on racial discrimination hitherto pursued by the Union Government masquerading under the plea of self-preservation. In this brief review I can give only a general impression; it is essentially a book which every one must study for himself. The general conclusion which its history conveys is that no Empire, the greatness of which is the boast of its island people, can maintain that boast in the world of today, if overwhelming millions of its subjects are estranged by real enemies of the Empire under the eyes of the nation which is expected to hold it together. Those foes, secret and open, are in South Africa dancing to the tune of a new Messiah of the White Race Supremacy Religion, Jan Christian Smuts. He is a foremost exponent of racial discrimination, and his latest legislation now before the Union Parliament, if carried out, will degrade our people to a status of helotry against which we put up a fight vigorously since 1893 when Natal was a crown colony. This drastic measure so alarmed our countrymen that the South African Indian Congress has sent a Delegation to India in order to apprise the people and the Government of India of its implications and ultimate consequences. In reality this legislation is an open insult to Inlia and a challenge to the whole of Asia. Hence the book dealing with the Indian problems of South Africa is undoubtedly a timely and illuminating publication. The book makes a most painful reading and reveals the wholly irresponsible character of the alien Government of India. It throws a lurid light on the incalculable mischief and misery that the tyranny of colour inevitably entails. It also reveals, in brutal nakedness, how hopeless and miserable the Indian's lot is in British Colonies and Dominions, but worst of all, in his own Motherland owing to foreign domination. The Indian labourer or soldier is in requisition everywhere to solve the Whitemen's economic and military problem and facilitate their struggle for wealth and expansion, but there is none to save him from tyranny abroad and starvation at home. The book will serve as an eye-opener to those who want India to remain under the so-called British Commonwealth of Nations.

Bhawani Dayal Sannyasi

SIMONE: *A novel by Lion Feuchtwanger. Hamish Hamilton, Ltd., London. Thacker & Co., Ltd., Bombay. 1944. Price Rs. 6-14.*

A story of the fall of France in 1940. The heroine, a 16-year old Burgundian girl named Simone, a St. Joan born long after her time, is impelled to resist the Germans in her own way, by setting fire to the patrol and the lorries, the property of her uncle, lest they should fall into the hands of the Germans. The tense moments of her psychological thought and action have been vividly described. The treatment has been psychological.

The remarkable feature of the novel is the way in which the author has woven the dreams which a young girl can have of her heroine and her attempts at realizing them in practical life—the idealism of the past, never dead, thus springing into life and inspiring the young.

Simone's is the only character which has been drawn, the others forming into the background, and her portrait gains all the more charm and dignity for that.

P. R. Sen

CAPTIVE SOIL: *By Mrinalini Sarabhai. International Book House, Ltd., Bombay. Pp. 47. Price Rs. 2-8.*

In technique and in theme, this little play in two acts offers certain arresting and original features. It is a poetic drama with a chorus, a prologue and an epilogue, and if it does not present a moving action which is said to be the life of a drama, it is deeply charged with a passionate idealism, which at times gives out an incandescence of beautiful poetry.

It is an incomplete saga of an enslaved soil, or for that matter, any enslaved soil, which, unarmed and unaided, has to wage a war of soul against the overwhelming antagonism of brute force and tyranny, with the only weapon of self-sacrifice. "No, our weapons differ," says the patriot in the play. "We shall overwhelm them in our death." The story element is meagre. It is rather the typical picture of an enslaved country with typical characters, which make the impression, that of an oppressive, alien rule, with all its hollow paraphernalia of justice and legislation, trembling at the mighty impact of a passive resisting nation grappling for its inalienable birthright, freedom. Neither the rosy dream of love, nor the siren-songs of beauty and art, can lure away the patriot from his country's struggle for freedom. A new love has crept into his heart, "a love, but not a woman: A love born of the soil."

Gandhian technique of non-violent passive resistance forms the background of the play. It ends with a solemn epilogue which voices the rebirth of the one and indivisible freedom in the society of man. The play presents the most vital problem of all times, namely, the problem of peace, and the most unhappy soil of today, namely, the captive soil of India, stands behind the veil of a thin allegory.

Sunil Kumar Basu

BRITISH PROPAGANDA IN AMERICA: *By Chaman Lal. Published by Kitab Mahal, Allahabad. Pages 125. Price Rs. 3-12.*

Mr. Chaman Lal has done a service to his country and for the cause of truth by exposing in this small volume, the vile British propaganda against India carried on in America by hired men both Indian and European. That a large amount of Indian tax payers' money is spent in this nefarious business, is no longer

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a secret and was indirectly admitted by the Government when figures for such expenditure were given to the members of the Central Legislative Assembly in reply to a question. To keep her Imperial grip over India, England wants the moral support of the civilized world and in her shameless efforts Indian men and money are utilized for the purpose. Mr. Chaman Lal put in some straight questions to Sir Girija Sankar Bajpai, Agent-General of the Government of India in U.S.A., but this ex-member of the Viceroy's Executive Council could not give any satisfactory reply. Mr. Chaman Lal in his own way contradicted all these mischievious publications during his tour in U.S.A. and other Indians in America and their American friends are doing the same, but so long the Government of India is in the hands of an alien bureaucracy, the source of mischief cannot be stopped.

A book of this nature should have widest publicity in the country, so that Indians may know that insult is being added to the injury to India's cause by a Government which pretends to be one of the most advanced and civilized in modern times.

A. B. DUTTA

SANSKRIT

BRIHASPATI-SMRITI (Reconstructed) : *By K. V. Rangaswami Aiyangar, Honorary Professor of Economics, Benares Hindu University. Gaekwad's Oriental Series, No. LXXXV. Oriental Institute Baroda. Royal 8vo. Pp. 186 + 546. Price Rs. 15.*

The present work puts together about 2,400 *slokas* found attributed to Brihaspati in about 200 later works a number of which still remain unpublished. These are arranged in seven sections, *e.g., Vyavahara, Samskara, Acara, Sraddha, Asanca, Apaddharma* and *Prayascitta*. So this represents a fuller reconstruction than the one made by Dr. Jolly more than half a century back and highly acclaimed by scholars as well as jurists. A long introduction covering more than 100 closely printed pages deals with topics like the relationship of Brihaspati with older authors ; his peculiarities and special features ; the authenticity of portions cited only in later works and the genuineness of verses ascribed to different authors in different works. Some of these involve controversial issues, the satisfactory solution of which must await the discovery of more definite evidence. The labours of the learned editor are highly commendable. No pains have been spared to make the work useful in every respect by the addition of a number of indexes and appendices. The method followed in the foot-notes in referring to sources is, however, not very clear especially in connection with variants the sources of which have not been indicated.

CHINTAHARAN CHAKRAVARTI

BENGALI

PATABHUMIKA : *By Ramapada Mukherjee. To be had of Ramesh Ghosal, 35, Badurbagan Row, Calcutta. Price Rs. 2-8.*

Sj. Rampada Mukherjee has made his mark in Bengali literature as a novelist and short-story writer. The theme and characters of his fictions and stories are mostly selected from our everyday life. He sees something uncommon in the most ordinary and commonplace things and gives a tinted description of what he sees. He possesses the power of picturesque embellishment and his lucid and graceful style is enlivened by sweet humour. The manner in which he narrates his stories is fascinating. *Patabhumika, (i.e.,* the background) a collection of ten short stories from the pen of this distinguished writer has, undoubtedly, enriched our literature. The best story in this book is 'Patabhumika' wherein the talents of the author are fully displayed. From the very beginning he describes the story in a highly enjoyable humorous way but in the main [illegible] gives such a twist that the reader is overwhelmed with sorrow at the sight of the sorry plight of the poor rickshaw driver sitting beside his broken rickshaw. In the background of this as well as some other humorous stories the writer deftly depicts such pathetic scenes which not only touch the reader deeply but also stir the innermost in human consciousness profoundly. With the exception of one or two all the stories contained in the book will be highly appreciated by all lovers of literature.

NALINI KUMAR BHADRA

ANTARAL (Behind the Screen) : *Sri Digindra Chandra Bandyopadhyay. Bengal Publishers, 14, Bankim Chatterjee Street, Calcutta. Price Rs. 2.*

A problem-drama dealing with the issue of illegitimate children in society. It is difficult to weave in the fine texture of art one's social views, but the writer has partially succeeded in the task.

D. N. MOOKERJEA

HINDI

PHALAHAR CHIKITSA : *By Kaviraj Mahendranath Pandeya, Ayurved-Sastri. Mahendra Rasayanalaya, Katra, Prayag. 1943. Pp. 209. Price Rs. 2-4.*

The author, who is a progressively minded Ayurvedic practitioner, describes in this book the properties of various fruits commonly available in India. He is of opinion that a judicious use of fruit-diet, coupled with hygienic methods of treatment, is sufficient to rid the human system of most forms of diseases without the intervention of drugs. The author has made use of modern researches in dietetics ; and his book also contains practical instructions with the help of which the common man will be able to maintain a high standard of natural health. We recommend this book to all those who are interested in the drugless way of treatment.

NIRMAL KUMAR BOSE

MARATHI

MANGALADHAMA : *By Gopinath Talvalkar. Published by R. J. Deshmukh, 191, Shaniwar Peth, Poona 2. Price Rs. 3-8.*

An excellent treatise on Gandhism as a code of conduct and philosophy of life is this book by Mr. Talvalkar, done in absolutely chaste and simple Marathi. Based faithfully on Gandhiji's own writings, it can become a correct reflection of the great teacher's ideas and thoughts as regards human behaviour, how it is and how it should be, if the human race is to be saved from self-destruction. For summer and winter classes of Seva Dals, it is an ideal text-book for the exposition of Gandhism as a social, economic, industrial, educational and political cult.

T. V. PARVATE

GUJARATI

MENDINO RANG (Henna Dye) : *By Raj Hans. Printed at the Raichura Golden Jubilee Printing Works, Baroda. 1944. Cloth-bound. Illustrated. Pp. 175 + 5. Price Rs. 3.*

The cruelty of this capitalist world, as it affects poor men and women particularly the latter, if they happen to possess good looks and beauty, is handled here, with first-hand knowledge although the author happens to belong to the Princely class. Mendi (Henna) is the name of the heroine of the story, who with [illegible] husband undergoes various vicissitudes in life, till she comes back to her village home. It is a picture which grapples one's attention and if only the lesson it teaches is taken to heart, society will greatly benefit.

THE MIRACLE MAN WITH UNRIVALLED POWER

India's Greatest Astrologer & Tantrik-Yogi

RAJ JYOTISHI, JYOTISH-SHIROMANI PANDIT RAMESH CHANDRA BHATTACHARYYA, JYOTISHARNAV, M.R.A.S. (London) of International fame, President—World-Renowned All-India Astrological & Astronomical Society. (ESTD. 1907 A.D.)

He is the only Astrologer in India who first predicted the Allies Victory in the present world war on 3rd. Sept., 1939 within 4 hours the very day of the declaration of war which was duly communicated to and acknowledged by the Secretary of State for India, the Viceroy and the Governor of Bengal and who is also the consulting Astrologer of the **Eighteen Ruling Chiefs of India.**

It is well-known that the Astrological predictions of this great scholar, his wonderful methods of redressing the pernicious influence of evil stars, his power to bring success in complicated law-suits and also to cure incurable diseases are really uncommon.

Many Ruling Chiefs of India, High Court Judges, Commissioners of Divisions, Advocate-Generals, Nawabs, Rajas, Maharajas, etc,, and also many reputed personalities of the world (of **England, America, Australia, Africa, China, Japan,** etc.) have given many unsolicited testimonials of the great Pandit's wonderful powers.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji. He is a great Tantrik." **Her Highness The Dowager 6th Maharani Saheba of Tripura State** says :—"I am feeling wonder at the marvellous Tantrik work and excellent efficacy of his Kavachas. He is no doubt a great personage with miraculous power. **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt.,** says :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son."...**The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt.,** says :—On seeing my son, his prophecy about my future is true to words. He is really a great Astrologer with extraordinary power." **The Honourable Justice Mr. B. K. Roy of Patna High Court** says :—"At a glance on me, he began to disclose my mental thoughts and he predicted marvellously many things. He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot** says :—"The wonderful power of calculation and Tantrik activities of Panditji on several occasions have struck me with greatest astonishment. Really he is unique in his line." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court,** says :—"Panditji has bestowed the life of my dead son. I have never seen in my life such a great Tantrik-Yogi." **Mr. J. A. Lawrence, Osaka, Japan,** writes :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2724, Popular Ave., Chicago, Illinois, U. S. America** :—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mrs. F. W. Gillespie, Detroit, Mich., U. S. America :**—"I am wearing your special Dhanada Talisman and so far my luck has been with me a great deal better than in the past." **Mr. K. Ruchpaul, Shanghai, China** :—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Eita, Govt. Clerk & Interpreter in Deschang, West Africa** :—"I had orderd some Talismans from you that had rendered me wonderful service." **Mr. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon** :—"I got marvellous effects from your Kavachas. I have had transactions with you almost every year for the last 20 years for about Rupees three thousand." Etc., etc. and many others.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

WONDERFUL TALISMANS (Guaranteed). In case of failure, Money refunded.

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. It will give even a beggar the wealth of a king (as written in Tantra). **Price Rs. 7-10.** Special and capable of giving immediate effects **Rs. 29-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special and capable of giving immediate effects **Rs. 34-2. (The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha).**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-8.** Special **Rs. 34-2.**

INDIAN PERIODICALS

Basis for a World Religion

Hamilton Fyfe suggests "Love is God" as the foundation of a world religion. Gandhiji's formula is also correct: "Truth is God." There is no religion higher than Truth. In an article in *The Aryan Path* Hamilton Fyfe observes:

Bagehot, as bold a thinker as he was cautious in his banking business, suggested in the middle of the nineteenth century, when philanthropy flourished as never before, that on the whole benevolence perhaps did more harm than good. He might have hinted also that religion lay open to the same criticism, because of the conflicting, dogmatic and mutually destructive views of its professional advocates.

Mankind has suffered, ever since history gives us any glimpse of its activities, from the absence of a faith that could appeal to all with the same force and the same beauty. Those of us who recognise this must be always on the lookout for a religion—that is, a bond, a tie, a fellowship—which might unify the whole human race, piercing beneath mere surface differences as Tagore put it, "down below race, rank, religion, to the fundamental humanity, man as man." We cannot be content to hope patiently for William Penn's millennium when "all Humble, Meek, Merciful, Just, Pious and Devout Souls shall know one another, though here the divers liveries they wear make them strangers." We want, we need, a world religion now.

I read, therefore, with eager interest a sermon kindly sent to me by the head of the Terapanthi Sect of Swetamber Jains, together with a Short History of the Sect. I found in these publications much that seemed excellent to me, but I was disappointed not to find anything that pointed to Jainism (about which before I had known nothing) as a possible world faith. This disappointment I should have kept to myself but for the invitation given me to express a "considered opinion" on the matter. I shall be grateful to *The Aryan Path* if I may do so in its widely-read pages.

The Jain system, as explained in the history, consists almost entirely of rules for the priesthood, or rather the preaching friars who travel about giving instruction, but not taking part in "any social, political or legal affairs" and paying "unstinted homage to their Head" who is described as "the highest living deity" and referred to as "Him" with capital H.

In some ways the rules laid down are more severe than those under which Christian monks and friars were supposed to live. The Jains are not allowed, for example, to warm themselves at a fire in cold weather or to cool themselves with a fan when it is extremely hot. The reason for this is that "fire lives" and "air lives" might be injured. They are not to eat meat or vegetables: what they do eat is not stated. They must not drink unboiled water because there may be "water lives" in it; but why it should be more humane to boil these to death instead of swallowing them is not explained. It looks as if the idea was to safeguard the consumer's interior from the entrance of animalculae rather than to show kindness to the animalculae themselves.

Now it seems to me that any faith which can be offered with hope of acceptance to the mass of humanity in all lands must be of a social character and must, if conduct is shaped by it, lead to political action, using "political" in its proper original sense—"related to the well-being of the community." I feel also that to follow blindly, without reserve, the orders of any fellow-man as to what we shall think and believe is unworthy of intelligent men and women. To deify their chief, as Jains do, can be described only as relinquishing intelligence altogether.

In the sermon on World Peace delivered by this God-man I have looked vainly for any wisdom that is not contained in similar discourses by other religious leaders. Indeed, I find rather less, for the sermon asks us to credit the possession by certain people of "a Soul Force which can reduce to ashes sixteen provinces" and denounces the teaching of Evolution, calling for education concentrated on the Soul and the Afterlife, subjects about which we know nothing and which are seldom referred to nowadays in pulpit utterances elsewhere. This, by itself, makes it impossible that Jainism should exert any wide or deep influence over the peoples of the world today.

For education must deal, if it is to have any lasting and strengthening effect on character, with what we know, not with what we imagine or fancy. Children should be told what theories have been put forward as to the nature of the universe and Man's place in it; but no theory should be represented to them as fact. To do that would be not merely immoral but futile.

Most of us heard a good deal aout the soul and the after-life when we were young, but very few indeed could now explain what are their convictions on these matters.

The terms are but cloudy symbols of something they never really believed in—any more than their teachers did.

What we know about the world we live in is that it certainly was not planned as a habitation for Man. That is proved by Man's unceasing efforts to alter it, to make it suitable for him to live in. Man departs as far as possible from the natural order, in which all other living creatures live and move and have their being without any attempt to escape from it.

The force we call Nature must therefore be distinguished from the idea of God—unless we conceive of God as heedless of us and all other species ; as coldly just in certain aspects and callously unjust in others ; as almighty, but neither loving nor merciful. For that is how we are forced to conceive of Nature and, although they have never resolutely faced up to the problem of God and Nature, all religions that have spread widely assume that God is our Father, kindly, affectionate, tending us as a shepherd tends his sheep.

To pretend in schools and colleges, in temples, churches and mosques, that the world was designed for Man by a benevolent Creator is, I repeat, futile. Even while they are young, many boys and girls detect the falsity of it. If they think at all when they grow up, they turn resentfully against the religion that has atempted to deceive them. They find, if their reading is of any value to them, that the whole of the world's literature negatives the assumption that Man is a superior creature because he is gifted (or cursed) with self-consciousness.

This, the one attribute which sets him apart from other animals, is supposed to have been conferred on him as a special favour by a divine ruler. Yet throughout the ages Man has been depicted in literature as weak if not wicked ; as greedy of power and wealth ; as a victim to his own passions or to the cruelty of his kind. From the earliest recorded times Man's "crimes, follies and misfortunes" have been the theme of fiction, as Gibbon declared them to be the stuff of history.

From the author of the Book of Genesis describing how the human race was cursed by Jehovah ; Homer perceiving "no more piteous breed that creeps on earth's crust"; Burton declaring in his *Anatomy* that Man had many enemies such as lions, wolves and serpents, but that the worst enemy was himself, "since no fiend could torment, tyrannize and vex as one man doth another"; to William James pronouncing Man "the most formidable of all the beasts of prey and the only one to prey systematically on its own species," almost all writers of note throughout the ages have been in agreement as to Man—at any rate, civilised Man—being a misfit.

Yet, while we are compelled to admit that it is largely true, if not the whole truth, our observation notices a quality in Man which struggles towards a life at once more natural and more rational, to use Matthew Arnold's words. We can benefit ourselves by studying Nature closely and obeying its rules, reducing the artificial elements in our lives by reverting to natural conditions as far as we can. But in another direction this quality sets us against Nature.

Nature has no pity, shows no mercy, creates and destroys with the same disregard for suffering, seems at one moment to be a kindly parent and the next annihilates its offspring with unaccountable violence. In humanity there are chords of sympathy, of fellowship.

Many animals, possibly all, have these in rudimentary, unconscious forms, such as mother love, such as the protection by males of their mates. These are instinctive. We are aware of our feelings ; we can strengthen or weaken them at will—or by atrophy of will. If they were strengthened to the utmost, we should behave to all our fellow-creatures, non-human as well as human, "as we would have them behave to us," according to the rule Confucius formulated 500 years before Christ. That would be rational behaviour, the only firm basis for a society that could hold out hope of happiness, stability or long duration.

Here then is the divine element in Man ; here the one result of intellect (sprung [illegible] self-awareness) which gives it value as an aid to living. This element which we alone can cultivate and develop, contains that was implied in the phrase "God is Love," which by experience we know to be untrue if God and Nature are one. Turn the phrase round ; make it run "Love is God" and it seems to me we have hit on the true formula, the only possible formula, for a religious bond or tie which can unite all mankind.

I prefer the term "comradeship" to "love," which has been soiled and for many spoiled by being applied almost exclusively to one kind of love and disgustingly exploited by film producers and composers of songs for crooners. "Comradeship" strikes a healthier, sounder note. It gets rid of much smug pretence. We cannot say honestly that we love a thief or a murderer, but it is quite possible to feel towards them as comrades who have been unfortunate ("There but for the grace of God . . .") and, while we take away their liberty or their lives, to treat them as we should wish to be treated if we had sinned against comradeship.

This acceptance of equality and brotherhood was at the root of all great religions when they were founded.

It was soon overlaid by forms and ceremonies, regulations and glosses ; it was hidden away by hierarchies, made of small account by priests and presbyters. They spoke of "all men equal in the sight of God," though they professed belief in a God who had made them anything but equal. They meant that the society of comrades was to be looked for only in a world to come.

That form of religion, like all forms which depend on belief in heaven and hell, is dying. The world cries out for a faith, a rule of life, more substantial, more effective, more in harmony with its knowledge of itself. Offer "Love is God" to children for a generation and it would be well on the way to acceptance as a working religion. Children would go more than half-way to meet it. They are ready for comradeship, quick to make friends, to trust, to show sympathy. Sadly we watch the spirit of comradeship being crushed in them as they become adolescent and usually disappears when they have grown up.

It would be easier to keep it alive than to kill it, it dies hard. "Race, rank and religion," Tagore's three obstacles, have to be forced on young minds which instinctively repel them. What Jesus meant when he said we should all be like little children is clear to everyone who understands the child character. It is his child-like readiness to treat all alike, to be friendly and helpful, to be always the good comrade, that has kept his personality vivid and given his savings power. The legends encrusted on him have hindered rather than helped.

"Get rid of your miracles and the whole world will fall at Christ's feet," Rousseau cried; there was truth in that. Nowhere can we build religion any longer on the miraculous, the supernatural. Nor is this to be regretted, for never have religions so based been efficacious. We can do better; we can use a foundation vastly more secure, base a rule of life, not on faith, but on certainty—the certainty that only through comradeship with all living creatures can happiness come to man, woman or child.

C. F. Andrews

G. A. Natesan writes in *The Indian Review*:

C. F. Andrews is one of the few Englishmen whose friendship I have been really proud of. When he was with you, you felt you were in the presence of a really superior being. A devout Christian, he was a true servant of God and he ever sought to serve suffering humanity not only in India but in several other parts of the globe. He was really a Deenabandhu, champion of the oppressed and the lowly. Suffering and distress in any form affected him deeply. He would not hesitate to rush immediately to places infected by plague, cholera and the like if he could be of any service to those in that area. In him you really found "the cry of duty springing at once from a great soul." The enslavement of one individual by another was to him a moral abomination. Hence his strong condemnation of indentured labour and his successful and indefatigable efforts for the stoppage of the same. The domination of one race over another was a greater abhorrence to him. The granting of independence to India was with him a moral question and many may not be aware that long before Nehru, Gandhi and even the Congress thought of it, he advocated independence for India. A genuine soul and a true Christian, he felt deeply the wrongs inflicted by Englishmen on India. His life was truly a dedicated one. In him you saw the true triumph of Christianity and humanity reaching its high water-mark.

As I think of dear Charlie, many things come to my recollection. His benignity found expression in his affectionate smile, his flowing beard and his hearty embracing of his dear friends, of whom I could certainly count myself as one. It was my good fortune to be closely acquainted with him during my stay in London in 1928 for over three weeks. And in later years, I had the honour more than once of having him as my guest in my residence at Madras. When he was staying with me, I never felt I had an English guest. He was really an Indian among Indians. I had many opportunities to know the innate greatness of this man. You found no trace of racialism in him, nothing of the pride and arrogance which you notice unfortunately in some of the members of the ruling race in India. In his case it was all gentleness, love, affection and tenderness to an extraordinary degree.

In 1938, Mr. Andrews was staying with me for a few days. It was then that I was laid up with a serious heart attack and my life was despaired of. I well remember his entering my room one morning, sitting by my bedside and telling me: "This morning I thought of you in my prayers." In the days of my illness, several pujas and offerings were held, but I confess I felt at that time, and the thought is still present in me, that the prayer offered by Andrews was one of great comfort to me. The fact that he was a Christian never occurred to me. It was a great and kindly soul that prayed. Hence it was that a few years later when Andrews suggested that I should be the publisher for his "Sandhya Meditations" a series of discourses delivered in the Christkula Ashrama at Tiruppattur—I readily responded to his suggestion, and Andrews was greatly pleased with me, his Hindu friend, for undertaking the publication.

Here are two incidents which I heard in London in 1928. A good friend of mine had purchased for Andrews a fairly costly overcoat. A few weeks afterwards, Andrews turned up at that friend's house on a cold evening without the overcoat. "What is the matter? Have you lost the overcoat?" exclaimed the friend. "No," replied Charlie, "I gave it to a poor fellow last week who was shivering."

One day, an Indian student in London turned up at Andrews's place, and wailing over his lot, desired some pecuniary assistance from him. Andrews's noble soul was deeply touched and without hesitating to enquire about the antecedents of the visitor, but deeply anxious to help him in some form or other, explained to the young man that at that moment he could not afford to spare him any money, but that he had the manuscript of a book which he wanted to have typewritten, for the cost of which he had some little amount left. The fellow clutched at the opportunity, asserted he knew typewriting, took the manuscript and some money for typing. Poor Andrews! He never saw the man nor the manuscript afterwards. Andrews would not say any harsh word of him; he forgave him altogether.

The End of a Chapter

The New Review observes:

The twenty-first session of the League of Nations was its last. From the first it was clear that the League was not viable. It was a league of some nations and not an international association; it was based on power and not on law; though worked on a power basis, it never exerted power and was satisfied with vocal performances. The U.S.A. whose President had fostered it abandoned it from the start. Britain and France which dominated its policy never came to any agreement about the international police force that would have enforced its mildest sanctions.

When the World War came on, the League was moribund and left to die in its Geneva isolation. At the official obsequies this month, there was no mourner. Yet the League had a department which did most useful work, the International Labour Office which fostered timely social legislation in many countries, not through dictates but by dint of discussion and publicity.

The United Nations Organisation which replaced the League has not yet officially taken up the I.L.O. owing to Soviet prejudice, and it has all the radical deficiencies which crippled the League. The U.N.O. also is worked on a power basis and is dominated by Britain, Russia, and U.S.A. Will it ever evolve into an international society based on law, open to all countries on equal terms, and armed with a suitable force?

Its latest proceedings are not reassuring.

The Second Para of the Second Chapter

The same *Review* observes :

The second session of the Security Council which is the executive of the U.N.O. was convened at the end of April at Hunter College in the Bronx. The basket-ball court had been turned into a light-panelled meeting-room and the smell of fresh hangings and fresh varnish told of America's sanguine welcome. The representatives of the Big Eleven were there : Quo Tai-chi the soft-spoken president ; James F. Byrnes clear, sharp and gathering laughter from the gallery; Andrei A. Gromyko the stern, stubborn and suspicious bureaucrat ; Sir A. Cadogan cool, clipped and careful, representing Eton, Oxford and the Empire ; Pedro L. Velloso the bald bespectacled lawyer of Brazil ; Mahmoud H. Pasha the plain-speaking, table-thumping magistrate who often reminds people of his work in the Egyptian High Court ; Francisco C. Nejera surgeon, poet, guitar-player and gesticulating diplomat who speaks French with a Mexican accent ; Henri Bonnet the long-nosed wary worried searcher after *le mot juste* ; Lt.-Col. W. R. Hodgson striking his reddish mustache and betraying cockney affinities in his Australian dialect ; Dr. Eelco van Kleffens the neat, thin and brisk Hollander who speaks logic in an illogical world ; finally Oskar Lange the rotund, high-pitched, pedantic champion hair splitter of Poland and lackey of Soviet Russia.

It was good to see Comrade Gromyko at the table, for the Soviet has acquired the reputation of a bad mixer among nations. At the first sessions of the Far Eastern Advisory Commission in Washington last year, Russia was absent as she had been absent, months before, at the international meetings on civil aeronautics and as she was to be absent at the London International Education Conference. At the Quebec world-conference on food she was present, but remained sullen and she withdrew before the end.

The Calcutta University and Its Critics

In the concluding portion of his article in *The Calcutta Review* Prof. Dharam Pal observes :

The Government of India approved the general principles of the Punjab Government's proposals (1865) for the establishment of a new University in the Punjab in the following words : "The Government ought to aim at giving to the people of India education in science and in all branches of true knowledge through the medium of their own vernacular languages ; and as the best means of improving those languages, and for other weighty reasons, the Government ought to afford every practicable encouragement to the study of the classical languages of the east. Indeed, it seems to His Excellency in Council impossible to suppose that the people of this country can ever be educated except through the medium of their own languages. The system of the Calcutta University is in some degree founded on the assumption that true knowlege, in its higher branches, can only be imparted to the people of India through the English language, and that the only literature that has any real value is that of Europe. But both these assumptions are open to question. The present difficulty of conveying scientific truth through the vernacular languages of India is indisputable, but there is no reason to doubt that this difficulty may be gradually overcome.

"In Bengal, so far as the power of the language to express scientific ideas with precision is concerned, this difficulty has been to a great extent overcome already. Within the last thirty years the Bengalee language has undergone such a process of improvement and expansion that, in the opinion of those best able to pronounce a correct judgment in the matter, it can now without difficulty be made the instrument of conveying knowledge, and the vehicle of accurate thought and abstract ideas" (Government of India to the Punjab Government, 19th Sept., 1868; Parl, Papers 1870, No. 397, pp. 363-65). The Duke of Argyll, the Secretary of State for India, sanctioned the establishment of "University College, Lahore" and added, "The institution will be competent to grant certificate, but not degrees, and may hereafter, if attended with due success, be expanded into University (Argyll's Ed. Despatch, No. 13 ; 5th Aug., 1869).

The Post-Mutiny era was of great importance in the history of Calcutta University, for the criticisms levelled against the constitution and curriculum of the University suggested the lines on which the future reform of the University was to be carried out.

The critics of the Calcutta University were right in emphasising the importance of vernaculars as the medium of education. Much of the superficiality of the present-day educated classes and their lack of originality in spite of abundant assimilative genius, are due to the defects of bilingual thinking (Sir S. Radhakrishnan : *The Philosophy of Rabindranath Tagore*, p. 210). As pointed out by Rabindranath Tagore, "Our foreign learning of today remains a thing of the school or college, is kept hung up like a sign-board and does not become a part of our life—or remains in our note-books and fails to get transcribed into thought and action." It would be idle to deny the advantages which we have derived from a study of European science and literature. "India would have been shorn of its fulness if it had missed contact with the West. The lamp of Europe is still burning : we must kindle our old extinguished lamp at that flame and start again on the road of time." Nevertheless, it has to be admitted that we cannot hope to develop any great literature in the English tongue. The modern educated Indian is a false copy of his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Western contemporary. His voice is an echo, his life a quotation, his soul a brain, and his free spirit a slave to things." The only solution of the difficulty is to make the vernaculars the medium of education. "The true way to touch the heart of the people would be to make vernaculars the means for the spread of knowledge. This is the only way to carry the good tidings to every corner of India. If we do not preserve the sacred Sanskrit and the beautiful vernaculars of India and help them to grow by use and exercise, then the very springs of Indian higher life are destroyed." Dr. John Matthai pointed out the drawbacks of English as the medium of instruction in his Convocation address to the graduates of the Allahabad University delivered on 8th December, 1945 :

"No genuine interest in the substance of knowledge can be created while so disproportionate a demand is made on the faculties of the young in acquiring the medium through which knowledge is imparted. We have now reached a stage in the development of University education in India when we can no longer postpone a final decision on this vital question. It is true that the English language opens to us a literature which, as a living, growing embodiment of human thought and experience, is perhaps unequalled in richness, variety and amplitude. It also places in our hands a vehicle of expression which in a rare degree combines beauty and elasticity and which, moreover, enables us to reach out to the uttermost parts of the earth. Many of us who have employed it as our main medium of expression during our working lives would not merely find it difficult to discard its use but could hardly do so without a pang at the thought of the beauty, pleasure and inspiration which its use has brought into our lives. The fact still remains that it is a language, which, in spite of its widespread use in the country and the mastery of it which Indian scholars have achieved, remains essentially foreign to what is deepest in us and incapable of providing an organic link between the few who have received the blessings of education and the many who have not, nor between us who are alive today and those who in the past created our great heritage of culture. Knowledge is a continual source of interest and power. But the path that leads to it is strait, narrow and hard, which is not easy to tread if we try to walk by the dim and unfamiliar light provided by a language that is not ours."

We have opened a "Clinical Department" under the direct supervision of qualified and experienced physicians and surgeons. All persons suffering from loss of vitality and vigour, premature old age, lack of stamina, married and personal hygiene problems, MENTAL AND NERVOUS DISORDERS (psychoanalytic and suggestive therapeutics under deep hypnosis), OBESITY (planned diet, re-educative exercises, electro vibratory massage and hormone vitamin mineral feeding). ALL CONSTITUTIONAL CHRONIC DISEASES WHICH HAVE DEFIED ALL TREATMENTS, etc., can now secure personal individualised treatment and expert guidance. Latest laboratory equipment to facilitate exact diagnosis available. ELECTRO-THERAPY (diathermy ultra short wave therapy, electro surgery, deep X-ray therapy, actino therapy, ultra violet and infra red radiations, electric ionisation etc., etc.,) with latest, modern apparatuses is a SPECIALITY at our CLINIC. Consultations free. Strictest privacy and confidence guaranteed. Consult in person during 11 a.m. to 2 p.m. and 4 p.m. to 6-30 p.m. on any week day. Saturdays 11 a.m. to 2-30 p.m. If you cannot visit us personally, send the full history of your case in detail, (if possible, ask your family physician to send us a detailed report) and a STAMPED SELF-ADDRESSED ENVELOPE for "diagnosis and suggested treatment" of your case.

Send Rs. 2 (postage 8 as. extra) by Money Order or Postal Order, (or by V.P.P. for Rs. 2-10) for a copy of the latest revised and enlarged 3rd edition of "Health and Vitality by Modern Methods." Contains over 450 pages and 200 illustrations. Everything you want to know about hormones, vitamins rejuvenation, etc., etc., is described in minutest detail in this handbook. Nothing like it ever published before. ASK FOR OUR FREE CIRCULAR DESCRIBING MOST OF OUR OUTSTANDING PRODUCTS.

Geophysical Prospecting in India

Science and Culture observes :

Geophysics is a part of what has now come to be recognized as the *Earth Sciences,* which include geography, geology, geodesy, geochemistry and geophysics. In the broadest sense, geophysics comprises the study of physical phenomena occurring in all parts of the Earth from all possible angles. Under geophysics, the following sciences are included : Meteorology, or study of weather ; Seismology, or study of earthquakes ; Terrestrial Magnetism, Oceanography, Volcanology ; Hydrology, or study of rainfall precipitation and the subsequent passage of it to the lakes and seas ; Terrestrial and Atmospheric Electricity ; and Geophysical Prospecting.

We quote from the annual presidential address of Prof. M. N. Saha to the Royal Asiatic Society of Bengal :

"Oil has been located in the past either from ground seepage or from certain surface geological evidence, and oftener by wild-cat methods. But in this particular case (of the discovery of oil in Kuweit in Northern Arabia), it has been found by geophysical methods, by the use of very delicate physical apparatus and by performing seismic experiments . . . This foreshadows the advent of a new age, the Age of Deeper Exploration of the Earth's Crust. Man has so far, with the tools and appliances at his disposal, been able only to scratch the surface of the earth, but science has now placed such delicate appliances at the disposal of mankind that he can explore the crust of the earth some thousands of feet below the surface. This new science of geophysics is scarcely two decades old, but in the U.S.A. the number of geophysicists runs to several thousands, distributed amongst universities, employees of oil and mineral companies, and among governmental departments. . . ."

"I later learnt in Russia that the second Baku which the Russians had discovered north of the Caspian Sea is a region with the same physical characteristics as Kuweit. This oil region which gave Russia sufficient oil for her tanks and aeroplanes at a time when the Baku supply was cut off by the Germans was discovered by similar geophysical methods, with the aid of the gravimeter and seismic methods . . . The orthodox methods of geology are unable to indicate to us the valuable ore deposits which may be lying hidden deep under lava or alluvia. The geophysical methods, which have brought to light Kuweit and the second Baku, will be of great help in these regions, but so far the Government of India has employed one geophysicist of Italian extraction for this purpose. If the work is to be tackled seriously, we must have a *Central Geophysical Laboratory* to train a numerous personnel in geophysics."

There is a great scope for the application of geophysical methods to the exploration for oil and minerals in India. Such application has been made, to a very limited extent, by foreign oil and mining companies and by local bodies, and activities in this direction, on a small scale, are still in progress. For instance, the Burmah Oil Company has engaged at different times well known foreign geological firms which have carried out electrical, seismic, and gravity surveys. Geophysical prospecting, in a similar way, has also been conducted by the Attock Oil Company. It is known that hundreds of thousands of square miles have been surveyed geophysically at an expenditure of several lakhs of rupees.

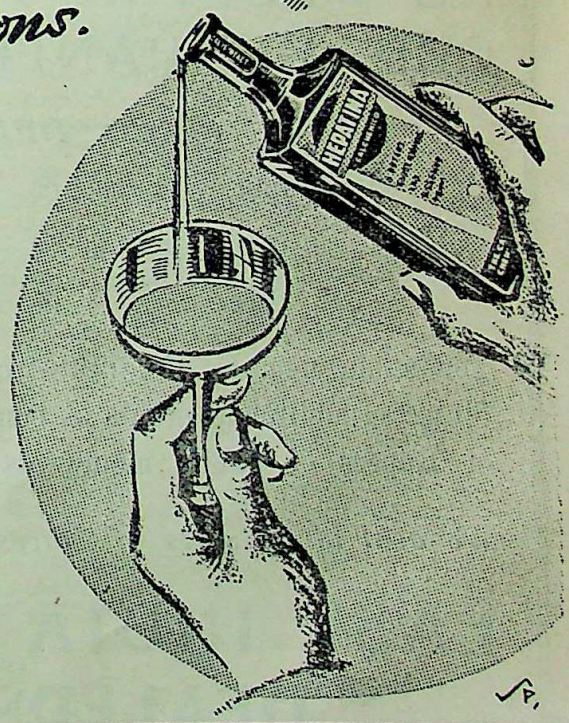
claim to have applied geophysical methods for purposes of survey and mineral exploration.

The Geological Department of Mysore has carried out several electrical surveys on sulphide ores and graphite deposits and has determined the depths of water-table in a number of instances. The Governments of Travancore and Gwalior are now using magnetic methods in their explorations for magnetic ore bodies.

Recently the Survey of India and the Geological Survey have shown great interest in geophysical methods of prospecting. Mr. B. L. Gulatee of the Survey of India, under request from the Geological Survey, carried out geophysical prospecting for hidden deposits of manganese ores in the alluvial area of Parsoda in the Central Provinces. The deposits of manganese ores buried completely under thick deposit of alluvium were located by gravity methods. The geophysicist in the employment of the Geological Survey of India is at present deeply interested in the application of geophysical methods to the problems connected with water supply and dam foundation.

The geophysical work so far carried out in India has been scrappy and unsystematic, and proper organization needed for such work is mostly non-existent, or utterly inadequate.



The vastness and immensity of the scope of geophysical prospecting in this coutry is reflected in the fact that over half a million square miles lie buried under surface alluvial deposits of late geological age. The depth of the alluvial cover in the vast stretch of land from Sind and Assam is estimated at about 6,000 ft. under which lie buried the three most economically productive rock systems of Indian geology, *viz.*, those of Dharwar and Gondwana systems as also of the Eocene age.

Examination and survey of such deeply seated mineral deposits are beyond the scope of surface geological surveys. Geophysical methods, such as magnetic, gravimetric, seismic and electrical, alone provide reliable techniques for exploration of minerals at such great depths. In his lecture before the Indian Association for the Cultivation of Science on the occasion of his receiving the Jay Kissen Mookerjee Gold Medal, Mr. D. N. Wadia, Mineral Adviser to the Department of Planning and Development, expressed his optimism regarding the scope of geophysical prospecting for mineral oils in the following words :

"Intensive geological exploration supplemented by geophysical prospecting, notably by seismographic refraction methods and by gravity determination with the help of torsion balance, remains to be done in areas of East Baluchistan, the N.-W. Punjab and the foot-hill zones of the Punjab and Assam, the alluvium and sand covered tracts of southern Punjab (South of Salt Range) and Assam which may yield encouraging results.

"Gravity tests for determining the presence of petroleum saturating the rock-beds in quantity, or other physical tests for sub-surface structures of a more favourable nature underlying these sites, have not been used in these Punjab areas so far. Potential oil fields of this nature occur at Fatehgunj, Golra, Bakrola, Chak-Dalla, Shirani Hills and Kopat and in the Jammu Hills; to a less extent in Kangra and Garhwal."

FOREIGN PERIODICALS

An American Estimate of Nehru

We publish this interesting article by Louis Fischer from the Editorial page of *New York Times* of March 17, 1946 :

On March 3, an article by Jawaharlal Nehru, appeared in *The New York Times Magazine*. On March 5, Winston Churchill delivered a speech in Fulton, Mo. The two documents are intimately related even though Nehru had not seen Churchill's address when he wrote his essay, "Colonialism Must Go" and Churchill had completed his text before Nehru's piece was printed.

Nehru's words constitute a statesmanlike utterance. Churchill spoke like an ex-statesman, an elder statesman who can say what statesmen refrain from saying.

Nehru placed India in the new framework of post-war international politics. He showed his awareness of many new factors in world affairs which alter the old problem of Indian independence. "The end of colonialism and imperialism," he says, "will not mean the splitting up of the world into a host of additional national states intent on their isolated independence. It will lead to a new grouping together of all nations, a new outlook, to co-operation gradually replacing competition and conflict."

Great Britain, and certain Americans, have always regarded India's independence as a threat and danger. Nehru here suggests that it contains a promise. In every paragraph he manifests his internationalism. He heaps scorn on "one decadent empire (which) tries to help another still more ramshackle empire": in this process the British speed the dissolution of their empire without saving the Dutch empire. Indonesia and Indo-China must go free, Nehru insists.

Moreover, he relates the freedom of the Arab countries to the liberation of India. "A free India," he also contends, "will link together the Middle East and China. India is so situated as to form the center of a group of Asian nations for defense as well as trade and commerce." He also advocates a closer union of India with the countries of the Indian Ocean, including Australia and New Zealand. Here speaks the mature world leader rather than the irresponsible agitator. He sees his own movement in the context of everybody's interests. Separatism and divisive strategy cannot succeed in the air-atomic age.

Warning Against Delay

Independence, Nehru acknowledges, is only a first step. It must not be delayed. Then "other questions can be discussed as between equals." Attlee, Pethick-Lawrence, Cripps, Alexander and Wavell should ponder that sentence. And also this : "If, however, freedom is delayed or circumscribed, and colonies and dependencies are used as pawns in the game of the power politics of a few great powers, then these dependent or semi-dependent countries will also play their part in power politics to the extent they can, and side with this or that power as suits their convenience and advantage." This spells Russia. Nehru does not like that alternative because if the colonies grasp it, "they will add to the confusion and chaos of a distracted world and be victims, together with others, of the inevitable disaster."

Prime Minister Attlee's declaration, offering India freedom without or within the Empire, may indicate that Britain is aware of its new position in the world and of the new mood in India. If the Attlee Government goes beyond the Churchill Government's Cripps offer of 1942, it may find India responsive especially in view of the imminent famine.

The fact that Attlee offers to free India in the spirit of Nehru while Churchill urges an Anglo-American alliance which would, by implication, hold India in the Empire, demonstrates the superiority of Attlee and Nehru over Churchill.

The ex-Prime Minister also feels that a constantly expanding Russia is a menace to peace and to freedom-loving countries. But what does he propose ? An Anglo-American military alliance tantamount to an American guarantee of the British colonial empire. This is a nineteenth century solution, out of date, ineffective, disastrous. Churchill is always the super-nationalist and imperialist. Nehru is the internationalist. Churchill helped make the atomic bomb. But he misses its significance. Nehru uses the language of the atomic age. Churchill urges a dual entente. Nehru advocates a "world order."

Threat by Russia

Since Russia threatens, Churchill, and with him some short-sighted Americans, reason : hold on more tightly to the British Empire. Since Russia threatens, Nehru replies, give freedom to India, Indonesia, Indo-China, Egypt, Syria, Lebanon, etc.

A free India would resist Russian encroachment as a danger to its freedom. An enslaved, unhappy, disaffected India—or Egypt or Java—might court Russia.

Several members of the Senate and House have alrady answered Churchill : America cannot assume responsibility for British imperialism. That is the way of exclusiveness, not of international co-operation.

Mr. Churchill's address took on special significance not only because of his own past and present positions. In his introductory remarks at Fulton, President Truman said : "I know that Mr. Churchill will have something constructive in his speech." Is this what Mr. Truman calls "constructive"? We are lost if this is how the American Government views the future of mankind.

President Truman has used Wilkie's expression, "One World." One World means that there is no Russian problem ; there is no Indian problem ; there is no problem of the defense of Great Britain or of the United States. Russia and India and America and Egypt and Germany and Greece are all one indivisible problem. To attack one segment of the problem, as Churchill did, is folly.

Churchill's proposal is a power proposal. It would preserve the *status quo* and the diseases it has bred. He does not promise to liquidate the British Empire after the Kremlin's imperialism has been checked. If his plan stops Russia the evils of imperialism, balance-of-power politics, nationalism and racial discrimination still remain. If he does not stop Russia it means war with Russia.

Nehru's solution, on the other hand, is curative, therapeutic and democratic. It would extend the area of freedom. It would be an enormous step toward the solution of the Russian problem, for Russia would lose its appeal to the oppressed peoples of Asia if those oppressed peoples received their independence.

The Development of Education in Turkey

In an article under the above caption in *The Asiatic Review*, January 1946, K. R. and A. R. Maxwell-Hyslop trace the history of gradual Westernisation of education in Turkey from the eighteenth century to the present day :

To understand the aim and achievement of modern Turkish education it is essential first to consider the main principles of Ottoman education and to realize how, since the eighteenth century, educational progress in Turkey has been indissolubly linked with the development of the idea of Westernization. The Islamic religion not only regulated the duties of the individual to God and his fellow-men, but provided the basis on which depended the administration of justice and the growth and organization of education and learning. To Muhammad himself are attributed the sayings, "The ink of the learned and the blood of the martyrs are of equal value in the sight of heaven," and "a father can confer upon his child nothing more valuable than a good education"; and therefore Sultan Mahomet "the Conqueror" dutifully followed the tenets of his religion in founding eight "medreses" (theological seminaries) round the mosque which was named after him in Constantinople and in making his new capital a centre of learning and culture. It is, however, the age of Sulayman "the Magnificent" (1520-1566) which can be described as the most enlightened period of Ottoman education. In his brilliant reign the study of medicine, mathematics (considered the basis of the study of law), natural science and Arabic literature, as well as purely theological studies, flourished in the reformed 'medreses'; primary schools attached to mosques and preparatory "medreses" ("tetummes") were established ; and Sulayman's services to Turkish education are remembered by his reorganization and extension of public instruction and his liberal and far-seeing patronage of learning and the arts. Yet it is not surprising that after Sulayman's reign the "medreses" became centres of narrow scholasticism and sophistry and made no intellectual advance. The spirit of Turkish learning was based both on the Koran and on the survival of Greek philosophy, which had been transmitted to Turkey through Muslim scholars writing in Arabic, and the influence of Aristotle, as interpreted by Muslim philosophers, still lingered on among the "Ulema" or learned men, who were averse from taking advantage of the contacts with Europe opened up by Sulayman's enormous European empire. Confining their intelligence to Oriental modes of thought and expression and to traditional methods of teaching they were opposed to any new ideas and experiments. Thus during the late sixteenth and seventeenth centuries while in Europe the boundaries of knowledge in science, medicine and the humanities were being swiftly advanced, Turkey was left outside the main stream of Western culture and decay soon set in.

The movement for Westernization may be said to date from the reign of Sultan Ahmet III (1703-1730). Under the stimulus of misfortunes and disasters abroad progressively minded Turks began to realize that European civilization possessed certain valuable qualities from which Turkey might benefit, and a small though insistent demand for reform gradually arose.

A more definite shape was given to the efforts for reform by Sultan Selim III, who was convinced of the necessity of radical reform in all branches of government and education. Beginning his rule in the same year as the outbreak of the French Revolution, he made energetic efforts to raise the level of education among all classes of his subjects and encouraged the translation of many European works of science

Turkish. He was anxious to obtain all the information possibl concerning the nations of Europe and to find out the cause of their superiority on the field of battle.

Throughout the reign of his successor Mahmud II (1809-1839) "the Reformer," when Turkey was immersed in troubles in many parts of the empire and in financial difficulties at home, both the movement for Westernization, symbolized in the military sphere by the abolition of the Janissaries, and the opposing forces gathered strength ; and in 1824, although there were as yet hardly the means to put it into practice, compulsory education for all as part of a general drive for Europeanization was proclaimed by the Sultan, and plans were made to modernize the existing schools. In spite of fanatical opposition the first secondary schools or "Rustiyes" were established and a medical school opened. Sultan Mahmud's first efforts to send 150 students to study in Europe were defeated, but later some officers of the artillery school and various others including the chemist Dervish Pasha, succeeded in going to England. Among the many services which Sultan Mahmud rendered his country, the careful education of his successor, Abdul Mecit, must not be forgotten, and his father's instructions that the reforms already initiated must be continued and extended were faithfully observed by the new Sultan.

The historical period commonly known as the "Tanzimat" or "Reform" dates from 1839, when legal sanction was given to the movement by the Sultan's proclamation of the "Hatti Serif" (Imperial Charter). This resembled the French "Proclamation des Droits de l'Homme," and proclaimed equality of civil rights for all citizens, Muslim and non-Muslim, based on the principles of liberty and justice. It was followed in 1856 by another important edict which decreed that education in the existing primary schools was to be free and made secondary education, hitherto practically not

existent, compulsory. A new programme of education for the whole empire was announced, reform of the medical and military schools decreed to be necessary, and proposals made for the foundation of more primary and secondary schools and of an Ottoman University. A Council of Public Instruction was set up to supervise the execution of this policy, and, a significant pointer to the future, while the "medreses" remained unchanged, the new primary schools were made independent of the monopoly previously exercised by the "Ulema" and of the control of the highest religious authority of the country, the Sheikh-ul-Islam. Up to this point the move away from the traditional conception of education as the prerogative of the religious organization was only indirect, but in 1860 progressive educationists founded the Ottoman Scientific Society whose avowed aim was the promotion of secular education. A few teachers were therefore sent to Europe to get the necessary training for becoming teachers at the Turkish University; while in 1858 the Normal School for Boys and the School of Political Sciences were founded, the latter in order to provide the country with a competent and trained civil service, capable of administering the new reforms.

There is no need here to elaborate the early history of the Kemalist revolution, but only to put into proper perspective the remarkable achievements in the field of education. The situation was briefly that outlined above, when in 1924 the American Professor John Dewey was invited to visit Turkey and report on the state of education to the new Government. The aims and the nature of the organization of education in Turkey today afford proof of the extent to which his recommendations were followed. Among the many enormous tasks which confronted the Republic the importance of the problem, often attempted in the past, but never solved, of providing universal education was this time taken to heart, and in order to make full use of the experience of educationists in other countries the Minister of Education, accompanied by a commission of experts, made a series of visits to inspect the systems of Czechoslovakia, Germany, France, Italy and England, while numerous reports were published, notably that of Professor Ismail Hakki on the experimental schools of Europe, and others on the commercial and technical schools in England, the People's high schools in Denmark, and the Sokol organization in Czechoslovakia. The help of Switzerland was also invited, and in 1932 Professor Malche of the University of Geneva was asked to propose measures for the reorganization of Istanbul University. These foreign contacts have continued; a delegation of Turkish educationists visited technical colleges in this country just before the war, and Professor S. J. Davies has lately been studying Turkish technical education under the auspices of the British Council. In 1939, the State had sent and was maintaining abroad no less than 560 students.

While foreign advice and help was welcomed by the new Republic, the system devised by Ataturk's Government was especially designed to solve the many intricate problems which were peculiar to Turkey, and it reflects in all its aspects the ideals and aspirations of the Republic. The problem of eliminating illiteracy was helped by the adoption of Latin characters and the energy and enthusiasm brought to the task of extending education in primary, secondary and higher grades may be measured by a study of some recently published graphs which illustrate the remarkable achievements of the Turkish Ministry of Education.

War of Ideas in Iran

In the same Journal F. J. Goulding writes about the progress of education in modern Iran :

All those who have lived in Iran and learned to love the country and her people may feel for her deeply today. She is falling a victim to that all-pervasive war of ideas which is sweeping every country of the world. Iran's plight is the more tragic because she is caught up in a world tide of conflict at a time when she was struggling highly successfully for progress within herself.

As is only natural in advance of every kind, not everything is perfect, and faults and defects can be found. But it is always easier to point a critical finger than it is to give constructive aid, and this is a moment when in Iran, as in every other country, the forces that are fighting for the intellectual, moral and spiritual advance of the whole country and all its 13,000,000 citizens, need every supporting hand.

The recent visit of distinguished Iranian professors to the World Education Conference has drawn attention to the great strides which the country has been making. They were a charming and gifted group. A standard of great distinction is set by men like Dr. Ali Asghar Hikmat, who has served as Minister of Education, and at various times held three other Ministries, Dr. Ghulam Ali Ra'adi, Director-General of the Ministry of Education, Dr. Ghulam Hussein Sadighi, Director-General of the Secretariat (Dabirkhaneh) of Tehran University, and Dr. Isa Sepahbudi, all professors at the University and all members of the National Commission for Scientific and Intellectual Co-operation.

Dr. Ra'adi is a poet of very high rank in present-day Persia, and follows in the true tradition of the country's historic culture.

These men are among the leaders of the new education and cultural movement in Iran which has arisen since the last war. The revolutionary Government of Reza Shah were quick to realize that education was a tool with enormous possibilities for good or ill. For it is ideas and not material force that finally have the greatest creative or corrosive influences in the life of men and of nations. In Iran education has been a great instrument of change. A new educational system sprang up sporadically all over Iran after 1921. People were dissatisfied with the old Islamic instruction by rote. In 1928 a general order for the unification of the syllabus of all schools was issued. Schools were divided into primary, middle and senior, mostly on a French model. A few mission schools were encouraged to maintain American and English methods. In 1931 the primary schools were all nationalized and all foreign influences excluded from them. This was the price paid to prevent what were, to the Shah's mind, more sinister influences getting any hold on the people.

Still, there has been a great and rapid increase in education in the country during the twenty years 1920 to 1940. It is perhaps the greatest single influence on the life of the people. In 1920 expenditure was less than £100 000. In 1940 it was between £2 000 000 and £3,000,000. In 1922 there were only 612 schools. In 1940 there were 8,237, with a total enrolment of practically half a million students (496,960) and 13,646 teachers. In the same period the University in Tehran grew from practically nothing to the graduation of over 400 students annually. Adult education also in 1940 showed a total of 157,197 students in over 2,000 classes.

In 1945 a law was passed urging universal primary education. This will, of course, take years for completion. But it means that the country is rapidly becoming literate, while only a few years back it was 95 per cent illiterate.

BEFORE you spend your time in needless worry, over difficult days and fear of delays, why not try Novum. A high-grade ethical product with an open formula. Recommended by doctors and nurses. Complete relief. Quick sure and effective.

Made in 3 strengths.

Price per container of 21 capsules of ordinary strength of NOVUM, Rs. 12-8-0; per container of 63 tablets, of strong NOVUM (Forte) tablets, Rs. 21-0-0; price per container of 21 red capsules, special extra strong strength, Rs 50-0-0.

Also available in "special injection form" for advanced and unyielding cases of female complaints.

Take 'Novum' at the first sign of delay—and see how comfortably you sail through your difficult days!

ASOKA & HIS INSCRIPTIONS

By **Dr. Beni Madhab Barua,** M.A., D.Litt. Price Rs. 15 only.

Of Asoka *H. G. Wells* said :—

"Amidst the tens of thousands of names of monarchs that crowd the columns of history, their majesties and graciousness and serenities and royal highnesses and the alike, the name of ASOKA shines, and shines alone, a star."

This evaluation of the great Maurya emperor finds a striking confirmation in the present monumental work. The entire position of the history of Asoka has been critically reviewed mainly from a first-hand study of the inscriptions and other source materials. And in this searching analysis nothing has been taken for granted, no reliance placed on foregone conclusions. It is a challenge to traditional thinking in Asoka and a blow to many of our cherished notions in the field. An expert, authoritative, well-documented study. Indispensable alike to historians, students and general readers. (Size—Royal. P. 500).

THE MIDDLE EAST AT THE CROSSROADS

By **T. Cliff.** Price Re. 1-4 only.

An expert, authoritative, well-documented study of the Middle East. Wide in its range and unique in its approach, the book will be of immense help to those who want to understand the problems of the Middle East

THE LEAGUE DEMAND

By **Dr. Rajendra Prasad.** Price As. 12 only.

A unique study of the communal problem of India in all its facets. A 'must read' book for every Indian.

NEW AGE PUBLISHERS Ltd., 22, CANNING STREET, CALCUTTA.

MARXIST-LENINIST BOOKS

SELECTED CORRESPONDENCE OF MARX AND ENGELS :

500 pp. Cloth bound. **Rs. 5**

The character and contributions of two correspondents give this book an extraordinary fascination. They discuss their practical work in the labour movement, comment on current political events, elaborate their REVOLUTIONARY THEORY, and discuss in outline their fundamental books.

A TEXT BOOK OF DIALECTICAL MATERIALISM :

By DAVID GUEST. 90 pp. **12 As.**

Written by a brilliant young English philosopher who was killed in Spanish Civil War in 1938, the book deals briefly and lucidly with such aspects of dialectical materialism as the general nature of dialectics, dialectics and society, and the philosophical struggle today. It also includes suggestions for further reading.

FASCISM AND SOCIAL REVOLUTION :

By R. P. DUTT. 390 pp. Nicely bound. **Rs. 4-8**

This is incomparably the best book on Fascism that has yet been written. It is not too much to say that it is the duty of every anti-fascist in the world not only to read but master thoroughly every word of it.

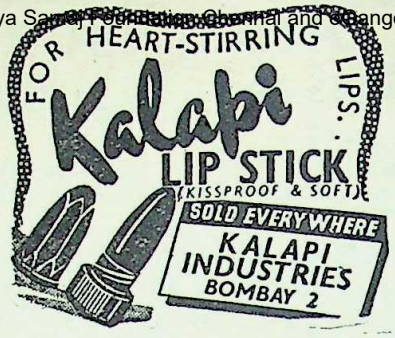
V. I. LENIN :

A BRIEF SKETCH OF HIS LIFE AND ACTIVITIES

Prepared by

Marx-Engels-Lenin Institute, Moscow.

284 pp. Nicely bound. **Rs. 3-8**



This is a text-book of Marxism as put into practice by Lenin and can best be compared with the "Short History of the Communist Party of Soviet Union (Bolshevics)". It will appeal to the academic mind which wants to make a thorough study of Lenin's work. It is a concise, well-documented account of Lenin's life and work as revolutionary leader and man of action, and as thinker and philosopher. It is a piece of research, the work of people who are thoroughly acquainted with the subject, and who are at the source of all information available.

Sir Francis Younghusband

In an article entitled "Some British I Admire" in *The Asiatic Review*, January 1946, Ranjee G. Shahani writes about Sir Francis Younghusband as follows :

Sir Francis was not one of those men who, in Shakespeare's words "smile and smile . . ." Indeed, charm, in the conventional sense of the word, he had not. He was apt to be gruff and somewhat aloof. Also, when in the company of old familiar fakes, he spoke in grunts. He was at his best—so at least I felt—during a quiet chat by the fireside. Then he seemed to throw away his armour and relax. One realized at once that he was a transparently sincere man : he said what he felt and he did exactly what he thought. On the very first occasion I met him—that was in 1932—he spoke of stainless and boundless peace ; of space unlimited ; of untrodden snow ; of wild flowers that blushed unseen; of the virgin hills whose tips kissed the distant stars.

Slowly, gradually, as he talked of his beloved Himalaya, one understood that he was somehow different from other Englishmen.

There are, roughly speaking, two kinds of thinkers : the creative and the constructive. To the first group belong, among others, Shakespeare, Goethe, Ibsen and Turgenev, who think through the act of creating. We do not ask these writers for true ideas, but above all for suggestions as to how thought works with various people at various crises. We expect them to make us feel how human beings reason not only when they are at leisure, but when the vicissitudes of life shake them to their foundations. More than that, we look to these great spirits to unite us to our fellow-men in sympathy and a kind of indulgent comprehension. The authors who preach, exhort, or wish to nail us down to narrow conclusions appear less divine than these masters. In brief, creative thinkers are those who do not believe in partial truths, are not dominated by theories, and do not let single, isolated ideas weigh out of proportion to the various strains in their theme. They contemplate life with a serene smile. Constructive thinkers, on the other hand, are mainly preoccupied with their own speculations and build out of these, with the aid of the cement of logic, rounded systems of thought. Plato, Shankara, Descartes, Hegel, Bergson, Whitehead—to mention but a few names at random—belong to this group. The value of the work of these men depends on the beauty of their intellectual edifices and on the truth and coherence of their respective visions of reality.

Frankly, Sir Francis cannot be placed in any of these two classes of thinkers. He did not try to see life through the eyes of various characters, nor did he elaborate a new theory of the universe. His importance lies elsewhere.

He was an instinctive lover of beauty of thought and action, or, rather, a born connoisseur of ideas and character.

Spiritual arrogance would seem to be the bane of most theologians and thinkers. Many cultivated spirits in the West believe that their wisdom is the highest attainable by man. Most Easterns hold the same lofty opinion about the illumination of their race. Sir Francis was refreshingly free from this myopia of the spirit. Indeed, his was a stereoscopic vision, which embraced the best of the Orient and the Occident. Although a good Christian, he fully appreciated, nay reverenced, the inwardness of Asia. He held that the soul of Hinduism and Buddhism was at one with Christianity. He was thus a real reconciler. He believed that the more intensely spiritual we became, the more quickly we would meet and mingle and broaden out into a happy brotherhood of man. This conviction led to the founding of the World Congress of Faiths, which owes practically everything to him. Sir Francis was sure—and he had a faith that dispels all clouds of doubt—that a new Renaissance, more glorious than any that was upon us. This is the marriage of East and West.

REACTIONS TO THE CABINET MISSION PROPOSALS

Supplement to THE MODERN REVIEW, June, 1946

BRITISH PREMIER'S SPEECH IN THE HOUSE OF COMMONS AND OPPOSITION REACTION

The British Premier Mr. Clement Attlee, to a tense and expectant House of Commons read on May 16 the plan outlined in the White Paper which the British Cabinet Mission to India consider "the best arrangement to ensure speedy setting up of a new constitution for India."

The plan, which makes six major proposals to be submitted to majority parties in India urges immediate formation of an Interim Government for India, in which all portfolios including that of war, would be held by Indian leaders.

The plan, which has full support of the British Government, further states that the Cabinet Mission have endeavoured "to be just to the smaller as well as the larger sections of the people", and is designed to set in motion machinery "whereby a constitution can be settled by Indians for Indians."

Before reading the Cabinet Mission's statement, Mr. Attlee said: "I rise to give the House an important statement, which is being issued simultaneously in India by the Cabinet Mission and the Viceroy. "It is, I am afraid, a long statement. I shall have, I fear, to make a rather heavy demand on the patience of the House, but after consultation with the Opposition leaders it was thought that this was so important a document that it should be on the record of the House, and should be read to the House as a whole, because it is impossible to summarise it adequately.

"I propose, therefore, to read it in full with the exception of two tables—rather long tables of figures—which I propose to summarise.

"Before reading the statement the House will perhaps allow me to express my gratitude to members of the Mission and to the Viceroy for undertaking a very difficult task and for their patient endeavours to try to get agreement between the two major communities (Hindus and Muslims)."

"This", continued Mr. Attlee, "is the statement by the Cabinet Mission to India and His Excellency the Viceroy."

The Prime Minister then proceeded to read the statement.

Cheers greeted the Prime Minister when he sat down at 3-18 p.m. G.M.T. (8-48 p.m. I.S.T.) after speaking for 32 minutes.

Churchill's Speech

Mr. Winston Churchill, leader of the Opposition, rose immediately. He said: "I think the Prime Minister was right to read to the House the able but melancholy document to which we have listened, and that it was appropriate that he should read it instead of merely circulating it.

"Certainly I have heard nothing for a long time which so deeply deserves the attention of Parliament and the British nation. The respectful attention which the House gave to every word uttered by the Prime Minister is proof that this opinion is well-founded.

"It would, of course, be most unwise this afternoon for any of us to attempt detailed comment on the long complicated proposals which have now been laid before us.

"The Prime Minister did me the courtesy of sending me a copy last night, but although I read it carefully in the small hours of the morning, and I have now had the advantage of hearing it again, I should certainly not commit myself at this juncture to any thing but observations of a most general character.

"Moreover, these observations, such as they are, arise from the situation in respect of India which we have known for a long time rather than from the new proposals, to which, however, I make a brief reference.

"I am bound to make it clear however, without delay what is the position of the official Opposition.

"The head of the Coalition Government, I and my colleagues of those days, are committed to the offer made to the people of India at the time of the Cripps Mission of 1942, by which we offered Dominion Status as expressed by the Statute of Westminster, including the right of secession.

"We offered this to the many peoples of India, subject to certain provisions, the first was that there should be a broad, real and sincere agreement between the main Indian parties, and the second was that in the constitution we should have provision for honourable discharge of the obligations we have contracted in India towards the minorities, who, added together, are themselves a majority, and also for the discharge of those obligations, embodied with treaties with the Indian States.

"These proposals were made at a moment when the danger of Japanese invasion threat-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ened India in a terrible manner. I personally was induced to agree to them by the all-compelling war interest of trying to rally all forces in India to the defence of their soil against Japanese aggression, and all horrors which would have followed therefrom.

The Cripps Mission

"The Cripps Mission failed. The answer which Mr. Gandhi gave to the British Government at that time was 'quit India.' He and the Congress proceeded to raise or encourage a revolt or a widespread disturbance affecting principally communications on which the British and Indian forces relied for holding the threatened fronts.

"These disorders, although seriously fomented, were suppressed with surprising ease and very little loss of life, and the inducement to revolt found no response outside political classes from the great mass of the Indian people.

"We persevered and presently the tide turned. India was successfully defended and emerged from the second world convulsion in our lifetime, protected against external violence by the armies, sea power and diplomacy at the disposal of the British Empire, including the valiant contribution of the Indian forces themselves and the Gurkhas.

"Nevertheless, we still persisted in our effort which had been rejected in 1942 and the late Secretary of State for India, Mr. Amery, on June 14 last, when Government had ceased to be Coalition and was a Conservative Government, used the following words which were quoted by Mr. Eden when the proposal was made to send a Cabinet Mission to India in February.

"These are the words of Mr. Amery: 'The statement makes clear that the offer of March 1942 stands in its entirety. That offer was based in two main principles.

The first is that no limit is set to India's freedom to decide for herself her own destiny, whether as a free member and partner in the British Commonwealth of Nations, or even without it.

The second principle is that this can only be achieved under a constitution or constitutions framed by India, to which the main elements of India's national life are the consenting parties.'

A New Situation

"By that statement we were and are bound. Now, however, a new situation has arisen. We are confronted with the fact reiterated in the Prime Minister's statement. That there is no agreement. The main elements of Indian national life are not at present time consenting parties, to quote the words of Mr. Amery.

"No one will doubt the sincerity and earnestness with which the Cabinet Ministers and the Viceroy have laboured to bring about a solution of the Indian difficulty and worked for a solution with a zeal which would be natural, were it to gain an Empire and not to cast it away.

But the fact is that they have failed through no fault of their own, despite all their efforts and devotion and ingenuity, which is a fact which should be education in Indian matters, not only in this country but throughout the world.

"During these negotiations it has been increasingly clear that the object sought for was not Dominion Status and the subsequent consequence of the right of secession, but direct and immediate independence. I am not sure that results had been realised by the House—it certainly came as a surprise to me.

"The new proposals that we have had seen at first sight to shift the onus of deciding the future Constitution of India from Indian parties to the British Government, who have themselves come forward with an elaborate and detailed scheme.

In so far as this shifting of onus may prove to be the case, it certainly seems to have been an unfortunate step which goes beyond what we understood was the purpose of the Ministers' mission, the mandate they received, which was defined by the Prime Minister as to set up machinery for Indians to decide their form of government.

Discharge Of Obligations

"It will, I hope, however, be common ground that we cannot enforce by British arms and a British-made constitution upon Indians against the wishes of any of the main elements in Indian life (cheers.)

"There remains the discharge of our obligations to Indian minorities and the States. We must study the documents with long and searching attention in order to see that these duties have been faithfully safeguarded.

"It would seem at first sight that attention should be particularly directed to the position of the Muslim community of nearly 80,000,000 already most formidable of all races and creeds in the Indian sub-continent, and whose interest and culture are a matter of great consequence to the commnuity as a whole and vital to the peace of India.

"Secondly, we must examine the provision made for the depressed classes, or untouchables as they are called, who number nearly 6,000,000

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and for whose status and future repeated assurances have been given and pledges made by many British Governments in ancient and more recent times.

Paramountcy Of Crown

"Finally there are relations which the Indian States, which comprise a quarter of the population and one-third of the territory of the Indian Sub-continent, are to have to the Crown and to the new Government.

At present these relations are defined by solemn treaty, dependent upon the Paramountcy of the Crown.

Apparently this is to be abolished.

In a sentence which was obscure and could be either one thing or the other, they would be relegated to a kind of Noman's Land—this question of Paramountcy—and if that is so, it would seem that all foundation for those treaties would be swept away.

"All these matters and many others which will occur to Members as they study the White Paper will require several weeks of profound and earnest consideration, and it would certainly not in my view be desirable to bring this whole matter to debate in the House with all that a debate in these circumstances may entail —It would not be right to bring it in any precipitate manner.

Legislative Steps

"We do not even know at the present time what are the Legislative steps which would be required either for the setting up of an Interim Government or in the event of an agreement being reached, what legislation would be necessary for the creation of a New Constitution or abrogation of the King's title of Emperor of India.

We know nothing of that. Therefore, I say in the name of the Opposition that a new situation has been created, that we are bound to review it in the light of the existing facts, and that we reserve our entire freedom of action as to the future course we should take."

Mr. Davies' Statement

Mr. Clement Davies, Leader of the Liberal Party, said the Prime Minister's statement was one of the most momentous that had ever been made before the ancient House of Commons.

It would be necessary to study this statement with the very greatest care, and he hoped the House would also wait to hear, understand and appreciate the views of the Indians themselves.

Mr. Davies added: "But a united expression of gratitude from here and from India is due to the three members of Government for their patience, courage and efforts to resolve this difficult matter, which affects not only the position of India among world States, but future Government and well-being of four hundred million people.

"This is not a moment to utter any thought which might, in any way, jeopardise or affect adversely the possibility of a satisfactory settlement being arrived at by all.

I would only like to say that in the history of our relations with India for over 200 years, our history has been honourable one of which any people and any Government may justifiably be proud.

We may have made mistakes, and have had our faults, but never in the whole course of history can any Empire show such a fine record of tolerance, understanding and justice.

CABINET MISSION'S PRESS CONFERENCE
Sir Stafford Cripps Speaks

Explaining the Cabinet Mission's statement at a Press conference, which was also attended by Lord Pethick-Lawrence and Mr. A. V. Alexander, Sir Stafford Cripps said: "We hope from the bottom of our hearts that the Indian people will accept this statement in the spirit of co-operation in which it has been drawn up and that within a week or two the process of constitution-making may begin and the Interim Government may be formed."

Lord Pethick-Lawrence, Secretary of State for India, joined Sir Stafford in stressing "the determination of the British people as a whole to do everything in their power to assist you in securing a constitution which will enable your future to be great in the annals of your country and in the history of the world."

"You have heard two broadcasts on the statement and you have the document before you. This evening the members of the Mission wanted an opportunity to meet you to give you a few words of explanation and to-morrow we shall be meeting you again to answer questions which you may have to put.

I will make a few remarks about the statement while we are waiting for the Secretary of State to come from the Broadcasting studio.

The first thing I want to point out is what the statement does not purport to do. Let me remind you that this is not merely the Mission's statement, that is the statement of the four signatories, but is the statement of His Majesty's Government in the United Kingdom. Now the statement does not purport to set out a new constitution for India. It is of no use asking us 'How do you propose to do this or that?' The answer will be: We don't propose to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

do anything as regards decision upon a constitution, that is not for us to decide.

What we have had to do is to lay down one or two broad principles of how the constitution might be constructed and recommend those as foundations to the Indian people. You will notice we use the word "recommend" with regard to the ultimate constitutional forms with which we deal.

You may quite fairly ask, "But why do you recommend anything; why not leave it to the Indians?" The answer is that we are most anxious to get all Indians into some constitution-making machinery as quickly as possible and the block at present is in this matter. We are therefore by this means trying to remove the block so that the constitution-making may start and progress freely and rapidly. We hope very earnestly that that will be the effect.

Now, that it has been finally and absolutely decided that India is to have the complete independence she desires, whether within or without the British Commonwealth as she chooses, we are anxious that she shall have it as soon as possible and the soonest is when there is a new constitution structure decided upon by the Indian people.

But of course we cannot just stand by and wait till that time comes. It is bound to take some time to reach that point of completion of the new constitutional structure.

So, as you know, the Viceroy, in whose province Government-making primarily lies, has already started his talks with a view to the immediate setting up of a representative Indian Government. We hope that with the other issues out of the way on the basis of our statement he will be able very rapidly to get that new government representative of the main parties set up and in operation.

This matter of the Interim Government is of supreme importance because of the enormous tasks facing India at the moment. It is these great tasks, and perhaps the greatest of them is to deal with the food situation, that makes it absolutely essential that we should between us arrange a smooth and efficient transition.

Nothing could be more fatal to the Indian people today in the face of dangers of famine than a breakdown of administration and communications anywhere in India, and that is why we stress as we do the vital need for co-operation between all parties and communities including the British in this time of transition.

Provinces Option

Elucidating the Interim Government plan, Sir Stafford said:

"So much then for the vitally important point of the Interim Government. Some of you may wonder how soon this means that the British will sever their Governmental connection with India—I hope that in any event we shall remain the closest friends when India's freedom comes.

"Well, we certainly can't say that. We can foretell how quickly constitutions can be hammered out? One thing is however absolutely certain and this is the quicker you start the quicker you will end and the sooner we shall be able to withdraw, handing over the power to the new Governments of the Union provinces and, if it is so decided, of the groups.

Constitution-Making

"This brings me to what has been decided rather than recommended. It has been decided to make a start with the constitution-making right away. This does not mean a decision as to what the constitution shall finally be, that is for decision by the representatives of the Indian people.

"What it does mean is that the deadlock which has prevented a start on the process of constitution-making is to be removed once and for all.

"The form in which we propose that the constitution-making bodies should be assembled is important for this reason. It permits of arriving at constitutions in the recommended form. It goes a little further than that in one respect. As we believe and hope that the two parties will come into this constitution-making on the basis of our recommendations it would not be fair to either of them if the fundamental basis which he recommend could be easily departed from.

"We have tried to get a scheme as near as possible to the full adult suffrage which would be fairest but which would take probably two years to work out—and no one believes that we could wait that length of time before starting on constitution-making.

"Some discard the present legislatures as decisive for the option and say let it be exercised when the first new elections have taken place when no doubt there will be a much fuller franchise and when, if necessary, the precise issue can be raised at the election.

"So the three sections will formulate the provincial and group constitutions and when that is done they work together with the States representatives to make the Union constitution. That is the final phase.

Position of States

"Now a word about the States. The Statement in Paragraph 14 makes the position quite

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

clear that Paramountcy cannot be continued after the new constitution comes into operation, nor can it be handed over to anyone else. 'It isn't necessary for me to state—I am sure—that a contract or arrangement of this kind cannot be handed over to a third party without the consent of the States.'

"They will, therefore, become wholly independent but they have expressed their wish to negotiate their way into the Union and that is a matter we leave to negotiation between the States and the British Indian parties.

"There is one other important provision which I would like to stress as it is somewhat novel in constitution-making. We were met by the difficulty of how we could deal fairly with the smaller minorities, the Tribal and the Excluded Areas.

"In any constitution-making body it would be quite impossible to give them a weightage which would secure for them any effective influence without gravely upsetting the balance between the major parties. To give them a tiny representation would be useless to them.

Smaller Minorities

"So we decided that minorities would be dealt with really in a double way. The major minorities, such as the Hindus in Muslim provinces, and the Muslims in Hindu provinces. The Sikhs in the Punjab and the Depressed Classes who had considerable representation in a number of provinces would be dealt with by proportional representation in the main construction of the constitution-making bodies.

"But in order to give these minorities and particularly the smaller minorities like the Indian Christians and the Anglo-Indians and also the Tribal representatives a better opportunity of influencing minority provisions, we have made provision for the setting up by the constitution-making body of an influential Advisory Commission which will take the initiative in the preparation of the list of fundamental rights, the minority protection clauses and the proposals for the administration of Tribal and Excluded Areas.

"This commission will make its recommendations to the constitution-making body and will also suggest at which stage or stages in the constitution these provisions should be inserted, that is, whether in the Union, group or provincial constitutions or in any two or more of them.

"Now that, I think, gives you some picture of the main points with which we have dealt in our statement.

"There is only one other point that I want to stress before leaving the matter with you until tomorrow morning.

"You will realise, I am sure, how terribly important is this moment of decision for the Indian people.

Cripps' Appeal

"We are convinced that this statement offers an honourable and peaceful method to all parties and if they will accept it we will do all that lies in our power to help forward the constitution-making so as to arrive at the speediest possible settlement.

"Let no one doubt for one moment our intentions. We have stayed here so long and worked so hard only to carry out what has long been the policy of the British Labour Party and that is to transfer power to the Indian people as quickly and smoothly as possible and as co-operatively as the difficulties of the process permit.

"We hope from the bottom of our hearts that the Indian people will accept the statement in the spirit of co-operation in which it has been drawn up, and that within a week or two the process of constitution-making may begin and the interim Government may be formed."

SECRETARY OF STATE'S PRESS CONFERENCE

The British this time intended to quit India, the powers of the Constituent Assembly will virtually be unlimited, British troops are to stay on during the interim period, no time-limit has been fixed for framing the constitution, it is possible for recalcitrant groups to wreck the constitutional procedure, and the new proposals are not an 'award' and so the question of using British troops to enforce them does not arise.

These statements were made by Lord Pethick-Lawrence, Secretary of State for India, replying to a battery of questions put to him at a 90-minute Press Conference on May 17.

As to the right to opt out of a Group formed by a section, he said, it would arise only after the constitution had been framed and the first election to the legislature had taken place.

The Secretary of State said that no legislation by the British Parliament would be required either for setting up any Interim Government or the constitution-making machinery.

He added that some legislative steps would have to be taken when the new constitution comes into force, but the Labour Government anticipated no serious difficulty in getting it through.

Viceroy's Veto

Asked what powers the Interim Government will enjoy and whether the Viceroy's veto will remain, or a convention could, as in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Provinces, be mutually agreed upon whereby the power of veto will remain in suspense, the Secretary of State said that this was a matter for the Viceroy. The Viceroy was negotiating with various bodies about the formation of an Interim Government on the assumption that the constitution-making body would be set up.

Asked if there was any time-limit put for the constitution-making body Lord Pethick-Lawrence said that this matter was discussed by them but they considered it wise not to prescribe any time-limit. The process of constitution-making could proceed rapidly as complexities of the task permitted.

The India Office

The Secretary of State smiled when the question as to what would be the position of the India Office during the interim period while the constitution-making body would be going ahead with its task, was put.

Coming events cast their shadow before, he observed. Already before his statement was laid, he said, months ago the India Office had been proceeding on the assumption that the time would come when a great change would be made in India and the position of the India Office would be altered. If the constitution-making business went on, that process would be accelerated. The India Office has an enormous administrative machine. That machine would be at the disposal of the new constitution in India. The India Office would gradually be transferred to the control of the new Government.

Bengal Votes

Answering questions about the eligibility of election to the Constituent Assembly, the Secretary of State made it clear that persons outside Provincial Legislatures, as regards the term "General" used in the table representation from Provincial Legislatures, included Europeans.

So far as Bengal was concerned 25 votes in the Bengal Assembly might slightly alter the voting at the election of representatives but it would not affect the Constituent Assembly which would have one representative per one million of population.

Constituent Assembly's Powers

Could the Constituent Assembly be considered sovereign in view of ruling out of adult suffrage and keeping British troops in India during the interim period and previously laying down procedure of constitution-making?

Replying, the Secretary of State said that adult suffrage had not been ruled out. Adult suffrage, if the constitution-making body so decided, would be an essential basis of the future constitution.

Secondly, if the futur constitution of India was based on independence outside the British Commonwealth naturally one of the first steps would be the withdrawal of British troops. British troops would remain until the constitution was made but not for forcing the constitution. The question of British troops remaining did not affect the sovereignty of the Constituent Assembly.

Thirdly, the procedure for constitution-making was laid down by the Cabinet Delegation as Indian parties could not come to any agreement.

No Award

Answering another question whether it was intended to enforce the award of the Cabinet Delegation and use British forces in the event of resistance to the proposals, the Secretary of State said that their statement did not announce any award. It was a recommendation as to the function of the constitution-making body and a decision to summon Indian representatives to make their own constitution. Therefore, quite clearly there was no question whatever of the British enforcing an award, and the question of using British troops did not arise.

British Anxiety

The A. P. A. writes: Battery of correspondents today probed into every corner of the Cabinet Delegation's new constitutional plan to determine whether it contained loopholes which would permit the British to retain power in India, and were met by answers insisting that Britain this time intended to quit India.

Lord Pethick-Lawrence, flanked by Sir Stafford Cripps and Mr. A. V. Alexander, answered questions in an effort to convince reporters that they wanted the plan accepted in a form which would permit the British to surrender control of the country at the earliest possible moment.

Most of the questions were directed at the section dealing with Indian States. These have a special position in India since they are ruled by Princes who technically have certain amount of status as independent nations.

At the same time, these Ministers made it clear that once the constitution-making body was in session, its powers were virtually unlimited.

In reply to scores of questions, they said that the Viceroy would take on the job of forming an Interim Government at once.

During the interim period when the constitution will be in the making, British troops

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

will remain in India. Lord Pethick-Lawrence said that the Government would remain responsible to preserve law and order until the new Indian constitution was finished and could not give up the means of enforcing such law and order.

Position of States

As to the Princely States, he agreed that their status was left intentionally vague in the constitutional plan published last night. He said they had a special position and must be brought into the proposed Indian Union by negotiations between the constitution-making body and representatives of the Indian States.

To a direct question whether certain Princely States might choose to remain independent and stay out of the Indian Union altogether, the Secretary of State pointed out that their relationship with Britain was to terminate immediately upon formation of the Union.

Without definitely denying that they might remain out as islands of independence within the Indian Union, he pointed out that they had agreed to co-operate in forming the Union.

These questions were prompted by the situation which developed during the negotiations of four years ago, when a provision was made to permit the States to remain out as independent countries with treaty relations with Britain. This time, no such special provision is made.

A big question remained unanswered at the end of the session, and that was whether the Congress and the Muslim League would participate in the setting up of the constitutional machinery.

Lord Pethick-Lawrence said the Cabinet Delegation would remain in India, because "our next job is to get the plan accepted by the two main bodies."

The plan, as proposed by the Cabinet Mission, provided for a Central Government with powers to act in matters of Foreign Affairs, Defence and Communcations. Lord Pethick-Lawrence said that it lay within the powers of constitutional convention to go beyond these proposed limitations, however. He said that safeguards to protect the rights of such a body as the Muslims had been put in. There was the special provision that no decision affecting Muslim and Hindu communities as such could be taken without the approval of a majority of each community.

To a question as to what would happen to French and Portugese colonies, the Secretary of State explained that this was a question for the Indian Union to determine when it took charge of its own foreign relations.

The A. P. I. writes: Speaking easily and with an even temper and occasionally helped by Sir Stafford Cripps, who sat to his left, Lord Pethick-Lawrence answered scores of questions.

He said that the constitution recommended by the Mission could not be modified in favour of one party to the disadvantage of another.

Provinces And Union

The question of the right of the provinces vis-a-vis the proposed Union was one of the questions.

He was asked: Just as the provinces have the right to opt out of the groups, will they have the right to secede from the Indian Union, say within two years?

Lord Pethick-Lawrence replied: They will not have the right to opt out in a period of two years. What they will have the right to do is to ask for a revision of the constitution at the end of ten years.

Q: Supposing Assam, which has a Congress Ministry, decided not to come into group C. with Bengal, which has a Muslim League Ministry, would Assam be allowed to join any other group?

A: The right to opt out comes later, for this reason, that the whole picture should be understood before the option is exercised.

Q: Can a province, if it opts out of one section, go into another section?

Lord Pethick-Lawrence replied that if the right was given to a province to opt into another section and that other section did not want to receive it, a rather awkward situation would arise. An answer to the question was not laid down in the statement but it would be open to the constituent assembly to deal with it at the appropriate time.

Q: If any province does not wish to join the group in which it has been put, can it stay out?

A: The provinces automatically come into the sections "A" "B" and "C" which are set out in the statement. Initially they are in the particular sections to which they are allocated in the statement and that particular section will decide whether a group shall be formed and what should be the constitution.

The right to opt out of the group formed by that section arises after the constitution has been framed and the first election to the legislature has taken place after that constitution. It does not arise before that.

Q: There is a provision whereby any province could, by a majority vote of its Legislative Assembly, call for a reconsideration of the terms of the constitution after an initial period of ten years. Is there included

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the words "call for a reconsideration of the term of the constitution" any right to have secession considered ?

A: If you revive the constitution quite clearly the whole basis of the constitution can be considered again. Any province can ask for a revision of the constitution. And so far as I can see, when that revision is undertaken, all questions in the constitution are open to rediscussion.

Q: If the provinces in section "B" which formed a Muslim majority area, decided to form a group but would not come into the Union, what would be the position ?

A: It would be a breach of the condition under which all three people met together for the purpose of making the constitution and, therefore, the constitution-making machinery would break down if it was persisted in.

That is contrary to the understanding on which these people came together. If they are coming together on an understanding, presumably honourably accepting the major premise, and if they were to refuse that later on, it will be a breach of the understanding and we do not contemplate such a thing.

Q: Could the provinces in section "B" at the end of ten years decide to be a separate Sovereign State ?

A: If the constitution is being revised, of course all proposals for its revision will be open for discussion. Whether they would be carried through is quite another question.

Q: Supposing a group decides not to come into the Union Constituent Assembly, what would be the position as far as that group is concerned ?

A: This is a purely hypothetical question. You cannot forejudge exactly what would be done in the event of people not co-operating but there is every intention to proceed with the constitution-making machinery as it is set out in the statement. What will happen if one person or any person or groups of people in some way tried to put spanners in the wheels I am not prepared at this stage precisely to say, but the intention is to get on with the job.

Will it be open to the Constituent Assembly to endow the Union with all powers of taxation, customs, income-tax and other taxes.

Lord Pethick-Lawrence replied that the statement left it open to the Constituent Assembly to interpret the words relating to finance, subject to the condition that any resolution raising a major communal issue should require a majority of the representatives present and voting of each of the two major communities. Subject to that, and subject to alternations in the basic formula, a bare majority in the Constituent Assembly could carry a proposal.

TEXT OF TRIPARTITE CORRESPONDENCE

Points of fundamental difference which caused the failure of the Simla Conference are revealed in the Tripartite correspondence published on May 18 comprising 21 documents and running to 14 printed pages.

Letters exchanged by the three parties set out the principles and suggested points of agreement put forward by the Cabinet Mission, a memorandum embodying the minimum demands of the Muslim League and points suggested on behalf of the Congress as basis of agreement.

The Conference, which opened on Sunday, May 5, came near breakdown on May 8. On that date Mr. Jinnah, in a letter to the Secretary of State, said that no useful purpose would be served by discussing the points suggested by the Mission.

In a letter, dated May 9, the Congress President stated that the Mission's suggestions were not acceptable, and went on to suggest the formation of an Interim Provisional Government and reference to an independent tribunal of matters in dispute concerning a constituent assembly.

Meetings between Pandit Nehru and Mr. Jinnah followed.

In letters concerning these meetings, Pandit Nehru discussed the question of choosing a suitable umpire and said it would be desirable to exclude Englishmen, Hindus, Muslims and Sikhs. He added that he and his colleagues had drawn up a list from which a choice could be made, and he presumed that Mr. Jinnah had also prepared a list of possible umpires.

Mr. Jinnah replied that in their meetings not only the fixing of an umpire but several other points were discussed and that no agreement was arrived at on any of them.

Letters To Leaders

Letter from Lord Pethick-Lawrence to Maulana Abul Kalam Azad and Mr. Jinnah, dated April 27, 1946.

"The Cabinet Mission and His Excellency the Viceroy have carefully reviewed the opinions expressed to them by the various representatives they have interviewed and have come to the conclusion that they should make one further attempt to obtain agreement between the Muslim League and the Congress.

"They realise that it would be useless to ask the two parties to meet unless they were able to place before them a basis of negotiation which could lead to such an agreement.

"I am, therefore, asked to invite the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Muslim League to send four negotiators to meet the Cabinet Mission and the Viceroy together with a similar number from the Congress Working Committee with a view to discussing the possibility of agreement upon a scheme based upon the following fundamental principles:

"The future constitutional structure of British India is as follows:

"A Union Government dealing with the following subjects:—Foreign Affairs, Defence and Communications. There will be two groups of provinces, the one of the predominantly Hindu provinces and the other of the predominantly Muslim provinces, dealing with all other subjects which the provinces in the respective groups desire to be dealt with in common. The Provincial Governments will deal with all other subjects and will have all the residuary sovereign rights.

"It is contemplated that the Indian States will take their appropriate place in this structure on terms to be negotiated with them.

"I would point out that we do not think it either necessary or desirable further to elaborate these principles as all other matters would be dealt with in the course of the negotiations.

"If the Muslim League and the Congress are prepared to enter into negotiations on this basis, you will perhaps be so good as to let me know the names of the four people appointed to negotiate on their behalf. As soon as I receive these, I will let you know the locus of the negotiations which will in all probability be in Simla, where the climate will be more temperate."

Congress Reply

Letter from the President of the Congress to Lord Pethick-Lawrence, dated April 28, 1946:—

"I thank you for your letter of April 27th. I have consulted my colleagues of the Congress Working Committee in regard to the suggestion made by you, and they desire me to inform you that they have always been willing to discuss fully any matters concerning the future of India with representatives of the Muslim League or any other organisation. I must point out, however, that the 'fundamental principles' which you mention require amplification and elucidation in order to avoid any misunderstanding.

"As you are aware, we have envisaged a Federal Union of autonomous units. Such a Federal Union must of necessity deal with certain essential subjects of which defence and its allied subjects are the most important. It must be organic and must have both an executive and legislative machinery as well as the finance relating to these subjects and the power to raise revenues for these purposes in its own right. Without these functions and powers it would be weak and disjointed and defence and progress in general would suffer. Thus among the common subjects in addition to Foreign Affairs, Defence and Communications, there should be Currency, Customs, Tariffs and such other subjects as may be found on closer scrutiny to be intimately allied to them.

"Your reference to two groups of provinces, the one of the predominantly Hindu provinces and the other of the predominantly Muslim provinces, is not clear. The only predominantly Muslim provinces are the North-West Frontier Province, Sind and Baluchistan. Bengal and the Punjab have a bare Muslim majority. We consider it wrong to form groups of provinces under the Federal Union and more so on religious or communal basis.

"It also appears that you leave no choice to a province in the matter of joining or not joining a group. It is by no means certain that a province as constituted would like to join any particular group. In any event it would be wholly wrong to compel a province to function against its own wish. While we agree to the provinces having full powers in regard to all remaining subjects as well as the residuary powers, we have also stated that it should be open to any province to exercise its option to have more common subjects with the Federal Union. Any sub-federation within the Federal Union would weaken the Federal Centre and would be otherwise wrong. We do not, therefore, favour any such development.

"Regarding the Indian States we should like to make it clear that we consider it essential that they should be parts of the Federal Union in regard to the common subjects mentioned above. The manner of their coming into the Union can be considered fully later.

"You have referred to certain 'fundamental principles' but there is no mention of the basic issue before us, that is, Indian independence and the consequent withdrawal of the British army from India. It is only on this basis that we can discuss the future of India, or any interim arrangement.

"While we are ready to carry on negotiations with any party as to the future of India, we must state our convictions that reality will be absent from any negotiations whilst an outside ruling power still exists in India.

"I have asked three of my colleagues of the Congress Working Committee, namely, Pandit Jawaharlal Nehru, Sardar Vallabhbhai Patel

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection. Harsawal

Digitized by Arya Samaj Foundation Chennai and eGangotri

and Khan Abdul Ghaffar Khan to accompany me in any negotiations that may take place as a result of your suggestion."

Jinnah's Reply

Letter from the President of the Muslim League to Lord Pethick-Lawrence, dated 29th April:

"I thank you for your letter of the 27th April, which I placed before by Working Committee on Saturday morning.

"My colleagues and I fully appreciate the further attempt that the Cabinet Mission and His Excellency the Viceroy are making to bring about an agreement between the Muslim League and the Congress by proposing a meeting of the representatives of the two organisations for the purpose of negotiating an agreement. They, however, desire me to invite your attention to the position taken up by the Muslim League since the passing of the Lahore resolution in 1940 and, thereafter, successively endorsed by the All-India Muslim League sessions and again by the convention of the Muslim League Legislators, as recent as the 9th of April 1946, as per copy enclosed.

"The Working Committee desire to point out that many important matters, both of principle and detail, in your brief letter, require elucidation and clarification, which, in their opinion, can be achieved at the meeting proposed by you.

"Therefore, without prejudice or commitment, the Working Committee, in their anxiety to assist in finding an agreed solution of the Indian constitutional problem, have authorised me to nominate three representatives on behalf of the Muslim League to participate in the negotiations.

"The following are the four names: 1. Mr. M. A. Jinnah, 2. Nawab Mohammad Ismail Khan, 3. Nawabzada Liaquat Ali Khan, and 4. Sardar Abdur Rab Nishtar."

(A copy of the resolution passed by the Subjects Committee to be placed before the All-India Muslim League Legislators Convention on April 9, 1946 is enclosed with the letter).

Secretary of State's Reply to Maulana Azad

Letter from Lord Pethick-Lawrence to the President of the Congress, dated April 29, 1946:

"Thank you for your letter of 28th April. The Cabinet Delegation are very glad to know that the Congress agree to enter the joint discussion with representatives of the Muslim League and ourselves.

"We have taken note of the views you have expressed on behalf of the Working Committee of the Congress. These appear to deal with matters which can be discussed at the Conference for we have never contemplated that acceptance by the Congress and the Muslim League of our invitation would imply as a preliminary condition full approval by them of the terms set out in my letter. These terms are our proposed basis for a settlement, and what we have asked the Congress Working Committee to do is to agree to send its representatives to meet ourselves and representatives of the Muslim League in order to discuss it.

"Assuming that the Muslim League, whose reply we except to receive in the course of the afternoon, also accept our invitation, we propose that these discussions should be held at Simla, and intend to move there ourselves on Wednesday next. We hope that you will be able to arrange for the Congress representatives to be in Simla in time to open the discussions on the morning of Thursday, May 2."

Reply To League Points

Letter from Lord Pethick-Lawrence to the President of the Muslim League, dated April 29, 1946:

"Thank you for your letter of the 29th April. The Cabinet Delegation are very glad to know that the Muslim League agree to enter the joint discussion with the representatives of the Congress and ourselves. I am glad to say I have received a letter from the President of the Congress to say that they are also willing to participate in the proposed discussions and have nominated Maulana Azad, Pandit Nehru, Sardar Vallabhbhai Patel and Khan Abdul Ghaffar Khan as their representatives.

"We have taken note of the resolution of the Muslim League to which you draw our attention. We have never contemplated that acceptance by the Muslim League and the Congress of our invitation would imply as a preliminary condition, full approval by them of the terms set out in my letter. These terms are our proposed basis for a settlement and what we have asked the Muslim League Working Committee to do is to agree to send its representatives to meet ourselves and representatives of the Congress in order to discuss it.

"We propose that these discussions should be held at Simla and we intend to move there ourselves on Wednesday next. We hope that you will be able to arrange for the Muslim League representatives to be in Simla in time to open the discussions on the morning of Thursday, May 2nd.

1. Groups of Provinces:—(A) Composition; (B) Method of Deciding Group Subjects; (C) Character of Group Organisation.

2. Union: (A) Union Subjects; (B) Character of Union Constitution; (C) Finance.

3. Constitution-making Machinery; (A) Composition; (B) Functions; (1) In Respect of Union; (II) in Respect of Groups; (III) In Respect of Provinces."

Congress Stand

Letter from the President of the Congress to Lord Pethick-Lawrence dated May 6, 1946:

"My colleagues and I followed with care the proceedings of the conference yesterday and tried to understand what our conversations were leading up to. I confess to feeling somewhat mystified and disturbed at the vagueness of our talks and some of the assumptions underlying them. While we would like to associate ourselves with every effort to explore ways and means of finding a basis for agreement, we must not deceive ourselves, the Cabinet Mission or the representatives of the Muslim League into the belief that the way the Conference has so far proceeded furnishes hope of success.

"Our general approach to the questions before us was stated briefly in my letter to you of April 28th. We find that this approach has been largely ignored and a contrary method has been followed. We realise that some assumptions have to be made in the early stages as otherwise there can be no progress. But assumptions which ignore or run contrary to fundamental issues are likely to lead to misunderstanding during the later stages.

"In my letter of April 28th, I stated that the basic issue before us was that of Indian independence and the consequent withdrawal of the British army from India, for there can be no independence so long as there is a foreign army on Indian soil.

"We stand for the independence of the whole of India now and not in the distant or near future. Other matters are subsidiary to this and can be fitly discussed and decided by the Constituent Assembly."

"At the conference yesterday I referred to this again and we were glad to find that you and your colleagues, as well as the other members of the conference, accept Indian Independence as the basis of our talks. It was stated by you that the Constituent Assembly would finally decide about the nexus or other relationship that might be established between a free India and England. While this is perfectly true, it does not affect the position now, and that is the acceptance of Indian independence now.

"If that is so then certain consequences inevitably follow. We felt yesterday that there was no appreciation of these consequences. A Constituent Assembly is not going to decide the question of independence; that question must be and, we take it, has been decided now. That Assembly will represent the will of the free Indian nation and give effect to it. It is not going to be bound by any previous arrangements. It has to be preceded by a Provisional Government which must function as far as possible, as a Government of free India, and which should undertake to make all arrangements for the transitional period.

"In our discussions yesterday repeated references were made to 'groups' of provinces functioning together, and it was even suggested that such a group would have an executive and legislative machinery. This method of grouping has not so far been discussed by us but still our talks seemed to presume all this. I should like to make it very clear that we are entirely opposed to any executive or legislative machinery for a group of provinces or units of the federation. That will be sub-federation, if not something more, and we have already told you that we do not accept this. It would result in creating three layers of executive and legislative bodies, an arrangement which will be cumbrous, static and disjointed, leading to continuous friction. We are not aware of any such arrangement in any country.

"We are emphatically of opinion that it is not open to the conference to entertain any suggestions for a division of India. If this is to come, it should come through the Constituent Assembly free from any influence of the present Government power.

"Another point we wish to make clear is that we do not accept the proposal for parity as between groups in regard to the executive or legislature. We realise that everything possible should be done to remove fears and suspicions from the mind of every group and community. But the way to do this is not by unreal methods which go against the basic principles of democracy on which we hope to build up our constitution."

Basis Of Talks

Letter from Lord Pethick-Lawrence to the Presidents of the Muslim League and the Congress, dated May 8, 1946:

"My colleagues and I have been thinking over the best method of laying before the conference what in our judgment seems the most likely basis of agreement as shown by the deliberations so far.

"We have come to the conclusion that it will be for the convenience of the parties if we

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

commit this to writing and send them confidential copies before the conference meets again.

"We hope to be in a position to let you have this in the course of the morning, but as this will give you too short a time to study it adequately before the proposed resumption of the conference at 3 o'clock this afternoon I feel sure that you will agree that the meeting be postponed until the same hour (3 o'clock) tomorrow afternoon, Thursday, 9th May, and I hope that you will concur in this change of time which we are convinced is in the interests of all parties".

Letter from the Private Secretary to Lord Pethick-Lawrence to the Presidents of the Congress and the Muslim League, dated May 8, 1946:

"With reference to the Secretary of States letter to you this morning the Cabinet Delegation wish me to send to you the enclosed document which is the paper to which the Secretary of State referred. The Delegation propose that this paper should be discussed at the next meeting to be held on Thursday afternoon at 3 p.m. if that is agreeable to the Congress-Muslim League delegates."

Points Suggested by the Mission

Enclosure with letter of May 8: Suggested points for agreement between the representatives of the Congress and the Muslim League:

1. There shall be an All-India Union Government and Legislature dealing with Foreign Affairs, Defence, Communications, Fundamental rights and having the necessary powers to obtain for itself the finances required for these subjects.

2. All the remaining powers shall vest in provinces.

3. Groups of provinces may be formed and such groups may determine the provincial subjects which they desire.

4. The groups may set up their own executives and legislatures.

5. The legislature of the Union shall be composed of equal proportions from the Muslim-majority provinces and from the Hindu-majority provinces whether or not these or any of them have formed themselves into groups; together with representatives of the States.

6. The Government of the Union shall be constituted in the same proportion as the legislature.

7. The constitutions of the Union and the groups (if any) shall contain a provision whereby any province can be a majority vote of its Legislative Assembly call for a reconsideration of the terms of the constitution after an initial period of ten years and at ten yearly intervals thereafter.

For the purpose of such reconsideration a body shall be constituted on the same basis as the original Constituent Assembly and with the same provisions as to voting and shall have power to amend the constitution in any way decided upon.

8. The constitution-making machinery to arrive at a constitution on the above basis shall be as follows:

A. Representatives shall be elected from each Provincial Assembly in proportion to the strength of the various parties in that assembly on the basis of 1|10 of their numbers.

B. Representatives shall be invited from the States on the basis of their population in proportion to the representation from British India.

C. The Constituent Assembly so formed shall meet at the earliest date possible in New Delhi.

D. After its preliminary meeting at which the general order of business will be settled it will divide into three sections, one section representing the Hindu-majority provinces, one section representing the Muslim-majority provinces and one representing the States.

E. The first two sections will then meet separately to decide the provincial constitutions for their group and, if they wish, a group constitution.

F. When these have been settled it will be open to any province to decide to opt out of its original group and into the other group or to remain outside any group.

G. Thereafter the three bodies will meet together to settle the constitution for the Union on the lines agreed in paragraphs 1-7 above.

H. No major point in the Union constitution which affects the communal issue shall be deemed to be passed by the Assembly unless a majority of both the two major communities vote in its favour.

9. The Viceroy shall forthwith call together the above constitution-making machinery which shall be governed by the provisions stated in paragraph 8 above.

Muslim League Reaction

Letter from the President of the Muslim League to Lord Pethick-Lawrence, dated May 8, 1946:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"I have now received the letter of your Private Secretary, dated 8th May, 1946, and the enclosed document to which you had referred in your earlier letter of 8th May, 1946. It is proposed by you that this 'paper' be discussed at the next meeting of the conference to be held on Thursday afternoon at 3 p.m. if this is agreeable to the Muslim League delegation.

"Your proposal embodied in your letter of 27th April, 1946, runs as follows:

"A Union Government dealing with the following subjects:—Foreign Affairs, Defence and Communications. There will be two groups of provinces, the one of the predominantly Hindu provinces and the other of the predominantly Muslim provinces, dealing with all other subjects which the provinces in the respective groups desire to be dealt with in common. The Provincial Governments will deal with all other subjects and will have all residuary sovereign rights.

"This matter was to be discussed at Simla and we agreed to attend the conference on Sunday, 5th May, 1946, on the terms of my letter, dated 28th April, 1946.

"You were good enough to explain your formula and then after hours of discussion on the 5th and 6th of May, the Congress finally and definitely turned down the proposed Union confined only to three subjects even with power to levy contribution for financing the Union.

"Next, your formula clearly envisaged an agreement precedent between the Congress and the Muslim League with regard to the grouping of Muslim and Hindu provinces and the formation of two Federations of the grouped provinces and it followed that there must be two constitution-making machineries. It was on that basis that some kind of Union was suggested in your formula confined only to three subjects and our approval was sought in order to put into this skeleton blood and flesh. This proposal was also categorically turned down by the Congress and the meeting had to be adjourned for the Mission to consider the matter further as to what steps they may take in the matter.

"And now the new enclosed document has been sent to us with a view that this paper should be discussed at the next meeting to be held on Thursday afternoon at 3 p.m. The heading of the paper is 'suggested points for agreement between the representatives of the Congress and the Muslim League.' By whom are they suggested, it is not made clear.

"We are of the opinion that the new suggested points for agreement are a fundamental departure from original formula embodied in your letter of 27th April, which was rejected by the Congress.

"To mention some of the important points we are now asked to agree that there should be one all-India Union Government in terms of paragraphs 1-7 of this paper, which adds one more subject to be vested in the Union Government, *i.e.*, "Fundamental rights" and it is not made clear whether the Union Government and legislature will have power or not to obtain for itself the finances by means of taxation.

"In the new 'suggestions' the question of grouping of provinces is left exactly as the Congress spokesmen desired in the course of discussions that have taken place hitherto, and is totally different from your original formula.

"That there should be a single constitution-making body we can never agree to; nor can we agree to the method of formation of constitution-making machineries suggested in the paper.

"There are many other objectionable features contained in the suggestions which we have not dealt with as we are only dealing with the main points arising out of this paper.

"In these circumstances, we think, no useful purpose will be served to discuss this paper as it is a complete departure from your original formula, unless after what we have said above you still desire us to discuss it in the conference itself tomorrow.

Pethick-Lawrence's Letter

Letter from Lord Pethick-Lawrence to the President of the Muslim League, dated May 9, 1946.

I have to acknowledge your letter of yesterday which I have shown to my colleagues. In it you raise a number of issues to which I propose to reply in order.

1. You claim that Congress "finally and definitely turned down the proposed union confined only to three subjects even with power to levy contribution for financing the Union."

This statement is not in accord with my recollection of what took place in the conference room. It is true that the Congress representatives expressed their view that the limitation was too narrow and argued further that even so limited, it necessarily included certain ancillary matters.

Up to a point you recognised that there was some force in the argument because you agreed, as I understood, that some power to obtain the necessary finance must be given. There was no final decision on this matter (or of course on any other).

2. Next you claim, if I understood you alright, that our reference to the formation of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

R. G. Groups is at variance with the formula in our invitation. I am afraid I cannot accept this view.

It is of course a slightly amplified form because it specifies the manner in which the provinces can decide as to joining any particular group.

This amplified form is put forward by us as a reasonable compromise between the views of the Muslim League and those originally expressed by Congress against grouping at all.

3. You further take exception to the machinery that we suggest should be set up for making the constitution.

I would point out to you however that you yourself in explaining how your two constitution-making bodies would work agreed on Tuesday last in the conference that they would have to join together in the end to decide the constitution of the Union and you took no exception to their having a preliminary session in common to decide procedure.

What we are proposing is, in fact, precisely the same thing expressed in different words. I am, therefore, quite at a loss to understand what you have in mind when you use the words "this proposal was also categorically turned down by the Congress".

4. In your next succeeding paragraph you ask who it is that makes the suggestions that are contained in the document I sent you. The answer is the Cabinet Mission and His Excellency the Viceroy who makes them in our endeavour to bridge the gap between the view-points of the Congress and the Muslim League.

5. You next take exception to our departing from the original formula in my invitation. I would remind you that in accepting my original invitation neither the Muslim League nor the Congress bound itself to accept in full the original formula, and in my reply of April 29 I wrote these words:

"We have never contemplated that acceptance by the Muslim League and the Congress of our invitation would imply as a preliminary condition for approval by them of the terms set out in my letter.

"These terms are our proposed basis for a settlement and what we have asked the Muslim League Working Committee to do is to agree to send its representatives to meet ourselves and representatives of the Congress in order to discuss it."

Indeed this is the only sensible attitude because the object of all our discussions is to explore every conceivable possibility of reaching agreement.

6. Fundamental rights were included by us in our suggestions for consideration in addition to the list of Union subjects because it seemed to us that it would be of benefit both to the large communities and to the small minorities for them to be put in and accordingly to be worthy of consideration in our conference.

As to finance it will of course be quite open to discuss in the conference the precise significance of the inclusion of this word, in I.G.S. context.

7. Your two following paragraphs are mainly a recapitulation of your previous arguments and have been already dealt with above.

From your last paragraph I understand that though you do not consider in the circumstances that any good purpose would be served by the attendance of the Muslim League Delegation at the conference fixed for this afternoon you are willing to come if we express a desire that you should do so.

My colleagues and I wish to obtain the views of both parties on the document submitted and, therefore, would be glad to see you at the conference.

Congress President's Letter

Letter from the President of the Congress to Lord Pethick-Lawrence, dated May 9, 1946:

My colleagues and I have given the most careful consideration to the memorandum sent by you yesterday suggesting various points of agreement.

On April 28, I sent you a letter in which I explained briefly the Congress view-point in regard to certain "fundamental principles" mentioned in your letter of April 27. After the first day of the conference, on May 6, I wrote to you again to avoid any possible misunderstanding regarding the issues being discussed in the conference.

I now find from your memorandum that some of your suggestions are entirely opposed to our views and to the views repeatedly declared by the Congress.

We are thus placed in a difficult position. It has been and is our desire to explore every avenue for a settlement and a change-over in India by consent, and for this purpose we are prepared to go far.

But there are obvious limits beyond which we cannot go if we are convinced that this would be injurious to the people of India and to India's progress as a free nation.

In my previous letters I have laid stress on the necessity of having a strong and organic Federal Union. I have also stated that we do not approve of sub-federations or grouping of provinces in the manner suggested, and are wholly opposed to parity in Executives or Legislatures as between wholly unequal groups

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

We do not wish to come in the way of provinces or other units co-operating together, if they so choose, but this must be entirely voluntary.

The proposals you have put forward are meant, we presume, to limit the free discretion of the Constituent Assembly. We do not see how this can be done. We are at present concerned with one important aspect of a larger problem.

Any decision on this aspect taken now might well conflict with the decisions we, or the Constituent Assembly, might want to take on other aspects.

The only reasonable course appears to us is to have a Constituent Assembly with perfect freedom to draw up its constitution, with certain reservations to protect the rights of minorities. Thus we may agree that any major communal issue must be settled by consent of the parties concerned, or, where such consent is not obtained, by arbitration.

From the proposals you have sent us (D.E.F.G.) it would appear that two or three separate constitutions might emerge for separate groups, joined together by a common superstructure left to the mercy of the three appointed groups.

There is also compulsion in the early stages for a province to join a particular group whether it wants to or not. Thus why should the Frontier Province, which is clearly a Congress Province, be compelled to join any group hostile to the Congress?

We realise that in dealing with human beings, as individuals or groups, many considerations have to be borne in mind besides logic and reason.

But logic and reason cannot be ignored altogether, and unreason and injustice are dangerous companions at any time and, more especially, when we are building for the future of hundreds of millions of human beings.

I shall now deal with some of the points in your memorandum and make some suggestions in regard to them.

No. 1. We note that you have provided for the Union to have necessary powers to obtain for itself the finance it requires for the subjects it deals with.

We think it should be clearly stated that the Federal Union must have power to raise revenues in its own right. Further that currency and custom must in any event be included in the Union subjects, as well as such other subjects as on closer scrutiny may be found to be intimately allied to them.

One other subject is an essential and inevitable Union subject and that is Planning. Planning can only be done effectively at the Centre, though the Provinces or Units will give effect to it in their respective areas.

The Union must also have power to take remedial action in cases of breakdown of the constitution and in grave public emergencies.

Nos. 5 and 6. We are entirely opposed to the proposed parity, both in the Executive and Legislature, as between wholly unequal groups.

This is unfair and will lead to trouble. Such a provision contains in itself the seed of conflict and the destruction of free growth. If there is no agreement on this or any similar matter, we are prepared to leave it to arbitration.

No. 7. We are prepared to accept the suggestion that provision be made for a reconsideration of the constitution after ten years. Indeed the constitution will necessarily provide the machinery for the revision at any time.

The second clause lays down that reconsideration should be done by a body constituted on the same basis as the Constituent Assembly. This present provision is intended to meet an emergency. We expect that the Constitution for India will be based on Adult Suffrage. Ten years hence, India is not likely to be satisfied with anything less than adult suffrage to express its mind on all grave issues.

No. 8-A. We would suggest that the just and proper method of elections, fair to all parties, is the method of proportional representation by single transferable vote.

It might be remembered that the present basis of election for the Provincial Assemblies is strongly weighted in favour of the minorities.

The proportion of one-tenth appears to be too small and will limit the numbers of the Constituent Assembly too much. Probably, the number would not exceed two hundred.

In the vitally important tasks the Assembly will have to face, it should have larger numbers. We suggest that at least one-fifth of the total membership of the Provincial Assemblies should be elected for the Constituent Assembly.

No. 8-B. This clause is vague and requires elucidation. But for the present we are not going into further details.

No. 8-D.E.F.G. I have already referred to these clauses. We think that both the formation of these groups and the procedure suggested are worn and undesirable.

We do not wish to rule out the formation of the groups if the Provinces so desire. But this subject must be left open for decision by the Constituent Assembly. The drafting and settling of the Constitution should begin with the Federal Union. This should contain common and uniform provisions for the Provinces

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and other Units. The provinces may then add to these.

No. 8-H.—In the circumstances existing today we are prepared to accept some such clause. In case of disagreement the matter should be referred to arbitration.

I have pointed out above some of the obvious defects as we see them, in the proposals contained in your memorandum. If these are remedied, as suggested by us, we might be in a position to recommend their acceptance by the Congress. But as drafted in the memorandum sent to us, I regret that we are unable to accept them.

On the whole, therefore, if the suggestions are intended to have a binding effect, with all the will in the world to have an agreement with the League, we must repudiate most of them. Let us not run into any evil greater than the one all of us three parties should seek to avoid.

If an agreement, honourable to both the parties and favourable to the growth of free and united India, cannot be achieved, we would suggest that in Interim Provisional Government responsible to the elected members of the Central Assembly be formed at once and the matters in dispute concerning the Constituent Assembly between the Congress and the League be referred to an independent tribunal.

After a proposal by Pandit Jawaharlal Nehru that an umpire should be appointed to settle matters of difference between the parties, the conference, understanding that there was a likelihood of agreement on an umpire between the parties, was adjourned and the following correspondence passed between the parties.

Nehru's Letter to Jinnah

Letter from Pandit Jawaharlal Nehru to the President of the Muslim League, dated 10th May, 1946:

"In accordance with our decision yesterday at the conference, my colleagues have given a good deal of thought to the choice of a suitable umpire. We have felt that it would probably be desirable to exclude Englishmen, Hindus, Muslims and Sikhs.

"The field is thus limited. Nevertheless we have drawn up a considerable list from which a choice can be made. I presume that you have also, in consultation with your Executive, prepared a list of possible umpires.

"Would you like these two lists to be considered by us, that is, by you and me? If so, we can fix up a meeting for the purpose. After we have met, our recommendation can be considered by the eight of us, that is the four representatives of the Congress and the four representatives of the Muslim League, and a final choice can be made, which we can place before the conference when it meets tomorrow.

League President's Reply

Letter from the President of the Muslim League to Pandit Jawaharlal Nehru, dated May 10th, 1946:

I received your letter of 10th May at 6 p.m. At yesterday's meeting between you and me at the Viceregal Lodge, we discussed several points besides the fixing of an umpire. After a short discussion, we came to the conclusion that we will further examine your proposal made by you at the conference yesterday, with all its implications after you and me consulting our respective colleagues.

I shall be glad to meet you to consider the various aspects of your proposal any time that may suit you tomorrow morning after 10 o'clock.

Letter from Pandit Jawaharlal Nehru to the President of Muslim League, dated May 11th, 1946:

"Your letter of May 10th reached me at 10 last night.

"During the talk we had at Viceregal Lodge, you referred to various matters besides the choice of an umpire and I gave you my reactions in regard to them but I was under the impression that the proposal to have an umpire had been agreed to and our next business was to suggest names.

"Indeed it was when some such agreement was reached in the conference that we had, we had our talk. My colleagues have proceeded on this basis and prepared a list of suitable names.

"The conference will expect us to tell them this afternoon the name of the umpire we fix upon, or at any rate, to place before them suggestions in this behalf.

"The chief implication in having an umpire is to agree to accept his final decision. We agree to this. We suggest that we might start with this and report accordingly to the conference.

"As suggested by you, I shall come over to your place of residence at about 10-30 this morning.

Letter from the President of the Muslim League to Pandit Jawaharlal Nehru, dated May 11th, 1946:

"I am in receipt of your letter of 11th May, 1946.

"During the talk we had at the Viceregal Lodge which lasted for about 15 or 20 minutes I pointed out various aspects and implications of your proposals and we had a discussion for a little while, but no agreement was arrived at

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between you and me on any point except that at your suggestion that you consult your colleagues and I should do likewise. We adjourned to meet again the next day to further discuss the matter.

"I shall be glad to meet you at 10-30 this morning for a further talk."

League Demands

Memorandum by the President of the Muslim League embodying minimum demands by way of an offer, in accordance with the conference decision, dated 12th May, 1946.

(Copies sent to the Cabinet Delegation and the Congress).

Principles to be agreed to as our offer:

1. The six Muslim Provinces (Punjab, N.W.F.P., Baluchistan, Sind, Bengal and Assam) shall be grouped together as one group and will deal with all other subjects and matters except foreign affairs, defence and communications necessary for defence, which may be dealt with by the constitution-making bodies of the two groups of Provinces—Muslim Provinces (hereinafter named Pakistan Group) and Hindu Provinces—sitting together.

2. There shall be a separate constitution-making body for the six Muslim provinces named above, which will frame constitutions for the group and the provinces in the group and will determine the list of subjects that shall be Provincial and Central (of the Pakistan Federation) with residuary sovereign powers vesting in the provinces.

3. The method of election of the representatives to the constitution-making body will be such as would secure proper representation to the various communities in proportion to their population in each province of the Pakistan Group.

4. After the constitutions of the Pakistan Federal Government and the Provinces are finally framed by the constitution-making body, it will be open to any province of the group to decide to opt out of its group, provided the wishes of the people of that province are ascertained by a referendum to opt out or not.

5. It must be open to discussion in the joint constitution-making body as to whether the Union will have a Legislature or not.

The method of providing the Union with Finance should also be left for the decision of the joint meeting of the two constitution-making bodies, but in no event shall it be by means of taxation.

6. There should be parity of representation between the two groups of Provinces in the Union Executive and the Legislature, if any.

No major point in the Union Constitution, which affects the communal issue, shall be deemed to be passed in the joint constitution-making body, unless the majority of the members of the constitution-making body of the Hindu Provinces and the majority of the members of the constitution-making body of the Pakistan Group, present and voting, are separately in its favour.

8. No decision, legislative, executive or administrative, shall be taken by the Union in regard to any matter of controversial nature, except by a majority of three-fourths.

9. In group and provincial constitutions, fundamental rights and safeguards concerning religion, culture and other matters affecting the different communities will be provided for.

10. The constitution of the Union shall contain a provision whereby any province can, by a majority vote of its Legislative Assembly, call for reconsideration of the terms of the constitution, and will have the liberty to secede from the Union at any time after an initial period of ten years.

These are the principles of our offer for a peaceful and amicable settlement and this offer stands in its entirety and all matters mentioned herein are interdependent.

Congress Points as basis of Agreements

Points suggested on behalf of the Congress as a basis for agreement, 12th May, 1946:

1. The Constituent Assembly to be formed as follows:

(I) Representatives shall be elected by each Provincial Assembly by proportional Representation (single transferable vote). The numbers elected should be one-fifth of the number of members of the Assembly or others.

(II) Representatives from the States on the basis of their population in proportion to the representation from British India. How these representatives are to be chosen is to be considered later.

2. The Constituent Assembly shall draw up a constitution for the Federal Union. This shall consist of an All-India Federal Government and Legislature dealing with Foreign Affairs, Defence, Communications, Fundamental rights, Currency, Customs and Planning, as well as such other subjects as, on closer scrutiny, may be found to be intimately allied to them.

The Federal Union will have necessary powers to obtain for itself the finance it requires for these subjects and the power to raise revenues in its own right. The Union must also have power to take remedial action in cases

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of breakdown of the constitution and in grave public emergencies.

3. All the remaining powers shall vest in the Provinces or Units.

4. Groups of Provinces may be formed and such groups may determine the provincial subjects which they desire to take in common.

5. After the constituent assembly has decided the Constitution for the All-India Federal Union as laid down in Paragraph above, the representatives of the Provinces may form groups to decide the Provincial Constitutions for their group and, if they wish, a group constitution.

6. No major point in the All-India Federal Constitution which affects the communal issue shall be deemed to be passed by the Constituent Assembly unless a majority of the members of the community or communities connected present in Assembly and voting are separately in its favour provided that in case there is no agreement on any such issue it will be referred to arbitration.

In case of doubt as to whether any point is a major communal issue, the Speaker will decide, if so desired, it may be referred to the Federal Court.

7. In the event of a dispute arising in the process of constitution-making, the specific issue shall be referred to arbitration.

8. The constitution should provide machinery for its revision at any time subject to such checks as may be devised. It so desired, it may be specifically stated that this whole constitution may be reconsidered after ten years.

Congress Reply to League Proposals

Note by the Congress on the principles to be agreed upon as suggested on behalf of the Muslim League dated May 12, 1946.

The approach of the Muslim League is so different from that of the Congress in regard to these matters that it is a little difficult to deal with each point separately without reference to the rest the picture as envisaged by the Congress is briefly given in a separate note. From consideration of this note and the Muslim League's proposals the difficulties and the possible agreement will become obvious.

The Muslim League's proposals are dealt with below briefly:

(1) We suggest that the proper procedure is for one constitution-making body or constituent assembly to meet for the whole of India and later for groups to be formed if so desired by the provinces concerned. The matter should be left to the provinces and if they wish to all kinds and prevent progress: or indeed any function as a group they are at liberty to do so and to frame their constitution for the purpose. In any event Assam has obviously no place in the group mentioned, and the North-West Frontier Province: as the election show is not in favour of this proposal.

(2) We have agreed to residuary powers apart from the Central subjects, vesting in the provinces. They can make such use of them as they like and, as has been stated above, function as a group; what the ultimate nature of such a group may be, cannot be determined at this stage and should be left to the representatives of the provinces concerned.

(3) We have suggested that the most suitable method of election would be by single transferable vote. This would give proper representation to the various communities in proportion to their present representation in the legislatures. If the population proportion is taken, we have no particular objection, but this would lead to difficulties in all the Provinces where there is weightage in favour of certain communities. The principle approved of would necessarily apply to all the provinces.

(4) There is no necessity for opting out of a province from its group as the previous consent of the provinces is necessary for joining the group.

(5) We consider it essential that the Federal Union should have a legislature. We also consider it essential that the Union should have power to raise its own revenues.

(6) and (7) We are entirely opposed to parity of representation as between groups of Provinces in the Union executive or legislature.

We think that the provision to the effect that no major communal issue in the Union constitution shall be deemed to be passed by the Constituent Assembly unless a majority of the members of the community or communities concerned present and voting in the Constituent Assembly are separately in its favour is a sufficient and ample safeguard of all minorities. We have suggested something wider and including all communities than has been proposed elsewhere. This may give rise to some difficulties which can be got over by reference to arbitration. We are prepared to consider the method of giving effect to this principle so as to make it more feasible.

(8) This proposal is so sweeping in its nature that no Government or legislature can function at all. Once we have safeguard major communal issues other matters, whether controversial or not require no safeguard. This will simply mean safeguarding vested interests of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

movement in any direction. We, therefore, entirely disapprove of it.

(9) We are entirely agreeable to the inclusion of fundamental rights and safeguards concerning religion, culture and like matters in the constitution. We suggest that the proper place for this is the All-India Federal Union Constitution. There should be uniformity in regard to these fundamental rights all over India.

(10) The Constitution of the Union will inevitably contain provisions for its revision. It may also contain provision for its full reconsideration at the end of ten years. The matter will be open then for a complete reconsideration. Though it is implied, we would avoid reference to secession. We don't wish to encourage this idea.

MR. JINNAH'S STATEMENT ON CABINET MISSION'S PROPOSALS

"I regret that the Mission should have negatived the Muslim damand for the establishment of a complete sovereign State if Pakistan, which we still hold is the only solution of the constitutional problem of India and which alone can secure a stable Government and lead to the happiness and welfare, not only of the two major communities, but of all the people of this sub-continent," says the Muslim League President, Mr. M. A. Jinnah in a 2,000-word statement issued on May 22 critically examining the Cabinet Mission's proposals.

Mr. Jinnah says: "It is the more regrettable that the Mission should have thought fit to advance common-place and exploded arguments against Pakistan and resort to special pleadings, couched in deplorable language, which is calculated to hurt the feelings of Muslim India. It seems that this was done by the Mission simply to appease and placate the Congress because when they came to face realities, they themselves have made the following pronouncement embodied in para five of their statement which reads:

'This consideration did not however deter us from examining closely and impartially the possibility of a partition of India since we were greatly impressed by the very genuine and acute anxiety of the Muslims lest they should find themselves subjected to a perpetual Hindu majority rule. This feeling has become so strong and widespread amongst the Muslims that it cannot be allayed by mere paper safeguards. If there is to be internal peace in India, it must be secured by measures which will assure to the Muslims a control in all matters vital to their culture, religion, and economic or other interests'.

Mr. Jinnah giving details says:

(1) They have divided Pakistan into two—what they call section 'B' (for the north-western zone) and section 'C' (for the north-eastern zone).

(2) Instead of two constitution-making bodies only one constitution-making body, is devised with three sections A, B, & C.

Power Of Union Government

(3) They lay down that "there should be a Union of India, embracing both British India and States, which should deal with the following subjects: Foreign Affairs, Defence and Communications; and should have power necessary to raise the finances required for the above subjects."

There is no indication at all that the communications would be restricted to what is necessary for defence nor is their any indication as to how this Union will be empowered to raise finances required for these three subjects, while our view was that finances should be raised only by contribution and not by taxation.

(4) It is laid down that "the Union should have an executive and legislature constituted from British India and States representatives. Any question raising a major communal issue in the legislature should require for its decision a majority of the representatives present and voting of each of the two major communities as well as majority of all the members present and voting."

While our view was (*a*) There should be no legislature for the Union but the question should be left to the Constituent Assembly to decide; (*b*) that there should be parity of representation between Pakistan group and Hindustan group in the Union Executive and Legislature if any; (*c*) that no decision, legislative, executive or administrative should be taken by the Union in regard to any matter of controversial nature except by a majority of three-fourths; and all the three terms of our offer have been omitted from the statement.

"No doubt there is no safeguard for the conduct of business in the Union Legislature that any question raising a major communal issue in the legislature should require for its decision a majority of the representatives present and voting of each of the major communities as well as a majority of all the members present and voting." Even this is vague and ineffective. To begin with who will decide as to what is a major communal issue and what is a minor communal issue and what is purely non-communal issue?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(5) "Our proposal that the Pakistan group should have the right to secede from the Union after the initial period of ten years, although the Congress had no serious objection to it, has been omitted and now we are only limited to reconsideration of the terms of the Union constitution after the initial period of ten years."

Constitution-Making Body

Referring to the constitution-making machinery, Mr. Jinnah says: "Here again the representative of British Baluchistan is included in Section B, but how he will be selected is not indicated.

(6) With regard to the Constitution-making body for the purpose of framing the proposed Union constitution, it will have an overwhelming Hindu majority as in a House of 292 for British-Indian Muslim strength will be 79, and if the number allotted to the Indian States, 93 is taken into account, it is quite obvious that Muslim proportion will be further reduced as the bulk of the States representatives would be Hindus. This assembly so constituted will elect the Chairman and other officers, it seems, also the members of the Advisory Committee referred to in para 20 of the statement, by majority and the same rule will apply also to other normal business." But I note there is only one saving clause which runs as follows:

"In the Union Constituent Assembly resolution varying the provisions of paragraph 75 above or raising any major communal issue shall require a majority of the representatives present and voting of each of the two major communities."

"The Chairman of the Assembly shall decide which (if any) of the resolutions raise major communal issues and shall, if so required by a majority of the representatives of either of the major communities, consult the Federal Court before giving his decisions.

It follows, therefore, that it will be the Chairman alone who will decide. He will not be bound by the opinion of the Federal Court. Nor indeed anybody knows what that opinion was as the Chairman is merely directed to consult the Federal Court:

(7) With regard to the provinces opting out of their groups, it is left to the new legislature of the provinces after the first general election under the new constitution to decide instead of referendum of the people as suggested by us."

Rights Of Minorities

"The Advisory Committee on the rights of citizens, minorities and tribal and excluded areas should contain full representation of the interests affected: and their function will be to report to the Union Constituent Assembly upon the list of fundamental rights, the clauses for the protection of minorities, and a scheme for the administration of the tribal and excluded areas, and to advise whether these rights should be incorporated in the provincial, group or Union Constitution."

"This raises a very serious question indeed," says Mr. Jinnah. "For if it is left to the Union Constituent Assembly to decide these matters by majority vote and whether any of the recommendations of the Advisory Committee should be incorporated in the Union Constitution, then it will open the door to more subjects being vested in the Union Government. This will destroy the very basic principle that the Union is to be strictly confined to three subjects."

Mr. Jinnah concludes:

"These are some of the points which I have tried to put before the public after studying this important document. I do not like to anticipate the decision of the Working Committee and the Council of the All-India Muslim League, which are going to meet shortly at Delhi. They will finally take such decision as they may think proper after careful consideration of the pros and cons and thorough and dispassionate examination of the statement of the British Cabinet Delegation and the Viceroy."

CONGRESS WORKING COMMITTEE'S RESOLUTION

The Congress Working Committee has passed a resolution on May 24, expressing its inability "to give a final opinion at this stage of H.M.G.'s proposals" as it finds a divergence between these proposals and Congress objectives.

Following is the full text of the Congress Working Committee's resolution on the Cabinet Mission's proposals:

"The Working Committee has given careful consideration to the statement dated May 16, issued by the Delegation of the British Cabinet and the Viceroy on behalf of the British Government, as well as the correspondence relating to it that has passed between the Congress President and the members of the Delegation. They have examined it with every desire to find a way for a peaceful and cooperative transfer of power and the establishment of a free and independent India. Such an India must necessarily have a strong Central authority capable of representing the nation with power and dignity in the counsels of the world.

In considering the statement, the Working Committee have kept in view the picture of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

future, in so far as this was available to them from the proposals made for the formation of a provisional Government and the clarification given by the members of the Delegation. This picture is still incomplete and vague. It is only on the basis of the full picture that they can judge and come to a decision as to how far this is in conformity with the objective they aim at.

These objectives are: Independence for India a strong, though limited, Central authority, full autonomy for the provinces, the establishment of a democratic structure in the Centre and in the units, the guarantee of the fundamental rights of each individual so that he may have full and equal opportunities of growth, and further that each community should have opportunity to live the life of its choice within the larger framework.

Provisional Government

The Committee regret to find a divergence between these objectives and the various proposals that have been made on behalf of the British Government, and, in particular, there is no vital change envisaged during the interim period when the provisional Government will function, in spite of the assurance given in Paragraph 23 of the statement. If the independence of India is aimed at, then the functioning of the provisional Government must approximate closely in fact, even though not in law, to that independence, and all obstructions and hindrances to it should be removed. The continued presence of a foreign army of occupation is a negation of independence.

The statement issued by the Cabinet Delegation and the Viceroy contains certain recommendations and suggests a procedure for the building up of a Constituent Assembly, which is sovereign in so far as the framing of the constitution is concerned. The Committee do not agree with some of these recommendations. In their view it will be open to the Constituent Assembly itself at any stage to make changes and variations, with the proviso that in regard to certain major communal matters a majority decision of both the major communities will be necessary.

The procedure for the election of the Constituent Assembly is based on representation in the ratio of one to million. But the application of this principle appears to have been overlooked in the case of European members of Assemblies, particularly in Assam and Bengal. Therefore, the Committee expect that this oversight will be corrected.

Constituent Assembly

The Constituent Assembly is meant to be the future of India, as they indicate that there a fully elected body, chosen by the elected members of the provincial legislatures. In Baluchistan, there is no elected Assembly or any other kind of chamber which might elect a representative for the Constituent Assembly. It would be improper for any kind of nominated individual to speak for the whole province of Baluchistan, which he really does not represent in any way.

In Coorg, the Legislative Council contains some nominated members as well as Europeans elected from a special constituency of less than a hundred from the general constituencies should participate in the election.

The statement of the Cabinet Delegation affirms the basic principle of provincial autonomy and residuary powers vesting in the provinces. It is further said that provinces should be free to form groups. Subsequently, however, it is recommended that provincial representatives will divide up into sections which "shall proceed to settle the provincial constitutions for the provinces in each section and shall also decide whether any group constitution shall be set up for those provinces."

There is a marked discrepancy in these two separate provisions, and it would appear that a measure of compulsion is introduced which clearly infringes the basic principle of Provincial Autonomy. In order to retain the recommendatory character of the statement, and in order to make the Clauses consistent with each other, the Committee read Paragraph 15 to mean that, in the first instance, the respective provinces shall make their choice whether or not to belong to the section in which they are placed. Thus the Constituent Assembly must be considered as a sovereign body with final authority for the purpose of drawing up a constitution and giving effect to it.

Indian States

The provision in the statement in regard to the Indian States are vague and much has been left for future decision. The Working Committee would, however, like to make it clear at the Constituent Assembly cannot be formed of entirely desperate elements. And the manner of appointing State representatives for the Constituent Assembly must approximate, in so far as it is possible, to the method adopted in the provinces.

The Committee are gravely concerned to learn that even at this present moment some State Governments are attempting to crush the spirit of their people with the help of the armed forces. These recent developments in the States are of great significance in the present and for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is no real change of policy on the part of some of the State Governments and of those who exercise paramountcy.

A Provisional National Government must have a new basis and must be a recursor of the full independence that will emerge from the Constituent Assembly. It must function in recognition of that fact though changes in law need not be made at this stage.

The Governor-General may continue as the head of that Government during the interim period. But the Government should function as a Cabinet responsible to the Central Legislature. The status, powers and composition of the provisional Government should be fully defined in order to enable the Committee to come to a decision. Major Communal issues shall be decided in the manner referred to above in order to remove any possible fear or suspicion from the minds of a minority.

Opinion Reserved

The Working Committee consider that the connected problems involved in the establishment of a provisional Government and a Constituent Assembly should be viewed together so that they may appear as parts of the same picture, and there may be co-ordination between the two, as well as an acceptance of the independence that is now recognised as India's right and due.

It is only with the conviction that they are engaged in building up a free, great and independent India, that the Working Committee can approach this task and invite the co-operation of all the people of India.

In the absence of a full picture, the Committee are unable to give a final opinion at this stage.

MISSION REPLIES TO CONGRESS AND LEAGUE

The Cabinet Delegation and the Viceroy in a statement issued on May 25, replied to the points raised in the Congress Cabinet's resolution and Mr. Jinnah's statement.

(1) Once the Constituent Assembly starts its work—"there is no intention to interfere with its discretion"—H.M.G. will through Parliament take the necessary action for cession of sovereignty to the Indian people.

2. The grouping of the Provinces (regarding their choice to belong to their respective section) is an essential feature of the scheme and can be modified only by an agreement between the parties.

(3) The Interim Government will be selected in consultation with the political parties, and H. M. G. will give it the "greatest possible freedom in the exercise of day-to-day administration."

(4) There is nothing to prevent members of the interim cabinet from resigning in case of a vote of no-confidence or of failure to pass any important measure.

(5) Owing to Parliament's "ultimate responsibility for the security of India" under the present India Act, "it is necessary that British troops should remain during the interim period which, it is hoped, will be short."

The following is the full text of the statement:

"The Delegation have considered the statement of the President of the Muslim League dated May 22, and the resolution dated May 24 of the Working Committee of the Congress.

"The position is that since the Indian leaders, after prolonged discussion, failed to arrive at an agreement, the Delegation put forward their recommendations as the nearest approach to reconciling the views of the two main parties. The scheme stands as a whole and can only succeed if it is accepted and worked in a spirit of co-operation.

Constituent Assembly

"The Delegation wish also to refer briefly to a few points that have been raised in the statement and resolution.

"The authority and the functions of the Constituent Assembly, and the procedure which it is intended to follow, are clear from the Cabinet Delegation's statement.

"Once the Constituent Assembly is formed and is working on this basis—there is no intention of interfering with its discretion or questioning its labours—H. M. G. will recommend to Parliament such action as may be necessary for the cession of sovereignty to the Indian people, subject only to two matters which are mentioned in the statement and which, we believe, are not controversial, namely, adequate provision for the protection of the minorities (paragraph 20 of the statement), and willingness to conclude a treaty with H. M. G. to cover matters arising out of the transfer of power (paragraph 22 of the statement).

Concessions To Britishers

"It is a consequence of the system of election that a few Europeans can be elected to the Constituent Assembly. Whether the right so given will be exercised is a matter for them to decide.

"The representative of Baluchistan will be elected at a joint meeting of the Shahi Jirga and the non-official members of the Quetta Municipality.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"In Coorg the whole Legislative Council will have the right to vote, but the official members will receive instructions not to take part in the election.

PAKISTAN IN MASK

"The interpretation put by the Congress resolution on paragraph 15 of the statement to the effect that the Provinces can in the first instance make the choice whether or not to belong to the section in which they are placed does not accord with the Delegation's intentions.

"The reasons for the grouping of the Provinces are well-known and this is an essential feature of the scheme and can only be modified by agreement between the parties.

"The right to opt out of the Groups after the constitution-making has been completed will be exercised by the people themselves, since at the first election under the new Provincial Constitution this question of opting out will obviously be a major issue, and all those entitled to vote under the new franchise will be able to take their share in a truly democratic decision.

CHOICE FOR STATES

"The question of how the States representatives should be appointed to the Constituent Assembly is clearly one which must be discussed with the States. It is not a matter for decision by the Delegation.

INTERIM GOVERNMENT

"It is agreed that the Interim Government will have a new basis. That basis is that all portfolios including that of the War Member will be held by Indians; and that the members will be selected in consultatnon with the Indian political parties. These are very significant changes in the Government of India and a long step towards independence.

"H. M. G. will recognise the effect of these changes, will attach the fullest weight to them, and will give to the Indian Government the greatest possible freedom in the exercise of the day-to-day administration of India.

CABINET RESPONSIBILITY

"As the Congress Statement recognises the present constitution must continue during the interim period; and the Interim Government cannot therefore be made legally responsible to the Central Legislature. There is, however, nothing to prevent the members of the Government individually or by common consent, from resigning, if they fail to pass an important measure through the Legislature or if a vote of no-confidence is passed against them.

BRITISH TROOPS

"There is, of coruse, no intention of retaining British troops in India against the wish of an independent India under the new constitution; but during the interim period which it is hoped will be short, the British Parliament has under the present Constitution, the ultimate responsibility for the security of India and it is necessary, therefore, that British troops should remain."

GANDHIJI'S ANALYSIS OF MISSION'S PLAN

"After four days of searching examination of the State Paper issued by the Cabinet Mission and the Viceroy on behalf of the British Government my conviction abides that it is the best document the British Government could have produced in the circumstances," says Mahatma Gandhi under the caption "An Analysis" in the *Harijan*, dated May 26.

Mahatma Gandhi adds: "It reflects our weakness, if we would be good enough to see it—the Congress and Muslim League did not and could not agree. We would grievously err, if at this time, we foolishly satisfy ourselves that the differences are a British creation.

"The Mission have not come all the way from England to exploit them. They have come to devise the easiest and quickest method of ending British rule. We must be brave enough to believe their declaration until the contrary is proved. Bravery thrives upon the deceit of the deceiver.

"My compliment, however, does not mean that what is best from the British standpoint is also best or even good from the Indian. Their best may possibly be harmful. My meaning will, I hope, be clear from what follows.

"The authors of the document have endeavoured to say fully what they mean. They have gathered from their talks the minimum they thought would bring the parties together for framing India's charter of freedom.

"Their one purpose is to end British rule as early as may be. They would do so, if they could, by their effort, leave a united India not torn asunder by internecine quarrel bordering on civil war. They would leave in any case.

"Since in Simla the two parties, though the Mission succeeded in bringing them together at the conference table (with what patience and skill they could do so they alone could tell), could not come to an agreement, nothing daunted them. They descended to the plains of India and devised a worthy document for the purpose of setting up the Constituent Assembly which should frame India's charter of independence free of any British control or influence.

CONSTITUENT ASSEMBLY ELECTION

"It is an appeal and an advice. It has no compulsion in it. Thus the Provincial Assem-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

blies may or may not elect the delegates. The delegates having been elected may or may not join the Constituent Assembly.

"The Assembly having met may lay down a procedure different from the one laid down in the statement. Whatever is binding on any person or party arises out of necessity of the situation. The separated voting is binding on both the major parties, only because it is necessary for the existence of the Assembly and in no case otherwise.

"At the time of writing I took up the statement, re-read it, clause by clause, and came to the conclusion that there was nothing in it binding in law. Honour and necessity alone are the two binding forces. What is binding is that part of it which commits the British Government.

"When, I suppose, the four members of the British Mission took the precaution, receiving full approval of the British Government and the two Houses of Parliament, the Mission are entitled to warm congratulations for the first step in the act of renunciation which the statement is. Since other steps are necessary for full renunciation I have called this one a promissory note.

"Though the response to be made by India is to be voluntary, the authors have naturally assumed that the Indian parties are well organised and responsible bodies capable of doing voluntary acts as full as, if not more fully than, compulsory acts.

Therefore, when Lord Pethick-Lawrence said to a Press correspondent, 'if they do come together on that basis it, will mean that they will have accepted that basis but they can still change it, if by a majority of each party they desire to do so', he was right in the sense that those who became delegates well knowing the contents of the statement were expected by authors to abide by the basis unless it was duly altered by the major parties.

"When two or more rival parties meet together they do so under some understanding. A self-chosen umpire (in the absence of one chosen by the parties the authors constitute themselves one) fancies that the parties will come together only if he presents them with a proposal containing a certain minimum and he makes his proposal leaving them free to add, to subtract from or altogether change it by joint agreement.

Problem of Grouping

"This is perfect so far. But what about the units? Are the Sikhs, for whom the Punjab is the only home in India, to consider themselves against their will as part of the Section which takes in Sindh, Baluchistan and the Frontier Province? Or is the Frontier Province also against its will to belong to the Punjab called "B" in the statement; or Assam to "C" although it is a Predominantly Non-Muslim Province?

"In my opinion the voluntary character of the statement demands that the liberty of individual unit should be unimpaired. Any member of the Sections is free to join it. The freedom to opt out is an additional safeguard. It can never be a substitute for the freedom retained in Para (15) which reads:

"Provinces should be free to form groups with Executive and Legislatures and each group could determine the Provincial subjects to be taken in 'common.'

"It is clear that this freedom was not taken away by the authors by Section 19 which 'proposes' (does not order) what should be done.

"It presupposes that the Chairman of the Constituent Assembly at its first meeting will ask the delegates of the provinces whether they would accept the group principle and if they do, whether they will accept the assignment given to their province. This freedom is inherent in every province and that given by para (15) will remain in tact.

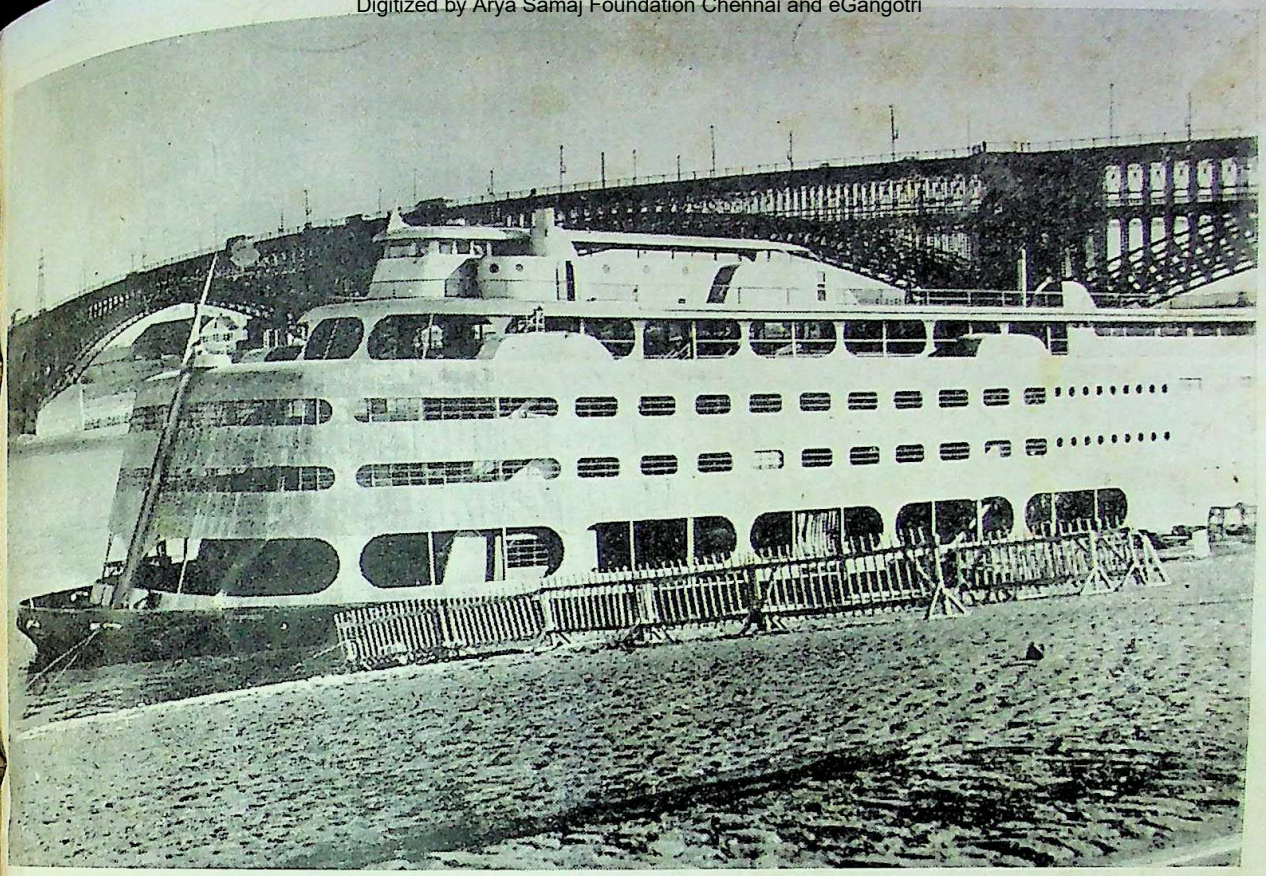
"There appears to me to no other way of avoiding the apparent conflict between the two paragraphs as also the charge of compulsion which would immediately after the noble character of the document.

"I would, therefore, ask all those who are perturbed by the group proposal and the arbitrary assignment, that, if my interpretation is valid, there is not the slightest cause for perturbation.

There are other things in the document which would puzzle any hasty reader who forgets that it is simply an appeal and an advice to the nation showing how to achieve independence in the shortest time possible.

"The reason is clear. In the new world that is to emerge out of the present chaos, India in bondage will cease to be "the brightest jewel" in the British Crown. It will become the blackest spot in that Crown, so black that it will be fit only for the dustbin.

"Let me ask the reader to hope and pray with me that the British Crown has a better use for Britain and the world. The brightest jewel is an arrogation.



"When the promissory note is fully honoured, the British Crown will have a unique jewel as of right flowing from due performance of duty.

"There are other matters outside the statement which are required to back the promissory note. But I must defer that examination to the next issue of *Harijan*.

THE MODERN REVIEW

JULY 1946

VOL. LXXX, NO. 1 WHOLE NO. 475

NOTES

Congress President's Letter to Viceroy

The long-drawn parley between the Cabinet Mission and the major political parties in India has reached its logical conclusion. The proposals made in the statement of May 16 contained the germ of democracy and as such, despite all handicaps placed on the Congress, are worthy of a prolonged trial. For where the path leads towards the goal it should be followed, however tortuous and thorny it might be. In the Interim Government proposals, on the other hand, the forces of reaction have had their last throw at bringing all our efforts at the attainment of freedom to negation and as such they cannot be accepted under any circumstances.

In a long letter to the Viceroy, the Congress President has comprehensively dealt with the reasons for the Congress rejecting the Interim Government proposal made by the Viceroy and the Cabinet Mission in their statement on June 16. Following is the full text of the letter :

25th June, 1946.

Dear Lord Wavell,

Ever since the receipt of your statement of June 16th, my Committee have been considering it from day to day and have given long and anxious thought to your proposals and to the invitations you have issued to individuals to form the Provisional National Government. Because of our desire to find some way out of the present most unsatisfactory situation, we have tried our utmost to appreciate your approach and viewpoint. In the course of our conversations we have already pointed out to you our difficulties. Unfortunately, these difficulties have been increased by the recent correspondence.

The Congress, as you are aware, is a national organisation including in its fold the members of all religions and communities in India. For more than half a century it has laboured for the freedom of India and for equal rights for all Indians. The link that has brought all these various groups and communities together within the fold of the Congress is the passionate desire for national independence, economic advance and social equality. It is from this point of view that we have to judge every proposal. We hoped that a Provisional National Government would be formed which would give effect in practice to this independence.

Powers of Provisional Government : Appreciating some of your difficulties, we did not press for any statutory change introducing independence immediately, but we did expect a *de facto* change in the character of the Government making for independence in action. The status and powers of the Provisional Government were thus important.

In our view this was going to be something entirely different from the Viceroy's Executive Council. It was to represent a new outlook, new methods of work and a new psychological approach by India to both domestic and external problems. Your letter dated 30th May, 1946, gave us certain assurances about the status and powers of the Provisional Government. These did not go far enough, according to our thinking, but we appreciated the friendly tone of that letter and decided to accept the assurances and not to press this particular matter any further.

The important question of the composition of the Provisional Government remained. In this connection we emphasised that we could not accept anything in the nature of "parity" even as a temporary expedient and pointed out that the Provisional Government should consist of 15 members to enable the administration of the country to be carried on efficiently and the smaller minorities to be represented in it.

Some mention of names was made and on our part suggestions were put before you informally, including the name of a non-League Muslim.

Selection of Names : In your statement on June 16th some of the names were made from the provisional list prepared by the Congress. The manner of preparing your list and presenting it as an accomplished fact seemed to us to indicate a wrong approach to the problem. One of the names included had not been previously mentioned at all and was that of a person holding an official position and not known to be associated with any public activity. We have no personal objection to him, but we think that the inclusion of such a name particularly without any previous reference or consultation, was undesirable and indicated a wrong approach to the problem.

Then again a name from our list was excluded and in his place another of our colleagues was put in, but as you have said that this can be rectified, I need not say more about.

Inclusion of Nationalist Muslim : One outstanding feature of this list was the non-inclusion of any Nationalist Muslim. We felt that this was a grave omission. We wanted to suggest the name of a Muslim

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to take the place of one of the Congress names on the list. We felt that no one could possibly object to our changing the name of one of our own men. Indeed, when I had drawn your attention to the fact that among the Muslim League nominees was included the name of a person, who had actually lost in the recent elections in the Frontier Province and whose name we felt had been placed there for political reasons, you wrote to me as follows: "I am afraid that I cannot accept the right of the Congress to object to names put forward by the Muslim League, any more than it would accept similar objections from the other side. The test must be that of ability." But before we could make our suggestion I received your letter of the 22nd June, which surprised us greatly. You had written this letter on the basis of some Press reports. You told us that the Cabinet Mission and you were not prepared to accept a request for the inclusion of a Muslim chosen by the Congress among the representatives of the Congress in the Interim Government.

This seemed to us an extraordinary decision. It was in direct opposition to your own statement quoted above. It meant that the Congress could not freely choose even its own nominees.

The fact that this was not to be taken as a precedent made hardly any difference. Even a temporary departure from such a vital principle could not be accepted by us at any time or place and in any circumstances.

In your letter of the 21st June, you gave certain questions framed by Mr. Jinnah in his letter dated 19th June and your replies to them. We have not seen Mr. Jinnah's letter. In Question 3, reference is made to "representation of the four minorities *viz.*, the Scheduled Castes, the Sikhs, the Indian Christians and the Parsees", and it is asked as to "who will fill in vacancies caused in these groups, and whether in filling up the vacancies the leader of the Muslim League will be consulted and his consent obtained."

Problem of Scheduled Castes: In your answer you say, "If any vacancy occurs among the seats at present allotted to representatives of the minorities, I shall naturally consult both the main parties before filling it." Mr. Jinnah has thus included the Scheduled Castes among the minorities and presumably you have agreed with this view. So far as we are concerned we repudiate this view and consider the Scheduled Castes as integral parts of Hindu society. You also, in your letter of June 15th, treated the Scheduled Castes as Hindus.

You pointed out that in your proposal there was no "parity" either between Hindus and Muslims or between the Congress and the Muslim League inasmuch as there were to be 6 Hindus belonging to the Congress, as against 5 Muslims belonging to the League. One of the 6 Hindus belonged to the Scheduled Castes.

We are in any case not agreeable to the leader of a party, which claims to represent a community which is a minority, interfering with the selection of names either of the Scheduled Castes, whose representation you counted as falling within the Congress quota, or with the selection of representatives of the minorities mentioned.

In Question 4, the Scheduled Castes are again referred to as a minority and it is asked whether the proportion of members of the Government community-wise as provided in the proposals will be maintained. Your answer is that the proportion will not be changed without agreement of the two major parties. Here again one communal group functioning admittedly as such is given a power to veto changes in other groups with which it has no concern.

We may desire, if opportunity offers itself, to increase the representation, when it is possible, to another minority, for example, Anglo-Indians. All this would depend on the consent of the Muslim League. We cannot agree to this.

We may add that your answers restrict the Congress representation to Caste Hindus and make it equal to that of the League.

Decision on Major Communal Issue: Finally you state in answer to Question 5 that "no decision of a major communal issue could be taken by the Interim Government if the majority of either of the main parties were opposed to it." You further say that you had pointed this out to the Congress President and he had agreed that the Congress appreciated this point. In this connection I desire to point out that we had accepted this principle for the long-term arrangement in the Union Legislature and it could possibly be applied to the Provisional Government if it was responsible to the Legislature and was composed of representatives on the population basis of major communities.

It could not be applied to the Provisional Government formed on a different basis altogether. It was pointed out by us in my letter of the 13th June, 1946, that it would make administration impossible and deadlocks a certainty. Even in the question as framed by Mr. Jinnah it is stated that "in view of the substitution of 14 now proposed for the original 12" no major communal issues should be decided if the majority of the Muslim members are opposed to it. Thus this question arose after the substitution of 14 for 12, *i.e.*, after your statement of June 16th.

Veto Power to Muslim League: In this statement no mention was made of this rule.

This very important change has been introduced almost casually and certainly without our consent. This again gives the power of veto or obstruction to the Muslim League in the Provisional Government.

We have stated above our objections to your proposals of June 16th as well as to your answers to the questions framed by Mr. Jinnah. These defects are grave and would render the working of the Provisional Government difficult and deadlocks a certainty. In the circumstances your proposals cannot fulfil the immediate requirements of the situation or further the cause we hold dear.

My Committee have, therefore, reluctantly come to the conclusion that they are unable to assist you in forming a Provisional Government as proposed in your statement of June 16th, 1946.

Acceptance of Long-Term Plan: With regard to the proposals made in the statement of May 16th, 1946, relating to the formation and functioning of the constitution-making body, the Working Committee of the Congress passed a resolution on the 24th May, 1946, and conversations and correspondence have taken place between Your Excellency and the Cabinet Mission on the one side and myself and some of my colleagues on the other. In these we have pointed out what in our opinion were the defects in the proposals. We also gave our interpretation of some of the provisions of the statement. While adhering to our views, we accept your proposals and are prepared to work them with a view to achieve our objective. We would add, however, that the successful working of the Constituent Assembly will

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

largely depend on the formation of a satisfactory Provisional Government.

Sd/- A. K. AZAD

Congress Resolution on British Proposals

The following is the full text of the resolution of the Congress Working Committee on the Cabinet Mission's Declaration released for publication on June 25 :

On May 24, the Working Committee passed a resolution on the statement, dated May 16 issued by the British Cabinet Delegation and the Viceroy. In this resolution they pointed out some defects in the statement and gave their own interpretation of certain parts of it.

Since then the Committee have been continuously engaged in giving earnest consideration to the proposals made on behalf of the British Government in the statements of May 16 and June 16 and have considered the correspondence in regard to them between the Congress President and the members of the Cabinet Delegation and the Viceroy.

The Committee have examined both these sets of proposals from the point of view of the Congress objective of immediate independence and the opening out of the avenues leading to the rapid advance of the masses, economically and socially, so that their material standards may be raised and poverty, malnutrition, famine and the lack of the necessaries of life may be ended, and all the people of the country may have the freedom and opportunity to grow and develop according to their genius. These proposals fall short of these objectives. Yet the Committee considered them earnestly in all their aspects because of their desire to find some way for the peaceful settlement of India's problem and the ending of the conflict between India and England.

The kind of independence, Congress has aimed at, is the establishment of a united, democratic Indian federation, with a Central authority, which would command respect from the nations of the world, maximum provincial autonomy and equal rights for all men and women in the country. The limitation of the Central authority as contained in the proposals, as well as the system of grouping of provinces, weakened the whole structure and was unfair to some provinces such as the N.-W. F. Province and Assam, and to some of the minorities, notably the Sikhs. The Committee disapproved of this. They felt, however, that, taking the proposals as a whole, there was sufficient scope for enlarging and strengthening the Central authority and for fully ensuring the right of a province to act according to its choice in regard to grouping, and to give protection to such minorities as might otherwise be placed at a disadvantage. Certain other objections were also raised on their behalf, notably the possibility of non-nationals taking any part in the constitution-making. It is clear that it would be a breach of both the letter and spirit of the statement of May 16, if any non-Indian participated in the voting or stood for election to the Constituent Assembly.

In the proposals for an interim Government contained in the statement of June 16, the defects related to matters of vital concern to the Congress. Some of these have been pointed out in the letter, dated June 25, of the Congress President to the Viceroy. The Provisional Government must have power and authority and responsibility and should function in fact, if not in law, as a *de facto* independent Government leading to the full independence to come. The members of such a Government can only hold themselves responsible to the people and not to any external authority. In the formation of a provisional or other Government, Congressmen can never give up the national character of the Congress, or accept an artificial and unjust parity, or agree to the veto of a communal group. The Committee are unable to accept the proposals for the formation of an interim Government as contained in the statement of June 16.

The Committee have, however, decided that the Congress would join the proposed Constituent Assembly, with a view to framing the constitution of a free, united and democratic India.

While the Committee have agreed to Congress participation in the Constituent Assembly, it is in their opinion essential that a representative and responsible provisional national Government be formed at the earliest possible date. A continuation of authoritarian and unrepresentative Government can only add to the suffering of famishing masses and increased discontent. It will also put in jeopardy the work of the Constituent Assembly, which can only function in a free environment.

The Working Committee recommend accordingly to the All-India Congress Committee, and for the purpose of considering and ratifying this recommendation they convene an emergent meeting of the A.-I. C. C. in Bombay on July 6 and 7.

Interim Government Proposal

The following is the full text of the *interim* Government proposal announced on June 16 :

"His Excellency the Viceroy, in consultation with the members of the Cabinet Mission, has for some time been exploring the possibilities of forming a Coalition Government drawn from the two major parties and certain of the minorities. The discussions have revealed the difficulties which exist for the two major parties in arriving at any agreed basis for the formation of such a government.

The Viceroy and the Cabinet Mission appreciate these difficulties and the efforts which the two parties have made to meet them. They consider, however, that no useful purpose can be served by further prolonging these discussions. It is indeed urgently necessary that a strong and representative Interim Government should be set up to conduct the very heavy and important business that has to be carried through.

The Viceroy is, therefore, issuing invitations to the following to serve as members of the Interim Government on the basis that the constitution-making will proceed in accordance with the statement of May 16 :

Sardar Baldev Singh, Sir N. P. Engineer, Mr. Jagjivan Ram, Pandit Jawaharlal Nehru, Mr. M. A. Jinnah, Nawabzada Liaquat Ali Khan, Mr. H. K. Mahatab, Dr. John Matthai, Nawab Mohammad Ismail Khan, Khwaja Sir Nazimuddin, Sardar Abdur Rab Nishtar, Mr. C. Rajagopalachari, Dr. Rajendra Prasad, Sardar Vallabhbhai Patel.

If any of those invited is unable for personal reasons to accept the Viceroy will, after consultation, invite some other person in his place.

The Viceroy will arrange the distribution of portfolios in consultation with the leaders of the two major parties.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The above composition of the Interim Government is in no way to be taken as a precedent for the solution of any other communal question. It is an expedient put forward to solve the present difficulty only, and to obtain the best available Coalition Government.

The Viceroy and the Cabinet Mission believe that Indians of all communities desire to arrive at a speedy settlement of this matter so that the process of constitution-making can go forward and that the Government of India may be carried on as efficiently as possible in the meantime.

They, therefore, hope that all parties, especially the two major parties, will accept this proposal so as to overcome the present obstacles, and will co-operate for the successful carrying on of the Interim Government. Should this proposal be accepted the Viceroy will aim at inaugurating the new Government about the 26th June.

In the event of the two major parties or either of them proving unwilling to join in the setting up of a Coalition Government on the above lines, it is the intention of the Viceroy to proceed with the formation of an Interim Government which will be as representative as possible of those willing to accept the statement of May 16.

The Viceroy is also directing the Governors of the Provinces to summon the Provincial Legislative Assemblies forthwith to proceed with the elections necessary for the setting up of the constitution-making machinery as put forward in the statement of May 16."

Interim Proposal Scrapped

The Cabinet Mission and the Viceroy in a statement regret that it has not been possible to form an *interim* Coalition Government, but they are determined that the efforts should be renewed. Until a new *interim* Government can be formed, it is the intention of the Viceroy to set up a temporary caretaker government of officials. Following is the full text of the statement issued on June 25 :

"The Cabinet Mission and the Viceroy are glad that constitution-making can now proceed with the consent of the two major parties and of the States. They welcome the statements made to them by the leaders of the Congress and the Muslim League that it is their intention to try and work in the Constituent Assembly so as to make it a speedy and effective means of devising the new constitutional arrangements under which India can achieve her independence. They are sure that the members of the Constituent Assembly, who are about to be elected, will work in this spirit.

The Cabinet Mission and the Viceroy regret that it has not so far proved possible to form an Interim Coalition Government, but they are determined that the effort should be renewed in accordance with the terms of paragraph eight of their statement of June 16.

Owing, however, to the very heavy burden which has been cast upon the Viceroy and the representatives of the parties during the last three months, it is proposed that the further negotiations should be adjourned for a short interval during the time while the elections for the Constituent Assembly will be taking place. It is hoped that when the discussions are resumed, the leaders of the two major parties, who have all expressed their agreement with the Viceroy and the Cabinet Mission on the need for the speedy formation of a representative Interim Government, will do their utmost to arrive at an accommodation upon the composition of that Government.

As the Government of India must be carried on until a new Interim Government can be formed, it is the intention of the Viceroy to set up a temporary caretaker government of officials.

It is not possible for the Cabinet Mission to remain longer in India as they must return to report to the British Cabinet and Parliament and also to resume their work from which they have been absent for over three months. They, therefore, propose to leave India on Saturday next, June 29.

In leaving India the members of the Cabinet Mission express their cordial thanks for all the courtesy and consideration which they have received as guests in the country and they most sincerely trust that the steps which have been initiated will lead to a speedy realisation of the hopes and wishes of the Indian people."

Wavell-Jinnah Correspondence

The release of the Wavell-Jinnah correspondence throws a flood of light on the causes that led to the breakdown of the *interim* Government proposals. After the statement of June 16 was officially scrapped, Mr. Jinnah came out with a fiery statement in which he declared that "any attempt to whittle down in any way the assurances given to the Muslim League or to change or modify the basis of the statement of June 16, which has been accepted by the Muslim League, will be regarded as going back on the part of the Cabinet Delegation and the Viceroy on their pledged word in writing and as a breach of faith." The charges of Mr. Jinnah may be considered to have been summed up in the following portion of his long statement :

> I regret that the Cabinet Delegation and the Viceroy should have thought fit to postpone indefinitely the formation of the Interim Government on the basis of their statement of June 16 as that statement clearly says that the Vicerov aimed at inaugurating the Interim Government about June 26.
>
> It is very difficult to see what are the mysterious reasons and causes for this sudden departure. The Muslim League emphatically disapproves of this action on the part of the Cabinet Delegation and the Viceroy, because all contingencies including rejection by the Congress were contemplated by and provided for in the statement of June 16 and clause 8 of the statement taken along with the context is quite clear and the delegation and the Viceroy were in honour bound to go ahead with the formation of the Interim Government immediately with those who were willing to come into the Interim Government on the basis and principles set out in their statement of June 16.

Viscount Wavell has not suffered these charges to go unanswered. The correspondence that passed between him and Mr. Jinnah has been released for publication together with the short but important letter, that was sent to the League President in reply to his statement mentioned above. The correspondence, published below, proves that Mr. Jinnah's charges against the Cabinet Delegation and the Viceroy stand amply rebutted.

Wavell's Second Letter

June 28.

Dear Mr. Jinnah,

The Cabinet Mission and I feel that there are certain points in your statement released yesterday which it would be wrong to leave unanswered.

You will remember that at an interview which the Cabinet Mission and I had with you on the evening of June 25, before the meeting of your Working Committee, at which you accepted the proposals in the statement of June 16, we explained to you that as Congress had accepted the statement of May 16 while refusing to take part in the Interim Government proposed in the statement of June 16, this had produced a situation in which para 8 of the statement of June 16 took effect.

This paragraph stated that if either of the two major parties was unwilling to join in the setting up of a Coalition Government on the lines laid down in that statement, the Viceroy would proceed with the formation of Interim Government which would be as representative as possible of those willing to accept the statement of May 16.

We said that since the Congress and the Muslim League had now both accepted the statement of May 16 it was the intention to form a Coalition Government including both those parties as soon as possible.

In view, however, of the long negotiations which had already taken place, and since we all had other work to do, we felt that it would be better to have a short interval before proceeding with further negotiations for the formation of an Interim Government.

Thus, whatever interpretation you may put on para 8 your Working Committee can have been in no doubt as to the course we proposed to adopt.

I confirmed in writing the same evening what we had told you.

Secondly, the assurances which you quote in your statement related specifically to the particular Interim Government that would have been set up if both major parties had accepted the statement of June 16.

To prevent misunderstanding I propose to publish this letter together with your letter of June 19 the substance of which has already appeared in the Press, and my reply of June 20.

The Viceroy's second letter of June 28 to Mr. Jinnah:

I have received your letter of June 28 and have shown it to the Cabinet Ministers.

We are quite unable to accept your suggestion that we have gone back on our word. As I have said in a letter to you earlier today, our course of action was determined by what had been laid down in para 8 of the statement of June 16; and we had made it plain to you before your Working Committee meeting on June 25, that we proposed to follow this course.

The arrangements for the elections to the Constituent Assembly have already been put into operation and we do not propose to postpone them.

As the substance of your letter was included in the All-India Radio news today I am publishing this reply.

W. WAVELL

MR. JINNAH'S LETTER

June 19th, 1946

Dear Lord Wavell,

I am in receipt of your letter of the 16th June, 1946 together with an advance copy of the statement by the Cabinet Delegation and yourself of the same date.

In my interview with you at Simla prior to the announcement of the Cabinet Delegation's proposals, you had informed me that you were going to form the Interim Government consisting of 12 members on the basis of 5 Muslim League, 5 Congress, 1 Sikh and 1 Indian Christian or Anglo-Indian. As regards the portfolios, you had indicated that the important ones would be equally divided between the Muslim League and the Congress; but details of actual allotment were to be left open for discussion. After the statement of the Cabinet Delegation and yourself, dated the 16th of May, 1946, you again on the 3rd of June at New Delhi gave me to understand that the formula for the formation of the Interim Government disclosed to me at Simla would be followed. On both the occasions I sought your permission to communicate this information to my Working Committee which you kindly gave. Accordingly, I gave a full account of the talks I had with you and the decision of the Working Committee in regard to the acceptance of the long-term proposals was largely influenced by the faith which they reposed in the scheme for the formation of the Interim Government disclosed by you to me on the two occasions. Further, as I have already pointed out in my letter to you of the 8th June, 1946, I made the statement before the Council of the All-India Muslim League that that was the formula, which, I was assured by you, would be the basis on which you would proceed to form your Interim Government, and, therefore, this formed an integral part of the plan embodied in the statement of the Cabinet Delegation. This was one of the most important considerations which weighed with the Council of the All-India Muslim League also in arriving at their decision, although even then there was a section that was opposed to the plan being accepted.

When the Congress Press started a sinister agitation against Congress-League parity, with a view to inform you of the Muslim League stand, I write to you on the 8th June that any departure from this formula, directly or indirectly, will lead to serious consequences and will not secure the co-operation of the Muslim League.

Subsequently, in my interview with you on the 13th June you informed me that you wanted to alter the basis and proceed on the formula of 5 Congress, 5 Muslim League, and 3 others, namely, 1 Sikh, 1 Scheduled Caste, and 1 Indian Christian. I told you then that if any change was proposed to be made I would have to place the matter before the Working Committee and may have to call another meeting of the Council of the All-India Muslim League. I also informed you that when the Congress finally agreed to your new formula I would then place it before my Working Committee for them to take such action as they deem necessary.

After discussion with the Congress representatives you wrote to me on the 15th June informing me that you had failed to negotiate an agreement on the composition of the Interim Government on the basis of five-five-three and that the Cabinet Delegation and yourself would issue a statement on the 16th of June on the action that you proposed to take and that you would let me have a copy of it before publication.

Accordingly, you sent me a copy of the statement by the Cabinet Delegation and yourself issued on the 16th June, with a covering letter of the same date, which I placed before my Working Committee and who after

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

careful consideration of the matter have authorised me to state as follows :

(*a*) That the Working Committee are surprised that invitations have been issued to 5 Muslim Leaguers to join the Interim Government without calling for a list from the leader of the Muslim League.

(*b*) That your latest proposal on the basis of which you now desire to form your Interim Government shows that you have abandoned parity between the Congress and the Muslim League, the two major parties, and have substituted parity between the Muslim League and Caste Hindus, and have added a fourth representative of the minorities, namely, a Parsi. One of the minority representatives nominated by you, *i.e.*, Mr. Jagjivan Ram, is a Congressman and has been selected, it appears, not to give real representation to the Scheduled Castes, but to give an additional seat to the Congress in the Interim Government.

(*c*) That the modifications which have been made in the original formula for the Interim Government have adversely affected the proportion of the Muslims in the Interim Government, as a whole and as against the Congress, as a single group.

(*d*) That in view of the serious changes which have, from time to time, been made to satisfy the Congress, it is not possible for the Working Committee to arrive at any decision in the matter of the formation of the Interim Government so long as the Congress does not finally convey its decision on the proposals to you, and

(*e*) That the question of distribution of portfolios should also be finally decided so that there may be no further hitch created by the Congress in this regard and the Working Committee may have a complete picture before them when they meet to consider the proposals.

Further, I shall be grateful if you will please make the following points clear with reference to your letter and statement of the 16th June :

1. Whether the proposals contained in the statement for the setting up of an Interim Government are now final or whether they are still open to any further change or modification at the instance of any of the parties or persons concerned ;

2. Whether the total number of 14 members of the Government as proposed in the statement would remain unchanged during the interim period ;

3. If any person or persons invited as representatives of the 4 minorities, *viz.*, the Scheduled Castes, the Sikhs, the Indian Chirstians and the Parsis, is or are, unable to accept the invitation to join the interim Government for personal or other reasons, how will the vacancy or vacancies thus created, be filled by the Viceroy ; and whether in filling up the vacancy or vacancies the Leader of the Muslim League will be consulted and his consent obtained ;

4. (*a*) Whether during the Interim period for which the Coalition Government is being set up the proportion of members of the Government, Communitywise, as provided in the proposals, will be maintained,

(*b*) Whether the present representation given to 4 minorities *viz.*, the Scheduled Castes, the Sikhs, the Indian Christians and the Parsis will be adhered to without any change or modification, and

5. In view of the substitution of 14 now proposed for the original of 12 and the change made in the original formula, whether there will be a provision in order to safeguard Muslim interests, that the Executive Council shall not take any decision on any major communal issue if the majority of the Muslim members are opposed to it.

I trust that you will kindly favour me with your reply as early as possible.

Yours sincerely,
M. A. JINNAH

VICEROY'S LETTER TO MR. JINNAH

Dear Mr. Jinnah, June 20, 1946

I thank you for your letter of the 19th June which I have shown to the Cabinet Mission.

I do not think it is necessary for me to comment on the first part of your letter. I am sure you will appreciate that negotiations designed to secure acceptance by two parties with conflicting interests may not always end on the same basis as that on which they began ; and as you know, I never gave you any guarantee that they would necessarily be concluded on any particular basis.

I note the views of the Muslim League set out in paragraphs (*a*) to (*e*) of your letter.

The intention in the statement of June 16 was that the discussion on portfolios with leaders of the two main parties should follow the acceptance by both parties of the scheme. This intention still holds, since until the names are known, it is difficult to decide on the distribution of portfolios.

On the points which you desire to be made clear in connection with the Government to be formed under our statement of June 16, I give you the following reply after consultation with the Delegation :

1. Until I have received acceptance from those invited to take office in the Interim Government, the names in the statement cannot be regarded as final. But no change in principle will be made in the statement without the consent of the two major parties.

2. No change in the number of 14 members of the Interim Government will be made without the agreement of the two major parties.

3. If any vacancy occurs among the seats at present allotted to representatives of Minorities, I shall naturallly consult both the main parties before filling it.

4. (*a*) and (*b*) The proportion of members by communities will not be changed without the agreement of the two major parties.

5. No decision on a major communal issue could be taken by the Interim Government if the majority of either of the main parties were opposed to it. I have pointed this out to the Congress President and he agreed that the Congress appreciated this point.

6. If you agree, I will send copies of the questions in your letter and of paragraphs 4 and 5 of this letter to the President of the Congress.

Yours sincerely,
W. WAVELL

Candidates for the Constituent Assembly

The time has come for the selection of candidates for the Constituent Assembly. The Congress Leaders have suggested names of well-known Indian experts on constitutional law, irrespective of their party affiliations, for inclusion in the Congress list. That is good.

A Constituent Assembly is a rare feature in the life of a nation. Its tasks and responsibilities are very great. The more efficient is its work, the shorter is the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

interval between two such Assemblies and the more durable the social peace achieved. The U.S.A. had her Constituent Assembly some two centuries back, need has not arisen to call another. France had several such Assemblies during the past hundred years. The prospective candidates for the Indian Constituent Assembly ought to realise the great burden they are going to shoulder. Their power will be immense, they would make or mar the future of the unborn generations. A revolution may be averted by them if they succeed ; a catastrophe will be a certainty if they fail.

The methods that were followed in selecting candidates for the Legislatures make us apprehend that the same tactics are likely to be adopted in selecting Constituent Assembly candidates as well. In the long lists of members of the Legislatures in Bengal, Bihar and Assam in particular, one has to look long before he comes across a name that suggests parliamentary abilities. The Congress list is no exception. Persons with well-known records of anti-social activities are included in it. It pained us to find a number of such names on the list of persons returned to the A.-I.C.C. from Bengal. The lists are faultless with regard to group quota. The declared criterion for these selections was that the candidates were political sufferers. The selecting authorities thought it fit to send workers to the Legislatures. We hoped that it would ensure at least one important thing that is badly needed today, discipline. But the disillusionment came too soon. In Assam, the Group controversy has needlessly exposed the division among Congress ranks in the Ministry as well as the Legislature ; in Bengal, the unsavoury facts revealed after the last election to the Upper House by the Assembly members augur ill for the province.

The fundamentals of Indian life and activity are embodied in a verse of the *Bhagavad Gita* : "Do your duty without waiting for the results thereof, be that good or be that ill." This great teaching of unattachment to worldly desires brings about an unruffleness of mind essentially needed by a patriot. The Bengal Revolutionaries of the Partition days had discovered the seed of their success in this verse, they made the study of the *Gita* compulsory for their recruits and thus succeeded in building up a band of workers with grim determination, sterling character, well-disciplined and ready to lay down their lives for the attainment of freedom for our motherland. They were a handful in number but they shook the British throne and lashed world opinion to alertness about India. They made tremendous sacrifices without waiting for a reward. Deviation from this principle has brought disaster on the Congress in Bengal.

The recognition of political suffering as an object of reward through the grant of membership of the Legislature cannot be too strongly condemned. This lowers sacrifice to the level of capitalisation and brings down the sufferer in the esteem of the people whom he served. The purity of his sacrifice is lost and it is natural that motive would be ascribed to his subsequent activities. Unfit for parliamentary work by temperament, lacking in educational experience and equipment needed for it and shorn of the respect he commanded among his folk, is bound to cut a sorry figure and the country suffers both ways. With parliamentarians innocent of knowledge of law and constitution, enactments serving sectional interests, Acts with retrospective effect and the like become frequent and a source of menace to the people. Valuable workers are lost in the Legislatures.

The people are disappointed in their expectation that their beloved leaders, local and provincial, would resist the temptation of the paltry salary and honour that attaches to the membership of a Legislature. If employment has to be found for those of them in distress, other avenues should be discovered. Legislatures ought not be used as an object of reward or employment by any political party because it means evil for all, the workers themselves not exempted.

We appeal to the Bengal Congress authorities to ponder over and rise above personal, group or party tactics in making selections of candidates for the Constituent Assembly. Ability, and not the mere fact of political suffering, should be the prime test for such selections.

League Planning Committee on Pakistan Economics

The Honorary Joint Secretary of the All-India Muslim League Planning Committee in a statement says :—The Cabinet Mission's Plan provides that the proposed Union of India would deal with foreign affairs, defence and communications and shall have powers to raise the finances required for the purpose. The economic implications of putting these subjects under the control of the proposed Union are as follows :

The foreign relations and the foreign trade of a country are interdependent. Trade considerations play an important role in the determination of the foreign policy. The Centre, through its foreign policy, will be in a position to exercise a considerable measure of control over the volume, character and direction of the foreign trade of the constituent units.

The authority entrusted with the responsibility for incurring public expenditure can and does affect the economic life of the community to a very great extent. The expenditure on defence usually constitutes a very large part of the total public expenditure. Under the proposed Plan the defence expenditure will be the responsibility of the Centre which would thus have the power to influence the economic life of the units in a very effective manner.

The Defence Department of a country is usually the largest single employer in the country. It employs a large number of people directly as members of the defence services. The secondary employment created by it is enormous, for a very much larger number is employed in the production of goods and services required for defence. All this employment will be controlled by the Central Government.

The goods required for defence include, amongst others, the products of the following industries :

Iron and Steel Industry ; General Engineering Industry ; Power Industry ; Chemical Industry ; Cement Industry ; Consumption goods industries, such as leather, textiles, sugar, paper, matches, soap, etc.

The first five are basic industries, for their products are indispensable for other industries. The location of these industries is decided partly on grounds of strategy and partly in the interests of the economic development of the country. These decisions will be made by the Central Government which will thus have the power to promote or discourage the economic development of different areas.

In order that the requirements of the Defence Department may be efficiently and promptly met, a good deal of economic planning would be necessary. In

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri

Digitized by Arya Samaj Foundation Chennai and eGangotri

particular the development of the abovementioned industries will have to be planned by the Centre. This will greatly curtail the liberty of the Groups as well as Provinces in the matter of economic planning. The Units will have no option but to esure that their plans are such as can be fitted in the Master Plan prepared by the Centre. Thus the Central Government, through its economic planning for defence, would be in a position to determine the character of the economy which the different units are to have.

Communications play a very important role in the economic life of a country. The location of industries and of markets, the character of agricultural production and the economic development of different areas are dependent on the facilities available for the transport of goods and the rates at which they are carried.

The railways can't charge uniform rates for all goods and distances. Differential rates are both necessary and justified on economic grounds. But the right of discrimination places enormous power in the hands of the railway authorities, which can, if they so choose, cripple the economy of any area through their rates policy.

The Union Government will have the powers to raise the finances required for the central subjects. It has not been laid down as to how these finances are to be raised. There are two ways of doing this :

1. The units may make contributions to the Centre on an agreed basis, or,

2. The Centre may impose taxes on its own account.

As this question has to be decided by the proposed Constituent Assembly, it can safely be taken for granted that a majority of the members of the Assembly would be in favour of the second method. The economic effects of this method of raising the finances required by the Centre would be of a very far-reaching character.

Some of the important sources of revenue for a common centre are as follows :

Customs; Central Excise; Income-tax; Currency.

The imposition of import and export duties for revenue purposes is very closely connected with the imposition of such duties for protective purposes. It is necessary that the one should not nullify the effect of the other. The case for their proper co-ordination and control by the same authority is very strong. This authority is likely to be the Union Government which will thus get the powers to control the policy with regard to protection.

The incidence of import and export duties whether for revenue or for protective purposes cannot be uniform for all the people. Different people are affected differently. For example, the incidence of the export duty on jute has been to an appreciable extent on the Muslim agriculturists of Eastern Bengal. Again, the protective duty on sugar has meant that the Muslims, along with others, have been paying a higher price for the sugar consumed by them, whereas the beneficiaries of the duty have been the Hindu growers of sugar-cane in the U.P. and Bihar, and the non-Muslim owners of sugar-mills. Such examples could be easily multiplied. The point that it is intended to emphasise is that the authority imposing the import and export duties is in a position, to bring about a re-distribution of wealth amongst the members of the community and to discriminate between different people in the distribution of sacrifices and benefits.

Excise duties cannot be levied on a uniform basis. Only a few commodities are selected for this purpose and they are taxed at different rates. Besides, the incidence of excise duties, like Customs duties, is such that different people are affected differently. This gives the Central Government powers to exercise discrimination in the imposition of burdens.

Income-tax is a direct tax and through it all the economic activities of the individual come directly under the control of the taxing authority. People are naturally more interested in the authority that taxes them directly than in any other. That is why the component units in most of the federations in the world have always tried to reserve the powers of direct taxation to themselves leaving the Central Government to rely mostly on indirect taxes. But the increasing needs of the Central Government have usually led to an encroachment on the rights of the Units in the sphere of direct taxation, with the consequent loss of importance by the Units.

Currency is the source of inflationary finance. In times of emergency such as war, it is the most important source of finance for the Central Government. Once it is conceded that the Union Government will have powers to raise money otherwise than through contributions by the Units, the case for the Central control over currency becomes irresistible.

Currency and banking are closely related and their unified control is essential on economic grounds. This would mean that banking would also become a Central subject.

The Plan provides that any major communal issue should require for its decision a majority of the representatives of each of the two major communities. This may be an effective safeguard against any direct interference in the religious and cultural interests of the Muslims. But there need be no such direct interference for the religion and culture of a people can be imperceptibly, but none less effectively, destroyed by applying the economic strangle-hold against which there is no safeguard, as economic issues are not likely to come under the definition of "major communal issues".

Some of the important key points for the control of the economic life of a community are as follows :

1. Foreign trade.
2. Protective tariffs.
3. Public expenditure (of which the expenditure on defence constitutes a very large part).
4. Income-tax.
5. Economic planning.
6. Basic industries.
7. Currency.
8. Banking.

Practically all the above subjects, for one reason or another, would come under the control of the proposed Centre which would be virtually an Akhand Hindustan Centre. The Units will find that policies with regard to most of the important matters are laid down for them by the Centre and all that they are required to do is to carry them out. It would be no exaggeration to say that under this arrangement the Groups and Provinces may be no more than glorified municipalities.

Is Congress a Hindu Body ?

Strenuous and persistent efforts have for some years past been made in India and abroad to paint the Congress as a Hindu organisation. The propaganda

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were mainly Conservative Britons and their Indian colleagues of the Muslim League. The Indian National Congress has always been a national organisation of the Indian masses. Any person, belonging to any community or professing any religion, is eligible for membership provided he subscribes to its political creed, namely, attainment of Indian independence by non-violent and peaceful means, and pays a subscription of four annas per annum. An influential section of Muslims have all along been in the Congress, even Mr. Jinnah was one of its leaders for a number of years. The first President of the Congress was an Indian Christian and the second one was a Parsee. The longest term of Congress Presidentship has been held by a Muslim. Vital facts like these are deliberately suppressed for misrepresenting the Congress as a Hindu body. The estrangement of the Muslims from the Congress is solely due to British patronage. Recognition of Muslim claims even to an absurd length through the League and a blunt refusal to recognise them when the Muslims come through the Congress is the foremost reason which has added weight to the League. As soon as this patronage is withdrawn and the Muslim community finds that their claims are duly recognised when pushed forward through prevalent democratic institutions the League will crumble.

After the *interim* Government proposals of June 16, were scrapped in spite of Mr. Jinnah's declared eagerness to work it, the League leader has been lashed to fury and in his usual manner has attacked the Congress in the following words :

As regards the resolution of the Congress, I most emphatically repudiate its bogus claim that it represents India and its claim to 'national' character. The Congress is a Hindu organization and it does not represent any other community except the Caste Hindus. It certainly does not represent the Muslims, and the mere fact that it has a handful of Muslim henchmen for the purpose of window-dressing cannot give it the national character which it claims, nor the right to represent India upon which it keeps on harping. This has been established beyond doubt in the recent elections, the results of which show that the Muslim League carried away 90 per cent of the total Muslim seats in the various legislatures, and out of the remaining 10 per cent, the Congress share does not amount to more than 4 per cent.

The Congress, therefore, has no right to represent or speak on behalf of the Muslims, and its refusal to accept the proposals for the formation of the Interim Government is based on sinister motives. First, they wanted to break the parity between the Muslims and the Caste Hindus. It was accepted by them at Simla last year at the conference called by the Viceroy in connexion with the Wavell proposals, and secondly, their insistence on nominating a Congress Muslim is aimed at striking at the fundamentals of the League and its Muslim national representative character and at attempting to establish a false claim that the Congress represents the Muslims and the Muslim League is not the representative organization of Muslim India. As pointed out above the Congress claim is not true nor based upon facts and, therefore, the Muslim League cannot be a party directly or indirectly to any course of action which is calculated to prop up this bogus claim.

This vituperation was anticipated by the Congress and a complete reply to the charges has already been recorded in advance in the Congress President's letter to the Viceroy. The letter, which has been reproduced elsewhere, is quite clear and we need not deal with it here.

It is not yet definitely known who were the persons that had pulled Mr. Jinnah's strings from behind. It has been naturally apprehended that they belong to the Civil Service. The role of the diehard Civil Service in India, most of whom are Churchill's men, in obstructing all efforts of Indian national progress is wellknown. In addition to manning the Secretariat, they now hold the gubernatorial *guddee* of eight out of eleven provinces of India. Their mind has been spoken out by one of Churchill's henchmen, Mr. Casey, who now speaks with 'authority' about Indian affairs. In a series of articles contributed from Melbourne and published in the U.S.A., in the *Christian Science Monitor* of Boston, Mr. Casey makes the following significant observation on the Hindu colour of the Congress. The articles appeared immediately after the publication of the Cabinet Mission's Declaration. In passing it should be noted that Mr. Casey was a nominee of Mr. Churchill and his stupid and self-opinionated administration—which favoured all reactionaries—has virtually ruined Bengal beyond redemption.

All-India politics today are sharp and clear-cut. There are only two parties of India-wide consequence —the Congress Party and the Moslem League. The Congress Party is almost entirely Caste Hindu, the Moslem League is entirely Moslem.

The Congress Party claims to represent all communities, but it is clear from the results of recent elections and from other evidence that it represents in effect only the Caste Hindus.

However, even this means a considerable body of support. There are nearly 220,000,000 Caste Hindus in the whole of India, of whom about 160,000,000 are in British India. For those, like the writer, who prefer their figures in tabular form, the Indian population in millions are as follows :

	Caste Hindus	*Moslems*	*Scheduled Castes*	*Others*
British India	160	84·1	42·3	27
States	58·5	13·4	9·7	15
	218·5	97·5	52	42

These figures are from the 1941 Census adjusted reasonably for net population increase since.

The Congress Party holds that divided India is unthinkable. It claims to speak for 75 per cent of India, and asks where it would be possible to find a bigger majority than this on any major political question in any country. It goes on to ask in effect for British India to be handed over to it, and the right to deal subsequently with minorities as a domestic problem. It says it realises quite well that India cannot have orderly government with a permanently dissatisfied minority of 100,000,000 in the midst, and that it will be up to the Congress Party to solve this problem.

The Moslem League, on the other hand, insists that it will not in any circumstances come into an all-India Government working an all-India constitution under which Moslem representation would be swamped by that of Caste Hindus. It affects to believe that no constitutional safeguards for Moslems

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in an all-India constitution would be any protection for them against the ambitions of the Hindus.

It would be difficult to conceive more irreconcilable political aims than those of the Congress Party and Moslem League. This is an unenviable situation that the British Government has to resolve—quite the most intractable major problem of its kind any Governrent has ever had to face. The situation is frequently compressed into slick slogans—*Quit India —Split India; United we stand, Divided We Fall;* and the reverse.

Unfortunately, there is very little room for compromise between the ambitions of the Congress Party for a United India and those of the Moslem League for an autonomous Moslem State or States.

A beautiful reply to this propaganda of the theory of internal differences and the unbridgability of the gulf between the major parties has been given by the *Globe,* Boston. After the publication of the Mission's proposals, it writes editorially :

The best indication that Great Britain really wishes to solve the Indian problem comes from empire spokesmen who say privately that the people of the sub-continent are capable of reasonably efficient self-government. India gives Britain such a bad name, and Indian Nationalism is such a source of strategic weakness in war, that she is becoming a liability rather than an asset.

Therefore, London has followed the breakdown of discussions between Hindu and Moslem leaders with a proposal for a constitution. It fails to grant Mahometan provinces Pakistan, the independence they demand, but instead would create a loose federation, more like the Swiss, less centralized than the American. The National Legislature and executive would deal only with foreign affairs, defense and communications ; any measure raising an issue between Hindus and Moslems would require majority support for both communities.

British power in India has so long acted upon the principle of "divide and rule" that Indian internal differences are out of hand, and agreement will be difficult to obtain. But it would be to the British advantage. Should India become an independent nation, London hopes that she will develop into a source of increased trade, as did the American colonies after they had won their freedom. Should the Indians decide on dominion status, the settlement may provide a precedent for others that will make the British Empire wholly a commonwealth.—[Italics ours.—Ed. *M. R.*]

Casey on Economics of Pakistan

After the Muslim League Planning Committee's view on the economics of Pakistan, Mr. Casey's opinion on the subject will be interesting. In one of the same series of articles published in *Christian Science Monitor,* Mr. Casey writes :

The present idea is to form one Moslem country in North-west India composed of the Punjab, Sind, Baluchistan and the North-West Frontier Provinces —and another in North-East India, composed of Bengal and Assam. Mr. Jinnah appears to claim the whole of these provinces as they now stand, although there are Hindu majorities in many of their districts. But it is possible that he would forego this extreme claim and, although with the loss of some rich industrial areas, be content with smaller but more purely Moslem regions.

Nevertheless, if Eastern Pakistan were to be confined to the Moslem majority areas of Bengal and Assam, I am not at all sure that it would represent the sort of Pakistan that the Moslem League would want, particularly if it were to exclude Calcutta and the coal fields. The Moslem League is not seeking a sylvan retreat—and that is what it would be, shorn of Calcutta and the coal fields. It would be a poor rural area, practically without any industry and not even able to feed itself.

The cry of Pakistan is raised in the towns and cities among the relatively small number of Moslems who think politically and who are mortally afraid that as a community the Moslems will be swamped by the more astute, better educated, wealthier and more numerous Hindus.

The Moslem League have worked themselves up into a state of mind that can only be called Hindu-phobia. Not that there is not some justification for this. The Caste Hindus have dealt with the Moslems with the minimum of warmth and generosity—of even fairness. When and where the Hindus have been in the saddle, the Moslems have had the rough end of the stick. The Caste Hindus have given the Moslems little evidence that they believe in a fair deal—and they deny them a new deal.*

The fact remains that, Pakistan or no Pakistan, Hindus and Moslems have got to continue to live together in the same villages, towns and cities in which they are now closely integrated. Pakistan would not result in the village store being owned by a Moslem. It would not put the mills and the business houses into Moslem hands. The only way that the Moslems can advance themselves economically is to achieve education and to learn how to compete successfully with the Hindus, which means a vast amount of hard work and the passage of time.

Under the Pakistan division each side would have a formidable body of hostages in the camp of the other. If there were to be discriminatory treatment by the Moslems against the Hindus in Pakistan, this would be quickly followed by reprisals against the Moslems in the Hindu majority areas. Competition in discrimination might well follow with unfortunate and unpleasant results for both sides.

But unless the Moslems discriminate against the Hindus in Pakistan, how is Pakistan going to result in rapid and increasing economic opportunity for the Moslems ? If the Hindus are in almost complete control of, say, the cloth trade in Bengal (as they happen to be), and if the Moslems legislate to ensure that licenses to trade in cloth shall be, for the future, on a 50-50 basis as between Hindus and Moslems—this means, in effect, running large numbers of successful Hindu merchants out of the cloth trade for the benefit of the Moslems. Are the Hindus in Hindu majority provinces going to take this lying down ?

The competition and antagonism between Pakistan and Hindustan would translate itself inevitably into trade rivalry. The greater part of Indian industry would be in Hindustan, and the

* Needless to say this is a typical false statement incapable of being substantiated.—Ed. *M. R.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

largest part of the Indian market. Hindustan would, at best, be rather unwilling that Pakistan products should share its home markets. Tariffs would rise, inevitably, against Pakistan products, to the detriment of Pakistan industry—and vice-versa. The stronger party—Hindustan—would be likely to win a tariff war of this sort.

I do not believe that, even today, the bulk of the Moslems have given anything like enough thought to the demand for Pakistan. I do not believe that they have analyzed the economics of Pakistan objectively.

I am convinced that the solution lies in substantial and effective safeguards for the Moslems in an all-India constitution and government, to ensure that the Moslems get a fair deal, and maybe rather more than a fair deal, to compensate them for the disabilities that have been imposed on them in the past and to give them an opportunity of catching up.

We have always been in favour of giving the Muslims full opportunity for catching up, provided that any special favour granted to them must be specific, clearly stated and for a short period after which all discriminatory provisions would be withdrawn. The present policy of discriminatory treatment in favour of the Muslims *qua* Muslims in the economic, political and administrative fields means in effect perpetuation of backwardness. This serves as a drag on the progress of the whole society, and means selling the unborn generations into servitude.

India: British Report Leans to Moslems

Another significant contribution to the *Christian Science Monitor* for May 17, under the above caption should also be mentioned. It is written by Mr. Saville R. Davis, Chief of the London News Bureau of the *Christian Science Monitor* after the publication of the White Paper on May 16, and cabled from London. Mr. Davis writes :

On the whole, the British plan goes further than expected towards honouring the requests of the Moslem minority. The statement showed none of that tendency to favour the Congress Party at the expense of the Moslems which many commentators expected when the Mission left for India.

However, the Congress Party does gain a United India with a Central Legislature executive branch, empowered to control foreign affairs, defense and communications. The fact that the Moslems have agreed to this during the Simla discussions does not detract from its importance to Congress Party leaders.

The Moslems for their part gain what Lord Pethick Lawrence in a broadcast described as the "advantage of Pakistan without the dangers inherent in a division of India."

If ever a reasonable basis for agreement existed, therefore, it would seem to be now. The two parties face a clear decision whether to accept or shoulder responsibility for refusal.

Those who have not followed the Simla negotiations closely should understand that both the Congress Party and the Moslem League had abandoned their extreme positions during the Simla talks. It was no longer a question of centrally-controlled India versus dividing the country into Hindu India and Pakistan. In rejecting both these extreme solutions, therefore, the Cabinet Mission offended no one, since compromise was already far advanced.

The procedure of the Cabinet Mission was to start with a balance sheet of agreements at Simla and then make specific recommendations for "closing the remainder of the gap."

Where the Congress Party wanted one Constituent Assembly and the Moslems wanted federal and local assemblies, the Cabinet Mission recommended one assembly which at the appropriate moment, when dealing with the affairs of groups of provinces, would resolve itself into three groups.

Moslems wanted groups of provinces to have their own legislatures and executives. This was granted.

The Moslems wanted to have the provinces divided into Hindu and Moslem groups, prior to the constitution-making process, with the right for the provinces to secede with the groups thereafter if they so desired.

The Congress Party wanted each province left free to join the group or not. The British plan favoured the Moslems in the main.

Paramountcy Under Indian Union

The Cabinet Delegations' statement that withdrawal of paramountcy will not result in a transfer of it to the Indian Union, has brought a new constitutional issue to limelight. The declaration as to the cessation of paramountcy on the formation of the Indian Union not merely in regard to other states, as being incidental to the recognition of Indian independence without the same being vested in another body or sovereign authority, raises questions of great complexity, especially having regard to the varying degree of sovereignty enjoyed by about 600 States spread all over India. The whole problem of paramountcy has been discussed in a masterly article by Sir Alladi Krishnaswami Iyer in the *Leader*. Sir Alladi says that during the *interim* period, the newly constituted Executive Council should function as advisers to the Crown Representative in regard to the discharge of his functions *vis a vis* the States. This is the same plea which has been vigorously put forward by Sir Gopalaswami Iyengar, who was himself until recently intimately connected with the administration of a premier Indian State. It apparently has also the support of Gandhiji as has been pointed out by Sir Gopalaswami himself. Discussing the powers and position of the newly appointed Executive Councillors in this regard, Sir Alladi says :

> After all, it has to be remembered that the vital basis on which rested the bifurcation of functions under the Government of India Act has not come into being. The plea put forward is merely one for a reversion to the state of things prior to 1935 with this difference that whereas the members of the Executive Council shared the power and the responsibility prior to 1935 along with Governor-General, the present Councillors will, under the present constitution, having regard to the statutory changes brought about by the Act of 1935, be merely in the position of advisers to the Crown Representative in the discharge of his responsibility. It might be that whereas in the discharge of his functions as the head of the British Indian Government, the Governor-General is bound to accept the advice of his Councillors according to any agreed or accepted formula, the advice

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri

Digitized by Arya Samaj Foundation Chennai and eGangotri

tendered by the Councillors in regard to the functions of the Crown Representative may not have the same sanction.

Dealing with the Union's powers over the States, Sir Alladi says :

Even in regard to the States acceding to the Union it has to be noticed that the scope of paramountcy is not co-extensive with the range of subjects coming within the sphere of the Union Government according to the proposed scheme of the Cabinet Mission. If so, the question would naturally arise as to what is to become of the rights acquired, say, in regard to the passage and acquisition of railway lands the various agreements concluded in a large number of cases as a result of the exercise of the rights of paramountcy by the British Crown.

Are these rights to enure for the benefit of the Indian Union, and if so how does the position square with the limited range of the spheres of the Indian Union according to the proposed plan ? It will lead to inextricable confusion if the States which accede to the Union are to re-assert rights which have long ago lapsed or to resume the exercise of sovereign functions such as, say, the issue of independent currency, the re-introduction of an independent postage etc., on the ground that the Union Constitution cannot assume these high sovereign functions having regard to the restricted and limited range of union authority.

In regard to the non-acceding States the position is even more difficult. Are they to be resurrected as independent sovereign States spread all over India with a wider range of powers and amplified sovereignty than they ever possessed, as the ultimate dominion, according to the accepted theories of sovereignty, must reside somewhere ?

The Cabinet Delegation has made a statement that withdrawal of paramountcy will not result in a transfer of it to the Indian Union. This view is questionable in the light of the claim made by the British Crown on several occasions that in part at least the rights of paramountcy are traceable to their being successors of the Moghul Emperor. Besides, if the Indian Union is to be in any sense the successor to British sovereignty in India as the result of the recognition of India's right to independence, there is no reason why on the principle of State succession—a principle which has been recognized by the Permanent Court of International Justice in several cases—that the Union authority should not exercise the rights of paramountcy in regard to non-acceding States.

Paramountcy is, though undefinable and undefined, the result of rights acquired through treaty, usage and sufferance. If so, what is the constitutional impediment to these rights passing on to the Indian Union ? Any other conclusion would lead to inextricable confusion in Indian polity and a reverter to a state worse than the position occupied by the different States in India after the fall of Moghul Empire.

As the declaration stands at the present moment, a danger of confusion in the solution of the problem is recognised. Sir Alladi points out that these and other questions will have to be approached not from a legalistic standpoint but from the viewpoint of the larger interests of India as a whole. If all the 600 States are immediately brought into the Union, the problems arising may be capable of easy solution and adjustment.

Human Rights

In accordance with the resolution of the Economic and Social Council on the establishment of a Commission on Human Rights, the nuclear Commission on Human Rights held its first sitting in New York in May last. The Commission consisted of nine members representing Norway, U.S.S.R., Yugosiavia, France, Belgium, Peru, China, U.S.A., and India. Our country was represented by Mr. K. C. Neogy. The nuclear Commission considered its terms of reference, the definitive composition of the Commission and various documents referred to the Commission concerning human rights and to report thereon to the second session of the Economic and Social Council. The Commission felt that while it was within its competence to draft a bill of human rights, it was not as yet in a position to do so, but it would proceed with the preparatory work.

A Committee appointed by the American Law Institute has done good preparatory work in this direction. A statement of Essential Human Rights has been prepared by them and published in the *Annals of American Academy of Political and Social Science*. The cultures or countries represented on this Committee, besides the U.S.A., were British, Canadian, French, pre-Nazi German, Italian, Polish, Soviet Russian, Spanish, Latin American, Arabic, Chinese and Indian.

The statement opens with the preamble that upon the freedom of the individual depends the welfare of the people, the safety of the State and the peace of the world. In society, complete freedom cannot be attained ; the liberties of the one are limited by the liberties of others, and the preservation of freedom requires the fulfilment by individuals of their duties as members of society. The function of the State is to promote conditions under which the individual can be most free. To express those freedoms, to which every human being is entitled and to assure that all shall live under a government of the people, by the people, for the people, this declaration is made.

1. Freedom of belief and of worship is the right of every one.

The duty of the State in protecting this freedom may involve the following steps :

(*a*) To abstain from enacting laws which impair the right,

(*b*) to prevent its governmental agencies and officials from performing acts which impair this right,

(*c*) to enact laws and to provide suitable procedures, if necessary, to prevent persons within its jurisdiction from impairing the right, and

(*d*) to maintain such judicial, regulatory and operative agencies as may be necessary to give practical effect to the right.

2. Freedom to form and hold opinions and to receive opinions and information is the right of every one. The individual must be free to receive opinions expressed by others by any means of communication such as books, newspapers, pamphlets or radio.

3. Freedom of expression is the right of every one. It includes the freedom of the individual to speak, the press, the graphic arts, the theatre, or any other art form to present his ideas.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

4. Freedom to assemble peaceably with others is the right of every one.

5. Freedom to form with others associations of a political, economic, religious, social, cultural, or any other character for purposes not inconsistent with these articles is the right of every one.

6. Freedom from unreasonable interference with his person, home, reputation, privacy, activities and property is the right of every one.

7. Every one has the right to have his civil and criminal liabilities and his rights determined without undue delay by fair public trial by a competent tribunal before which he has had opportunity for a full hearing.

8. Every one who is detained has the right to immediate judicial determination of the legality of his detention. The State has a duty to provide adequate procedures to make this right effective.

9. No one shall be convicted of crime except for violation of a law in effect at the time of the commission of the act charged as an offence, nor be subjected to a penalty greater than that applicable at the time of the Commission of the offence.

10. Every one has the right to own property under general law. The State shall not deprive any one of his property except for a public purpose and with just compensation.

11. Every one has the right to education.

12. Every one has the right to work.

13. Every one has the right to reasonable conditions of work.

14. Every one has the right to adequate food and housing.

15. Every one has the right to social security. The State has a duty to maintain or insure that there are maintained comprehensive arrangements for the promotion of health, for the prevention of sickness and and accident, and for the provision of medical care and for compensation for loss of livelihood.

16. Every one has the right to take part in the government of his State.

17. Every one has the right to protection against arbitrary discrimination in the provisions and applications of the law because of race, religion, sex or any other reason.

18. In exercise of his rights, every one is limited by the rights of others and by the just requirements of the democratic State.

This recognises the general relativity of rights. Thus freedom of religion does not permit practices such as human sacrifice, nor, in countries where the prevailing standards profoundly disapprove, of practices such as polygamy. Freedom of speech does not forbid the State from adopting reasonable laws forbidding libel and slander; nor does it permit blasphemy or utterances tending to promote panic, mob violence, insurrection or war. The organisation of parties seeking to establish dictatorship is not consistent with freedom of assembly or association because it would tend to destroy the rights of others.

An international Bill of Rights accepted and observed by the member nations of the U.N.O. will prove a long step forward towards the safeguarding of world peace.

India and South Africa

The passive resistance of the Indian settlers in South Africa against the fascistic intransigence of the Union Government and shameless hooliganism of the South African Europeans is making new history. We were anxiously awaiting the repercussions of the final passing of the Asiatic Land Tenure and Indian Representation Bill, and suggested the application of economic sanctions as also the starting of a passive resistance movement. We are now witnessing heroic *Satyagraha* campaign of the South African Indians.

On June 11, a Government of India Press Note announced that as a protest against the South African Union Government's continued attitude of indifference to the representations of the Government of India, for the postponement of the Asiatic Land Tenure and Indian Representation Bill, the existing trade agreement between India and South Africa was being terminated, and as matters did not seem to improve, it had been found necessary to recall the High Commissioner.

The Press Note traces the history of Indian emigration to Natal and recounts the recent antecedents a knowledge of which will help us to understand the sinister implications of the new measure. The new Bill came as a shocking surprise. The Government of India had reasons to believe that the attitude of the Union Government had changed and the problem of Indian rights would soon be solved. The Union Government had declared the ordinance for the creation of a Licensing Board *ultra vires* and expressed their intention of exploring an alternative solution of the Indian question. In June 1945, the Union Government undertook legislation for the provision of better housing facilities for all classes of the population, including Indians. Assurances were given that the new measure would not in any way prejudice existing Indian interests. The Government of India was given a hint that the Pegging Act would be allowed to lapse after March 31, 1946.

Thus the draft Asiatic Land Tenure and Indian Representation Bill came as a veritable surprise. And this Bill is worse than the Pegging Act because, while that Act applied only to residential land in urban areas, the present Bill applies to all kinds of land, including agricultural land, both in urban and rural areas. The franchise, which is proposed to be given on a communal basis, will provide for representation by Europeans, except in the case of the Natal Provincial Council where it may be by Indians. The Government of India asked for postponement of the legislation and, as recommended by the third Broome Commission, requested the Union Government to receive a representative delegation of Indians to explore an alternative settlement. The suggestion was rejected and the bill was rushed through the Parliament.

What has followed the final passing of the Bill is a tale of stupid and malignant brute force being resisted by the undaunted Indian passive resisters. The night attacks of the Europeans on the camps of the non-violent Indian resisters causing personal injury even to children and womenfolk may be compared to the worst sort of Nazi terrorist tactics. But the *Satyagrahis* stood their ground, undaunted by these insults, threats and assaults. As was anticipated, mass arrests followed under a 70-year old trespass law. In a statement on the arrest, Dr. G. M. Naicker, President of the Natal Indian Congress Party, said that the inhuman character of the Act of 1946 was made clear by the fact that the Government had chosen to avoid the real issue and instead of charging him with contravention of the measure, it had arrested and prosecuted him under an antiquated law, 72 years old.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. R. P. Deshmukh, Indian High Commissioner in South Africa, has revealed that the South African Europeans "openly talked of bloodshed and of burning and destroying Indian property in that country." They have actually chosen this path of brute violence against an unarmed and non-violent people. But *Satyagraha* will gain new force by this oppression upon the resisters and we hope the time will come when tyrannical strength will submit to this invincible moral might. In the meantime all efforts should be made to press forward the case before the U.N.O.

Anti-Indian Policy in Ceylon

The anti-Indian policy of Ceylon has focussed our attention to this puny pendant in the Indian Ocean. The recent agitation of the Indians in Ceylon against this reactionary attitude, which is very much reminiscent of the South African Union Government's anti-Indian measures, has caused grave concern all over India.

The position of the Indian population of Ceylon began to deteriorate as early as 1931 when owing to the provisions of the Donoughmore constitution the relation between the domiciled Indians and the natives of the island became tense and bitter. Thus while communal representation was abolished, the franchise of Indians became highly restricted. The rights of the Indians have been completely disregarded by the Soulbury Commission. The Indians are being asked to submit to more severe conditions. Commenting on the new constitution, *Roy's Weekly* has noted :

> The certificate of permanent settlement is not granted to even those who have laboured for more than a decade in the building up of the island's economic life. The Land Development Ordinance of 1935 restricted the qualifications of domicile further, and today Indians in the colony are made to undergo serious economic, civic and political discrimination and are treated as "marginal population."

The present agitation in Ceylon started as a protest against the action of the Ceylon Government in serving notices to quit on 400 Indian labourers and their families who have been working on the Knavesmere Estate at Undugoda for many years. Explaining the significance of the hartal held on June 4 as a protest against this action, Mr. S. Thondaman, President of the Ceylon Indian Congress, stated the main demands of the Indians as formulated by the Congress. They are : (1) franchise on a footing of equality with the rest of the population of the island, (2) comprehensive citizenship rights to all Indians by a quinquennial residence test and a declaration of intention to settle permanently in Ceylon, and (3) pending legal measures to secure franchise and civic rights, suspension of all discriminatory actions. Mr. Thondaman also warned that if the question was not settled by negotiations, a "united and uninterrupted struggle" would follow. He also made an appeal to Pandit Nehru asking for India's support in this fight against denial of franchise and citizenship rights.

On June 12, 25,000 Indian labourers working on the rubber and tea estates began what they called "an indefinite strike," demanding constitutional recognition and full franchise and citizenship rights for the Indian labourers in Ceylon. The Ceylon Indian Congress, which called the strike, stated that it was not confined to the issue of the 400 Indians who were asked to quit the Knavesmere Estate but referred to the whole problem of the "status of Indians in Ceylon which is sharply brought up by the incidents at Knavesmere."

It may be interesting to know the Ceylonese attitude in this connection. In an interview to the API, Dr. D. S. Senanayake, Leader of the State Council, explained the position of his Government regarding the policy of land settlement and said that it was the Ceylon Indians' own fault that there was at present no provision for their being absorbed into the island's economy. Mr. Senanayake also said that he personally doubted whether the Ceylon Indians would be able, in future, to get on good terms again, since the present Indian agitation against the new Constitution which gave Ceylon full freedom, had hardened Sinhalese opinion against Indians.

The intransigent attitude of the Ceylon Government, as revealed in the words of Mr. Senanayake, is deplorable. It is extremely unfortunate that Ceylon is thoughtlessly disregarding the eminently just claims of the Indians. It is a big risk indeed ; for the entire economy of the island is bound up with that of India. The Sinhalese nationalists are ignoring the repercussions that would be inevitable if this anti-Indian policy is pursued. We, however, urge the India Government to adopt a strong attitude in this matter, both as a question of principle and as one of expediency.

Trouble in Burma

Burmese politics still continues to be in a troublous state. The frequent cases of lawlessness and disorder have deepened the existing turmoil so that the present-day Burmese politics has become a baffling problem. About a month back, U Saw said :

> Situation in Burma politically and economically is deteriorating day by day. I wonder how long this state of affairs will continue. I am quite sure that the British people will regret it one day. As for the Myochit (Nationalist) Party it has no alternative but to withdraw its members since our Councillors cannot effectively do anything for reconstruction and rehabilitation of Burma. The Government cannot even restore law and order in the country.

A serious case of lawlessness took place in the second week of June when several persons including one woman and one infant were killed during a battle-royal between a gang of criminals numbering over 100 and the police force of Tawlate Police Station in Insein District. Last week it was reported from Rangoon that a gang of Burmese dacoits had formed revolutionary government, and this government had brought as many as 26 villages under its rule. It was further reported that there had been hundreds of cases of dacoity in Burmese districts during the last one month.

This is, however, the insignificant side of the picture. The Burmese troubles have another serious aspect. On June 7, the Anti-Fascist League staged a mass demonstration against the Government's "repressive measures" including the incident at Tantabin 40 miles from Rangoon, where three were killed in police firing. Slogans were raised demanding the release of members of the People's Volunteer Organisation and withdrawal of occupation forces and granting of full independence. U Aung San emphatically stated, "A full-scale battle for freedom may yet not come if the British give us our peaceful demands. If the British, however, insist on it, they will have it." But Burmese politics will not change overnight, and it is significant that when lawlessness in Burma was being

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

discussed in the House of Commons, Mr. Henderson clearly stated that if the present chaotic conditions continue in Burma, it may not be possible to hold an election in next April or May. This policy of postponing the realisation of promises is typical of old British diplomacy. This old diplomacy may not prove sufficiently effective in the present situation. In the Commons debate of June 7, Mr. Driberg, Labour M.P., has rightly observed that the British must make a new start, talk to the nationalist leaders as equals and not patronisingly, and try to get the co-operation of the People's Volunteer Organisation all over Burma.

Rice Procurement Scheme of Saadullah Ministry Under Scrutiny

The Shillong correspondent of the *Young Assam*, a Sylhet weekly, has given some account of the rice procurement scandal perpetrated by the Saadullah Ministry. Sir Mahammad Saadullah, when out of office, has become a loud champion of the people in distress. It is extremely necessary that the disgraceful episode of blackmarketing, waste and gambling with the people's food during the last famine which black-painted the face of Assam under his administration should be published in all details. The full story of the brutal manner in which hungry *emigres* from Bengal to Assam, most of whom were Muslims, had been turned out of the province under orders of the League Ministers should also be brought to light.

The Report of the Surma Valley Food-Grain Procurement Enquiry Committee conducted under the Chairmanship of Sj. Paresh Lal Shome, Advocate-General of Assam, has been submitted and is being closely examined by the Bardoloi Ministry. The *Young Assam*'s report is given below :

The policy enunciated by the previous Government by the creation of license holders overnight and realising from them a substantial amount for the war funds by the District authorities before issuing their respective license was reported to be mainly responsible for the bungling of the whole affairs. It was the middlemen and the greedy inexperienced license holders that reaped the harvest at the cost of the cultivators. The charges of excess weight and less payment as resorted to by the middlemen license holders in settling accounts with sellers of rice and paddy and all of whom are cultivators as revealed by the Enquiry Report should also be examined in the light of the sufferings and loss caused to Government accounts and the cutivators. The lack of co-ordination between the Supply Department and the District authorities which is now clear left the Government Agents alone to do everything by themselves. It was evident that not a single godown was provided to the Government agents for the storage of the procured rice and paddy. It is no wonder therefore that paddy and rice had to be stored in *kutcha* godowns beyond the capacity of these godowns under definite instructions from the Government themselves. The then Ministry slept over the warning given by the Shome Committee in its interim report in July 1945 which ran as follows : "We have seen that most of the godowns have been seriously damaged because of the storage of the paddy and rice beyond their capacity and in a manner which is most careless and unbusinesslike. We are afraid Government may be made liable for heavy compensation for damages in the godowns by the owners thereof and these godowns should be released as soon as possible."

Another malpractice for which the late Government was entirely responsible must have attracted the notice of the Supply Minister, Mr. Mookherjee. He has discovered how the prices were ruling the market. The first and the known price was the price notified in the *Gazette* and the second and the confidential price at which Government agents were directed to make their purchase of rice and paddy from the cultivators. Why this huge fraud was perpetrated, under the very instruction of the late Ministry, is a matter which has engaged the serious attention of Mr. Mookherjee. He has also unearthed the mystery, how the interim report of the committee and the suggestions made by the Syndicates for better system of procurement was thrown to the waste-paper basket by the late Ministry. This callousness, on the part of the authorities concerned, made the province loser to a huge extent of money and the treasure of foodgrains at the time when it was most needed. Mr. Mookherjee must have seen how in 1944 the Ministry ordered the Syndicate huge stocks of rice and paddy for supply to Bengal and the Military but the Government failed to despatch these to their appropriate destination. This bespeaks of the inefficiency of the authorities to do their job and thus the huge loss to all concerned including the public was huger still. The stocks left by the Government Agent were allowed to be decomposed amounting to further loss on the one hand and the farce of fresh purchase on the other, indulged in by the Government themselves, must have convinced Mr. Mookherjee that there was a conspiracy to fatten some at public cost.

Asiatic Labour Conference

The Governing Body of the International Labour Organisation has decided to hold the Preparatory Asiatic Regional Conference in India in January, 1947. This is a most welcome move indeed. For, on various occasions we have expressed our dissatisfaction with the International Labour Conference which met at Geneva because it was mainly concerned with questions regarding Western labour and industry and had very little to do with Asiatic labour problems. The I.L.O. did not take any steps to remove the disabilities of a discriminatory character imposed upon Asiatic workers and to bring about equality of status in respect of working conditions, irrespective of race, nationality or colour. The present constitution of the I.L.O. does not provide for the direct representation of colonies or dependencies of member states at the meetings of the general conference. *The Leader* has rightly commented in this connection that "the colonial powers regard the colonies merely as markets for the manufactured goods of the West and think that the ideals of Geneva are a heady intoxicant which will impair the economy of the colony."

However, the present decision of the I.L.O. would go to fulfil a demand of the last 20 years. It was in 1926 that the first move for an Asiatic Labour Conference was made. Since then Indian delegates have been continually pressing forward their demand for an Asiatic Labour Conference at every session of the I.L.O. The Governing Body of the I. L. O. discussed the question at a meeting in 1931. A lot of discussion followed and eventually the question was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

referred to the governments of the countries concerned. Much noise was made, but the Conference never met. Of course, an Asiatic Labour Conference was held in Colombo in 1934, but the I.L.O. did not organise it. The fact that it was not held under the auspices of the I.L.O. was most unfortunate; for it consequently failed to become representative of all the countries of Asia. Only three countries, *viz.*, Japan, Ceylon and India, sent their delegates to this conference. We hope the proposed Conference of 1947 will be free from all shortcomings and will be able to tackle seriously the problems of Asiatic labour.

Kashmir Happenings

The recent happenings in Kashmir have a symbolic significance in the present context of India's political developments. There is a dramatic suddenness in the story of Pandit Nehru's somewhat impulsive Kashmir visit and arrest. And so a recounting of the trend of events is necessary for throwing light on Kashmir politics which has appeared baffling to many.

The movement of the National Conference was suspended by its leaders at the call of the national leaders. The disturbances were partly quelled by instruments of terror and oppression, and the leader of the movement, Sheikh Abdullah, was arrested and his trial was to begin without delay. Prosecution of Sheikh Abdullah without a previous enquiry into the police and military excesses during the disturbances was the height of injustice. For the movement of the National Conference was inspired by no communal motive or personal ambition. it was a spontaneous movement of the discontented people of Kashmir against the reactionary rule of the reigning dynasty. The opposition that the Muslim National Conference put up against Abdullah's movement clearly proves the fact that the aspirations of the National Conference were purely non-communal. It was the distress and misery of the people that inspired the movement against the present dynasty which happens to be Hindu. Interested parties wanted to make capital of this spontaneous movement by trying to give it a communal character, and some even discerned the spectre of Soviet ambition and influence casting its shadow over the Kashmir hills. This propaganda helped the Kashmir authorities in victimising the leaders of the movement.

Pandit Jawaharlal Nehru had long ago warned the Kashmir Government against taking any vindictive measure in this issue and in a long statement had revealed the inner story of police and military repression in Kashmir. When he found that the self-complacent rulers were paying no heed to his timely warning, he decided to visit the spot personally. The objects of his visit were mainly to arrange for Sheikh Abdullah's defence and to acquaint himself with the complications of Kashmir politics. But the Kashmir Premier let him know that no useful purpose would be served by his visiting Kashmir. Pandit Nehru was not daunted by this sort of diplomatic evasion and he stepped into the borders of Kashmir. An order prohibiting his entry into Kashmir territory was served on him when he crossed Kohala Bridge. Pandit Nehru observed with characteristic courage and dignity that he could not obey orders which he had defied for the last thirty years. Pushing back armed sentries, Pandit Nehru and his party walked along their way.

Next morning at 9-30, Nehru was arrested and detained at the Dak Bunglow at Domel. State military sentries guarded the Bunglow. Mr. Dwarkanath Kachru, General Secretary, States People's Conference, was also arrested. Later he was brought by Kashmir Government to the Dak Bunglow at Uri, 96 miles from Srinagar. The Kashmir Prime Minister, Rai Bahadur Ram Chandra Kak, however, told a press correspondent that they had no intention of detaining Pandit Nehru. Sheikh Abdullah's trial was postponed till July 1.

The arrest of Pandit Nehru came as a shock to the entire nation. Complete hartal was observed in many parts of India. In a statement, Maulana Abul Kalam Azad observed that the Maharajah of Kashmir had committed a grievous blunder in acting in the way he had done. He further said that if an amicable solution was not found, far-reaching and serious repercussions were inevitable.

Meanwhile, important discussions were going on in Delhi, and they needed Pandit Nehru's presence. Maulana Azad sent urgent telegram messages asking him to return in view of the serious negotiations in Delhi. In obedience to the President's directive, Nehru returned to Delhi, on the understanding that he should go back to Kashmir later. In a long statement to the Press correspondent next day he gave a description of the incidents in Kashmir. He observed:

> I am not disposed to obey any order I consider unreasonable anywhere and at any place whether in a State or in the rest of India. Nor do I consider myself an outsider in any State. The whole of India is my home and I claim the right to go to any part of it.

Commenting on the new set-up of things that was inevitable, he significantly said that in future the rulers would have to abandon their selfish policy of taking without giving anything. It is the question of human right, and not that of treaty rights or dynastic rights that will decide the problems of the future.

Orissa State Merger Scheme

Orissa is going ahead in right earnest with the States merger scheme. At the Orissa States People's Conference held at Cuttack, Mr. Harekrishna Mahatab, Premier of Orissa, enumerated the advantages that would be derived by the amalgamation of Orissa States with the Orissa Province. He pointed out that if these two areas continued to remain separate, both of them would be weak, and there was the danger of even the Oriya race being wiped out. The greatest advantage of amalgamation would be that both areas together would become a stronger alministrative unit making it possible for the provinne to have its own cadre in service, its own High Court and other institutions without depending on other provinces The other advantages would be the combined development of industries with the mineral and other natural resources of the province and the States, the efficient control of the rivers passing through the States and the province, and finally, the establishment of a strong unit in the A Group of provinces proposed in the Cabinet Mission's Declaration. The people in the States would then have the opportunity of enjoying civil liberties as the people of the province.

Mr. Mahatab indicated at the Conference that the question had passed the deliberative stage and was now receiving executive attention with a view to translating it into action. It has been taken up by the Orissa Government and the first official move in that direction was a Conference held at the Government House at Puri on June 2, where the representative of the Political Department, Mr. Herbert, was present.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

With regard to the position of the Rulers, Mr. Mahatab said that they could not ignore the fact that they were the Governments of the States at present. In the negotiations they would officially represent the States and the people of the States could only be unofficially heard. In any common administration that might be set up for the province and he States, the Rulers also would have a voice. According to him, it was for the Conference to consider all those aspects and embody their views in the form of resolutions.

Mr. Mahatab revealed that he was in correspondence with the Nawab of Bhopal, the Chancellor of the Chamber of Princes. He said that the Nawab wanted details of the Scheme which he would be sending.

A second Conference is shortly going to be held in Calcutta by the second week of July, attended by the Rulers of the Eastern States Agency and also by Mr. Mahatab and Mr. Herbert. Mr. Mahatab hoped that the Nawab of Bhopal, in the meantime, would help the parties with advice. The move for the amalgamation of the Orissa States with the province was, however, not a new one. It had been in existence since 1939 when the States Peoples Inquiry Committee recommended it.

Mr. Mahatab made it plain at the Conference that in any common administration that might be set up for the province and the States, Rulers would have a voice. It was for the Calcutta Conference to consider all these aspects and embody their views in the form of resolutions. It was also better that they should have a central organisation for all the 26 States.

Hyderabad Constitutional Reforms

In a speech delivered at Gulbarga, Nawab Moni Nawaz Bahadur, Reforms Member of the Nizam's Government, referred at some length to the Hyderabad Reforms Scheme drawn up in 1939 but held in abeyance on account of the war. The Nawab outlined the main features of the scheme and the principal modifications that have been made in it. He said :

> As you are aware the most important components of the Reforms Scheme consist of representation by interests, joint electorates and parity of representation between Hindus and Muslims so far as the elected and nominated seats are concerned. Representation by interests is intended to prove that every elment of society shall receive representation in the legislature in proportion to its importance and that the Legislative Assembly shall not consist merely of those who have made a profession of politics. In other words, the Legislative Assembly shall present a true composite picture of the various interests of the country. Direct representation of interests will result in the establishment of close contacts between the Government and the public and the reduction of unnecessary intermediaries. The aim of joint electorates is to ensure that each community shall depend upon the other for the advancement of its interests. To make sure, however, that each member shall be a true representative of his own community, it has been stipulated that he shall secure at least 40 per cent of the votes of his own community. Each interest shall be represented by an equal number of Hindu and Muslim members, so that the possibility of rivalry and tension between the two communities may be eliminated. In view of the changes that have taken place during the last six or seven years, the Government have under contemplation certain necessary alterations the result of which would be that, whereas under the original scheme the nominated and appointed members were in a minority, under the revised scheme, the latter would constitute the majority. Besides, the franchise qualification of Pattedars and Cultivators prescribed under the original scheme is being lowered, which would treble the number of voters in those constituencies. For those living in urban areas who cannot under the existing arrangements seek election to the Legislature from any other constituency, a constituency is being created, consisting of owners and tenants of lands and buildings in urban areas, so that the urban population too may enjoy sufficient representation in the Legislature.

This, however, is not the complete picture. A short historical perspective may be necessary to give a correct meaning of this Reforms Scheme. The present State Council consists of 21 members of whom only 8 are non-officials. Out of them, two are *jagirdars,* two pleaders and the remaining four nominated by the Prime Minister. The Council's powers are strictly limited to legislation. Members have no right to question executive actions nor can they discuss the budget. Sir Ali Imam had drawn up a Reforms Scheme in 1920, which apparently was not liked by the Nizam. It was held in abeyance till Sir Ali Imam retired. After his retirement, it was quietly shelved.

In 1937, in pursuance of popular agitation, a Reforms Committee was appointed under the Chairmanship of Dewan Bahadur S. Aravamudu Aiyangar. The terms of reference restricted the Committee's powers to a very limited sphere. They were asked to report on "all suitable alternatives for the more effective association of the different interests of the State with the Government whereby the latter may be placed in continuous possession of their needs and desires."

The Committee recommended representation by interests instead of through territorial constituencies. Dewan Bahadur Aiyangar said that the only consideration which led him to view with favour representation by interests, was that it would dispense with communal representation. Representation by interests and joint electorates were the principal features of the Scheme. The main considerations which induced the authors of the scheme to accept the Fascist idea of the corporative State of which representation by interests was the corner-stone, was that it provided a way of escape from communal representation. Their hopes have been completely belied in two ways. First, they found that parity of representation between Hindus and Muslims had been introduced into the scheme by the back-door in opposition to the declared intentions of the authors of the scheme. Thirteen million Hindus were thus accorded parity of representation with three million Muslims ! Sir Akbar Hydari, then Prime Minister, was greatly distressed when he found in the final order as it came to him, parity of representation between Hindus and Muslims inserted in it. Secondly, the joint electorate feature is going to be removed very shortly before the first elections are held under the Scheme. Under the present Reforms, the State Council will be composed of 88 members of whom only 42 will be elected, the remaining 46 will be nominated.

The people of Hyderabad have registered their protest against the introduction of the new Reforms

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Scheme. In a memorandum to the British Cabinet Delegation, the leaders of different political organisations in the State have pointed out :

> To introduce representation in the Legislative Assembly on a functional basis of a corporate State by the Hyderabad Government is simply ridiculous in the face of the Second World War being fought for democracy. Functional basis strikes at the root of representative government. . . . It encourages separatist tendencies already in existence and may stimulate class legislation.

States People's Demands

A number of highway important resolutions have recently been passed by the Standing Committee of the All-India States People's Conference. The most significant of them are the one on the Hyderabad State and the one on the Cabinet Mission's proposals.

In the resolution on the Mission's proposals, the Committee has strongly resented the way in which the people of the States have been ignored and bypassed in the new plan. It further says :

> In the statement issued by the Cabinet Delegation and the Viceroy on May 16, references to the States are brief and vague and no clear picture emerges as to how they will function in regard to the constitution-making processes. No reference has been made to the internal structure of the States. It is not possible to conceive of a combination of the existing internal structure, which is autocratic and feudal, with a democratic Constituent Assembly or a Federal Union.

The resolution, however, maintains that the General Council of the A.-I. S. P. C. welcome the provision that paramountcy will end when the new All-India constitution comes into effect. The Council further are of opinion that even during the interim period the functioning of paramountcy should undergo a fundamental change so as to prepare for its total termination.

The resolution on Hyderabad State says :

> Any State which does not even recognise elementary civil liberties is out of court in any discussion about the future. The State of Hyderabad will have to change its ways completely before it can entitle itself to any consideration in Assemblies determining the future of India. In the event of the ban on the State Congress continuing and other civil liberties being denied, it will be the right of the State Congress to function in spite of this ban.

Under-Production—Not Over-Population

The continual scarcity in India has evoked different explanation from different quarters. A large number of short-sighted economists, still haunted by the ghost of Malthus, persistently maintained that poverty was due to the tremendous growth of population in India. The bogey of over-population was found convenient by interested people to whom it offered a handy excuse for their criminal neglect of responsibility. This insistence on over-population has long retarded the growth of efficient production which alone can solve the problem of the country's total requirements.

In a recent broadcast from Washington, Sir John Boyd Orr, Director-General of the Food and Agriculture Organisation, hit upon the real point when he said that "the trouble in India is not over-population—it is under-production." For the purpose of adequate and efficient production, Sir John observed, India needed efficient agriculture and modern industrial plant. If she could produce more, export more, and import more, world trade would benefit and there would be no question of over-population. Every physically fit individual would be a source of wealth to the country if the social and economic structure were so organised that all could produce wealth.

Declaring that it was one of F.A.O.'s tasks to help such countries as India, Sir John recalled Mr. Amery's claim that food production in India could be doubled in 15 years if modern farming methods were used. "Actually production is increasing by only about one per cent. yearly," he said. "The density of population there is less than in England and Belgium but we do not consider these countries over-populated."

Sir John Boyd Orr suggested better farming methods, more fertilisers and more "diversification" and end to abuses in the landlord system and larger individual holdings as cures for India's under-production problem.

The U. P. Gram Panchayet Bill

The Gram Panchayet Bill, prepared by the last Ministry in the United Provinces, seeks to re-model the entire village life of the province. It deserves close study by all other provinces which desire a stable and substantial uplift for their rural folk. The original conception of a Panchayet as something on the lines of a Greek city state with the whole adult population of the village participating in its work has been given up as impracticable. The Gram Panchayet will now be an executive of 30 members elected by a meeting of the whole adult population of the village. This is a happy departure because it conforms to the Indian tradition of a village republic where the elders commanding the confidence of the local people were entrusted with the village executive functions. Usually such number was confined to five as the very name Panchayet suggests.

Under the Bill, it has been proposed that the large body will be called Gram Sabha. It will meet twice a year. It will have power to pass the budget and also recommendatory resolutions. The Panchayet will, in addition to their normal functions, keep the land records and the village patwari will work under their supervision.

Plan for Village Roads in India

In the modern world, communications provide the basis of economic activity. Good, cheap and quick communications mean an immediate expansion in trade, commerce and industry, the resultant being general economic prosperity. In India, road development schemes have not received the attention they deserve and much less attention has been paid to the improvement of village communication calculated to open up the whole countryside. This question has been discussed in an article written by Mr. P. S. Sharangapani, himself an engineer, and published in the *Independent*. Discussing the need for village roads, he says

> The Governments in power have so far devoted their attention and resources to the construction of strategic roads, roads joining province to province

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

district to district, district head-quarters to tahsil places, and tahsil places to police stations, mainly, for collection of revenue and administration of law and order. It would be bare justice that Government should now concentrate on construction of village roads, secure a balance between village roads and through communications, and cater for the needs of villages wherein resides over 85 per cent of the population of India, wanting employment and crying for an adequate standard of living.

The length of such village access-roads in the province would be, however, enormous and therefore, a wise planner should first fix a correct order of priority and do first thing first, taking into account the funds and the technical personnel available. It is simple enough to prepare large paper schemes, but hasty construction of ill-considered, ill-prepared, ill-digested schemes would only lead to enormous waste of money and reprobation by the posterity.

Village roads as would bring about maximum increase in the earnings of the village-artisans and cultivators, ought to be constructed first. They would fall under the following categories :

(*a*) Villages over 300 population and within a radius of about 25 miles of a city having a population of over a lakh.

(*b*) Villages over 300 population and within a radius of about 15 miles of the district head-quarters.

(*c*) Villages over 300 population and within a radius of 10 miles of a tahsil head-quarters.

(*d*) Connecting to the existing metalled roads villages having—(*i*) Over 300 inhabitants and within a mile of the existing roads; (*ii*) Over 400 inhabitants and within 1½ miles of the existing roads; (*iii*) Over 700 inhabitants and within 2 miles of the existing roads; (*iv*) Over 1,000 inhabitants and within 3 miles of the existing roads.

Discussing the principal economic advantages that would accrue from village access-roads in the neighbourhood of large towns and markets, Mr. Sharangapani translates such economic advantages into money value. He says :

For one lakh of rupees spent on village-road construction as above, the increase in the earnings will be of the order of Rs. 8,000 to 9,000 per annum at a very conservative estimate, leaving out of account increase due to increased petrol duty and increased land revenue and other taxes. The annual loan charge for a road-loan of one lakh, assuming interest charges at 3 per cent and redemption of the loan in say 25 years would be :

Annual interest 3 p.c. on Rs. 1 lakh	3,000
Contribution to a Sinking fund at 3 p.c. compound interest for 25 years	2,746
Total annual loan charges	5,746
Annual expected increase in the earnings of the villagers	8,500

That is to say for every 100 rupees spent annually as road-loan charges, the village communities will profit by Rs. 150 (8,500/5,746), proving that construction of the above village roads particularly, is not only desirable but is a sound proposition from the point of finance and calculated to benefit the state as a whole.

Next, he comes to the technical aspect of the problem. The main considerations that should prevail in the design and construction of these village roads are given by him as follows :

(*a*) India being a very poor country, the village-access road must be the cheapest practicable.

(*b*) A 9-ft. wide moorum road should be sufficient. The road formation need not be more than 1 ft. high above the level of the surrounding country. The brims on both sides should have a flat slope for facility of cross-traffic. The grade should not as a rule exceed 1 in 30 for affording relief to the draught animal.

(*c*) The village bullocks are usually not shod and prefer to travel on soft moorum or earthen surface instead of on hard metal surface.

(*d*) The moorum roads can be converted to metal roads at a later stage, if traffic justifies it. If moorum is not available within a reasonable distance, it may be necessary to have a metalled road straight away.

(*e*) To secure economy, the bridges should be just-high enough not to cause more than 2 days interruption during rainy season.

(*f*) The earthen sides of the existing metalled roads should be widened to 8 ft. for use of village-carts which readily take to it if they are wide enough and properly maintained. This will also bring about segregation of the fast-moving motor traffic and the bullock-cart traffic. It will also help to eliminate the road-engineers' bogey of mixed fast but soft rubber tyred traffic and slow hard steel-tyred traffic ruinous to the tarred surfaces; and

(*g*) Fifty per cent of the cost of maintenance of a village road may be met from an *ad-hoc* village cess.

The article has been published with a view to draw the attention of the C.P. Ministry to it. We consider this scheme a fit subject of study by all other Provincial Ministries as also by the authorities at the Centre.

Labour Housing Problem

No serious attempt to find sanitary housing at a cheap cost for the industrial labour has yet been made. Problem of housing the lower middleclass folk is also equally pressing and that has also been equally neglected. Recently the Calcutta slums came into sudden prominence after the dramatic visits of Bengal's Australian Governor Mr. R. G. Casey. Only the bustees under the Calcutta Corporation were picked up as objects of Gubernatorial visits, the industrial areas of the city where housing conditions are hundred-fold worse were left out. Most of the big mills of the industrial areas are owned and controlled by British traders who have done nothing to improve the living condition of the barracks attached to their mills. Things are no better in other parts of this sub-continent.

In this province the present Labour Governor has recently visited some of them, closely following in the footsteps of his Australian predecessor through ankle-deep mud. Both the visits seem to have ne same object in view, namely, to discredit the Corporation. The British-controlled industrial areas have once again been carefully left out of the Labour Governor's surprise visit programme.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Things are, however, moving in a different direction in provinces under Congress administration. In the United Provinces, the Ministry has specially deputed a senior officer to study housing conditions in the province. The following extract is from his report :

In this province Hathras, Shikohabad, Firozabad, Saharanpur, Mirzapur, Gorakhpur, Lucknow and Cawnpore are the main industrial centres where workers in large numbers flock from outside and adjoining areas. As yet in very few cases the employers have taken care to provide housing to the workers. Even in Cawnpore only two settlements have been created for the workers. The third is under construction.

Time and again, the Government has impressed upon the employers to provide healthy quarters to their employees but in the absence of any legislation even the biggest ones who advertise their philanthropy at such a large scale have not taken kindly to that thing. In Cawnpore, the congestion is acute and the health of the workers has been impaired much to the detriment of industrial efficiency.

Some time back some quarters were constructed by the Government on the hire-purchase system. It transpires that in some cases even non-industrial workers got in that scheme and the interests of the genuine workers suffered. If the work is entrusted to some co-operative society or other competent agency, that system can be very useful to the workers. The condition of Ahatas in Cawnpore has become still worse from the point of view of sanitation and health. The owners of these Ahatas never care to look after such civic amenities. Last time the Development Board had passed a resolution that the owners of such premises will be compelled to maintain cleanliness but as yet no action seems to have been taken on that score. The scarcity of building materials, specially of bars and other iron materials has checked the private building programme to a great extent.

Fight With Illiteracy

Munshi Iswar Saran of the Harijan Ashram, Allahabad, has drawn attention of the Congress Governments to a simple and easy way of removing illiteracy. The last U. P. Ministry had called a conference to deal with post-war educational problems and it discussed the problem of fighting illiteracy. It has formulated certain proposals but they would prove very costly. Munshiji has provided an alternative to this costly official scheme and we hope his scheme will receive the attention it deserves. The scheme, in short, is as follows :

Maktabs and *Pathshalas* may not be quite scientific institutions but they have existed in this country for centuries and they should be revived. They may not impart the best education but surely they will make our children literate. Literacy produced by any machinery is every time better than the prevailing ignorance. Their one great merit is that they will be extremely inexpensive. It will not be necessary to construct any buildings, nor will it be necessary to have any elaborate paraphernalia for them. Any Maulvi or Pandit of the old type—their race is not extinct as yet—will do as a teacher. If we wait for what are called trained teachers, we may have to wait till the Greek calends.

In my younger days I used to see a Pandit or a Maulvi teaching in the shade of a big tree or in the dilapidated verandah of some house where were gathered children numbering about fifty or less. One single teacher was able to manage them. I have seen children sitting on a *tat*, some had *takhties* and some wrote on the ground. Voluntary payments were made to the teacher. If he was good and efficient, the number of pupils rose, if he was not, the number dwindled.

I must frankly confess that I do not think our good Maulvis and Pandits will be able to tackle the problem of adult education. We shall have to devise some other machinery for this purpose. Then there is the question of inspection. I venture to think that this should not present any formidable difficulty. Of course, the entire scheme will be under the Education Department.

Congress Governments all over the country are in a peculiarly favourable position to launch this scheme. The success of this scheme depends on popular sympathy and co-operation. They are in a position to command it. An Education Minister with a forceful personality can create a band of workers and evoke sufficient enthusiasm in a surprisingly short time. Then there is the organization created by the Congress to help him. What more does an Education Minister with a will and a vision want ?

Ours is one of the poorest countries in the world. It is very difficult for the people of India to afford to have costly schemes drawn up on the model of the rich western countries. The method of primary education described above was just the kind that prevailed in India till mid-nineteenth century when it was destroyed through a planned denial of education.

Servants of India Society's Activities for 1945-46

The Servants of India Society, founded by the great leader of social reform, Gopalkrishna Gokhale, has completed 41 years of its existence. Pundit Hriday Nath Kunzru is its President, Mr. A. V. Thakkar, Vice-President and Mr. D. V. Ambedkar, Secretary. The Rt. Hon. Srinivasa Sastri was its President from 1915 to 1927.

The Society's activities embraced every arena of our national life. In the political sphere, the Society pleaded for the release of all political prisoners and the lifting of the ban on political organisations. The communal proportions laid down and known as parity between the Hindus and Muslims in the Wavell offer of 1945 was characterised by the Society as undemocratic and unjust. During the year under report, the Society was represented at the International Maritime Labour Preparatory Conference at Copenhagen. At this Conference the representative urged the necessity of introducing the systems of social insurance for Asiatic seamen. Much useful work has been done among the Harijans. Since last year, the Society has assumed full responsibility for the aborigines' welfare work in Koraput District, Orissa, where ten schools are conducted, and a school for Sabara children is financed. Active interest has been retained in the uplift work for the aborigines in Panch Mahals, in Assam, and in Bihar and the C.P. Valuable work has also been done in the field of rural welfare. Education and literacy continued to receive due attention. The Society concentrated its attention on measures to relieve distress caused by famine in many parts of the country.

THE PLACE OF WOMEN IN THE NEW SOCIETY

By KAMALADEVI CHATTOPADHYAY

It is being increasingly realised that to secure a sound basis for a society, it is necessary to achieve a balance and adjustment between the individual impulses and the group needs, and in the same way between the different sections of society in the day-to-day human relationships as well as social dealings. Our living and working of one section are so intertwined with the living and working of another, that it is in the very nature of things that they be inter-dependent on each other for their mutual wellbeing, that the ways and codes of one certainly affect that of the other, that no one section can be isolated from the other. A social standard can, therefore, be only determined in terms of a collective standard, for society is an indivisible organism.

But unfortunately today the various parts of society are ill-balanced. The conventions as well as the codes which govern them also vastly differ. This has led to continuous friction and conflict between these component parts. A social plan has, therefore, to be directed towards eliminating the factors which destroy the balance and harmony and reduce the causes of the friction to the minimum so that the social unit may function as a harmonious whole.

Women happen to be one of the several sections of society that are out of step with the social organism. Their natural unfoldment has been arrested and progress stunted. Innumerable barriers have been erected in their path. Outworn customs that lack an inner meaning and significance, weigh them down like heavy mill-stones. But these are no more the exclusive problems of women than are children or the home. Rather they are the problems of society itself.

These are in a way world characteristics. But the Indian background is rather different from that of the West. In the days gone by when India enjoyed a well-established economic stability and a fairly harmonious and disciplined social pattern into which the women had been closely woven, the women enjoyed considerable freedom of opportunity and action, in almost every field of life.

The advent of machinery completely smashed the old pattern of living. Until then, the division between domestic and extra domestic, as now known, was vague. For the essentials of life were produced mostly by the family collectively. Society was split into small communities and all the daily activities converged around the fulcrums of the home. Hence the frontiers were broad and the later divisions of labour between the sexes was never so pronounced. Each family, being more concentrated, was very much larger. Men and women worked together in fields and at home-crafts. But as machine converted each of these occupations into large-scale industries, their character underwent total change, and gradually even the most intimate tasks became public, such as cooking, eating and lodging. And when women found that their individual effort could not compete with the large collective extra-domestic industries, many of them found themselves increasingly forced to join the vast growing concourse of humanity tied monotonously to the machines. This brought a real onslaught on the quiet stream of the old home-life. It meant henceforth abandoning the ancestral setting, the home and its archaic privacy and cut adrift from the family moorings, to jostle with crowds, live in squalid slums, neglect the children all day, and the like. These changes came too rapidly to allow proper reconditioning of the human as well as the material elements of society. Hence our immediate future problems must necessarily carry a close and vital bearing on these.

For the first time, women came to be forced to carry double burdens. Henceforward, the home-activities came to be divorced from the professional and correspondingly the gap between the functions of men and women also widened. By far the larger number of women had now to toil singly at home for that was considered her "rightful" field of work. At the same time economic necessity forced her to labour outside the four walls of the house to earn her livelihood. By implication, the homework, hard and laborious though it was, lost its economic value and ceased to be related to the basic economy of the family. Women, therefore, lost her economic independence. As we have seen, she had to battle hard even to get recognition to these earnings of hers. Any future reconstruction will, therefore, have to commence from this foundation. In a competitive society, work is assessed only according to its "marketable" possibilities. Hence evaluation of such functions in modern pecuniary terms is rather difficult, although they are the most sweated and unregulated of industries. As a matter of fact, woman expends more time, energy and skill over her domestic tasks than any unionised worker in heavy industry. Her tools are countless, her hours unlimited, her obligations compelling. While society assigns her the several onerous duties, it grudges her even the few rights which are her natural dues. A worker with a job cut out and all the rights legally protected has economic precedence and higher social status than a housewife, simply because her industry does not entitle her to a weekly wage or a monthly cheque ! This false slant has undermined the woman's independent status and made her a mere appendage of man. Hence the idea that "man supports woman," and the many social and sex inequalities that emerge from it, such as, for instance, lower wages even in large industries and lower scale of salaries in higher professions. The value of woman is not only pecuniary or biological, it is social as well. For she is the social stabiliser and the cultural repository. One of the basic fundamentals of future society would, therefore, be the recognition of woman in her traditional function as an independent economic entity and the termination of her present status as a "dependent" on man, as though she were a futile parasite and contributed nothing. The rest must necessarily follow as a natural corollary to this, for once she is put on an equal footing with man in the home, her natural right to the ownership of property is bound to be established.

Another curious anomaly that prevails today is that while society accepts as the inevitable characteristic of a natural order the working class woman's forced labour it resents and obstructs the middle-class woman's aspiration for an independent extra-domestic profession,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Where she has made her own way, she continues to be treated on a lower economic footing. The future society has, therefore, to recognise the woman's right to any profession and also apportion her equal payment for equal work, free from the present sex discriminations.

This raises another issue. The change in the old economy and the rise of the new, has meant the break up of the old joint family system, for the new generations do not conform any more to the professions of their fathers, but rather aspire and train for new ones This has naturally meant straying-away from the central family conclave. This has had serious repercussions on the life of the woman. The woman, though perhaps to a lesser extent than man, is nevertheless becoming more individualistic. The rapidly changing conditions also serve to widen the gap between the older generation and the newer. The younger woman, therefore, gladly welcomes a home of her own, to live her own life untrammeled by the rigid codes and often the nagging interference of the old. But experience is proving that this problem is not solved so simply. In a large household, there was far more division of labour and the entire burden did not fall on any single woman. Rather where a young woman, particularly a new mother was concerned, it was appreciably shared by the elder womanfolk of the household. Equally important was the gradual initiation and training of budding womanhood to the onerous duties of a housewife and responsibilities of a mother. Such training was an indispensible part of the family culture. Today most young women just never get a chance of any such instruction. The academic routine absorbs them the first part of their youth and when that ends, it is to straightway enter upon the housewife's solitary domain. As schools and colleges do not as yet normally include home-science or mother-craft in their syllabus, such essential instruction is wantonly bye-passed, leaving the young woman raw and untutored for the heavy and important duties. On the other hand, the working class woman who are compelled to work outside their home, have to completely neglect their homes and the children, the latter being left to the mercies of the neighbourhood or the comparatively grown-up ones, who in their turn are thus unable to go to school. So far as the other classes go, only a small number may be able to afford a servant, but generally for all practical purposes they have to manage on their own without help. Ill-epuipped, unaided, these women carry on their struggle to keep the house going against great odds. For one thing life and human needs have become far more complex and make more demands on human energies and time. The man too expects more from an educated wife and more duties fall to her lot. Most young women of this class get utterly exhausted today within the first 5 to 10 years of their married life, weighed down by these domestic cares of every-day routine. They have little leisure and even less energy to keep up any intellectual interests. Gradually they lapse back into a kind of dead lethargy, their minds becoming dull. They soon forget even the little they had learned, and in course of time become quite uneducated if not exactly illiterate.

The middle-class women had fared better up to about a decade ago, when domestic labour was cheap and plentiful. Today it is neither, and often none is available for love or money. This struggle has been sharpening too. It is moreover wrong to imagine that some of these pressures will be ceasing with the termination of the war. As industrialisation progresses, these will become more and more accentuated, as has been the case in the West. We must, therefore, assume that such conditions will be the normal feature of the future and then plan.

Most people, particularly men, breezily come out with attacks on the modern girl and her incompetency as a housewife and mother. Such attacks are mainly malicious and born mostly of blind prejudice. But even were she so, what men of today fail to appreciate is the fact that the young women are mentally more hardy, more resourceful and courageously carry on in the face of the very severe odds such as the women of the past never had to contend against. While the latter lived in familiar surroundings, in the bosom of a family nurtured with care, young women of today are whisked off to strange unknown places the moment they are married where often they do not know the local language, and have sometimes to live as an isolated household, with not a second family to turn to. Unfortunately our education is today so defective, so haphazard, lacking in organisation and cohesion, that most family lives do get quite disintegrated, for the woman is never able to organise her routine in a way as to be able to conserve time and energy. She has no leisure and gets completely weighed down under the burden of a life for which she is little equipped. Our old household has gone under the impact of a new world, with all its organisation and orderliness, but no new pattern has taken its place as yet.

These are in brief the very human problems of every day occurrence, but which nevertheless form the very kernel of the feminine world, and need to be tackled in a rationalistic and scientific way in the plan for a future society.

Thus while the old world has passed away, giving place to new, neither mentally nor in practice have we conditioned and adapted ourselves to the present world. As we have already seen, it is very essential that the domestic sphere and its functions get the due recognition, for it cannot be solved by compelling women to go out on jobs. Rather today, the approach is to give women the option to make her choice. Even in Soviet Russia where everybody is encouraged to work, there is in normal times no compulsion for housewives to do extra-domestic work. This is as it should be. Where women wish to engage themselves in extra-domestic work, as many are bound to, not only no discrimination should be applied but State and society should provide every facility, to enable women a free choice. Family allowances, baby bonuses and the like should be a part of the social structure. The Beveridge Plan makes a hopeful beginning in this direction and Canada has also come out with a plan for baby bonuses, thus every baby begininig with the second, entitles the family to an allowance. This definitely ensures the personal care and attention of its mother, as it now saves her from the burden of extra-domestic work. The Beveridge Plan also makes provision for Marriage and Maternity Benefit, which are also useful pointers. That is, the social insurance scheme provides for a young woman who has worked at a job up to the time of her marriage to get a Benefit when she wants to marry and when she becomes a mother, so that she has ample funds in hand on those occasions which call for extra expense. This is a thoughtful and useful provision that a future State may take for a basis and improve upon. In countries like Sweden which have co-operative housing

CC-0. Public Domain. Gurukul Kangri Collection, Haridwar

schemes, houses are allotted according to the size of the family and not the purse. Thus if the house rent is one-tenth the salary of the income, it is irrational to allot a large place to a childless couple or a family of three or four members, simply because their income is higher and can pay a high rent, whereas a lower income family of larger size is squeezed into a smaller place. The prevailing practice needs to be altered to a more rational one. Housing space must be determined by the size of the family and not necessarily higher rent for a larger house. This alone can ensure healthy living, privacy and comfort for the growing children, one of the most essential requisites that are obviously ignored today.

But in addition, creches, nursery and kindergarten schools, planned leisure-hour children's activities etc., have to be an essential feature of a normal society. For whether a woman stays at home or goes out, there must be some place where a child can be left when the woman wants to take time off. Then the child ceases to be a burden. Moreover, in nursery and kindergarten schools, children learn at an early age to live in an organised and disciplined manner in a large group, learn healthy social habits. Especially where a woman has a large family and heavy domestic burdens, she is inclined to be less patient and more brusque with the growing children who often become victims of her temper for no fault of theirs. Thus such institutions are helpful even in the case of a full-time housewife.

All the more highly industrialised countries of the West have conditioned themselves to the scarcity of domestic labour and patterned out accordingly. Girls are taught from an early age to organise and run a house. Later they go into special institutions for more specialised training for the same. At the same time it is being realised that the old divisions of man's and women's functions have not the same reality today, especially with such a large number of women taking on jobs which were hitherto considered purely men's. To relieve women of these double burdens new adjustments are being made, through community kitchens, community nurseries and the like ; the men taking a fuller and more rightful share in the household tasks. It is as it should be, for as women lend an increasing hand to the affairs considered exclusively the man's domain, he should play his part in what was regarded as an exclusively woman's sphere. In America, for instance, quite as many men go in for Home science courses as women. Men attend classes along with women conducted by the Maternity Association on the care and upbringing of children. Thus man is able not only to assist the woman at her domestic drudge, but also psychologically relieve her of some of the daily tedium and add to the general interest of an otherwise dull routine. There is so much more zest and interest when two work together in comradeship. Such a mental and physical condition is essential as a pre-requisite to provisions such as community kitchens and the like.

Another arm which the servantless community of the West has developed, is labour-saving devices in the form of gadgets. These are useful and also help in saving needless physical labour. They need, however, to be cheaply supplied and on a mass-scale to bring them within the reach of every woman and cease to be the luxury goods they are today.

Education in home-science and mother-craft should be the essential feature of every institution. The old idea that these being common instincts if you *feel* sufficiently, efficiency will follow, is a very erroneous one. Life is today extremely complicated and old methods have become ineffective. Therefore, a systematic training for modern living is very necessary. In fact this raises the whole issue of education. It is education alone which can give reality to principles that may be recognised as laws on the statute books. For without the requisite training, women can never be really independent nor can they take advantage of any of even the available facilities. The present system of education is essentially wrong, designed as it is on a single-sex basis. Therefore, even our mixed institutions are not *co-educational*, rather they are men's schools and colleges where women are *permitted*. Education has to be designed for *living* and life represents co-operation between the two sexes. Full cognisance must be taken of this and a proper approach in this direction developed. Therefore, social and home sciences should be an integral part of education. Moreover, qualified women should be as freely employed in all institutions as men are at present. Women should also be allowed to share equally with men, all educational responsibilities, particularly in the sphere of higher education where men still predominated. This alone would provide the proper atmosphere to nurture and build up healthier and less inhibited relationship between the two sexes. For it is here that the entire mechanism of collaboration between the sexes in all spheres, has to be worked out in theory and practice, to prepare the growing generations for the gentle and trying art of family living.

The ever-increasing penetration of women into the extra-domestic field is very welcome, for the world is after all but an extension of the home. On the one hand it cuts across the relative segregation of women as a sex and breaks up the old restrictions that narrow down the women's functions at the moment, and provide a wider and more varied field for them to function in. While on the other hand, their presence and participation brings a new and fresh influence to bear upon the larger problems. Women no doubt add their own touch of idealism and practical sense to things. In fact the treatment of no problem could be complete or in any sense satisfactory, unless men and women together shared the responsibility and lent a joint hand and joint vision. The future society has to encourage and welcome the participation of women in all spheres and activities of life, free from any sense of self-consciousness. For women are at present allotted a "not quite adult" status. There is a subtle suggestion that they are not responsible or mature enough, and need a helping hand like minors and children. Several of our laws which deny women equal economic and social rights with men, clearly indicate this. The basis of franchise for women in this country is another instance of this, where wifehood is made a basis for franchise. All this subtle undermining of equality must be replaced by a natural healthy acceptance of comraderie.

Our present social life is equally vitiated by a double moral standard both in law as well as in practice. In the last analysis, prevailing customs have the precedence over dead-letter laws, but where laws also serve to accentuate this double standard, the social life gets even more vitiated. While man is accepted as a weak wayward vessel with an inevitable tendency to transgress, woman is regarded as the repository of social morals. The fact is entirely overlooked that society is a double-harnessed chariot and its onward progress is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dependent on both man and woman. If one is allowed to play tantrums on the ground that is its nature, the progress of the other gets naturally impeded. When one demands equal moral standard, its implication is not loosening the discipline of the other sex also, but rather an attempt to impose the same discipline on both. As Gandhiji very aptly points out :

> "Woman is the companion of man, gifted with equal mental capacities. She has the right to participate in very minutest detail in the activities of men, and she has an equal right of freedom and liberty with him . . . By sheer force of a vicious custom, even the most ignorant and worthless of men have been enjoying a superiority over women which they do not deserve and ought not to have. Many of our movements stop half-way because of the condition of our women. Much of our work does not yield appropriate results. . . . They are a peerless pair, each helps the other, so that without the one, the existence of the other cannot be conceived, and, therefore, it follows as a necessary corollary from these facts that anything that will impair the status of either of them will involve equal ruin of them both."

The present idea that man can afford to be licentious so long as woman imposed upon herself strict discipline, is fallacious as well as dangerous. In future there ought to be only one ethical standard for both which neither could break with impunity. What is wrong for one cannot be right for the other. Death is as natural as birth and it is mere sadism to brand a woman whose husband dies, with all manner of severities. Nor can monogamy be imposed upon woman alone while man is allowed to indulge in polygamy. In the society of tomorrow, the present law and custom needs to be replaced by a law of monogamy for both. At the same time, provision must be made for all eventualities by enabling dissolution of marriage under certain circumstances. The prevailing laws of marriage are both unfair as well as irrational, for while it does not prevent socially injurious unions such as between diseased or insane people, it forbids two intelligent people from separating if their union had in reality ceased to be and become a burden or a mockery. If marriage is a useful social institution, as we believe it to be, then it can survive only as a voluntary one, not coercive. For then it becomes an artificial super-imposed affair instead of an institution based on the deepest needs of man, an indispensible social instrument for the proper regulation of human relationships. Such a relationship can only be constituted through the inter-play of mutual love, respect and obligation. Where this spring is missing or is dried up and social fear alone holds two people together, such a union can never add to the strength and vitality of a people. Under these circumstances, the man has no more rights over his wife than an Imperialist country over a colonial. As Gandhiji rightly says :

> "For me the marriage state is as much of a discipline as any other. Married life is intended to promote mutual good. Where one partner breaks the law of discipline, the right accrues to the other of breaking the bond. The breach here is moral, not physical . . . the wife or the husband separates to serve the end for which they had united. Hinduism regards each as absolute equal of the other. No doubt, a different practice has grown up, so have many other evils crept in . . ."

Moreover, the result of a ban on dissolution or making divorce difficult certainly does not make for happy or successful marriages. That is an absolute fallacy. But while a different standard obtains for man, the only result is an additional threat for society and a handicap-struggle for woman against man. The new society must, therefore, lay down identical moral obligations for both the sexes and establish identical ethical standards, while all laws are brought into conformity with this principle.

POEM

By RABINDRANATH TAGORE

The famished, the homeless
raise their hands towards heaven,
and utter the name of God.
Their call will never be in vain
in the land where God's response
comes through the heart of Man
in heroic service and love.

Lines written by the Poet during the Bengal famine of 1931

—From *India Speaks*
(Inauguration Volume, May 1946)

LIQUOR POLICY OF GREAT BRITAIN (1939-40)

By H. C. MOOKERJEE, M.A., Ph.D.

Some time after the outbreak of hostilities with Germany, Temperance organisations in Britain criticised the British Cabinet stating that the attitude of complacency towards the drink problem which had all along characterised the governing classes of Britain should forthwith be replaced by one of quick and prompt interference with the activities of the Liquor Trade.

In explanation of such invasions on personal liberty as had already been found necessary, the Cabinet had stated that they had been due to the vital needs of the state. For instance, conscription had been enacted to increase military strength, the maintenance of the food supply of the nation had led to its rationing, the equipment of mechanised armies had ended in petrol rationing, the safety of the civilian population in thickly settled areas had rendered evacuation compulsory, and taxes, direct and indirect, had been increased till they made unprecedented demands on the purses of the people. It was, therefore, argued that the British Cabinet should not postpone the imposition of restrictions calculated to husband the resources of the country.

The British Temperance Movement put forward certain reasons in support of its demands for controlling the Liquor Trade and reducing the consumption of alcoholic beverages. The most important of these are referred to below.

Deterioration of Efficiency

There is such a close connection between proceedings for drunkenness and convictions on the one hand and the quantity of liquor consumed on the other, that a reduction in the amount used is immediately reflected in a considerable diminution in their number. It was urged that as, in the best interests of the country, it was necessary that the people as a whole should be encouraged to maintain their physical and intellectual efficiency at the highest possible level, it was desirable that they should, as far as possible, be saved from the temptation of drinking and thus lowering their powers, for it is a well-established fact that drunkenness and even the effects of moderate drinking falling far short of actual drunkenness, lead to industrial and physical deterioration which no country engaged in a life and death struggle such as the war with Hitlerite Germany could afford. In support of this contention, the following figures, taken from official publications, were placed before the public.

	Beer (Nearest Thousand Standard Barrels)	*Spirits (Nearest Thousand Proof Gallons)*	*Drunkenness Proceedings*
1913	35,324	31,794	263,404
1914	34,193	31,660	263,515
1918	12,791	15,108	44,266
1919	21,692	21,699	86,467
1920	26,920	22,125	144,073

As regards the convictions, in 1913, the year preceding the outbreak of hostilities, they numbered 183,514 in England and Wales diminishing gradually till in 1918, when control was strictest, they fell to a minimum of 28,628. Next year, that is to say, in 1919, the number of convictions nearly doubled while the year after that (1920) they were more than three times the minimum figures given above.

Along with the above statistical data, it was emphasised that the people who were proceeded against and specially those convicted were not only themselves unable to give their maximum services to the country but also that they needlessly absorbed the energy of others engaged in seeing to the maintenance of the normal life of the nation. It was, therefore, argued that if the British Cabinet took effective steps to reduce the amount of liquor available to the public, there would be a sharp drop in drinking, moderate and excessive, and so a larger amount of man-power with a higher measure of efficiency would be available for national service.

It was also urged that never before had there been a time when it was necessary for every Briton to be in a state of constant preparedness. The dangers of attack from the air had increased to an alarming extent and there were thousands of people scanning the heavens for German air-crafts that might rain death on defenceless men, women and children. As alcohol by drugging the brain, blurs the vision, it was essential to encourage sobriety not only in the case of the watchers, but also where the general public, which had to be ready for any emergency, was concerned.

In that connection, attention may be drawn to the instructions issued to Wardens by the Chief Air Raid Wardens of different places among which reference may be made to those of Leeds, Chelsea and Marylebone. The first of these ordered that his Wardens were not to enter licensed premises (selling liquor) whilst on duty. The second stated, "None of our Wardens would drink on duty", while the third said, "We ask men not to drink on duty, as it is obviously desirable for the efficiency of the service."

Another point made by a religious organisation, the Emergency Committee of the Free Church of Scotland, soon after the outbreak of the recent war was that war conditions had led to the massing of individuals in new surroundings especially in the case of young men and young women called up for national service. So far as these young people were concerned, it could not be denied that while the resultant removal of the restraints of home was by itself an undesirable though unavoidable necessity, it was unwise to aggravate the risks to which they were already exposed by easy access to intoxicating liquors one of the effects of which, as shown elsewhere, is to materially weaken self-control.

Increase of Road Accidents

The connection between drinking and road accidents had been established even before the breaking out of the recent war but the British Cabinet had apparently failed to grasp the significance of scientific findings as regards the danger of alcohol even when taken in moderation by those in charge of highly mechanised machines of transport on land or in the air. Something has been said elsewhere about the increase of drinking after the blackout regulations had come into force and authorities have been quoted in support of this view.

Digitized by Arya Samaj Foundation Chennai and eGangotri

It was pointed out at that time that this implied great responsibility on drivers of motor vehicles and pedestrians as also that drinking, under these circumstances, was a grave danger, not merely to the individual, but to the community as a whole, in addition to the imposition of an unnecessary burden on the police. Nothing was done and the number of road accidents mounted. Mr. F. C. Watkins, Labour Member for Central Hackney, voiced the rising tide of public indignation against the unchecked continuance of drink-caused accidents when, on the 16th November, 1938, he moved the following resolution in the House of Commons :

> "This House views with concern the continued high rate of road accidents in spite of existing measures and therefore calls for more effective action for the public safety."

Several members, including the Minister of Transport, participated in the debate which followed. One of these, Mr. Frederick Montagu who, it should be added, had never previously shown any deep sympathy with temperance principles, made a speech from which the following lines are quoted to prove the extent to which he thought road accidents were due to drinking :

> "A good number of the Members of this House know that I am no pussyfoot. I do not believe in restrictions and prohibitions . . . but I must confess to a very considerable degree of concern at the number of roadhouses to be seen round about London and in other parts of the country . . . When I note the enormous number of cars packed outside these places, especially at week-ends, I cannot help feeling that here is something which ought to be looked into and which may be responsible, to a considerable extent, for some of the selfishness and some of the slaughter."

This debate, too, characterised by temperance organs as an unsatisfactory one, did not produce any effect. *The Alliance News* for December, 1939, once more drew attention to the seriousness of the situation when it stated :

> "We are killing on the roads of our country twice the number of people as were killed in pre-war months, due very largely to increased traffic dangers after dark. The presence on the streets after blackout of persons who are just leaving public houses (more or less under the influence of liquor) has added greatly to the dangers of the roads."

A very prominent leader of the British Temperance Movement next drew attention to the *Report of the House of Lords Select Committee on Road Accidents* which, among other things, had said :

> "It should be emphasised that, even when there is no question of drunkenness, a small quantity of alcohol is for many drivers most dangerous,"

and emphasised the importance of the fact where the people concerned were the thousands of young airmen who were being called upon to face the terrible risks of aerial reconnaissance and combat. Their nervous parents constantly in apprehension of the dangers to which these young people were unavoidably exposed, he pleaded, had surely the right to demand that their boys should be placed beyond the reach of a temptation which, if yielded to even in moderation, might cost them and their comrades their lives.

Then came a request from the (British) National Temperance Federation to Sir Kingsley Wood, the Minister for Air, to receive a deputation to discuss with him the issue of alcoholic beverages as it affected the members of the air forces. He declined to receive the deputation. Replying through his Secretary he said that he "was satisfied that alcohol is in fact used in the (air) service to a remarkably limited extent and that canteens are strictly managed under the full control of Commanding Officers."

This letter referred to the importance of moderation but carefully refrained from defining what, in official view, would be regarded as moderation in a calling so dangerous as that of a pilot. It was in this connection that an eminent medical man who, throughout his life, has been a champion of total abstinence observed that

> "The impairment of the power of judgment, of central, peripheral and binocular vision, of neuromuscular co-ordination is inevitable, after even small doses of alcohol. Bad enough in most other occupations, such a consequence for the airman is fraught with incalculable mischief."

The Air Minister was, therefore, requested in a second letter addressed to him by the General Secretary of the National Temperance Federation to accept and give effect to the view of Mr. Garro Jones, M.P., as expressed in April, 1938, that is, long before the recent war started, that

> "It would not be right to apply the same standard of conduct to the air pilots as to the other two services (Army and Navy where limited quantities of alcohol under certain circumstances are issued to the soldiers) even, let alone to the general public."

So far as the present writer is aware, the Air Ministry right up to the end of the war did not accept the suggestion of the Temperance Movement, detailed information about which appears elsewhere.

Depression of Living Standards

The annual per capita expenditure on drink in Great Britain in 1938, was about £5-12-0d or 8s-6d a week for a family of four persons. Actual enquiries conducted by temperance workers among men employed in a number of different industries showed that their expenditure on drink was usually between 5s and 16s a week, and that, in some industrial areas, it was much higher. For instance, Dr. Alfred Salter, M.P., in his evidence before the Royal Commission on Licensing stated that

> "In Bermondsey, where the average employment wage was only 45s a week, the expenditure on drink alone came to 16s per family."

Taking 8s. 6d. a week as the average expenditure on drink, there can be little doubt that it had detrimental effects on the standard of living because statistical investigations have shown that over 50 per cent of all the children in Great Britain "are living in families where total income is less than 60s. a week." A deduction of 8s. 6d. from this amount implies a substantially lower standard of living for the whole family.

Temperance workers pointed out that war conditions would accentuate this tendency, for though it was sure that wages would rise, this would certainly be accompanied by an increase in the prices of the necessaries of life. The time-lag between wages and prices would always be there. Along with this, the cost of liquor would also increase and as users of liquor who would be called upon to work harder and for longer hours would fly to liquor to overcome, at least temporarily, their sense of fatigue and also for the sake of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sociability, it was certain that the expenditure on drink would run away with a larger share of their earnings than in normal times. And this, when it happened, as it was contended was only too likely to happen, would adversely affect the standard of living of the whole family. It was also held that as it was essential that the workers should be well-nourished, the greatest sufferers under these circumstances would be the women-folk and the children.

Wastage of Foodstuff

On the 28th December, 1939, Mr. J. W. Robertson Scott, writing to the *Times* from the office of the celebrated periodical, *Countryman,* referred to the wastage of valuable foodstuff and man-power in the following terms :

"Brewing and distilling must be using up something like 17,000 tons of barley, 5,000 tons of other grains, and about the same tonnage of sugar, molasses, etc., weekly. Dare we any longer put off deciding (1) whether the nation can afford all this drain on feeding stuffs, and (2) whether it can permit all the attendant expenditure of not far short of £3,000,000 a week on materials and labour ?"

The British Cabinet which was greatly embarrassed by not only other criticisms of the same type but also when it was pointed out that the food wasted in the manufacture of liquor could be used for feeding pigs, attempted to defend itself by suggesting in what its critics regarded as an inspired broadcast, that "beech mast or acorns could be used instead of barley for feeding pigs." The reply to this came in the correspondence columns of a temperance paper in which a gentleman calling himself "A Practical Farmer" drew attention to the impractical nature of the advice offered by inquiring "where is any one, keeping 300 pigs or more, to get beech mast or acorns ?"

Then ensued further correspondence the last word in which was said by one Mr. R. Rowse-Hosking, writing on the 2nd January, 1940, to *The Farmer and Stock-Breeder*, one of the foremost of farmers' journals in England. He said :

"Instead of being palmed off to feed bacon pigs on beech mast and acorns, may I suggest a better way of obtaining the necessary food ? In beer alone, to say nothing of spirits, nearly ten million cwts. of malt and about three quarters of a million cwts. of rice, maize and other grains were used last year in its manufacture. Now, it is recognised that 10 cwts. of barley feed will produce 160 lbs. of pork, dead-weight, so that the barley used to make malt for brewing would feed about a million pigs of an average weight of 160 lbs.

"Ships are badly needed for transporting war supplies. Why should they be used for bringing barley for brewers to destroy ? Some farmers are actually killing off the baby pigs because of the shortage of feeding stuffs, and there will, therefore, be a reduction of the pig population and shortage of bacon.

"Those who consume food are to be rationed on January 3rd (1940) ; those who produce food, we are told, are to be rationed for animal feeding stuffs ; but those who destroy it are to be let off 'scot-free.' Is it either right or economical to let beer come before bacon, eggs, or butter ? Is our Government afraid to ration the brewers ? Do they prefer the ruin of pig and poultry-keepers and to put the nation on short commons instead ?"

On the 20th February, 1940, the Minister of Food (Mr. W. S. Morrison) in reply to an inquiry made by a lady member of the House of Commons stated that "about one million pounds of grain (were) daily" used up by the Liquor Trade. This does not include sugar, molasses, etc., also consumed by it which proves that there had been no improvement in the situation after the appearance of the correspondence referred to above.

Early in March, 1940, the British Temperance Movement started a campaign to mobilise public opinion against the misuse of foodstuffs. It emphasised that food control had been introduced and rationing imposed to prevent their possible wastage. To this end, to quote its language, "a skilful and very expensive administration" had been brought into being which, as was only natural, was "financed by the increased cost of foodstuffs" to the public. For the materials it used, the Liquor Trade had to depend either on what was grown in Great Britain or imported from outside at considerable risk to the seamen. In either case, the manufacture of liquor from these substances constituted, in the language used by it, "a woeful wastage of valuable food products and the destruction of essential vitamins" which were "greatly needed by the British nation as a whole so that every soul might maintain its strength, vigour, and efficiency at the highest possible pitch."

The gravity of the food situation was such that even the Rt. Hon. David Lloyd George, M.P., felt impelled to show his sympathy with the efforts of the Temperance Movement and when invited to a meeting arranged by it on the 14th March, 1940, sent the following wire to the President elect :

> "Deeply regret not present. Consider food situation demands drastic survey of brewery and distilling facilities. D. Lloyd George."

Misuse of Cargo Space

But the use of foodstuffs by the Liquor Trade had another and, from the human standpoint, a more deplorable result to which reference was made in a contribution which appeared in November, 1939, from which the following extract is made :

> "There is a shortage in certain imported foodstuffs, the reason being that there is a shortage of cargo boats. Yet it is estimated that to supply the Liquor Trade with its sea transport, over 50 million cubic feet of shipping space is employed annually. Are British sailors to continue to risk their lives for purposes of this kind ?"

The Liquor Trade continued to get its supplies of precious foodstuffs the transport of which by sea took a high toll of the lives of British sailors when the U-boat menace was at its worst. The indignation felt by all right-minded people was expressed in an article entitled "Liquor in War-time" published in the well-known *Spectator* of London on the 2nd February, 1940, from which the following lines are taken. It will be noticed that the point made is that the cargo space taken up by the food-stuffs used in the Liquor Trade, the most important of which is brewing, represented so much loss and that, at least under the conditions then prevailing, it should be utilised for importing food for man and stock.

> "In his address at the Mansion House last month the Prime Minister stated that if we want to win and, if possible, to shorten the war, 'We must control imports, we must do without commodities that are not necessary.' Bulky commodities taking much cargo-space are specially to be avoided, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

among them clearly must be included much of the material needed in brewing. Over half the total amount of barley used for this purpose is imported, as well as certain amounts of sugar, rice and maize. But in war-time, when sinkings of ships are of daily occurrence, cargo-space represents seamen's lives. Everything possible must be done to reduce their risks to a minimum, and to restrict space to the carriage of essential commodities only. Even if there were no question of the risk to seamen, cargo-space ought to be conserved for more useful purposes. Owing to the convoy system, the total amount of space available is considerably less than in peace-time, and this inevitably cuts down the import of both valuable foodstuffs and of feeding-stuffs for stock."

Significant Gaps in Propaganda

As the war went on and, with it, the need for finance grew more intense, a national savings campaign was instituted under Government auspices. The National Savings Association was organised and it sponsored an extensive publicity campaign through the press and the platform urging that while expenditure on the necessaries of life was, in the interests of efficiency, to be maintained, expenditure on luxuries must be drastically reduced and the money thus saved should be lent to Government. In their speeches, the Cabinet Ministers also pursued the same theme while there was no lack of this particular type of propaganda in broadcasts.

What was surprising in the whole affair, however, was the utter lack of any clear indication in regard to the particular commodities the use of which could be advantageously cut out. One would have thought that it was not at all a very difficult matter to draw attention to some very large items of national expenditure which could have been completely eliminated with very definite gain to the community and of which the enormous expenditure on alcohol is an outstanding example.

In some cases, the advertisements which appeared in the papers pointed out that it was wrong for the British merchant fleet to risk the abnormal perils of the sea due to the activities of German submarines to carry what we may call non-necessaries to England. Every one understood that this was to discourage their import and use by the British public which was expected to utilise the savings thus effected for national investment. Not one of these, however, mentioned anything about the waste of that part of the grain, sugar, molasses, and the like used by the Liquor Trade, which could be classed among the non-necessaries and importing which implied serious risk for seamen.

An obvious explanation of this seems to be that so general is the feeling against the curtailment of the facilities for drinking, that those conducting the propaganda were aware that there was very little chance of anything like a wide acceptance of such a suggestion.

Suggestions of the British Temperance Movement

All the above facts were known not only to the British Cabinet but also to individuals and organisations interested in the Temperance Movement in Great Britain. The United Kingdom Alliance of temperance organisations all over the country passed the following resolution :

"The United Kingdom Alliance calls public attention to the fact that the manufacture and consumption of alcoholic liquor entail :

"(1) The wastage of transport facilities.
"(2) The impairment of national efficiency.
"(3) The misdirection of man-power.
"(4) Uneconomic expenditure.
"(5) The destruction of food value of vast quantities of sugar and grain.
"(6) An increase in traffic danger."

The above resolution was passed soon after the outbreak of war with Germany. It had no effect in inducing the British Government to change its policy in the matter of the drink traffic.

In January, 1940, Mr. Earnest Winterton, a prominent temperance worker, wrote an article demanding immediate steps for halving the output of alcoholic liquors and prohibition of the use of spirits for beverage purposes. His other suggestions were putting up the price of intoxicating liquor by increasing the taxes and the weakening of their alcoholic strength. These were not accepted but there was no let up in the attempts made by those interested in the Temperance Movement to restrict the output and consumption of liquor. The following resolution was passed at a meeting of the London Free Church Federation held on the 14th March, 1940 :

"In view of the fact that the huge national consumption of intoxicants represents a serious wastage of foodstuffs by their destruction in brewing and distilling ; that the drink habits of drivers and pedestrians are an aggravating factor in the appalling total of road casualties ; and that the expenditure upon drink is impairing the economic resources of the nation, this Annual Meeting of the London Free Church Federation calls upon the Government to impose upon the drink trade, without further delay, not only the limitations which were found to be necessary during the last Great War, but also such additional restrictions as have now become imperative on account of the 'black-out' and of the importance of maintaining a constant state of national preparedness to meet any emergency."

The Temperance Movement realising the strength of the opposition it would have to encounter made, in 1939, from the Indian point of view, the very modest proposals that there should be a reduction in the drinking hours; that the sale of spirits should be made illegal from Friday night to Sunday night, that the "No Treating" order of the war of 1914-18, should be imposed, that the alcoholic strength of spirits and beer should be reduced, that no canvassing for liquor orders and no publication of advertisements to push their sale should be permitted, that air pilots, motor drivers, etc., should not be allowed to drink when on duty or, better still, for a prescribed number of hours before going on duty and, lastly, that there should be "a progressive restriction of the national output of liquor" and that savings in labour and raw materials thus effected should be diverted to the increase of the National Food Supply.

The Temperance Group in Parliament systematically brought pressure to bear upon Government not to impose Prohibition which they regarded, and regarded rightly, as an impossibility so long as the British maintain their present attitude in the matter of the use of alcohol, but, in accordance with the resolutions quoted above, to introduce those restrictions which had been in force during the war of 1914-18

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

adding to them three other regulations to meet the conditions then prevailing. These were that places selling drink should close one hour after sunset, that advertisements designed to increase the consumption of alcoholic drinks should be prohibited and lastly, that drivers of motor vehicles and aviators should not be allowed to drink during their hours of duty. The whole Temperance Movement of Great Britain gave this programme its unqualified support but these were not accepted.

Attitude of the British Cabinet and Its Implications

On the 28th February, 1940, Dr. Little, a member of the House of Commons interested in the Temperance Movement, asked Mr. W. S. Morrison, the Minister of Food, "Whether, as the foodstuffs required for the production of whisky, beer, etc., are vital and necessary at the moment for the life and welfare of the nation, he will make a statement as to the extent of the rationing of cereals to distillers and brewers?"

The reply, according to the official proceedings of the House of Commons, was as follows :

"In view of the limited supply of cereals available for animal feeding stuffs, the Government have decided to make an order restricting the output of whisky and other potable spirits for the current year to one-third of last year's production. The output of beer will be permitted to continue at a level not exceeding that of last year.

"To ensure that the Government's intentions are carried into effect with the least inconvenience to the industries concerned, advisory committees representative of distillers, brewers and maltsters are being set up by my Department.

"Steps will be taken to ensure that purchases of cereals for brewing or distilling are not made in excess of requirements for this year's permitted production. The consumption of sugar for brewing will, in accordance with arrangements made for the reduction of supplies for other industrial purposes, be reduced to 70 per cent of normal requirements. Supplies of cereals will, if necessary, be available to meet the deficiency.

"I am glad to be able to state that I have been assured of the co-operation of the industries concerned in giving effect to the Government's wishes."

The point was also made that Government had increased the taxes on liquor in which connection the following information was supplied :

	Pre-war	*War*
Spirits (proof gallon)	72/6d.	82/6d.
Beer (bulk gallon)	24s.	48s.
Wine (gallon)	1/6d.	3/6d.

From the above reply, it is evident that the British Cabinet was at last compelled to take some steps in regard to the preferential treatment which had, up to that time, been accorded to the British Liquor Trade. That the action taken was, however, inadequate became clear when, as the result of inquiries, it was found that the amount of whisky then in bond, that is stored under charge of Customs till duty was paid, amounted to no less than 140 million gallons, equal to five years' normal requirements and that the preferential treatment in regard to the beer industry was to continue as its output was to be permitted to reach its pre-war figure, any shortage due to the rationing of sugar being made up by increased supplies of cereals at a time when serious shortage of agricultural foodstuffs continued to prevail.

From the above, it is abundantly evident that so far as the amount of liquor available for consumption was concerned, the position remained practically unchanged. *The Daily Sketch* of London offered the following comment on the above policy of the British Cabinet in its issue of the 29th February, 1940 :

> "There will be plenty of whisky at present rates (unless the tax goes up) for years to come, despite restrictions on manufacture just announced. Amount of tax will probably remain as now throughout the war . . . Beer maximum output will be the same as last year. Even a cessation of distilling would not take effect for years, because of the time spirits need to mature."

When examined closely, the following inferences can be legitimately drawn from the answers given by the Minister of Food.

1. The output of beer would not be reduced by a single pint unless the Advisory Committee consisting of people financially interested in the brewing trade decided to do so. That this was not likely is self-evident.

2. The brewers who are food destroyers would continue to obtain as much sugar as if they were food producers like manufacturers of such articles as jam, marmalade, chocolate, etc., every one of these being allowed "70 per cent of normal requirements."

3. If the sugar allotted was found to be insufficient, the brewers would get grain instead.

4. As regards whisky, the output of which was to be reduced by two-thirds, we have to remember that potable spirits, unlike beer, keep for years and that supplies normally sufficient for five years were in stock when the above statement was made. Secondly, it is profitable for distillers to stop manufacturing whisky in war-time because of the higher prices paid for what is called mature whisky and the reduced demand inevitable by reason of war-time economy. The experience of the war of 1914-18 had shown that distillers would themselves have reduced their whisky output in war-time even if Government had not taken any action in the matter.

5. It was the contention of Government that increases in the prices of alcoholic liquors due to the enhanced taxes would tend to check their consumption but attention was not drawn to the fact that, as wages under war conditions were bound to increase, it was more than likely that their restrictive value was calculated, at least partially, to be neutralised.

Britain, Australia and New Zealand Contrasted

While Great Britain was, under pressure from various quarters, taking hesitating steps for controlling the consumption of liquor, the younger and, presumably, more vigorous Self-Governing Dominions were setting a worthier and a higher example. It was reported in the *Children's Newspaper* in November, 1939, that Mr. Robert Semple, Minister of Transport and of Public Works, New Zealand, had decreed that all the constructional camps of the country would be free from alcohol. These had come into existence as the result of the railway and road extension schemes involving expenditure of millions of pounds. He took up this attitude because Government was paying very high wages to finish its new roads and railways as rapidly as possible and it was aware that alcohol slows up work.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Christian World, dated the 28th December, 1939, reported that, sometime after the above step had been taken, the New Zealand House of Representatives passed, without opposition, a Bill prohibiting drinking at public dance halls or in their vicinity.

The same issue of the above periodical also reported that the then Australian Prime Minister, Mr. Menzies, announced the decision of his War Cabinet that military camps would remain "dry", which he said, "had been reached after careful consideration." Further, under the Defence Act, the supply of liquor to military trainees under the age of 25, who were being compulsorily trained in the State of Victoria (Australia), was forbidden. In the same State, the regulations forbade the possession and supply of intoxicating liquor at any Air Force canteen, unit, or station, during any period of training.

———:O:———

THE LEAGUE IS DEAD, LONG LIVE THE UNITED NATIONS!

A Retrospective Glimpse

By Mme. L. MORIN

Geneva, 25th April, 1946

Geneva, who watched over the League's cradle, has just seen it safely to its grave.

But although the session had something ghostlike about it, the whole process has been conducted with all due pre-war formalism and dignity.

And the slight mist of melancholy which hovered around, together with past memories, was soon dispelled by the brilliant sunshine, the gorgeous flowers, the ever kindly welcome of the Swiss people, and the unchanging beauty of Geneva and its lake and mountains in the early spring.

On the 7th September, 1929, the first stone of the future palace had been solemnly laid in the Parc of Ariana. September, 1937, saw the first sitting of the League in its new abode. Easter, 1946 : hardly more than ten years have elapsed—but what eventful years ! —and the League is here again, yet only to breathe its last and transmit its legacy to its young successor U.N.O.

All through the war, people were exclaiming : "Look at that magnificent palace standing there useless, and it cost 30 million francs at the time." And what was the daily cost of war for each country, if you please ? People will always agree to the heaviest armament budget in time of war, but a much smaller amount to be spent in favour of peace or constructive purposes is always considered excessive.

It should not be forgotten that the League Secretariat, if at a slow rhythm, did pursue its activities during the war, within ten minutes from the German guns, in its own humble way a challenge to the forces of disorder. Contributions received during that period were devoted to the technical services (economic, social, financial, transit, hygiene, drug-traffic, etc.). And those very same services, in slightly altered forms, seem likely to assume nowadays an ever-growing importance, the need for them being even greater than before.

As the League steps out of the present world scene, it also steps into history, and it may well occupy there in future a more creditable place than its present censors would have us to believe. That is why, at this present juncture, it is perhaps not utterly futile to take a last retrospective glimpse at the League's activities and ideals.

Some Precursors

In fact, it would be a fascinating study to trace through history the evolution of arbitration [illegible] other ideas which were later on embodied in the League Covenant but this, of course, cannot be attempted within the scope of a short article.

A few instances, taken at random.

Tribunals of conciliation existed at times in ancient Greece to settle matters between cities.

Pierre Dubois, a thirteenth-century lawyer of Normandy, envisaged a court of arbitration between nations, with ultimate recourse to the Pope.

Henri the IVth, King of France, also devised a scheme for international organisation.

At the close of the seventeenth century, the Abbé de Saint-Pierre published a plan for realising universal peace through the means of European federation.

But all these reminiscences appear very distant from our present preoccupations.

How the League Was Born

In 1915, a "League to impose peace" was created in the United States and attracted the attention of President Wilson.

In 1917, under Wilson's auspices, a peace enquiry bureau, with 200 eminent jurists, undertook to study the means of organising the world on a new basis.

One of Wilson's fourteen points foresaw the constitution of a League of Nations.

A committee started work in England, on Lord Cecil's initiative. Its plan was approved, after certain alterations, by President Wilson and his private counsellor, Colonel House.

When the Peace Conference opened, a commission was asked to draft the statutes of the League of Nations. The final text was approved in plenary session on the 28th April, 1919, and incorporated in the Versailles treaty on the 28th June of the same year.

It can be contended that in 1919 and 1920, many treatises were signed under the sway of political passions prevalent at the time. But the League Pact itself was not hastily drafted. In fact it was compiled with a great deal of care and thoughtfulness.

Yet, in spite of the immense hopes fostered by its creation, on the whole, and more so as years elapsed, the League has been more ridiculed than admired. Still should we not be grateful that it existed at all ?

True to say, its failures have been more conspicuous than its successes. Mr. Charles Rieben, in the Swiss weekly *L'Illustre*, endeavours to give a comparative picture of both.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Where the League Failed

In 1923, Italy had bombarded and occupied the island of Corfou, after the murder of General Tellini on the Greco-Albanian frontier. With regard to this dispute, unanimity could not be reached in Geneva. But a British "naval demonstration" seems to have proved a determining factor. Ultimately, a conference of ambassadors settled the affair, and Greece was compelled to pay a fine.

In 1928, Bolivia waged war against Paraguay, both revendicating the Chaco territory. Hostilities lasted several years and only ended through the intervention of six American states.

When in 1931, Japan grabbed at Manchuria, a vote of the League condemned the aggressor, but Japan banged the door and carried on.

In 1932, an imposing conference, in conformity with article eighth of the Pact, endeavoured to promote general and progressive reduction in armaments. Better late than never? No, it was already too late then. And we remember how it failed.

In 1935, another "moral condemnation" was launched against Italy who had attacked Abyssinia. But sanctions remained ineffective.

In March 1936, Germany reoccupied the left bank of the Rhine. And all countries started again "polishing" their armaments.

In the face of the Spanish war, nothing substantial was done either.

Austria, Czechoslovakia were easy preys after all that precedes. How heavy the atmosphere was in Geneva at the time of the Munich Agreement, those who were there may remember.

In 1939, the storm broke out . . . Germany who had left the League in 1933, was free to laugh at its condemnations.

The agression on Finland provoked the exclusion of Russia : it was the last pronouncement of the League acting as an arbiter of conflicts.

What the League did Achieve

Such are the League's main failures, but what of its successes?

The most dangerous conflict settled by the League was the Greco-Bulgarian frontier incident in 1925. Greek troops had already entered Bulgarian territory. An Enquiry Commission was sent there and the parties accepted its verdict.

Later on, in 1934, the League intervened with success between Yugoslavia and Hungary, after the murder of King Alexander by Croatian Oustachis.

Thanks to the League, many frontier legations have been settled to the satisfaction of both parties, in Europe, in Asia, and even in America, where Columbia and Peru were quarrelling for the Letitia territory.

Of course, the intervention of some neutral state might perhaps have served the same purpose. Yet it was indeed convenient to have at hand a competent organisation prepared to act in any given circumstances. Otherwise, the choice of an arbiter is always a lengthy and delicate matter.

Economic and Social Activities

In the social, economic and philanthropic spheres, the work of the League has been considerable, and its failures in other fields should not minimise that fact.

After the last world war, the League repatriated thousands of prisoners, helped and supported countless refugees and people who had been deprived of their nationality. The work of Nansen and the passports that still bear his name are so well known that they need hardly be recalled here.

The League fought against white-slave traffic, and drug-traffic, so much so that the proportion of intoxicated people is considerably lower than it used to be. It also waged war against cholera and other diseases.

Its Institute of International Intellectual Co-operation, whose main office was located in Paris, helped by various measures to closer understanding between nations. The Indian philosopher Radhakrishnan contributed regularly to the work of that institute.

The permanent Court of Justice has rendered such signal services that the U.N.O. has adopted it practically without any modification.

The International Labour Office has accumulated a considerable amount of valuable documentation through enquiries on the spot all over the world. By the conclusion of some sixty conventions, it has helped to improve the lot of workers in all countries.

And last but not least, the meetings of the League in Geneva have brought together in a friendly atmosphere men of very different types, belonging to all nations. Through their work in Geneva, they learned to know each other better, and something of this has survived, despite the storms of war.

The Causes of Failures

Why then has the League of Nations so deeply disappointed both those who created it and millions of people all over the surface of the earth who had watched its birth with ardent hope ?

Sir Eric Drummond (today Lord Perth) who acted for 17 years as its General Secretary, attributes this to three main causes :

1. The absence of the United States in Geneva.
2. The refusal of the Great Powers who were members to fulfil their obligations as they should have done.
3. The fact that the peoples themselves did not realise the consequences of those obligations.

In his remarkable book, *League of Nations Not Guilty*, the Greek writer Epirotis confirms this judgment : "The failures of the League," says he, "are due far more to the weaknesses of those who had to apply the Pact, than to the defects of the Pact itself."

Owing to this kind of "defeatism," the League could never effectively impose its decisions. Deprived of any coercive material power, it also lacked the moral courage to enforce sanctions in decisive circumstances, which they were precisely meant for. Through its growing inaptitude to cope with the most urgent problems of the day, the League had lost the confidence of the people, and could not be expected to survive.

It is evident also that the inclusion of the Pact in the Peace treaty was an error. The defeated nations were thus brought to consider the League as an instrument in the hands of the victorious powers, and in that very measure their faith in international institutions could never be won over.

Of course, the nations themselves bear their own responsibilities. To a great extent because the political education of people is still very imperfect, in the national as well as in the international field. And yet, the world is not lacking in men who might lead the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

masses on the road to progress. And if masses are tired of big words and slogans, they are nevertheless eager to understand how things stand and what they can reasonably hope for. They can also be expected to act in the right sense when their confidence is gained.

The United Nations Organisation has much to learn through the Geneva experience. It has already benefited by it.

A new era is opening : May U.N.O. succeed where the League has failed !

———:O:———

POSITION AND POSSIBILITIES OF OUR FOOD PRODUCTION

By Prof. U. N. GHOSAL, B.Sc. (Econ.) London

To-day the problem of food has overshadowed all other economic problems. The occurrence of two major disasters on the food front within a period of three years is something unparalleled and profoundly disturbing. Whatever views we may hold on the inevitability of these two particular happenings, nobody can seriously dispute that our food position has now reached a critical stage. Fresh disasters of larger magnitude lie ahead unless, of course, we are equal to the task and with utmost vigour succeed in pushing through such schemes of reorganisation as would help us to secure both short and long term improvements in agriculture.

Three Main Issues

To clear the issues, we may distinguish three main aspects of the food situation. First, there is the quantitative aspect, *i.e.*, the relation of over-all supplies to over-all requirements. Are the supplies enough to maintain 400 million people increasing at the rate of five million per year ? Next comes the question of the composition of dietary which the vast masses of the people are habituated to consume. Does this food possess elements of adequate nutritive value ? In the last place, the manner in which food is distributed amongst the different sections of the people is no less an important matter. For, in a free market, scarcity may exist in the midst of plenty when consumer's demand is not backed by sufficient purchasing capacity. The broad answers to these questions are fairly familiar to most of us but they will bear some illustrations.

Quantitative Aspect

Although our statistics of agricultural production, like most other statistics, are proverbially unreliable, a rough comparison between total requirements and total supplies will point to certain vital conclusions. On the basis of a minimum diet of 18 oz. per day per adult (Estimate of the Advisory Board of the Imperial Council of Agricultural Research) the annual requirement of 400 million approximates to about 54 million tons of food grains. *On an average* in recent years the main food grains production has been estimated at about 52½ million tons, leaving an annual shortage of about 1½ million tons. In partial adjustment of this chronic deficiency of internal supply a net import surplus of one million ton of food products has also taken place for several years. This brief picture has a twofold significance :

(*a*) It shows, in the first instance, how small is the margin between our scarcely sufficient food supply and disaster. For a country depending almost exclusively on agriculture which in its turn is subject to severe fluctuations in output on account of variations of rainfall, short supplies are inevitable at frequent intervals with their consequential dangers. For instanue, a short supply of even a million ton would influence, on the basis of a meagre ration of 16 oz., the diet of about eight million people. If it is true that we are faced this year with a food shortage of six million tons the consumption (on the previous basis of calculation) of as many as forty-eight million would be affected. Even with drastic cuts in rations in urban and other areas covering in all about fifty-three million people, we cannot hope to save near about ten million lives, unless sufficient imports are forthcoming. Ultimately, therefore, our outlook for food depends largely on the scale of imports we are able to secure from time to time and it is important to decide, in settling our food policy, how far such a course is desirable. Some considerations affecting this situation are discussed below in a separate section.

(*b*) The annual increase of population by five million imposes upon us the formidable task of raising, from our soil, on a very low basis of nutrition, an additional million ton of food grains every year. Can we continue producing at this rate year after year ? In the past we have not been equal to this task, our food production having remained more or less stationary and this has given rise to a number of deplorable consequences, *viz.*,

(*i*) a decrease in the average size of holding to 0·72 acre under food crops as against 1·2 acres per capita necessary to produce an adequate restricted diet under modern standards ;

(*ii*) an increase in the number of landless labourers who today constitute about one-third of the total population,—a fact of utmost importance in increasing the severity of mortality rates in a food crisis, as it did happen in case of the last Bengal Famine ; and

(*iii*) finally, in the necessary process of physical adaptation to decreasing per capita food, the average height and weight have also fallen.

Qualitative Aspect

Today we are faced not only with the danger of recurrent food shortages of a serious degree, but also

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by an almost total absence of protective and energy-building food in the national dietary. Our daily meals are based almost wholly on cereals and how these compare with an accepted standard of a well-balanced diet will be evident at a glance from the following table;

Cereals	14 ozs.
Pulse	3 „
Vegetable	10 „
Fruit	3 „
Milk	10 „
Sugar and Gur	2 „
Vegetable oil and ghee	2 „
Meat and Fish	3 „
Egg	1 (number)

A few more data will be more illuminating. Of the total cultivated area, the area under cultivation of fruits and vegetables is less than 2 per cent. Although we have 200 million head of cattle—the largest in the world—the per capita production of milk is 7 oz. per day whereas it is 35 in Holland and 53 in New Zealand. Again, it is said that at least 150 million people eat fish; their requirement at 2 oz. a day would come to three million tons a year. Against this our present estimated catch ranges round a little more than half-a-million ton. Furthermore, confronted with the terrible pressure of population on the soil, there has been a progressive tendency to grow less nutritive cereals in place of more nutritive ones. If we take stock of cereal production in the last 30 years the increases have been of the following order, *viz.*, Rice 3·5 per cent, Wheat 4·2 per cent, Maize 5 per cent, Bajra 25 per cent, Barley 57 per cent, Jawar 110 per cent. The consequences on the health of the population and rates of mortality amongst its different groups speak for themselves.

Distributional Aspect

The cultivating classes in this country fall into three main groups, *viz.*,

(i) landless labourers who must either depend on the wages they receive from employment in the fields covering a period of 4 to 6 months in a year and from some other sundry occupations, or conditions permitting, engage in crop sharing by cultivation of land in possession of others;

(ii) the owners of small plots too small to provide adequate yields for supporting themselves and their families. These cultivators are also on the look-out for crop sharing or any other jobs at hand;

(iii) the owners of large holdings who succeed in keeping themselves above want and still have a surplus produce.

The net outcome is that, since about three-fifths of the population belong to the first two groups, about half of the total produce finds its way into the surplus stocks of land-owners, Mahajans and other middlemen dealers of various sorts. Here is the crux of the problem that ultimately the distribution of goods in a free market is a question of purchasing power at the hand of consumers. Unless, therefore, necessary purchasing power is placed at the disposal of at least 250 million persons by creating additional sources of employment, our numbers are not past a mere increase of the yield from the soil would do little to secure an equitable distribution. So long as the present problem stands, and it can be solved only very gradually, the proposal for a subsidy on foodstuffs for poorer classes should engage our serious attention. A substantial portion of the surplus produce should be purchased at market prices and distributed at a lower subsidised rate to the starving millions. How this can be done, whether by direct procurement as the Government have been doing during wartime mainly for the urban areas, or by autonomous and co-ordinated Village Committees is a matter of organisation and cannot present an insurmountable obstacle if we are bent upon doing it.

A Vexed Controversy

In considering any scheme of agricultural reorganisation we must first settle a vexed controversy. Should we aim at self-sufficiency in the matter of food supply without depending to any extent on foreign imports? The answer in principle is that with a given amount of land (like any other scarce factor) the object should be to raise the largest amount of value per unit of land irrespective of the type of crops raised. Today when conditions are abnormal the "grow more food campaign" has its validity and there is nothing wrong in substituting food crops for money crops on the available land. But with the return of normal conditions, it is argued, the continuance of this process would be absurd if per unit of land we can get larger money value in jute or cotton. In this connection the example of England is often cited. England does not produce all her food yet an Englishman, on an average, earns an income 15 times larger than an Indian. *Prima facie*, then, the allocation of land in this country should conform to the principle of maximum value.

But the analogy of England does not hold. England is a highly industrial country with a small population. India, on the other hand, is predominantly agricultural and is likely to remain so for a long time to come. And agriculture in all countries, though more specially in India, is exposed to grave uncertainties on account of the operation of some natural and uncontrollable factors. A world-wide shortage, as at present, is not always a remote contingency, and in such circumstances commercial crops will not help us in securing food from abroad. Moreover, our agriculture is scattered over seven lakhs of villages in which the majority of the cultivators have to depend for their subsistence on the food they grow in their immediate surroundings. "Defence is better than opulence," said Adam Smith more than 150 years ago, and the defence of our food front claims the first priority. If our efforts at intensification of production from existing areas under food crops do not meet our requirements for foodstuffs, we have, to a certain extent, to sacrifice the principle of maximum value.

Potentialities of Long-term Development

A food policy designed to achieve concrete results must perforce distinguish between long and short period targets. The possibilities of long-term expansion in agriculture are indeed without limits. We have at our command new knowledge and new methods created by the advance of science. In a technological age the days

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In essence agriculture involves a set of simple operations. In order to reap a good harvest we prepare a seed-bed which we sow with good seed with proper quantity of manure and water. The main essentials, though not in order of priority, are seed, manure and water-supply, backed by proper methods of cultivation.

Let us take the case of irrigation alone. Of the total cultivated area of about 341 million acres only about 60 million acres are urder irrigation. Now the most dependable method of increasing the output from the soil is regular supply of water. For, by proper irrigation *anything between fifty to one hundred per cent increase* in the output can be secured from the soil. Supposing we succeed, with better knowledge and resources at our disposal, in doubling the present area under irrigation within a measurable period of time, this alone would mean, in terms of output, an additional 12-15 million tons of food grains.

The application of manure and the use of improved seeds have also an equally vital role to play. With proper manuring production goes up by anything between 20 to 40 per cent, (Dr. Burns estimates in his Technoogical Possibilities of Agricultural Development that at the rate of 20 lb. of nitrogen per acre, *at least,* a 40 per cent increase in rice yield is to be expected), and better seeds yield 5 to 10 per cent more than what our cultivators are accustomed to get.

The organic sources of manure, such as cow-dung, compost, bone-meal, etc., are largely wasted in this country. Cowdung alone is said to yield 160 million tons with a capacity for manuring 25 million acres at a rate of lb. 40 nitrogen per acre. Again, bones to the extent of one million ton are available every year of which 3 lakh tons are collected and about 2 lakh tons are crushed, giving about 50 thousand tons of bone-meal. The production of compost has just commenced (in Madras) though not in any appreciable scale. Apart from organic manures, chemical fertilisers have immense possibilities. The maximum pre-war use of sulphate of ammonia for all food crops (except sugar) was only 20 thousand tons. At present the Government of India propose to produce some 350 000 tons.

In any long period planning the question of methods of cultivation as well as of research also come in. It is impossible to conceive of any farming under modern methods so long as the present system of uneconomic holdings caused by fragmentation and subdivision remain in existence. A solution has got to be found by introducing some form of group farming. Meanwhile, it may also be contended that a very large part of our cultivable waste, estimated at 170 million acres, can be brought under cultivation if, and only if, large-scale methods are adopted.

Raising the Nutritional Level

It is often suggested that agriculture can be married to nutrition by practising 'mixed farming,' such as cattle raising, vegetable and fruit growing and so on. The fundamental obstacle to mixed farming *on any appreciable scale* lies, however, in the amount of land over which we can secure control. Between land area and diet there exists an important relationship. We require more land to produce a well-balanced diet composed of sufficient protective foods than an ill-balanced one of similar calorie value consisting mainly of cereals. "To produce 1,000 calories in the form of milk requires from 3 to 4 times as much land as to produce 1,000 calories in the form of wheat or rice." For we cannot obtain from an acre of land an equal calorie value in the form of milk when it is devoted to grazing or fodder crops in place of cultivation for cereals. The same is true for fruits, vegetables, meat and other protective foods. It follows, therefore, that unless and until substantial increase in the yield of cereals per acre release a proportion of land under these crops or fresh acquisition of land is made, no substantial solution of the nutritional diet would be possible. Nevertheless, some advance along certain specified directions is an immediate possibility.

A few concrete instances may be given at random. It should be possible, for example, to produce some 25,000 tons of food yeast from molasses, a product of sugar which is normally thrown away. Yeast enhances the value of proteins already present in our diet and it is ideally suited to meet certain serious deficiencies of tropical diets (vitamin B deficiency). It can be mixed easily with flour for bread, or added to any liquid food such as soup, milk and sauces. Again an immediate expansion of the fishing trade, particularly, inland and inshore fisheries, is a practical possibility if a few administrative measures necessary for landing fish, which the end of the war now permits, are at once undertaken. Further, we produce 4 million tons of all kinds of oil-seeds and if the whole of what we produce is crushed properly, we can obtain 1½ million tons of oil-fats and 2½ million tons of oil-cakes. Above all, if the cultivators all over the country are encouraged to grow for themselves such ordinary vegetables as beans, peas, lentils, tomatoes, lettuce, etc., in any spare land they may have, there would be a considerable improvement in the composition of a balanced diet.

A Short-Term Plan of Outstanding Interest

Time is of the essence in any short period planning. To meet the challenge presented by the growth of our population we need annually about a million ton of additional food grains. Can we plan to attain this target immediately?

An outstanding contribution to attack this baffling problem has just been made by a group of authors writing under the auspices of the Royal Institute of International Affairs (*A Food Plan for India*, Oxford University Press). The authors point out that the most effective method of securing an *immediate* intensification of India's food supply lies in a *large-scale use of artificial manures* (Sulphate of Ammonia) *on irrigated and good rainfall areas* coupled with the utilisation of organic manures whenever possible. The authors believe that this method alone will secure an increase in the annual over-all supply by 12 to 15 million tons in course of the next 7 years (1946-53) which will be sufficient to feed 450 million people at 10 per cent increase in cereal consumption.

In concrete terms the fundamentals of this scheme are :

(*i*) the utilisation of about *half-a-million ton of Sulphate of Ammonia* for the first year, rising up to 3 million tons on the 7th year when the plan will be in full operation. Of this amount the Government of India propose at present to produce internally some 350,000 tons, the rest being obtained from imports;

(*ii*) *the application of this manure to some ninety*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

million acres of land available already under irrigation and areas of regular rainfall, since without an assured supply of water artificials will do more harm than good ;

(iii) *the free distribution of the fertilisers* for the first year in any new area, and only at half the price for the second year and so on, in order to ensure the use of fertilisers. This would entail a subsidy of Rs. 13 crores from the Central Exchequer at Rs. 1-8 per maund on fertilisers used at a maund per acre on ninety million acres.

For putting this scheme into effect the authors suggest the setting up of 30,000 group centres each covering an area of 10 villages and each being equipped with a store for carrying fertilisers, improved seeds, new implements and the storage of grains received in part payment for materials supplied and services rendered. Given sufficient co-operation on the part of those for whom the scheme is proposed and a sufficiently high level of integrity on the part of the personnel which will have to work it, this plan holds out the prospect of solving in a substantial manner the *immediate* crisis in our food production.

Expansion of "Emergency" Irrigational Schemes

Nevertheless, we cannot rely too much on any single plan, least of all in agricultural planning. It is evident that the fight for food will have to be carried on all fronts. Unfortunately, an all-round struggle cannot be carried far on account of the chronic insufficiency or uncertainty of a common factor which permeates agricultural operations in every sphere and this, of course, is irrigation. In fact, irrigation is the largest single factor blocking all agricultural progress in this country. Double-cropping, manuring, vegetable growing, acquisition of fresh land—whichever way we look, the absence of an assured supply of water largely limits all efforts at expansion. Apart from these numerous combinations which irrigation permits, it is by itself an independent factor. Unaided by any other measure, it is the simplest and surest method of increasing output. Its proved merit and familiarity make it most acceptable to our illiterate cultivators who are ever so suspicious of all innovations.

It is common to think of irrigation mainly in terms of long-term planning. There is indeed little doubt that with the progress of years irrigation will gather larger and larger momentum in this country, and the recent appointment of the Central Waterways, Irrigation and Navigation Commission and the Central Technical Power Board, as fact-finding, initiating and co-ordinating bodies on a high level of experts, as also the irrigation programmes announced by the various provincial governments are first important steps in this direction. But the effect of all these will take at least another ten years to unfold itself. Meanwhile, even for purposes of short-term planning irrigation has abundant scope if the possibilites offered by the existing facilities and simpler methods are sufficiently explored and rapidly extended. We have already about 2½ million wells in actual use in this country irrigating an area well over 13 million acres. In those areas where knowledge of sub-soil water is reasonably complete the sinking of open masonry wells and tube-wells fitted with power-driven pumps should claim our first priority. Sir William Stampe, Irrigation Adviser to the Government of India, in an address given in 1944, pointed out that an increase of some 2 million acres could be effected within a period of three years by tube-well feeders, (even under war-time conditions), and, further, that an improvement of the existing canal system by better distribution of water and by reducing percolation losses could secure an increase of 15 per cent on the existing canal irrigated areas. Pending the development of electrical power, suitable mechanical devices will have to be organised for lifting water, since this is the main problem of successful irrigation from sub-soil water. Conditions arising out of the war, such as delay in securing materials and machinery, inadequacy of technical personnel and so on should not now hold up progress in the same manner as in the few years past. On the contrary, the end of the war should now place at our disposal a vast mechanical equipment which could be immediately turned to fruitful employment, especially for the de-silting of derelict tanks, the sinking of new tanks and wells, and the construction of drainage ditches. In the alluvial lands of Bengal, so often frequented by floods which leave on their trail the evils of water-logging, the construction and improvement of drainage system with the aid of these equipments are immediate possibilities. As for those areas where rainfall is precarious but is sometimes received in heavy falls of short durations, the twin problems of soil erosion and irrigation can be effectively solved by contour bunding and terracing. Some experts are agreed that an area of at least 5 million acres of marginal land alone—those extensive areas on the desert fringe which are cultivated perhaps only one year in every four or five and which never appear satisfactorily in statistics—can be brought under cultivation within a period of five years by the extension of contour bunding and other methods of increasing water storage and drainage. If all these short-term possibilities in the sphere of irrigation are put together it is not at all beyond the bounds of practicability to attain the immediate target of 6 lakh tons of additional cereal production on the basis of 1 lb. of grain per day per adult which the annual increase of population by 5 million demands.

SISTERS OF THE SPINNING WHEEL

Digitized by Arya Samaj Foundation Chennai and eGangotri

By DEVENDRA SATYARTHI

"Ever women's company he keeps, yet a thorough saint is he : swift as Wind is he, yet the hero never steps forward : to the entire world he supplies clothes, yet himself ever unclothed he looks : behold his five heads, brother, and his single good hand"[1]—thus the *Charkha,* or the spinning-wheel, is described in an old Punjabi riddle. Uninterruptedly for well over thousands of years the spinning-wheel has been linked up with human life. "Centuries ago," says Sarojini Naidu, "poets used the simile of the spinning-wheel and the weaver's loom for the destiny of life, the Fates spinning and weaving out man's destiny."[2]

The first spinning-wheel was made by God, says an old proverb of the Punjab. Man is compared to the spinning-wheel. *Shaitan da charkha,* or the Devil's spinning-wheel is a common nickname for a cunning fellow.

Punjabi women have always spun. The spinning-wheels inlaid with ivory have been celebrated in their ancient folklore. Their carpenters still know the art of making beautifully carved spinning-wheels. The bride in this land of five rivers still expects to get a *Shisham*-wood spinning-wheel inlaid with brass wires ; the sandal-wood spinning-wheel, worthy of a princess, is, of course, beyond the scope of the dowry she receives from her father. A poor man's daughter, obviously, can only get one made of the *Kikar*-wood, or not even that.

In my village, the words of the old Punjabi couplet still echo in the hearts of the peasants :

Mera lai chall charkha othe,
Ve jitthe tere hal vagde.

Carry my spinning-wheel there
O, where your ploughs are tilling.

You are naturally reminded of

"When Adam delved and Eve span,
Who was then the gentleman ?"

As ancient as the cotton cultivation, the spinning-wheel has a history behind it.

Ever since I can remember, the singing voice of the sisters of the spinning-wheel has been running in my veins like a pulse beating. I look back to the spinning-bees held at our house when I was young.

Spinning with my mother was a thing of art and beauty, as it is even today. Jatto, our family midwife, who gave herself airs of holiness with her forehead horizontally wrinkled, joined only occasionally. Dayawanti, who often wore a dove-coloured veil, was a young thing, slender-waisted and sleepy-eyed ; alive with rhythm, her whole body seemed to quiver like a string when she sang. Savitri, a cousin of mine, would not sing ; she was markedly quiet and Madonna-like. Punjabo, looked charming when she smiled, she was an artist out and out, and her songs were much in demand, songs came curling up through her memory. Nihalo, with her round face and her gold tooth, was never seen laughing. Bhagwanti, who had gold beads round her neck, was gifted with a genius for melody, she sang softly. Warm with life-blood and tradition, the spinning-songs, mostly sung in chorus, seemed to absorb everything.

Again and again I was attracted by the picturesque scene. There was a great bond between the spinning-bee and myself. I listened to the songs for sheer joy of music. The wheels had been there ; and songs, echoing from house to house with all their soulfulness, were impregnated with the rhythm of spinning, at once elemental and ancient. I shall always remember what Dayawanti once told me : "In my dreams the spinning-wheel talks with me : 'I was made by Visvakarma, the divine artist, every heart I approach with creeping footsteps ; wherever I go, I give work : I breathe the air of songs : Life is God's gift, I tell the women, and that they should spin as God span life : men do not want me ; I am the beloved of women'."[3]

"I draw songs from my heart as I draw yarn," mother would say, "sitting at the wheel I become a new woman. Sometime the spindle goes wrong but I can soon mend it, and that too, I do accompanied by some tune that seems to hang on my lips. Long live the spinning-wheel, I say, when it moves rightly."

Pitched in a lower key, Dayawanti would sing of the sun, the moon, and the stars :

With every turn of the spinning-wheel,
I wink at the stars.

Or

My dreams of the moon I distribute,
Take them if you care.

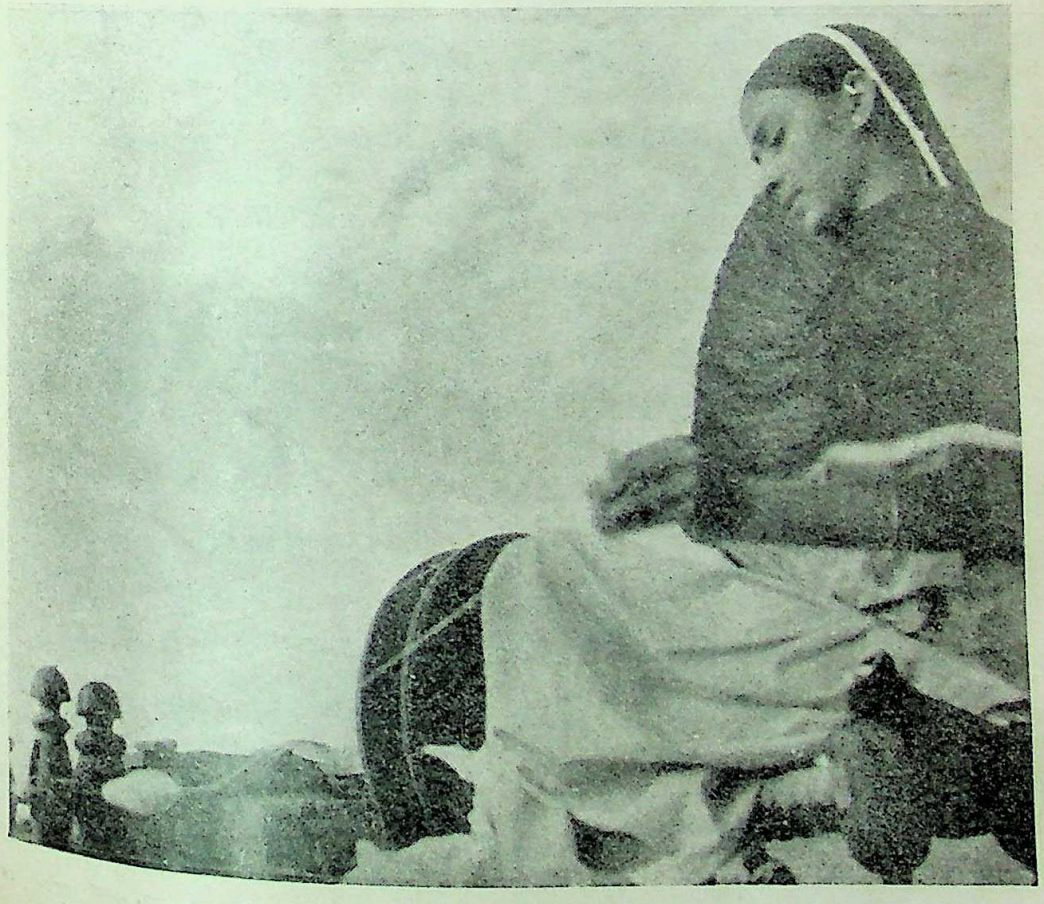
Nihalo's favourite song was :

Listen to me, O sun, listen to me, O moon,
Tears roll down my eyes :
The whole world enjoys,
But I spin my sorrows.

A simple couplet often reveals the spirit of the sisters of the spinning-wheel. Poignant similes and metaphors run like a crimson thread through the wide range of physical symbols.

The *Trinjan,* as the spinning-bee is called in the Punjab, always makes a happy picture. The young unmarried girls, the brides, and women of every age, all sit together at their wheels. Room is made for every spinner. They all imbibe the spirit of competition. They all lift their voices together and sing. It seems spinning has never been independent of the song. With its subtle excitement, the task of spinning goes on with the spontaneous, unrestrained music of the songs. The young girls make a feast of colours, jet-black, sombre-red, yellow-blue, rose-pink and green. Such picturesque-ness ! Such dark-eyed dreamy types ! The young brides with their *hennaed* fingers, bend their veiled heads over their spindles ; their dresses are silk and brocade, some

1. *Sada teemian da sang karda jati pher vi poora,*
Pavan sman chal hai usdi, pair na chukkda soora ;
Sare jagg noon leere deve, apon rainhda nanga,
Panj sir usde vekho bhai, hattha ikko changa.



2. From a public speech at Madras.—*The Hindu,* December 18, 1938.

3. Compare Mahatma Gandhi's note, *Swaraj through Women* : 'Since the beginning of time there has been a division of labour between men and women. Adam wove and Eve span. The distinction persists to the present day. Men spinners are an exception . . . experience shows that spinning will remain woman's speciality. I believe there is a good reason behind the experience. Spinning is essentially a slow and comparatively silent process. Woman is the embodiment of sacrifice . . . equality of sexes does not mean equality of occupation.'—*Harijan,* December 2, 1939.

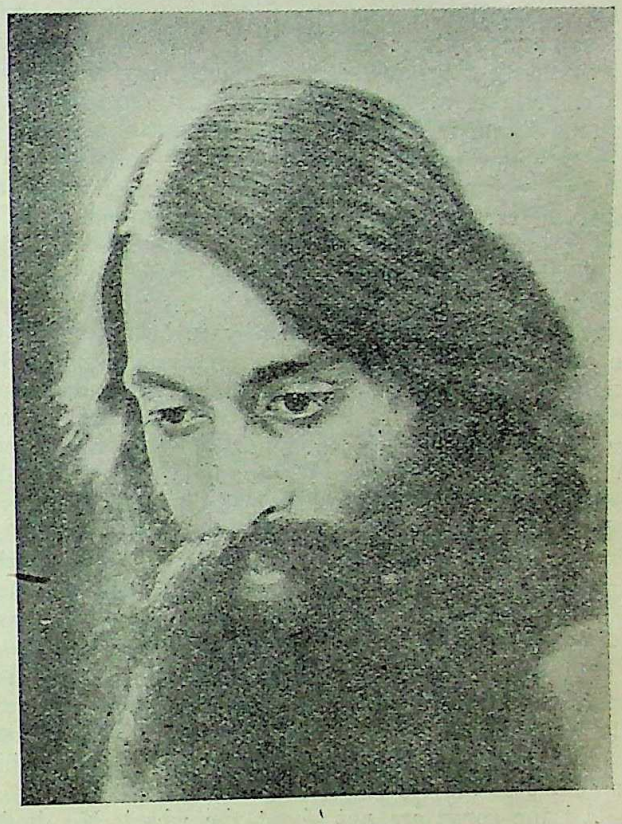
beautifully embroidered. Mothers forget their worries in this happy company.

Any time may be fixed for the spinning-bee, any house selected for it. Of course each spinner likes to give a party at her place, for she thinks that the spinning-bee, ever under the protection of the gods, adds to the spirit of friendship and peace of mind.

The winter is good for spinning, they say. An all-day spinning-bee called *Chiri Charoonga,*[4] is easier on a short winter day. After the daybreak, they assemble inside a room and spin till sunset; at noon they get their meal from their homes and they know that it should be soon taken. An oil-lamp is kept burning all the day if the room is dark. Every spinner returns from the spinning-bee with over half a pound of cotton turned into fine yarn. Mothers and brides hurry away as soon as the spinning is over, but most of the young, unmarried girls insist upon going out only after sunset; if the spinning is over before the appointed hour, they indulge in some native indoor game.



Another winter spinning-bee is the all-night *jagrata.*[5] This begins at about 10 p.m. after the other household work is well over, and it continues till next morning. The night being longer than the day, they can have more output of yarn than what they turn out in the all-day *Chiri Charunga.* Some call it *Rat Kattani.*[6] Cold is bitter. But spinners have learnt to be enduring. Often fire is kept in an iron-pot in the centre. They have woollen blankets. What fear has winter for a spinning-bee? says a Punjabi proverb.[7] They have some home-made sweet or fried corn, maize, gram or wheat, in the small reed-baskets; from time to time they eat, not so much for hunger as for driving away sleep from their eyes. Even the spinning-wheel laughs at the nodding spinner in the spinning-bee.[8] Songs continue. The spinning-wheels warble. The dawn wears away. The rays of the morning sun fall on the spinners' faces. All hurry up to finish off the remaining cotton.

Summer is less liked by the sisters of the spinning-wheel. Hot winds make the cotton coarse, they say.

Water is sprinkled in a basket in which are placed the Poonian, or rolls of the carded cotton which become moist and make fine spinning easier. The sittings of the spinning-bee during summer days are held in some airy room, or under the shade of a tree in the compound; and at night they prefer a roof but also like the stars, especially the constellations and the pole star, to watch over them, and the moon, particularly when full, to serve as their lamp. Once I heard the spinners singing:

Rise, O moon, and give us light,
Counting the stars, I passed the night.
Lo! there appears the moon, ye sisters,
There appears the moon.[9]

Rainy days are pleasant. Cotton gets automatically moist for fine spinning. In every thunder, in every shower of rain, in every downpour, the spinners hear a song. "If I am a spinner, I can spin even on a broken spinning-wheel"[10] repeats every one of them. But 'as a cook I spoil the corn; and as a spinner I turn cotton into wick-like yarn'[11] is a proverb which when put into the mouth of a good-for-nothing woman, is sure to make the whole spinning-bee burst with laughter.

Devendra Satyarthi has devoted twenty years of his life to the single-minded ideal of collecting for India the rich treasures of her folk-songs. The present article forms a chapter of his forthcoming book "Meet My People".

The placing of the spinners' rolls of carded cotton in a common basket is essential. It is generally done before the commencement of the spinning-bee. One of the women is selected. She first places a set of four or five cotton-rolls taken out of her own reed-basket on the palm of her left hand, and as she receives similar sets from everybody she places them crosswise over her own. This group of cotton-roll sets is then placed in the common basket. She gathers a second, a third set and so on in the same order and places them in the basket. She will distribute them as work goes on, so that every girl receives her own set every time. The sets from the common basket are distributed only when the distributor herself has spun her set. No songs are sung while the cotton-rolls are gathered in the basket.

4. *Chiri* means sparrow. *Charoonga* is an obscure word for baby-sparrow. The spinning-bee is so called for the spinners are expected to be so busy in their task as to have no time even to see sparrows.
5. *Jagrata* means vigil, the Hindustani, 'Ratjaga'.
6. Spinning throughout night.
7. *Tinjan noon ke dar pale da?*
Charkha vi hasse uste, jo tinjan de vich oonghe.
8. *Charkh ve channan te kar raushni, tare gindian*
rat vihaee;
Auh vekho chann charhia, ni bhainon, auh
vekho chann charhia.
(In love-songs, the moon is often an emblem of the beloved; and the countless stars stand for hours of separation).

10. *Je main homan kati, tan lakkran nal vi kati.*
Kati (from kattna to spin) is an obscure word for the 'spinners'; a more frequent word being *Kattanhari* or *Kattanwali*; *Lakkran* (lit. pieces of wood) in this proverb refers to the broken spinning-wheel.
11. *Annon karan kabannan, kapahan battian.*
Literally it means: "With corn I make bad food, and cotton I turn into wicks."

Shy at first, a newly-married bride would soon thaw in the spinning-bee. I remember having seen a bride who tied a piece of yarn to a virgin spinner's wheel and said : *Je veer piyara khol de, je khasam piyara tor de ; i.e.,* if your brother is dear to you then untie it, if your husband is dear to you then break it. It was a proverbial saying. The girl knew the joke well. To untie the easily breakable yarn piece was a hard game, yet she had to try to show that her brother was dearer to her. But she only succeeded in breaking the thread, and the whole spinning-bee burst with laughter, saying : 'No harm, she loves her husband.'

"Spinning-songs are clever enough, my son," once an old peasant mother told me, "they remain hidden from me while my hand is away from the handle of the spinning-wheel." It reminded me of the words of a Kashmiri boatman who said : "The tunes of my boat-songs will certainly fall flat, if I sing without actually playing my heart-shaped paddle."

Work songs, all over the world, show an obvious, psychological connection between tunes and the tasks of manual labour ; they are hardly to be severed from the efforts and movements they were invented to fit. I noticed in various parts of India how difficult it was to collect the songs of toil from villagers while they were away from their work. Some of them would sing voluntarily, but they would often fail to produce the genuine music of their songs of toil. Back at their task, their songs would rush out correctly.

In districts scores of miles apart, variants of the same songs may be heard. Old songs live in the memory. But the spinners continue to make attempts at new songs.

Words of new songs sometime appear to fit a tune badly. The singers soon smooth out the crudity. Women who would make new songs always have the richest treasury of old songs at their finger-tips. They worship the genius of the old singers.

All the songs are not about the wheel. No doubt the spinners here and there return to the music of the wheel itself. Here is a beautiful song, sung to a significantly melodious tune :

"*Ghoon ghoon,* O my spinning-wheel,
Should I spin the red roll of carded cotton or not ?"
"Spin, girl, spin."

"Far-off is my father-in-law's place,
Should I live there or not ?"
"Live, girl, live."

"Long, long is my woe,
Should I tell it or not ?"
"Tell, girl, tell."

"My husband is a minor,
Should I stay with him or not ?"
"Stay, girl, stay."

"*Ghoon ghoon,* O my spinning-wheel,
Should I spin the red roll of carded cotton or not ?"
"Spin, girl, spin."

The sad girl talks to her spinning-wheel. Perhaps none else is ready to share the deep sorrow with her. She is not a rebel, not at all. She must wait till her minor husband is a youth. The spinning-wheel symbolizes the guardian angel. She puts her own voice in the mouth of the spinning-wheel. She bears with everything as she learns to spin even the rough cotton into fine thread. Her woe mingles with her duty.

Another song is addressed to the bridal veil, though, unlike the spinning-wheel it keeps silent. It is red, it will always be red, the *saloo* as it is called by brides and all men and women. The mother and the mother-in-law are things apart, as the following song portrays :

I spin, I spin a fine, fine thread, O my bridal veil,
My mother-in-law, my mother-in-law sent me a bridal basket,
O my bridal veil,
I opened it, I opened it on a dark night, O my bridal veil,
From inside came out, from inside came out a black serpent,
O my bridal veil,
I threw it, I threw it across the river, O my bridal veil.

I spin, I spin a long, long thread, O my bridal veil,
My mother, my mother sent me a bridal basket, O my bridal veil,
I opened it, I opened it on a moonlit night, O my bridal veil,
From inside came out the *Naulakha* necklace, O my bridal veil,
I put it on, I put it on endearingly, O my bridal veil.

Words are inseparable from music. They seem to fly on the wings of the melody.

The wheel may be of gold and silver, as the ancient folk-songs witness :

O my mother, *ghoon, ghoon,* the spinning-wheel warbles!
Mine is a spinning-wheel made of gold,
Its axle made of silver I procured.

O my mother, *ghoon, ghoon,* the spinning-wheel warbles!
The thread that rotates the spindle is of silk,
Beautifully I got it dyed.
O my mother, *ghoon, ghoon,* the spinning-wheel warbles!

In some songs the spinners dream of the sandal-wood wheels. One of my pretty sisters-in-law, who passed away four years ago, gave me a gem of a folk-song :

My spinning-wheel is of *Kikar*-wood, darling,
Get me one of sandal, darling.

Cotton I won't spin any more,
Wool I won't spin any more,
Get me silk for spinning, darling.

My spinning-wheel is of *Kikar*-wood, darling,
Get me one of sandal, darling.

The spinners seem to think little and dream much. "When goddesses lived on the earth they always preferred spinning-wheels made of sweet-smelling sandal-wood ; Saraswati always span silk, while others took to cotton ; and daily they held their spinning-bees"—an old Brahmin woman once told me, and she meant it.

The spinning-songs, in which every-day life is viewed through the veil imposed by the singers, evoke the poetry of life, ever projecting beautiful pictures.

Some of the couplets, each of them mostly complete in itself, are highly symbolical. Some are purely impressionistic. The windy freshness of their rhythmic tunes belongs to the realm of the *Giddha* dance. Frequent references to spinning in some of them seem to show their origin in the spinning-bees. In the *Giddha* the couplets are prologued, as Nihalo's song, addressed to the sun and the moon, shows. The prologue has actually no limit, it may run into many lines. But the spinners

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

often rarely take to the prologued pieces. They like to sing the simple couplets, and as regards music, it is not actually the same as is found in the *Giddha* dance; freedom is taken in order to adapt them to the rhythm of spinning.

Here are three prologued pieces. They are sung by brides and girls :

My mother gave me a spinning-wheel,
Inlaid with gold nails.
O mother, I think of you,
Whenever I see my spinning-wheel.

My spinning-wheel is made of *kikar*,
Get me one of the *shisham*-wood,
How heavily it moves,
Thirty-six times has broken the thread that rotates the wheel.

All the girls have come after the spinning,
I cannot spin any longer,
My spinning-wheel is a nasty creature,
O it won't let the innocent girl go to sleep.

O at home, my daughter, you never feel happy,
Outside you ever go to spin :
On the left hip you carry the spinning-wheel ;
The unusual thread you spin.
O you look so awfully cross,
Whenever your husband comes to fetch you.

The whole range of simple couplets emerges from living poetry.

My love is a sugar candy—
Sweetly he talks to me.

My love is a sandal tree—
I am satisfied with the scent.

My love is a cypress plant—
I begged and got from God.

Alas, I shall have to leave the full spinning-bee,
Here comes the strong man's bullock-cart.

My friendships of the spinning-bee—
O I remembered them in my bridal bullock-cart.

Let's go to give farewell to our friend,
Spinning we do almost everyday.

Leave the spinning-wheel, remove your seat,
Your parents all right will give you dowry.

O camel-drivers, the camels have gone to Lahore,
Lonely I feel while spinning, pray, ask my husband to come home.

Your drunkard son, O widow,
O he broke the axle of my spinning-wheel.

All the night you searched and searched
I hid myself in the spinning-bee.

Overhearing the echo of the spinning-wheel,
The ascetic came down from the mountain.

They do not necessarily rhyme together, nor are both always lines of a couplet of the same length. The prologue of a *Giddha* couplet, however, is beautifully rhymed. The first line of each couplet in the prologue is free as in the chief couplet ; the second line of each of the group keeps up the rhyme, balancing the one in the second line of the chief couplet.

A couplet of this type, prologued or simple, is called *Boli*.[12] From the depths of the heart comes the music that keeps up the words of a *Boli* fresh and thrilling ; its lilt glorifies the isolated themes.

The *Boli* is noted for extempore variations. The gifted spinner, it would seem, adds a new piece every now and then to the floating reserve. Every new composer would try to put the best emotion and lyrical impulse. The whole spinning-bee shares the joy of a new couplet and soon it echoes through the whole neighbourhood. The free arrangement of the lines allows ample scope to alter a few words and to put in a new idea. Passing from mouth to mouth, as observations show, the new couplets acquire their traditional character like old folk-songs.

Some are worthless as poetry. But some are remarkable both for their meaning and for feeling. Turning from subject to subject, the Boli-makers sometimes catch hold of a charming picture. It is only when they explore deep emotions that the poetic genius gleams 'like the flashing of a shield.'

Before a score of couplets have been sung, a spinner has many more in her head. So says the bidding Boli-champion with deliberate modesty :

Bolian da pul bannh dian,
Methon jogg jittia na jave.

With Boli songs I may build a bridge ;
But I cannot outshine the whole world.

Outwardly she strikes a note of humility. But she is a mine of songs. Her aspiration is to know many more, so as to outnumber the bricks used in building a bridge.

Kattni is a small reed-basket for the carded cotton rolls and balls of yarn. The spinner makes it herself giving it an ornate lid. As fancy inspires her she believes that little *Kattni* is acquainted with poems and the spinning-wheel has learnt the singing of couplets :

My *Kattni* recites poems,
My spinning-wheel sings the couplets.

Hearken, ye stars,
My spinning-wheel sings the couplets.

My *Kattni* recites poems,
The moon looks at it stealthily.

A girl begs that the youth should kill a peacock to supply her with quills to make a beautiful *Kattni*, but he refuses to oblige her :

Go and kill a peacock for me, my love,
A new *Kattni* I wish to make.

I won't sinfully kill the peacock ;
Of reeds you must make your *Kattni*.

This youth may still show his love ; he does so in his own way while she sits in the spinning-bee. It makes her inquire with a blush :

Which clever youth threw the pebble ?
It came right inside my *Kattni*.

The spinner sings freely. Like the girls and brides everywhere, they sing of love again and again :

In my dream, I embraced him;
I opened my eyes and saw him not.

The sand of your fresh foot-print,
Again and again I pick up and put to my heart.

The moon rises daily
Without my love it is all dark.

12. Boli means 'speech' literally, the plural is *Bolian*.

A dust-cloud fills my sight :
My love's figure I see no more.

Twenty letters came from you :
The one about your coming you never wrote.

Pollen is formed on the berry trees :
Not yet came the lord of my heart.

Love-couplets are simple and outrageously frank. They often run into a series making a significant scroll. Love-match is rare. A girl always marries a boy after her parents' will, and she is expected to make a good wife. Wedded love provides no inspiration for love-poetry. The twilight of romance is a necessity. The "drinker of fresh milk," the sweetheart of the goatherds, comes again and again :

O drinker of fresh milk,
Layers of cream are seen now on your bosom.
Or
You'll bear a son like a lump of curd,
O drinker of fresh milk.

The bride at honeymoon is a regular theme ; it is sung everywhere :

With the edge of her veil she fanned out the earthen lamp,
With the twinkle of her eye she talked to me.

Another heroine is Banto that now figures as a type of beauty. Her head is likened to a jungle, her face symbolizes the moon, and her waist reminds us of a leopardess.

The love-sick girl cannot spin. She invokes gods for blessings ; she is so sure of their nearness. But they do not seem to help her.

The couplets have a large family. Like the spinners themselves, they exchange side-glances. Some are antiphonal. They even lead to criticism of life, bearing a progressive satire on contemporary society.

The longer songs give full pictures. They are more popular with the elderly women who take pride in their long-winded music. Redolent of the ancient spirit of the spinning-bee, they are essential :

Brothers Shed Tears

The dark *shisham*, mother, the dark *shisham*,
Of the dark shisham I got the spinning-wheel made.
For it my merchant father liberally paid,—
Who got it ready, mother, O who got it made ?
I took it from the shop and placed in the yard
People thought the yard is filled with light.
I took it from there and placed inside
People thought the lamp was burning bright.
I took it from there and placed on the roof
People thought the crescent moon had risen.
I took it from there and placed in the street
Wazir Khan was dazzled as he passed by.
Don't you fear, Wazir Khan, don't you fear, brother,
This spinning-wheel has spun your turban.
The two supports of the wheel are of the *Kau*-wood made,
Having bid audieu to sisters, brothers shed tears.

Mother and Daughter

Mother, cook the *chulaee* leaves,
Pray rend them first in tiny pieces.
Mother, make it delicious with a seer of butter,
Whenever your daughter comes from the spinning-bee.

Daughter, bring your spinning-wheel here,
Mother and daughter will spin together.
Mother, you are old and I am young,
We cannot pull on together.
Daughter, your kingly father will hear,
O where did you pick up this falling out ?
Mother, sisters of the spinning-wheel all fall out,
I too picked it in their company.

Mother, you yourself bring my spinning-wheel,
Sisters of the spinning-wheel will not give my seat.
Mother, you yourself bring my seat,
Sisters of the spinning-wheel will not give my basket.

Mother, you yourself bring my basket,
Sisters of the spinning-wheel will not leave me.

The Dark Cloud

From the east came the dark cloud,
From the west came the cruel rains.
Who'll help my rolls of carded cotton ?
Who'll help my spinning-wheel ?

My brother's wife will help my rolls of carded cotton,
My brother will help my spinning-wheel,
Her plaited tresses got wet,
His cheque wrapper got wet.

Where will her plaited tresses dry up ?
Where will his cheque wrapper dry up ?
Her plaited tresses will dry in the palace,
His cheque wrapper will dry up in the garden.

Song of the Bride

The first time the family-messenger came to take me
What the hell do I care, with him I will not go :
I can't lift my veil,
I can't trail my scarf,
I can't tread my path,
O family-messenger, yes, O family-messenger,
The family-messenger is a perfect fool,
He picks up a quarrel,
I cry for justice,—
I will not go, I will not go, I will not go.

The second time my husband's younger brother came to take me
What the hell do I care, with him I will not go :
I can't lift my veil,
I can't trail my scarf,
I can't tread my path,
Husband's younger brother, yes, O husband's younger brother,

He is my heart's darling,
A minor, yet a thorough passionate fellow,—
I will not go, I will not go, I will not go.

The third time my husband's elder brother came to take me
What the hell do I care, with him I will not go :
I can't lift my veil,
I can't trail my scarf,
I can't tread my path,
My husband's elder brother, yes, O my husband's elder brother,

Under the bed he goes—
The preserver of my veil,—
I will not go, I will not go, I will not go.

The fourth time my father-in-law came to take me,
What the hell do I care, with him I will not go :
I can't lift my veil,
I can't trail my scarf,
I can't tread my path,
My father-in-law, yes, O my father-in-law,
He is a peevish fellow,
An old man, yet all the more jealous,—
I will not go, I will not go, I will not go.

At last time my husband himself came to take me,
O dance with him, my mind, the peacock dance,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I could lift my veil,
I could trail my scarf,
I could tread my path,
My husband, yes, O my husband,
My husband's master is he,—
My heart's master is he,
I go, I go, I go.

THE SONG OF LACHHI

Aha, where Lachhi washes her face,
There a sandal grows—where Lachhi washes her face.
Aha, Lachhi asks the girls,
What coloured veil suits a fair complexion—Lachhi asks the girls.

Aha, truly said the girls,
A veil that's black suits a fair complexion—truly said the girls.

The *Song of the Bride*, originally a dance-song, is adapted to the rhythm of the spinning-wheel. The *Song of Lachhi* is again a dance-song, toned down in the spinning-bee; the original three couplets do not hide themselves even in the rearranged pattern.

"The veil is a woman's life history. It is her mistress as a young girl. The red veil of the bride contains all her tenderness, her shyness and her passion. The veil of the matron is at once one with her dignity and her self-respect. The white veil of the widow is her shroud and her barrier from the bitter world. Her nature, her character are written upon it more surely than upon the lines of her hand. Without it she would be no longer herself, but a bare tree shorn of the glory of leaves."[12]

Through their songs the sisters of the spinning-wheel express their joy and sorrow, hope and despair, anger and fear. The old songs seem to pulsate with new blood in every generation.

That the spinning-bee has lost its old hold on the countrywomen is a sad commentary on an age of turmoil we are passing through. Must the machine take away the spinning-wheel? The young bride remembers her mother, but surely she does not remember by heart the whole stock of her mother's songs—songs that her mother inherited from her own great-grandmother.

Years ago, in a letter addressed to Anand K. Coomaraswamy, a lover of folk-songs discussed the loss of craft-songs in England: "What is to me most tragic, however, is the thought, nay, the conviction that for every old song found, there must be two or three lost utterly and irrevocably. We notice this particularly in the songs of the crafts. There are many records of songs of crafts having been in existence, but the songs themselves are no more to be found. It is machinery and industrialism that has destroyed them and we notice that wherever machinery and industrialism has come more recently, there do more of the old songs still survive. That is why in agriculture we have the largest collection of existing songs. In smithing, where there is still very little machinery—the blacksmith, farrier, village smith, a good many still linger, but the songs of the weavers and the spinners are gone with the hand-loom, as the songs of the potters have gone with the hand-wheel, and all those others where a man could sing peacefully in the job of his work. What would you have? You simply cannot sing when you have belts of machinery whirling aloud over your head and 5,000 other people working with you . . . I am convinced that it is only in old societies that have been untouched by industrialism, that the real connecting link is still to be found between music and handicraft, just as it is between handicraft and other things of a communal purpose.'[14]

The spinning-bee is now breaking up in the Punjab villages. Old spinning-songs are fast disappearing.

Will it not be a rich compensation to preserve on phonographic records the songs of the sisters of the spinning-wheel?

The spinning metaphor is eternal. The poet of the Vedas asked his gods 'to spin out the ancient thread.' He sang again and again: "As fathers they have set their heritage on earth, as a thread continuously spun out.'[15] Rich in detail, the picture of the young husband wearing on the first day of the marriage the garment made by the bride, as seen in the Atharva-Veda, looks very significant. Is not the ancient tradition still alive in India everywhere in one form or other? During the first year of her stay at her father-in-law's, the bride in Orissa, especially in Sambalpur district, would do no other work than spinning. Assam is equally proud of the spinning-wheel and the hand-loom. And in the Punjab, it was only natural that Hussain, the Sufi poet (1539-1593 A.D.) should compare his soul to a girl, who remained unmarried because she failed to prepare for her trousseau the yarn which, after the ancient tradition, she had to spin herself. As the husband adored the young wife who brought dowry, hand-spun and country-made, so God liked the Sufi who died with a good account of *Karma*.

Freely I go to the countryside and come back every time with scores of old and new songs. Freely I ask the spinners to raise their voice in a rich chorus. Freely I tell them of the "glorious tomorrow" when life will be worth living, and new songs will outnumber the new balls of yarn.

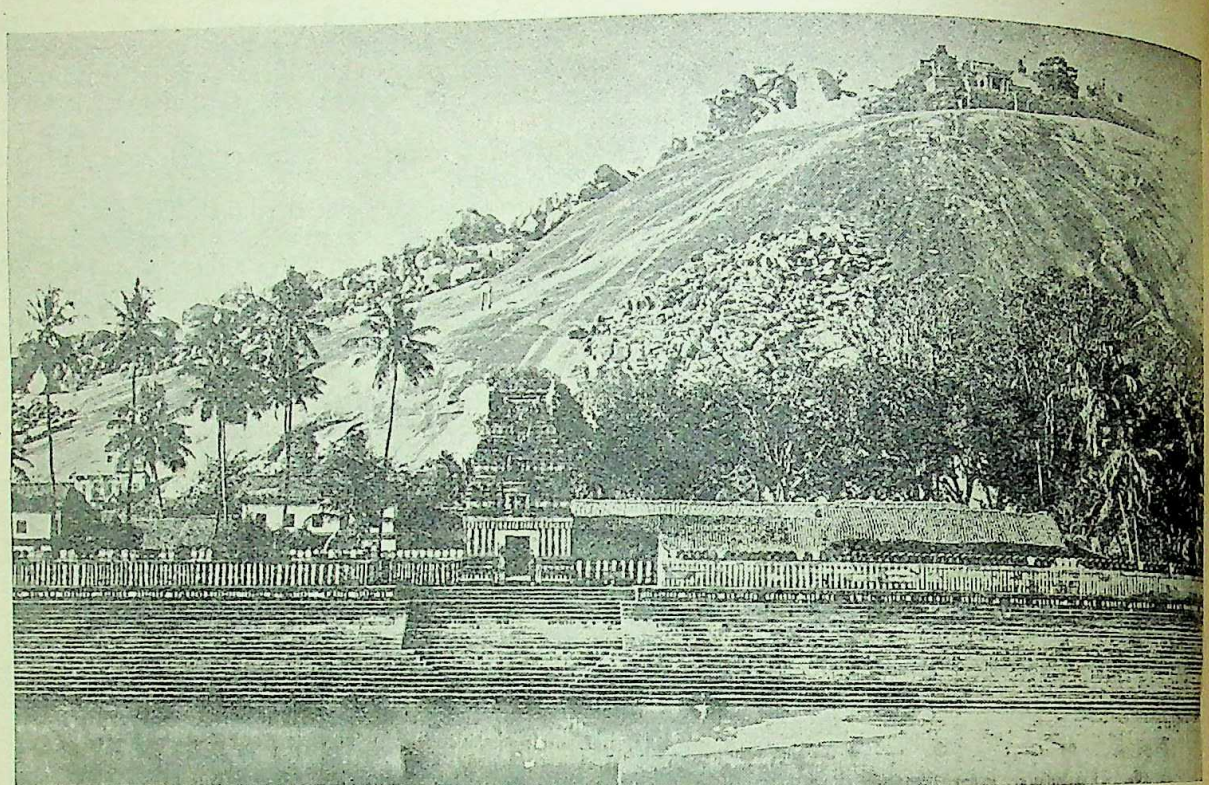
"You want songs," said a blushing young maiden, as I approached a spinning-bee in a remote village, "why not join us in our bee? You will have plenty and to spare by the evening."

So insatiable is my thirst for folk-songs that I decided to make a fool of myself and sat down in the circle of bright, gay girls.

The maiden, who had invited me, sang, burying her head in her knees:

If you'll marry, you old man,
First get your beard shaved.
Listen, I speak the truth,
O you must bring a gold palanquin.

I saw through the joke. They all blushed. I did not regret the happy occasion however, and rose from my seat much uplifted. Then an old peasant grandmother appeared on the scene. She asked me sharply: "But why don't you enquire about the growth of the cotton?"



I stood there silently. "We got very little cotton this year," she went on saying, "and this year spinning-bees will be thin. Even the cotton plants fall sick like men and women and children, my son, and we can't give them medicine." This was her realism. Her songs were over.

The sisters of the spinning-wheel joined the grandmother to laugh at me. "First tell us some way to save the old spinning-wheels from white ants," the maiden, who blushed no more, was saying, "and then enquire about our songs."

Sravanabelagola hill, behind which stands the sixty-foot high monolith of Gomateswara, Guru of the Jains

HINDUSTAN'S OLDEST MONOLITH

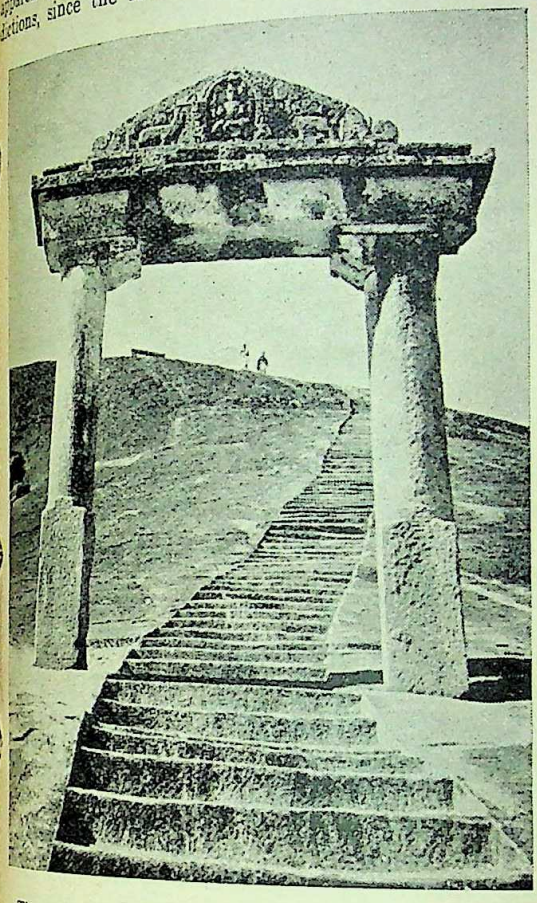
By FAQIR MOHAMMED, M.R.A.S. (Bengal)

Sravanabelagola has been defined by topographers as the "Mecca of the Jains." This is a unique adjective which became Mysore's copyright in 983 A.D., when Chamundaraya erected the colossal statue of Gomateswara. In commemorating the workmanship of Aritto Nemi, this masterpiece celebrates the golden age of Jainism in India. It is here that a student of Art gets as if a glimpse of the classical Egyptian monuments. But monolithically, according to archaeologist Fergusson, the image of Gomatesvara is decidedly taller than any known statue of Rameses in Egypt. The artist has sagaciously engraved a scale on the lotus-representing pedestal, to measure the height of the image, which, with the exclusion of its foundation stone, stands sixty feet high.

Both historically and aesthetically, this seat of Jain culture has its telepathic romance. A pilgrim surveying round and round the sky-robed image, automatically recalls the pageantry of the third century B.C. when the great Mauryan Emperor, Chandragupta the First, took an oath of complete renunciation and settled in this part of Mysore, as an ascetic for the rest of his life.

The Endless Penance

Carved out of fine-grained, light-grey granite, the image is a grand study in posture and [illegible] surveyor's first conception of it, is its rigid, military "attention" position. Due to the enormous stature of the statue, the topmost part of it has never been photographed satisfactorily so as to present a detailed study of the facial expression. The figure from top to bottom symbolises the meditative mood of the 'yati' during his prolonged penance to save the world. The rigidity of the upper extremity from the waist to the chin, betrays an endurance test of breath-control. The lower extremity from the quadriceps to the ankles is fairly relaxed. The face is a little elevated from the natural angle and has often led the student into confusion, concerning its objective of stare.



Jain philosophy interprets it as the Guru's stare at the struggling world, and a simultaneous appeal to the skies. The face resembles a full-orbed moon with beautifully arching eyebrows and a medium-sized nose. The head is covered with extremely unruly hair in spiral ringlets, which are often mistaken from a distance for tiny spools of celluloid. The nose is gracefully designed and the lips are tinctured with a faint smile. The ears are very large, hanging down the level of the chin.

The figure, from the thighs upward, is free from all support. And from the feet up to the thighs, it has been illustrated as surrounded by anthills from which creep out serpents and a green, leafy creeper envelops the legs and arms of Gomata. The creeper embraces the arms, ends at the biceps in a bunch of flowers. Some

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

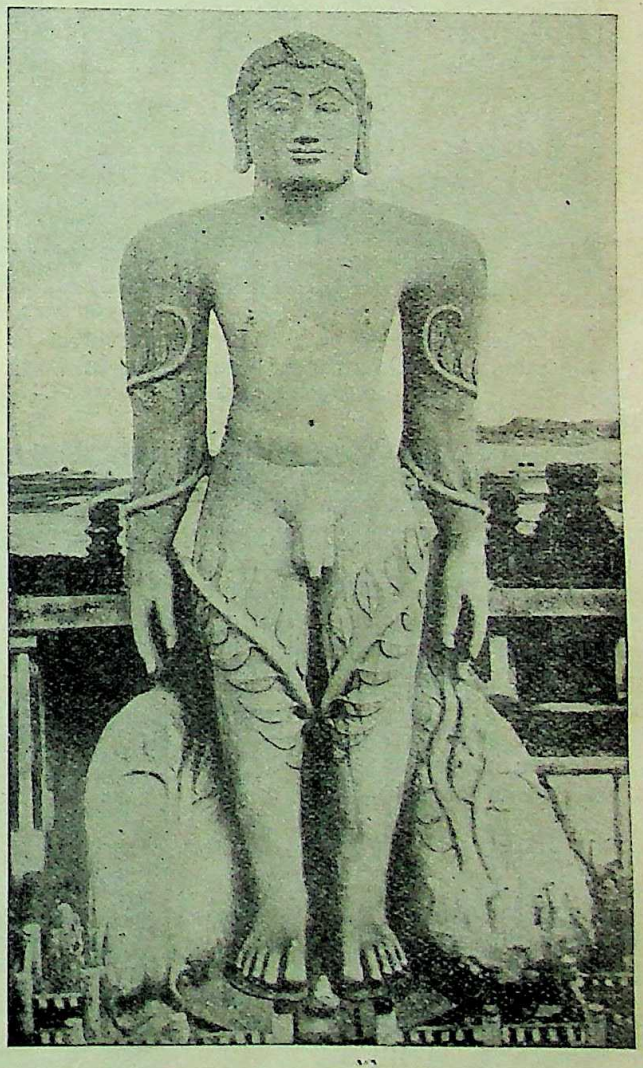
Digitized by Arya Samaj Foundation Chennai and eGangotri

surveyors read 'contentment' in the face of the image. Others who disagree with this view, affirm 'spiritual non-complacency' as a staying emotion in the face. But apparently there seems to be no ground for these contradictions, since the facial details are quite accurate.

The colossal arch-gate leading to the statue of Gomateswara in Sravanabelagola

The eyes proclaim a reservoir of internal harmony and bliss plus a hope in the future of humanity. In the philosophic Jain conception, Gomata gazes beyond the farthest line of horizon, for the resurrection of the world, especially India, from misery. The artist has injected youth into the entire work and Gomata stands in the full romance of his youthful days. The first and the last impressions of a pilgrim's gaze at the image are that Gomata appears to have completely imbibed the air of the vicinity and has every justification to be understood, in a Yogic deep-breathing pose. This was Aritto Nemi's ideal conception of Gometaswara's penance before he outlined the diagram in granite.

To-day, it has become a real pleasure for the visitor to measure and compare his height, by standing close to the monolith. And the old idea that "the cap falls down when we gaze at the summit of the Westminster Abbey" is sometimes repeated by the topographer.



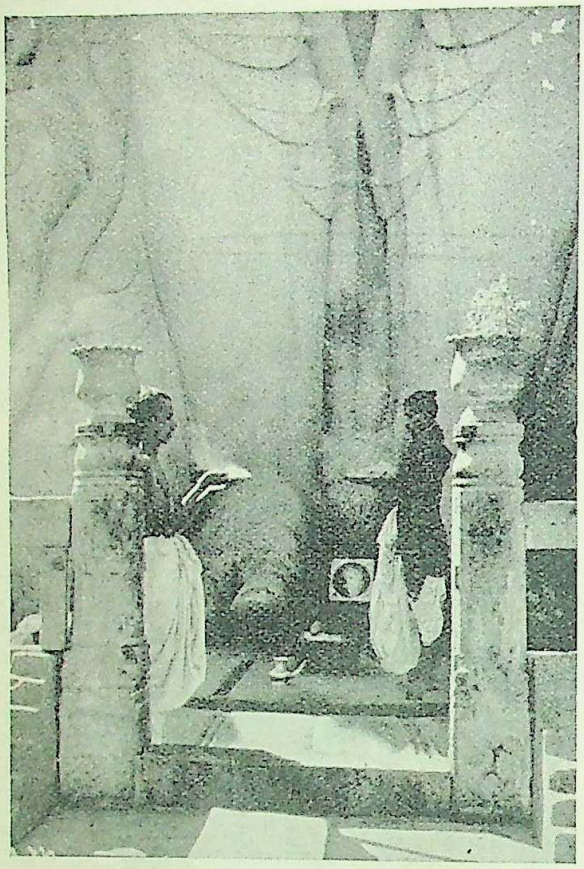
The Maha-Mastakabhisheka

Sravanabelagola is the rendezvous of Jains who come from all over India, once every fourteen years, to anoint the head of the image. This is the greatest Jain pilgrimage performed in India which is called 'Maha-Mastakabhisheka.' The earliest celebration of this festivity is recorded in an inscription, dated 1398, which reads: "Panditraya had it performed seven times."

In 1825, Maharaja Krishnaraj Wadiyar III celebrated it with pageantry and the ceremony was repeated in 1871, 1887, 1909, 1925 and 1940. The feast takes place in the month of 'Magha' or 'Phalguna' of the Hindu calendar.

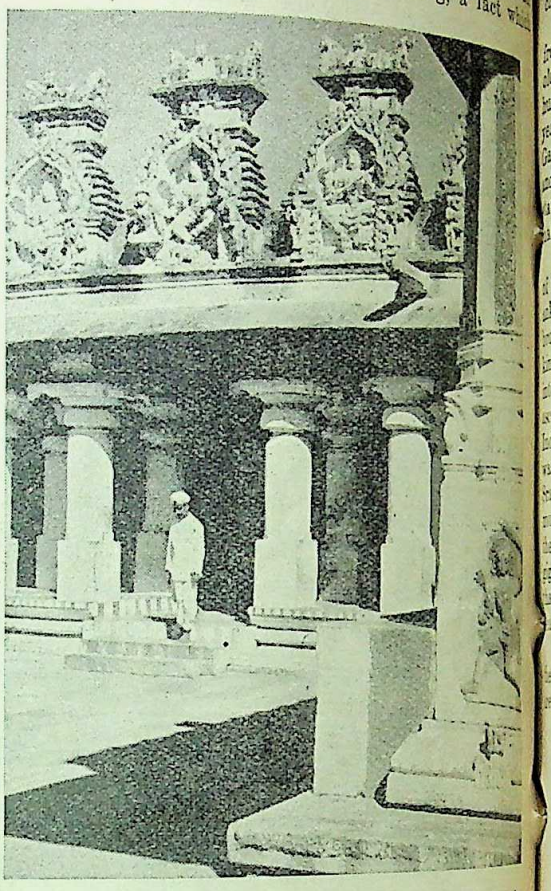
The proceedings of the pilgrimage are worth recording. One full month preceding the ceremony is devoted to worship in congregations in all Jain temples in the vicinity of the statue. This is followed by 'Pada-Puja' or, the worship at the feet of the great image. Boys and girls join their parents, priests and teachers in carrying brass and earthenware pots. Facing the image, an area of forty square feet is spread with bright, yellow paddy, which accommodates about a thousand painted earthenware pots filled with holy water. Cocoanuts and mango leaves are the chief features of the occasion.

On a scaffold above the image, priests stand with pots filled with ghee, milk and other perfumed beverages. At a signal given by the Swamiji, the contents of all these pots are poured over the head of Gomata in



The sixty-foot statue of Sri Gomateswara in Sravanabelagola

a multicoloured stream. This is a mere preliminary bath and the spectacular bath takes place in the afternoon on the Abhisheka Day. Now the one thousand pots resting on the carpet of paddy are lifted with a magical



CC-0. In the Public Domain. Gurukul Kangri Collection, Haridwar

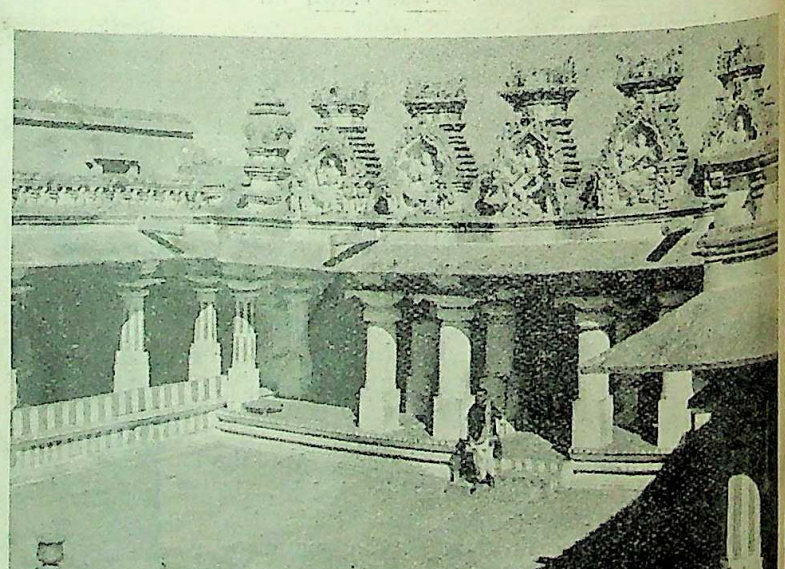
speed to the scaffold and their total contents are poured in a fast-ending stream, when the sudden chorus of

Jain priests offering *puja* in Sravanabelagola on the *Abhisheka* Day which occurs once in every fourteen years



A view of Jain architecture in the Sravanabelagola temple

mantras from priests fills the air. In this final anointment, fifteen differen substances are used, *viz.*, water, cocoa nut meal, plantains, jaggery, ghee sugar, almonds, dates, poppy seeds milk, curds, sandal, gold flowers, silve flowers and silver coins. The las two articles are mixed with nin patterns of precious stones, whic are all picked up in furious spee by beggars and other pilgrims stand ing by the image.

Finally, to restore the origina beauty of the image, 1008 pots holy water are rained on the mono lith. This ceremonious festival highly expensive and is estimated t reach a figure exceeding Rs. 30,000. I was generously donated by His High ness the late Sri Klishnaraj Wadiya Bahadur who took an active part i its proceedings in 1940.

It is an exclusive pilgrimag of the Digambara sect of Jains wh hold nudism as the inevitable sign of spiritual perfection. It is on this consideration that the statue of Gomata stands completely nude. And according to the high priest of the Digambara sect, complete penance is possible only when the human body is free from requisites of the earth, including clothing, a fact

Bracket images in the Sravanabelagola temple narrating the golden of the Mauryan Empire

The rigid posture of the *yati* symbolises

with the figure of Gomata.

self-control, while the nudity declares complete renunciation.

Chandragupta Maurya is believed to have migrated from Pataliputra to Sravanabelagola, where he spent his old age with his *guru* Bhadrabahu. A collection of five hundred inscriptions ranging from 600 A.D. till recent years, proves that this place was successfully ruled by Ganga, Rashtrakuta, Chalukya, Hoysala, Vijayanagara and Mysore rulers. Chamundaraya who erected the statue was the minister of the Ganga King, Rachamalla IV.

Tradition says that Bahubali is the dynastic name of Gomata who was the second son of the first Tirthankara Purudeva. Although he defeated his elder brother in the war of succession, he abdicated the kingdom in favour of his brother and retired into the woods, where he attained perfection as an ascetic. Bharata set up an image of his brother in North India. But as the statue was surrounded by serpents and was unfit for public worship, he set up a duplicate at Sravanabelagola. It is quite probable that the image must have been carved out of a boulder prostrate on the spot, as it would have been a task to carry a granite mass over the hill. Tradition concludes that Gomata, through his penance, burnt himself to death but the statement is not endorsed by history.

The distance between the summit of the head and the downward end of the ear is 6½ feet. The shoulders are gigantically broad and are not in proportion to the size of the breastbone. The waist is extremely delicate. This is a combination of the shoulders of a Hercules and the waist of an Apollo. The nipples are diminutive for a mighty breast. The lower limbs between the knee and the ankles are rather dwarfed. Though the statue is not in total agreement with the technique of symmetry, it is stately and not lacking in command. Gomateswara has gazed over India for 958 years. But it is a baby compared with the statues of Rameses which have stared on the Nile for more than four thousand years. It is much younger than the guardians of Abu Simbal, but is more imposing, by virtue of its commanding position on the hill overlooking the wide plain below. In spite of the ravages of time and weather it retains its pristine beauty and is visible from many miles.

Just as a topographer is advised to see the Taj in moonlight, the best hour to appreciate the majesty of Gomata is in the full moon, which lights up its facial smile. Under the changing metre of the moon, the figure of Indra displays mystic beauty. Indra in the centre of the pillared hall, is holding a 'kalasa' (water-vessel) for anointing Gomata. The mellow moon makes the 'kalasa' blaze and shimmer in varying degrees, sometimes harsh, sometimes passive. These lights and shades of moonlight supplement the charm that Gomata is deprived of in sunshine. Gomatesvara at this moonlit hour is a poem in granite and a melody in solitude.

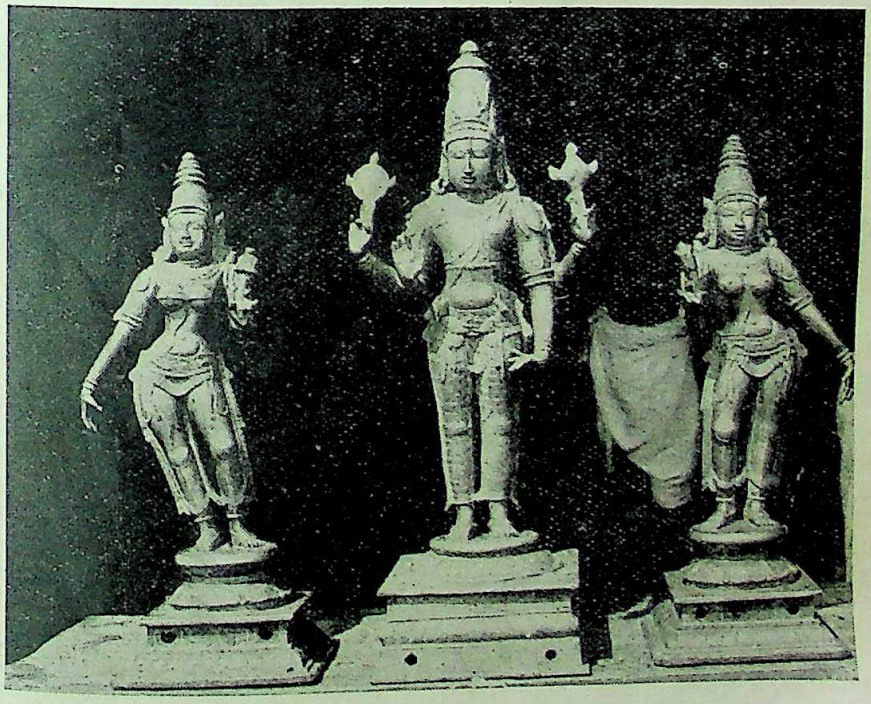
SOUTH INDIAN BRONZES



Their Real Significance

By T. N. SRINIVASAN, M.A.

Of late, there seems to have been a very great demand from students of Indian Art and Art connoisseurs to collect as many of South Indian bronzes as possible, either for purposes of exhibition or as commodities of a now-flourishing trade. So much so, like "going places" for the idle-rich, it has become a pleasant pastime for many to take a trip to the South with the hope of snatching a few good specimens of the bronzes and at the same time arranging with the clinging newspapers to broadcast these "finds," though in reality, they may be only a spurious imitation of the unavailable real one. It is the purpose of this short article to show that idols are not mere toys, that the temples are not more museums or repositories of artistic images and that the places of piigrimages are not holiday resorts.

Idol-worship has been in vogue in our country from time immemorial and has ever played a prominent part in our religious life. In the Ramayana, the Mahabharata, the Vishnu Purana and other acknowledged old works, there are very many references to idol-worship.

In determining the constitution of the Cosmos, theistic schools of philosophers are agreed that there

Vishnu with consorts. A set of bronze images that must have once received worship but now forms part of some art-connoisseur's collection.

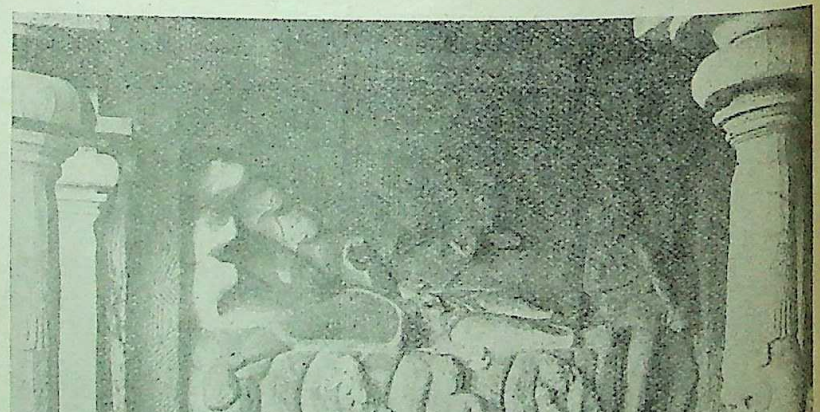
are three essences—*Chit, Achit* and *Iswara*. These the Visistadvaitins—the followers of Sri Ramanuja—describe as the Jivatmas, the Prakriti and Iswara. In whatever manner the philosophers may speak of the ultimate resolution of the three essences, the Paramatma stands out as an indissoluble factor, as it governs

A close-up view of the processional images (*Utsavaberams*) of a South India temple in Madras



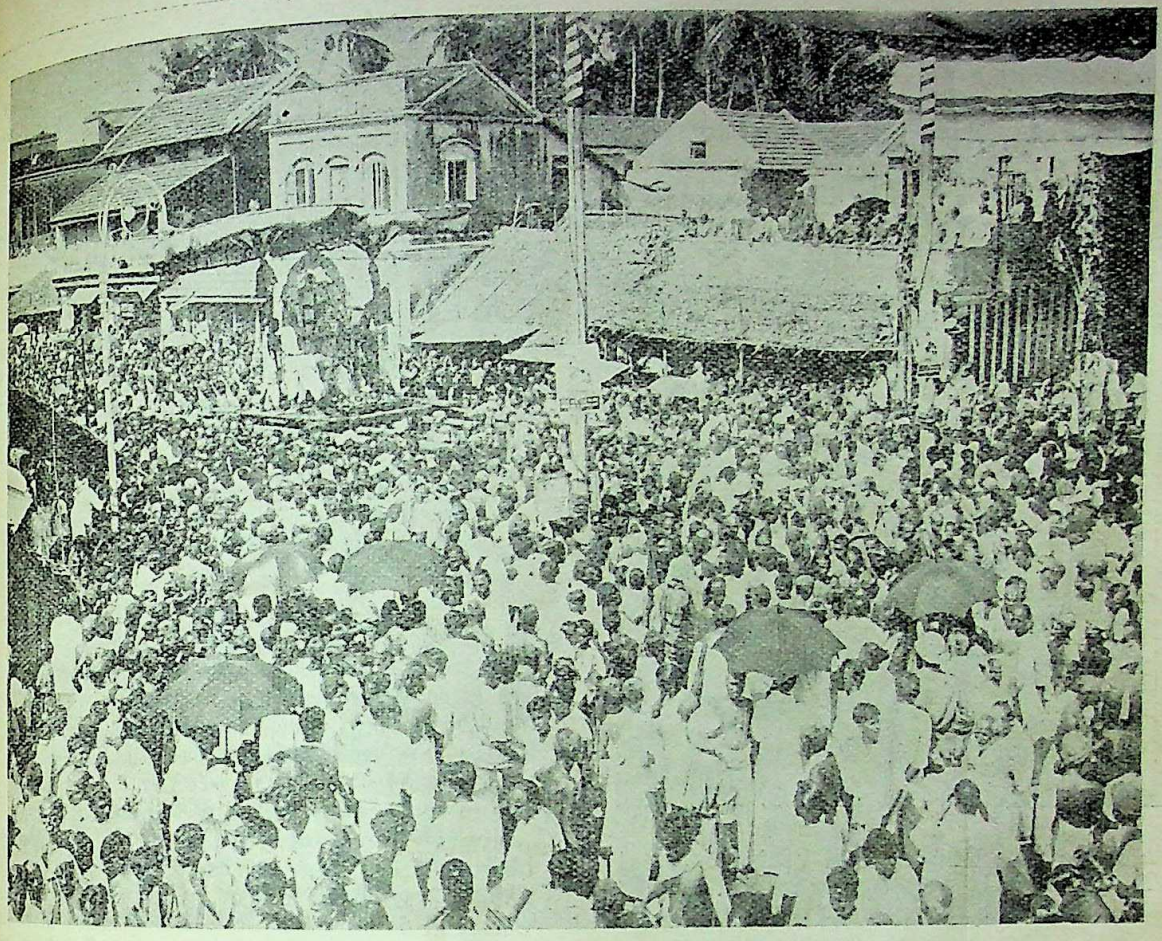
the essence of the existence. Hence it is advantageous to know the various manifestations of the Paramatman or the Parabrahman. They are five in number, *viz., Para, Vyuha, Vibhava, Harda,* and *Archa.*

The supreme being, as he is, when he is transcendent beyond the Prakriti Mandala devoid of phenomenality is the Para. This form is accessible only to those who have attained *Mukti* or to those who never had the pangs of births, deaths, and rebirths.

The Vyuha is likewise inaccessible to us, as it is the manifestation of the Parabrahman in the apartment or laboratory of his various fuhctions of creation, sustention and dissolution. The Vibhava form is accessible only to the most blessed of the creation. It is the manifestation through the various Avataras and other forms of visible appearance, when a personal contact with the divine form is made possible. Then we have the Harda or the Antaryami. God being omnipresent and omnipenetrative, He is in us and yet we see Him not. This realisation of God in every little act brings one to realise the Harda aspect.

The Archa is the easiest and most tangible form of God-perception and realization and the one universally accessible form. Ancient treatises like Silparatna, Silpasara, Silpasangraha, Mayamata, Manasara and many other works on the Hindu Iconography are not mere secular sciences or catalogues prepared for the twentieth century "art hunters" for their trade purposes. But they are essentially a science of religion and as such it is a sacred science dealing with the location and structure of our temples, the form and constitution of our idols, the ceremony of installation and perpetuation of the spiritual magnetism in these centres.

God's manifestation in the idols is the essence of our religious worship though alien religionists may deride this form of worship, perhaps due to their ignorance of the basic underlying significance of idolatry. To take an ordinary common-sense point of view, an idol represents or symbolises the Deity and even if it did nothing more than that it need not be a subject of derision. It is a common practice prevalent in all countries and more so in countries claiming a very high order of civilization, to commemorate a hero of history, a patriot of politics or a seer of science by statue, wherein are best manifested the prominent features of the hero. An equestrial statue in a coat of arms represents a great military hero, while an impressive statue in academical robes with a book in hand will easily indicate a great educationist. The unveiling of statues and their decorations form a regular *puja*. If these are appropriate to the human heroes, may we not with considerable force claim for the divine statues a continuous *puja*, as knowledge and reverence to the deity form the essence of every portion of our existence. But the idols enshrined in the holy places of worship are not mere symbols. The initial object of setting up images before us is no doubt



Anantasayan-murti in Mamallapuram, one of the many marvellous pieces of stone-carved images belonging to the Pallava age

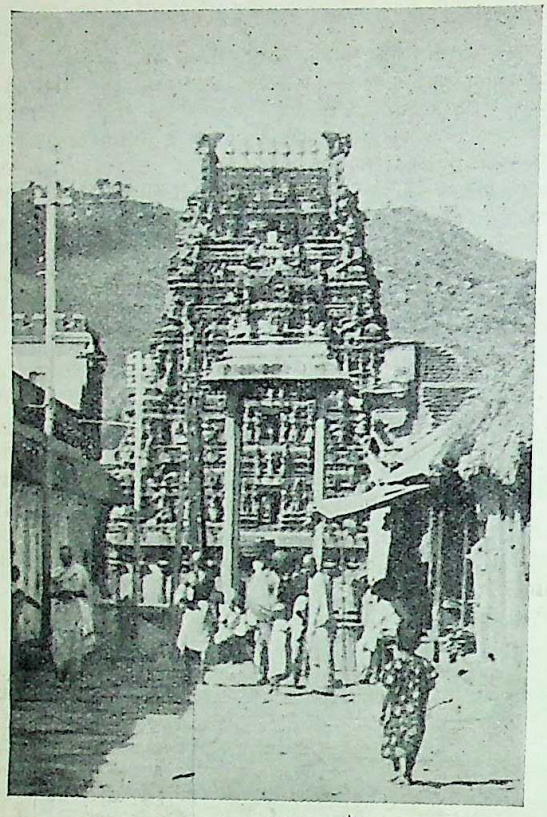
to facilitate our meditation, to fix a definite object before us for concentration when our thoughts are concentrated ; they help us in taking the thoughts over to an object beyond and behind the actual phenomenon and that is the noumenon thereof. This power of translation and transportation exists in the holy idols by

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A typical South Indian Temple procession, showing the Deity being carried on a *vahana* (vehicle) with all its paraphernalia

the Amsam of God, that has been invoked both at the initial *pratistha* as well as the daily *puja* of these idols made by the appropriate *mantras*. The chanting of these *mantras* concentrates in the image an amount of spiritual magnetism and develops a form of superhuman power in them. Hence we find that *pratisthas* made by those who have in themselves an Amsam or Aesam of God like Sri Sankara, Sri Ramanuja, Lord Ooranga, or Sri Ramakrishna bring in an imperishable and ever-growing magnetism. The Paramatman infuses his Amsa in such images and shrines in graded proportions and is ever present with us in that form.



It is also to be noted that in some centres the Paramatman makes a manifestation *suo moto* without an initial invocation and that is known as Swayam Vyaktam or self-manifestation of God in an image. The famous shrines at Tirupati, Srirangam, Conjeeveram, Badrinarayan, Rameswaram, Kasi, Puri are among the many of such places, where the manifestation of God is voluntary. Though from one standpoint the shrine of even the least importance is an object of veneration for its own religious efficacy yet in the determination of the relative religious objects to be attained the varying importance cannot be lost sight of. There then are spread all over our country numerous idols, some of which are of very recent origin, some older still but whose installations are borne out by the Sthalapuranas or local chronicles describing their origin to some ancient Rishi, while some yet are of an age out of calculation.

Every shrine is a complete cosmic representation in itself coupled with all the factors of the spiritual realm and its hierarchy as will be seen by the principal idol in the temple and the various Parivaradevatas stationed all round it within the respective Prakarams, the Dhwajastambam, Vimanam and the tower. Taking only the innermost power—the presiding deity of a shrine, there are five forms, which are named Dhruvabera or the Immovable Mula Vigraha, the Kautuka or the small idol used for *archana* and *abhisheka* (bath), the Balibera or the small idol that offers food to the subordinate entities, the Snapanaberam which is constantly present in the temple and the Utsavaberam or the medium-sized idol which is used for outward processions, festivals and decorations. According to the Vaikhanasa Agama, there are five representations and as described at length that Vishnu in the Dhruva (fountain), Purusha in the Kautuka (spirit), Satya in the Utsava (laws of God), Achyuta in the Snapana (matter) and Anirudha in the Bali (energy) are the requisites for a true Archa form of God.

In the worship connected with most of the important shrines in South India, all the abovementioned five *murtis* are meditated as residing in the one principal *beram* and all the influence for good is derived principally from them. Our minds and lives have to be moulded in all aspects from the influence exerted in every temple. Hence the Snapanabera, the Bhogabera, the Balibera and the Utsavabera appeal to us in the lower aspects of life, *viz.*, the bathing, the sexual

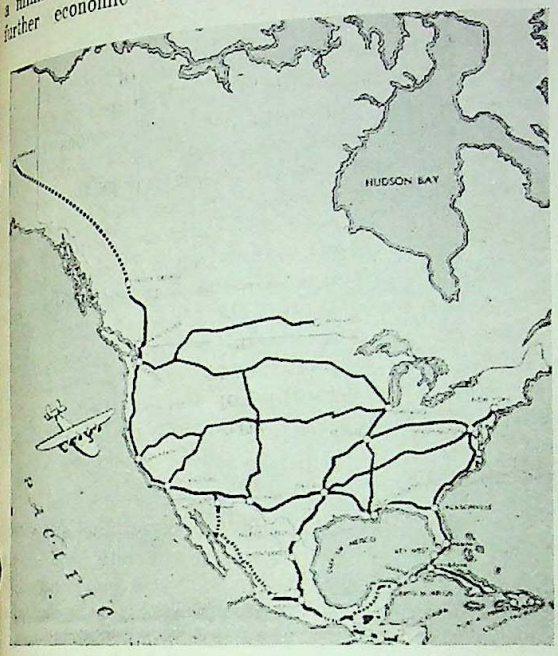
WORLD'S LONGEST HIGHWAY TO CONNECT ALL AMERICAN COUNTRIES

As neighboring nations in the Western Hemisphere unroll new lengths of the broad concrete ribbon that is the Pan-American Highway, a construction dream of more than 21 years is becoming a reality. The highway, when completed, will stand as a monument to the co-operative spirit of its builders since all the nations through which it passes had a hand in its construction.

Historically the Pan-American Highway began in 1924 when a group of engineers and construction men representing all the Americas assembled in Washington, D.C., to draft the constitution of the Pan-American Highway Confederation, one object of which was to "study the best ways and means to unite with one another the different national highway systems with a view to the establishment of a Pan-American Highway System." Almost overnight the conversation, stimulated by the rapid growth of motor transportation during the 1920's, turned on the ideal of one longitudinal road connecting the capitals of all the Latin American countries.

Now linking practically all of the American nations from Alaska on the north to Chile on the south, the highway already is speeding the economic inter-development of the countries through which it passes and is providing a means by which the nations, throug... an expected interchange of visitors who use the hig... way, can be linked more closely together in cultur... relations. During the war, it was of inestimable va... in accelerating the production and transportation o... essential war materials and some foods and already ha... proved its high strategic value in the matter o... hemisphere security.

When the German submarine menace, for examp... was at its worst off the Atlantic Coast of the Americ... and the use of ships accordingly was curtailed for th... importation of war materials from Latin America ... the United States, the highway was called into servic... for overland transportation. Ships at sea were routed ... to nearby ports from which their cargoes of war mate... rials, coffee and other supplies were transferred ... trucks and sent along on the highway. Because of th... shortened sea routes the number of trips for each ... was materially increased with the result that a sufficien... quantity of war materials from Latin America reached ... destinations in the United States.



EASED SHIPPING PROBLEM

During this period the highway served more than ... a military transportation purpose. The shortage o...

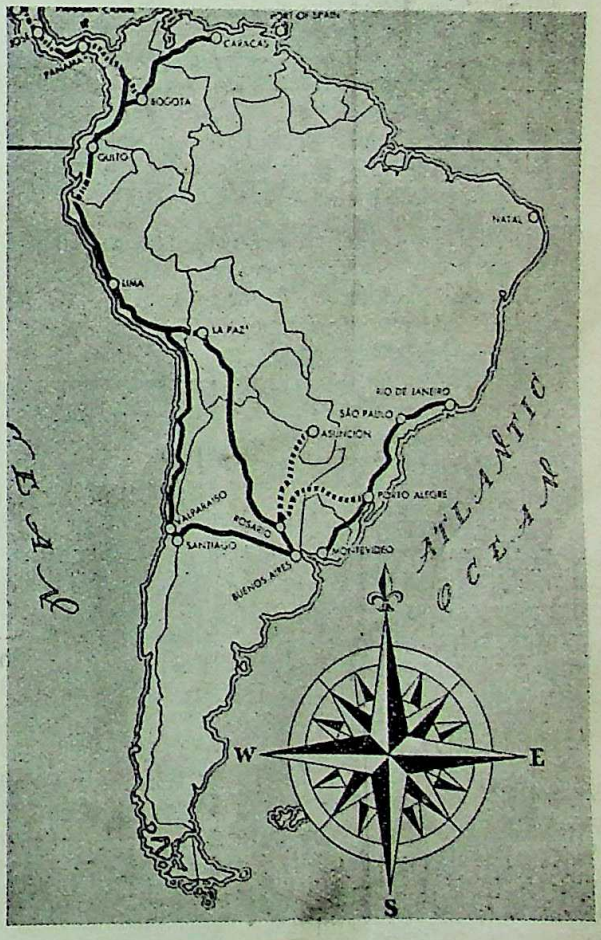
shipping almost wiped out the export markets for Central American fruits and reduced coffee exports to a minimum. This disruption threatened to create further economic dislocation in Central and South

The part of the Pan-American Highway within Central America as well as that portion of the road which lies within the United States and Canada. The Alaska Military Highway is shown in a dotted line

American countries by reducing employment. To fill this breach, the affected countries directed parts of their surplus labor into construction work on the highway and thus partially maintained employment while at the same time the highway construction went forward.



The U.S. Government has loaned money to various Latin-American countries to be used in construction of the highway, and U.S. Army engineers to plan and supervise construction. Most of the road is already carrying traffic. While some 1,200 miles, principally in Mexico, Panama, Colombia and Ecuador, are not surfaced for all-weather driving, the highway is entirely completed from Fairbanks, Alaska, to a point 432 miles south of Mexico City.

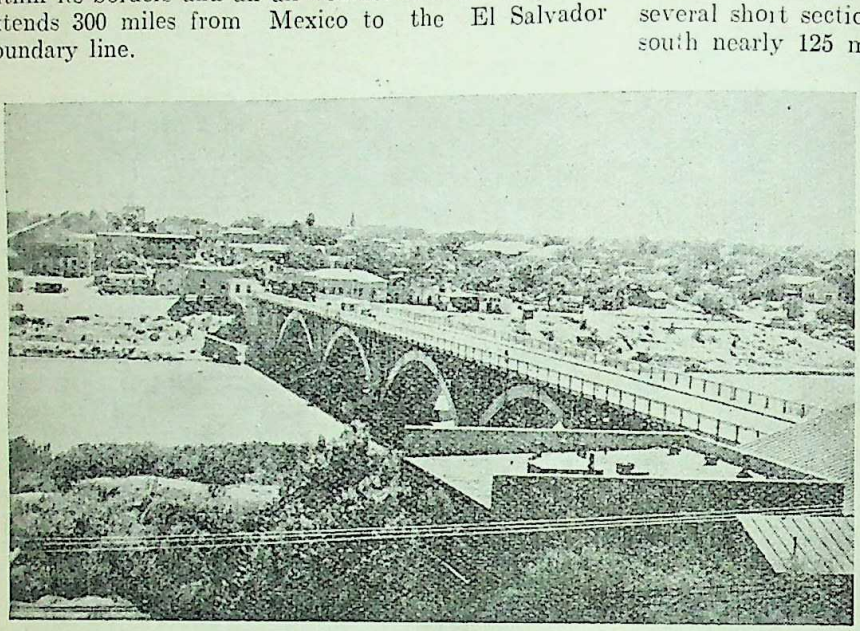
About three-quarters of the entire highway is now passible during all seasons of the year. The Inter-American section as the stretch from the southern U.S. border to Ecuador is called, is about half paved road, with another fourth surfaced for all-weather conditions. Of the 8,097 miles which lie in South America, from Panama to Chile and Argentina, one-quarter are paved, one-half have all-weather surfaces, the remainder is dry-weather surfaced and a small portion remains trail.

The route of the Inter-American section begins at Nuevo Laredo, Mexico, across the international boundary line from Laredo, Texas. The longest stretch of surfaced road on this section extends from Laredo to El Portillo, Mexico. El Portillo is a little less than 400 miles south of Mexico City. About 25 miles of this particular section have not been fully improved, but this is not a matter of much practical importance since traffic moves south from Mexico City to Matamoros by way of Puebla over a route that is fully improved and adds only 40 miles of additional travel.

The distance from El Portillo to the Guatemalan border is 614 miles, a good deal of which is under construction. Two isolated sections are paved and steady progress is being made on the uncompleted stretches, with the result that it appears probable that this section will be opened with a paved or all-weather road for a short distance beyond Las Casas within a comparatively short time. This will leave one gap in the highway in Mexico—a difficult mountain section of a little more than 150 miles on which it seems unlikely that an all-weather road can be completed within a year or two.

Two additional highway projects, not wholly a part of the Pan-American Highway but linked to it, are under consideration or in progress. The first is an all-weather road from Nogales, Arizona, near the Mexico-U.S. border down the Pacific Coast side of Mexico to Guadalajara, a few miles west of Mexico City. It provides direct connection with western U.S. routes running through Los Angeles and San Francisco, California, and Seattle, Washington, to join with the Alaska Highway from the United States to Alaska.

The South American section of the Pan-American Highway which will join the capitals of all the American nations



The second is a highway-ferry route from the south-eastern state of Florida to Cuba by ferry and from Cuba again by ferry to the easternmost point of the Mexican state of Yucatan. This route, if developed, will provide a short cut from the U.S. Atlantic seaboard into Mexico.

GUATEMALA SECTION COMPLETE

Guatemala, immediately south of Mexico, has completed the entire stretch of the highway which lies within its borders and an all-weather-surfaced road now extends 300 miles from Mexico to the El Salvador boundary line.

The international bridge between the United States and Mexico at Laredo, Texas, is the first of many international bridges on the route of the Pan-American Highway

In El Salvador the highway is paved from the Guatemalan border to the city of San Miguel, and about half the remaining distance to the Honduras border is surfaced for all-weather driving. The remainder is suitable for dry-weather travel. El Salvador is surfacing the dry-weather section under a co-operative agreement with the U.S. Public Roads Administration.

A stretch across a narrow part of Honduras consists of three all-weather sections separated by two short sections of dry-weather road. These short sections are being widened and surfaced by the Honduras Highways Department under the supervision of the U.S Public Roads Administration.

The entire length of the highway which lies within Nicaragua is passable. A short stretch from the Honduras border is all-weather and the remainder dry-weather road. The next portion is trail and the remaining distance to the Costa Rica boundary consists of all-weather road except for about 60 miles centering on Managua, the capital which is paved. The unimproved portion of the approved route over which the highway will eventually run can, however, be bypassed on an all-weather road built by the U.S. Army as part of its pioneer road construction operations in Central America.

Out of the total length of the highway which [illegible] in Costa Rica, only 115 miles consist of paved or [illegible] weather road. In the northern section, much of [illegible] route is open for travel only with difficulty [illegible] several short sections are little more than trails. In [illegible] south nearly 125 miles is trail.

The most difficult road construction ever attempted anywhere [illegible] involved in the 71-mile section between Cartago and San Isidro del General in Costa Rica. About one-third of this section runs along the top of the Talamanca mountain range, and a large portion of it between 9,000 and 11,000 feet above sea level. The view from this section includes probably the most stupendous conglomeration of high mountain peaks and ridges anywhere along the Inter-American route. The Atlantic and the Pacific Oceans are both visible from the highway at many points.

The major climb up this range begins about 125 miles inside the Costa Rican boundary, ascending some 4,000 feet in 25 miles to the country's central plateau where its population of 64,000 is largely concentrated and where Costa Rica's coffee is grown. Some 60 miles beyond the beginning of the central plateau, the route reaches San Jose, then goes up another 7,000 feet in 34 miles to Dead Men's Pass, which is nearly 11,000 feet above sea level. From the high point the road descends gradually to San Isidro del General.

In a rugged mountain section of Mexico, the Pan-American Highway follows a roundabout course

The first portion of the road in Panama, south of the Costa Rican border, is little more than trail, but from Volcan to Panama City is paved or surfaced for all-weather travel for the remaining distance. Below the city the improved road ends at the edge of the almost impenetrable Darien jungle.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Thus, for a year or two, perhaps longer, motorists along the highway will have to ferry from Panama to ports on either the Caribbean or the Pacific side of Colombia. The juncture at the Panama-Colombia border is the only one left in doubt along the entire length. Colombia has left a gap of some 40 miles to the Panamanian border to make possible a meeting place with Panama.

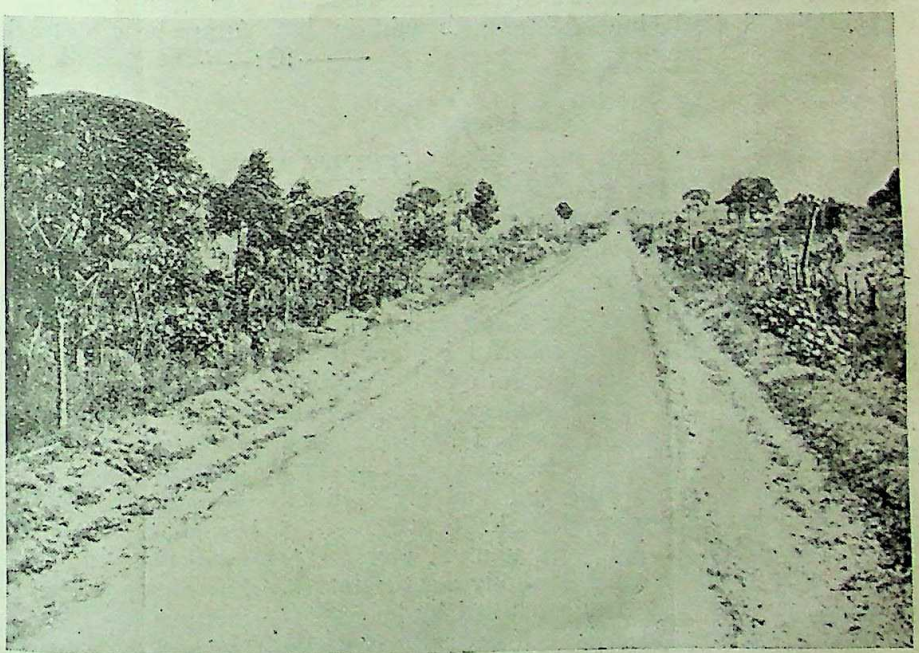
Using American-made road machinery, road construction crews are shown at work in El Salvador, Central America

In South America, the road from the Panama border runs along the Pacific Coast through Colombia, Ecuador and Peru. Down to Vitor Peru, where it splits into two highways, one running east to La Paz, Bolivia, and thence southeast to Buenos Aires, Argentina, the other continuing down the coast to Santiago, Chile, and then turning east to Buenos Aires. The route through La Paz is 5,433 miles long, a slightly shorter distance than the route via Santiago.

Spur in Eastern South America

From Buenos Aires it is possible in the dry season to drive northward along the highway to Montevideo, Uruguay, and Rio de Janeiro, Brazil.

Of the portion of the highway which lies in Colombia, about three-quarters of the distance is all weather road, and only 165 miles is trail. All of Ecuador's 721 miles is paved or all-weather surfaced.



On the Pacific Coast route, about half of Peru's 1,666 miles is paved and the rest is all-weather road. On the La Paz route it has nearly 800 miles of paved road and about 600 miles of all-weather road, with a relatively short stretch of dry-weather road.

Chile has nearly 600 miles of paved and all-weather road out of a total of 1,597 miles. Argentina's two routes—one southward from La Paz, the other east from Chile—aggregate more than 2,000 miles of which approximately 85 per cent is paved or all-weather surfaced.

Uruguay's section of the route from Buenos Aires to Rio de Janeiro has 366 miles of pavement and all-weather road, and Brazil has 655 miles of paved road.

Points where the highway will cross international boundaries have not been finally determined in all cases. Wherever construction has progressed to a frontier there has generally been a definite agreement between the two countries as to the point of crossing. Common frontier points have been established between Colombia and Ecuador, Peru and Bolivia and Argentina and Chile. The crossing between Ecuador and Peru may not be established until both countries are ready to build to the line since a choice of several routes, all difficult to construct, will have to be made.

Completing the final links in the highway will entail highway engineering and construction work comparable to the work that was necessary in building the Alaska Highway from the United States to Alaska through the Dominion of Canada except that much of it will be done in tropical temperatures instead of the sub-arctic temperatures of Canada and Alaska.

A finished section of the Pan-American Highway in the Central American republic of El Salvador

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Like the Alaska Highway, the unfinished sections of the Pan-American Highway present every variety of tough engineering problem—driving a road through deep morasses, deep forests and over mountains. Bridges must be built over torrential and raging streams and rivers, roadways blasted out of the sides of mountains and materials for construction transported many miles to the points where they will be used.

Longest Road in the World

From Fairbanks, Alaska, to its southern terminus, the road when finished will cover a total distance of 15,494 miles the longest road in the world, and will traverse 17 countries—Canada, the United States, Mexico, El Salvador, Nicaragua, Costa Rica, Panama, Colombia, Ecuador, Peru, Chile, and Brazil, with spurs off the main highway leading into Bolivia, Paraguay, Uruguay, Venezuela and Argentina.

Some of the more important bridges on the Pan-American Highway are remarkable examples of highway and bridge engineering. All are of the newest and most modern design and all are well-planned as to location. One of the most noteworthy is the Puenta Cuscatlan Bridge in the interior of El Salvador. This structure is the longest suspension bridge in Central America and spans the Lempa River, the largest river flowing into the Pacific Ocean between the Colorado River in the United States and the tip of the South American continent.

Because of the scarcity of proper materials, fabrication equipment and skilled labor in certain localities in Central America, a considerable portion of the materials used in bridge construction came from the United States. In addition to the U.S. prefabricated parts used in construction of the railroad bridge on the Mexican-Guatemalan border, 93 prefabricated timber bridges and eight abandoned steel bridges were bought in the United States and shipped to Central America by U.S. Army Engineers.

Construction work on the spans was aided by a mission sent to Central America by the U.S. Forest Service. Forestry experts went into the field and classified nearby available timber. The construction program, calling for the use of local materials as far as possible also led to the utilization in Nicaragua of rock of volcanic origin for arch culverts and bridge superstructures, abutments and piers where the rock deposits were available.

A Highway for Peace

The superstructure of two bridges in Honduras, one a three-span bridge over the Cuacirope River, are finished. The newest to be completed is the Goascoran River bridge linking El Salvador and Honduras, a 480-foot steel and concrete structure built to carry heavy trucks with loads of 27 tons.

Other important bridges cross the international boundaries of the United States and Mexico, Mexico and Guatemala, Colombia and Venezuela, Colombia and Ecuador, and Brazil and Uruguay, while another is planned to join Brazil and Argentina across the Uruguay River.

When the Pan-American Highway becomes an open tourist highway, what is now the "Good Neighbor Policy" between the American nations will change into a more simple, friendly understanding between the peoples of the various countries. Pre-war travel between Mexico and the United States proved this and post-war tourists undoubtedly will extend this spirit up and down the entire length of the two great western continents. This unity already is expressed in the international bridges, linking one American nation to another in an unbroken chain.

While in recent years the Pan-American Highway has been a strategic roadway for war, it will in the future be a strategic highway for peace.—*USIS.*

——:O:——

STEFAN ZWEIG

By S. I. CLERK

"Before parting from life of my free will and in my right mind I am impelled to fulfil a last obligation : to give heartfelt thanks to this wonderful land of Brazil which afforded me and my work such kind and hospitable repose. My love for the country increased from day to day, and nowhere else would I have preferred to build up a new existence, the world of my own language having disappeared for me and my spiritual home, Europe, having destroyed itself.

"But after one's sixtieth year unusual powers are needed in order to make another wholly new beginning. Those that I possess have been exhausted by long years of homeless wandering. So I think it better to conclude in good time and in erect bearing a life in which intellectual labour meant the purest joy and personal freedom the highest good on earth.

"I salute all my friends ! May it be granted them yet to see the dawn after the long night ! I, all too impatient, go on before."*

Petropolis, 22.11.1942 Stefan Zweig

And so Stefan Zweig together with his wife Elizabeth Charlotte Zweig committed suicide at Petropolis, Brazil, on February 23, 1942, ending "a life in which intellectual labour meant the purest joy and personal freedom, the highest good on earth." His was, in all probability, the unique distinction of being simultaneously, an Austrian, a Jew, an author, a humanist and a pacifist. This rather uncommon combination brought him a good deal of trouble at the hands of brutality and unreason personified in the recent dictatorship of Germany. Thrice he lost his home and had to start anew.

Stefan Zweig was born in 1881 when the Habsburgs were the monarchs of Vienna, the Golden Age of Security. While in school, he began to take a very keen interest in theatre, literature and art. This was natural in the Vienna of those days when the cultural events in the city and neither the military, nor the political nor the commercial events predominated in the life of the individual and of the masses. Above all, he devoted

* From publisher's post-script to Stefan Zweig's *The World of Yesterday.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

himself to literature more than anything else. At seventeen he knew every poem of Baudelaire and Walt Whitman. He and his school friends, with the enthusiasm characteristic of youth, were familiar with authors and poets such as Paul Valery, Stefan George, Rilke, etc., who were usually honoured by the public and the savants ten years later. Obviously, all this devotion to the Muse of Literature was at the expense of sports and physical training. He and most of his contemporaries at that time were definitely contemptuous about throwing away their time in playing games or in training their physical bodies.

Stefan Zweig is recognized today as a great European, a historian, a psychologist and a lover of mankind. Primarily, however, he was an artist—an artist of words. And, here too, he excels as a biographer. His studies of Marie Antoinette, Mary Stuart, Castellio, Casanova, Stendhal, Tolstoy, Balzac, Dickens, Dostoeffsky, Holderlin, Kleist, Nietzsche, (to mention a few) amply prove this. He was an ardent student of personalities and portraitures. These studies and his plays such as Thersites or Jermiah also reveal another important characteristic of the author. He champions Erasmus and not Luther, Mary Stuart and not Elizabeth, Castellio and not Calvin. His hero or heroine is one who succeeds in the moral and the spiritual sense, not one who succeeds in the ordinary mundane way. His studies differ from ordinary biographies because his goal is different. He is convinced that "it is only through the self-portraiture of a great artist that the genius of mankind becomes comprehensible to earthbound mortals."[1]

What occupied his mind throughout his life was the problem of the spiritual superiority of the vanquished. His plays such as Thersites and Jermiah pre-eminently deal with this. Jermiah is not a pacifist play. In it Stefan Zweig portrays the man who is denounced as a weakling in time of enthusiasm and temporary victory, but who, in the time of defeat, is the only one not only to endure it, but also to master it. This thought of his too makes his biographical studies really interesting.

It is difficult if not impossible to deal in any detail whatsoever with the innumerable books of the author. However, apart from his full-length biographical studies, mention may be made of a series of biographies he wrote under the general title of *Master Builders* : *An Attempt at the Typology of the Spirit*. It consists of three volumes : (1) *Three Masters* : Balzac, Dickens, Dostoeffsky ; (2) *The Struggle with the Daimon* : Holderlin, Kleist, Nietzsche ; (3) *Adepts in Self-Portraiture* : Casanova, Stendhal, Tolstoy. As two random instances of Stefan Zweig's supremacy of portrait sketches, we may take up Casanova and Tolstoy from his book *Adepts in Self-Portraiture*, "wherein he describes Casanova, Stendhal and Tolstoy as "the three representatives of the ascending gradations of the same creative function, self-portraiture."

Casanova a great writer ? His entire literary output is the story of his own life. In it we have a naive self-portraiture, a simple record of deeds and events with the least attempt to evaluate them or to study the actual working of the self. Only when the joys of life became irrecoverable memories did Casanova venture to soil his fingers with ink. With him what is important is not the way in which he tells the story of his life, but the way in which he has lived it. What an average author has to invent, Casanova has actually lived. Normally, artists can never experience what they imagine and men of action and men of pleasure cannot tell their stories. Casanova is most probably the unique exception. He tells us the exciting story of his life without any moral restraints or fears. He never had an inkling that he was destined to become famous and hence his book is so interesting. Urged by absence of pleasures and by utter loneliness in his old age he writes his memoirs at Dux where he is librarian to Count Waldstein. The writing of this book is his last win at the gaming table. But he departs before the cards are turned and never learns that he is a winner. Yet, winner he is, "for since he lived his life and wrote his story, no romancer and no thinker has invented a more romantic tale than that of his life or fabled a stranger personality than Casanova."[2] He may be denounced as immoral or disavowed as an artist, but none can deprive him of his immortality. Casanova demonstrates that it is a man's vitality and not character that determines whether he will be immortal or not. With immortality, morality is nothing, intensity all.

While Casanova is satisfied with a mere (though keen) description of his life, with Stendhal, self-portraiture reaches a higher level, the psychological. It is with Tolstoy that self-contemplation attains its highest level and self-portraiture in his case becomes a moral self-questioning. It becomes ethico-religious. And Stefan Zweig is both original and brilliant in his biography of Tolstoy. Tolstoy had a normal peasant physiognomy. His beardless face in youth was also similar to that of any average Russian peasant. "Rough-hewn like wood split for firing are the crossbeams of the forehead surmounting the little windows, the tiny eyes. The skin, like the outer surface of a wattle-and-dab cottage, is of clay, is greasy-looking and lusterless. In the middle of the full quadrangle of the face, we see a nose with gaping, bestial nostrils, a nose that is broad and pulpy as if flattened by a blow from a fist. Behind untidy wisps of hair project misshapen, flapping ears. Between the hollowed cheeks lies a thick-lipped, surly mouth. The general effect is inharmonious, rugged, ordinary, verging on the coarse . . . Tolstoy knew well enough that his countenance was unpleasing . . . That was why he soon let the hair grow on his face, that his mouth might be hidden behind a sable-mask—which only in old age grew silvered, and thereby venerable"[3] Only his eyes expressed the genius of the man. As Stefan Zweig quotes Gorky : "In his eyes, Tolstoy had a hundred eyes." Almost magical and magnetic, "they could blaze in the topmost altitudes of the spiritual world, and could with equal success throw a search-light into the darkest abysses of the soul."[4] All things were possible to these eyes ; only, being inactive was impossible for them. And with such eyes ever piercing the very heart of truth, happiness is impossible for the one who possesses them.

Unlike most of the men of letters and artists, Tolstoy had an extraordinary physique. His strong body served him almost right to his death. Even at eighty he continued his daily vigorous gymnastic exercises. His sight remained unimpaired to the day of his death. So were his hearing and memory. As a matter of fact,

it was his own bear's strength that Tolstoy feared unrestrained always and everywhere. He was almost panicky of the bestial unrestraint of the physical senses.

Tolstoy's writings are vividly real. Reading him and only him, we might be convinced that art is a simple matter and that all writing is hardly anything more than a faithful account of reality, an effortless transcription. However, what appears to be sketched freehand in broad and bold and clear outlines has really been achieved by very hard workmanship of a man who set to work painstakingly and diligently. Thus, for instance, seven drafts were made of *War and Peace* before the final novel was ready. Every detail was thoroughly checked by references not only to the contents of public libraries, but also to letters and other documents in private collections. Once his search for truth finished, he would strive for clarity. Here too the aim was perfection. At the same time, the toilsomeness of the process leaves no trace upon the finished product. Tolstoy's prose is timeless. His folktales, "Three Old Men", "Does A Man Want Much Land ?", "The Death Of Ivan Ilich And Polikoushka", and "Linen-Measurer" may have been written a couple of thousand years before the invention of printing or in the nineteenth or twentieth or thirtieth century, "for what finds expression here is not the contemporary mind as voiced by Stendhal and Rousseau and Dostoeffsky, but the primitive mind, which is changeless and perennial—the terrestrial pneuma, the primal sentiment, primal anxiety, primal sense of loneliness, felt by man brought face to face with the infinite."[5]

Tolstoy is not a man of the "higher" type, nor are his qualities those of a muse. They are ordinary qualities intensified. As compared with an average man his mind and senses work more vigorously. He never ceases to be normal. Hence his art is intelligible and absolutely human, and people hesitate to call him a genius. His books speak the language of naked truth and none other ; this is his limitation ; but they speak that language more perfectly than the books of any other imaginative writer, and this is his greatness. An incomparable recorder of truth, he lacks the power of creative fancy. Also, his cold and clear illumination brings little warmth to the heart. His books describe a world with no dreams, no illusions, no lies—"a world in which the only light is relentless truth."[6]

Turning upon himself, Tolstoy, a fanatical devotee of truth, is ruthless in knowing himself thoroughly. "But self-portraiture cannot be finished once and for all to attain the finality of objective works of art."[7] And to get a true likeness we must study all his works, novels and tales and diaries and letters. He had a mania for self-revelation. His urge to self-observation begins with the dawn of consciousness and ends only on the death-bed at the age of eighty-two. He was terribly introspective. Instead of a formal autobiography, Tolstoy writes the most complete autobiographies in the complex of his works. The novels and the tales contain perfectly recognizable portraits of their author in every phase of his career (*e.g.*, Lieutenant Olenin in *The Cossacks*, Count Besuhoff in *War and Peace*, Squire Levin in *Anna Karenina*, etc.,). Unlike other artists who usually present themselves to the public in one impersonation (Shelley in Epipsychidion, Goethe in Werther, Gottfried Keller in Der Grune Heinrich, Joyce as Stephen Dedalus), Tolstoy presents himself to the public each decade in a new appearance. This and his diaries and letters leave hardly an unexplored region in the vast extent of his existence.

It was when he was verging on fifty that Tolstoy suddenly turned away from art and towards religion. This was not abnormal. Only the intensity of the process was unusual. The process itself was merely the inevitable adaptation of the bodily organism to the approach of old age. He fails to solve the mystery of life. But as an artist, he projects his own need into humanity at large, thus universalizing it. He was unable to be a pious Christian, but he succeeded in projecting questing ego into the world announcing the terrible problems which assailed it so as to serve as warning and instruction for all mankind. As the basis of his doctrine, Tolstoy selected the text "Resist not evil," expanding it 'Resist not evil by force." Denunciation of force today by Gandhiji or Rolland owes a direct inspiration to Tolstoy. By "evil" Tolstoy meant force. Force also implies possessions, ownership and a desire to own more. Thus Tolstoy declared, "Property is the root of all evil and all suffering." Force is needed to acquire, increase and to protect property. State and Church aid these activities directly. Tolstoy is thus an anarchist, and in this respect even Trotsky and Lenin have not, theoretically, advanced beyond him. Tolstoy's books shook the Tsarist, the capitalist order of Russia to its very roots, just as Rousseau's writings destroyed French monarchy. Tolstoy would have opposed Bolsheviks' methods, but he did smooth the way for the Russian revolution.

To depict the archetypal man, "whose image (often recognizably enough) is hidden away within us all, to disclose his figure as clearly as possible and as completely as possible amid the complexities of our world : this was Tolstoy's primary aim as writer, an aim that could never be fully attained, and one that was all the more heroic for that. He was able to seek out and describe Everyman thanks to the unrivalled veracity of his senses."[8] And not since Goethe has any imaginative author been as successful as Tolstoy in revealing himself and the archetypal man. "Tolstoy, the indefatigable worker is the embodiment of Everyman's will, and Tolstoy, the incomparably sincere is the embodiment of Everyman's search after knowledge and truth."[9]

Now that we have dealt with two casual instances of Stefan Zweig's art of depicting personalities, we may consider his own method of work. He was an impatient and temperamental reader, and he believed the readers of his own books to be similar to himself in this respect. Consequently, his own writings have no superfluous descriptions or unnecessary minor details which bring failure to so many authors. Usually, he would have a number of drafts of his works before submitting the final work to the publishers. In the first draft he would allow his pen to go ahead without the least possible check. However, his real work—that of sifting and condensing—would begin no sooner a fair copy of the first rough version of the final book would be ready. Unlike others who like to show off everything they know about a subject, he always aimed at know-

ing more than what he gave out in his writing. This process of eliminating everything unnecessary would be repeated twice or thrice and in the end the process would become a sort of a chase for another sentence or even a word the absence of which would increase the tempo without lessening the precision of the writing.

Any study of the life and work of a person is incomplete so long as his interests and hobbies are not included in such a study. Beginning at the age of fifteen, thanks to larger means and augmented passion, Stefan Zweig gradually succeeded in collecting manuscripts of the greatest masters of all times in their own handwriting. He began by collecting merely famous autographs. Later he went in for manuscripts—the originals of works or fragments of works—which in a way help a person to have a glimpse into the creative method of some beloved master. Then he went further. No more satisfied with having merely manuscripts pages of a poet or a composer, he began to represent each poet or a composer in his happiest creative moment, the one of the highest achievement, *i.e.,* searching not merely for the manuscript of one of a poet's poem, for example, but of one of his most beautiful poem, nay if possible, "one of those poems which from the minute that the inspiration found its first earthly realization started on its way to eternity."[10] His collection contained among other things, a leaf from Leonardo's workbook, notes in mirror-writing for sketches; Napoleon's order of the day to his soldiers at Rivoli; a complete novel in proof sheets by Balzac; a first unknown version of Nietzche's *Birth of Tragedy*; a cantata by Bach and the aria of Alceste by Gluck and one by Handel. He was also interested in collecting even the furniture of a great person. Thus he writes in his autobiography, *The World of Yesterday,* that he was able "to acquire all the remaining furniture from Beethoven's room which had been auctioned off after his death and bought by Privy Councillor Breuming."

What was the ultimate object of such specialized collection of manuscripts? It was not the sense of sheer possession that tempted him, but the love of moulding a collection into a work of art. Ultimately, he wanted to leave this entire collection to such an institution which would spend a fixed sum every year in order to further the collection in his own manner, thus making the collection a living organism. However, the events in Europe upset his ideas and part of his collection he sold, part he gave to the National Library of Vienna and the rest is almost untraceable today. After all, he well maintains, "My joy always lay in the act of creating never in what had been created. So I do not lament for what I once owned; for if we, driven and hunted in these times which are inimical to every art and every collection, were put to it to learn a new art, it would be that of parting from all that once had been our pride and our love."[11]

10. *The World of Yesterday.*
11. *Ibid.*

Stefan Zweig was of an emotional and artistic temperament. He was profoundly distressed by the disorders of our times, and was passionately anxious to pave the way to a better world. He deplored the fact that even though we have today infinitely surpassed our ancestors in technical and intellectual matters, in moral and humanitarian things, we are today worse than the most savage race of mankind. Wars without declaration of war, concentration camps, persecution, mass robbery, bombings of defenceless women and children—these and their likes have been our lot today. Like a few great contemporaries of his such as Freud, Yeats, Gorky, Joyce, Rilke, Toscanini, Anatole France, Romain Rolland, Stefan Zweig too typifies the truly great Europe—not the Europe which breeds imperialists and fascists, but the Europe of Plato and Socrates, Leonardo and Garibaldi, Wagner and Beethoven, Rousseau, Voltaire and Tolstoy.

List of books by Stefan Zweig published in English:

Verlaine: Critical biography, 1905.
Emile Verhaeren: Critical biography, 1910.
Erstes Erlebnis: Four stories of childhood, 1911.
Jermiah: Play, 1917.
Drei Meister: Balzac, Dickens, Dostoeffsky, 1920.
Der Zwang: Novelette, 1920.
Angst: Novelette, 1920.
Romain Rolland: Critical biography, 1921.
Die Augen Des Ewigen Bruders: Legend, 1922.
Amok: Novelettes, 1922.

Der Kampf Mit Dem Damon: Holderlin, Kleist, Nietzsche, 1925.

Ben Jonson's "Volpone": Play, 1926.
Die Unsichtbare Sammlung: Episode, 1927.
Der Fluchtling: Episode, 1927.
Ver Wirrung Der Gefuhle: Three novelettes, 1927.

Sternstunden Der Menschheit: Five historical minatures, 1927.

Drei Dichter Ihres Lebens: Casanova, Stendhal, Tolstoy, 1928.

Kleine Chronik: Four sketches, 1929.
Joseph Fouche: Biography, 1929.
Rahel Rechtet Mit Gott: Legend, 1930.

Die Heilung Durch Den Geist: Mesmer, Mary Baker Eddy, Freud-Biography, 1931.

Marie Antoinette: Biography, 1932.

Triumph Und Tragik Des Erasmus Von Rotterdam: Biography, 1934.

Maria Stuart: Biography, 1936.
Castellio Cecen Calvin: Biography, 1936.
Der Begrabene Leuchter: Legend, 1936.
Benmeister Der Welt: Biography, 1938.
Gesammelte Erzahlungen: Fiction.
Megellan: Biography, 1938.
Brasilien Land Der Zukunft: Travel, 1941.
Amerigo: A Comedy of Errors in History, 1942.
The World of Yesterday: Autobiography, 1942.

EGYPT AND UNITY OF THE NILE VALLEY

By P. MADHAVAN NAIR, B.A.

I

The entire range of Anglo-Egyptian political relationship is dominated by two geographical features of paramount importance, the Suez canal and the river Nile. The former constitutes a vital artery of British Imperial communications; the latter supplies the life-blood of Egypt's existence. To Britain, the safety of the Middle East and particularly Egypt which lies athwart her communications to the Far East and Australia is essential. The present conciliatory attitude of Britain in respect of her policy in the Levant and the Middle East as evidenced by her withdrawal from Syria, the formal grant of independence to Trans-Jordan, and the seeming hostility to Jewish immigration into Palestine is a welcome prelude to the impending Anglo-Egyptian negotiations.

Egypt is a mixture of reaction and progress, poverty and prosperity, of the East and West, of the ancient and the modern. Physically it pursates with life, activity and colour in the Nile valley and delta and looks barren, monotonous and lifeless in the inhospitable and scorched wastes of the Sahara and Nubia. Egypt enjoys a unique position in the modern world being strategically situated at the meeting point of two continents, Asia and Africa, as well as of the two seas, the Mediterranean and the Red Sea. She is outside Asia and yet part of it and is for all practical purposes an oriental country.

The Suez Canal and Egypt

Egypt's strategic position has been enormously magnified ever since the cutting of the isthmus of Suez, that narrow neck of land which united Africa with Asia, and the opening of the great international highway, the Suez Canal—the product of the genius of Ferdinand de Lesseps. The importance of the Suez waterway can scarcely be minimised for this great artery of trade has cut short enormously the distance between Western Europe and India and countries of the Far East and Australia. Thanks to the Canal, Egypt has now attained a position of international importance. The Canal has brought in its train both evils as well as benefits to Egypt. She now lies at the cross-road of the world's trans-oceanic and trans-continental commerce. The proximity to this strategic highway has given Egypt great political and military significance for she commands and guards the Suez Canal and the routes leading thereto. Consequently she has been a prey to the clash of imperial interests. The British consider the Suez Canal as a vital link in the greatest sea route which connects the scattered parts of their Empire over which they boast, the sun never sets and want to ensure its security by retaining their military and political foothold in Egypt. To Britain, the security of Egypt and the Canal zone is a very vital concern which dominates her policy in the Near and Middle East. Egypt urges the evacuation of British troops not only on grounds of political prestige alone, as is commonly supposed, but also because of the intriguing supervisory influence which the presence of the British Army in Cairo exerts on her international politics and equilibrium, her foreign policy and sovereign status. The political agony of Egypt is likely to be prolonged until the day her aerial navigation and commerce assumes a preponderant influence.

Egypt Versus the Arab World

Egypt lies in the centre of the Arab World, midway between the colourful land of Morocco, the garden of North Africa, in the west and the ancient and picturesque oil-land of Iraq in the east. She is the premier State of Arabism politically, economically and culturally. She has a bigger population and her economic resources are vastly superior to that of any other Arab State, Syria, Lebanon, Trans-Jordan, Iraq, Yemen or even Saudi-Arabia. Further, Egypt has an enterprising and industrious population politically conscious and fully alive to its great and hoary past. The people of most other Arab States, except perhaps that of the young republics of Syria and Lebanon, are still in their political infancy, are strongly conservative in outlook and are mostly nomads wandering about with their 'ship of the desert,' the camel, and carrying on a little trade in dates, hides and textiles, which are directly the result of their geographical environment. Egypt has a powerful and influential press and the activities of its agitators and the student community are well-known and hardly need any reference.

Egyptian Culture and Civilisation

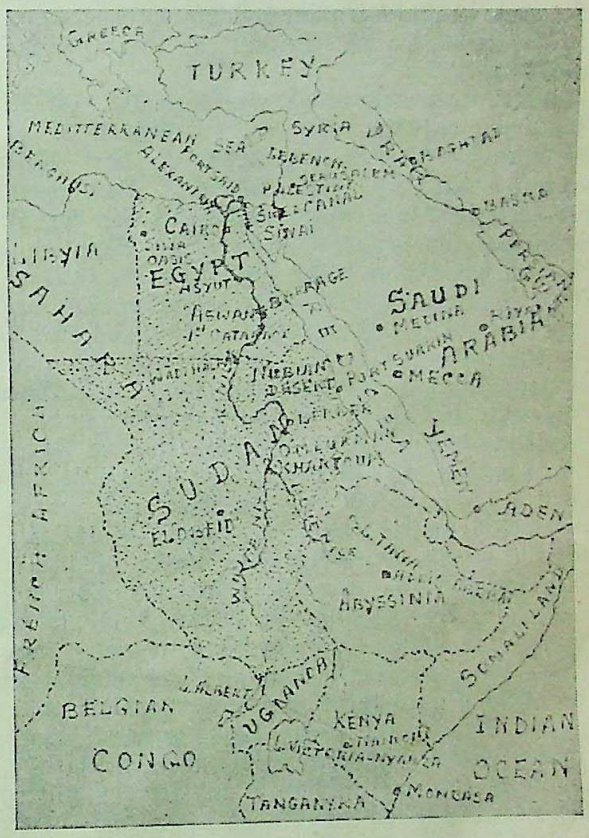
The land of the Pharaohs was the seat of a great and ancient civilisation and the massive pyramids, the one of the world's wonders, and the brooding sphinx bear testimony to its virile and fascinating past. The Egyptians knew the arts of agriculture, architecture, astronomy, etc., before any other people and their civilisation is very ancient and wonderful, dating back to at least 40 centuries before Christ. She is the chief seat of Koranic and Arab learning and the ancient and celebrated University of El Azhar and the modern University of El Faud are among the most important and influential in the Arab world. El Azhar especially is the seminary of Islamic culture, the glory of a thousand years, holding aloft the torch of Arab learning.

The Arab League

The above facts would make it clear that Egypt enjoys a unique and special position among the countries of the Near and Middle East and there is no doubt that she is the leading state in the Arab world. Hence we witness the appearance of Egypt in the foreground of the Arab League, which is working for the formation federation of all the Arab States. The League represents upwards of 40 million people in the various countries of the Near and Middle East and has been formed with the object of safeguarding their common interests and independence. It is a new factor of great significance in international politics and under its energetic Secretary General Azzam Bey has become a force to reckon with in the politics and strategy of the Middle

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



and Near East. Further, behind the Arab League is ranged Muslim opinion in other countries. The League's anti-Zionist and anti-French feeling has been taken into account by Britain in determining her policy in the Levant and Palestine.

The Arab States have recognised the leadership of Egypt in the League they have formed and Egyptians themselves know full well that considerable prestige would accrue to them for taking this interest in their common future. Even King Ibn Saud, the powerful and august ruler of Saudi Arabia, in which are situated the holy places of Mecca and Medina, responds to the call of Arab brotherhood and is one of the greatest champions of the Arab federation. The necessity for such a federation is obvious, for the Arab States situated as they are in the fertile oil-lands of the Near and Middle East are a prey to the conflicting ambitions of rival Powers and jealous imperialists who are always on the look-out for oil concessions, special privileges, spheres of influence and extra-territorial rights, by whatever name we may call it. Economic values take precedence over political values and therefore progressive Arab politicians devote much thought to the economic and cultural aspects of the Arab federation, like removal of customs barriers and passport restrictions, the establishment of a uniform educational system and type of learning. It is only after such an economic and cultural basement has been laid, will it be possible to guage the prospects of an enduring Arab federation or confederation. The coping stone of the scheme of Arab unity includes military alliances between Arab States.

The concept of Arab unity is not a new thing and was always on the horizon ever since the Holy Prophet Mohammad united the Arabic-speaking peoples with the message of Islam, and was imperfectly realised under the Ottoman Empire. In spite of serious obstacles, internal and external, the Arab dream and goal of unity have persisted through the centuries and have been partially achieved by the establishment of the Arab League during the last War, though seemingly under British inspiration. The process, however, has been accelerated in recent years by force of circumstances and dread of possible dangers like the Axis threat to the Middle East in the last war, etc. Nevertheless the League is a triumph of Arab diplomacy, foresight and solidarity. It will be a still greater triumph for the Arab people's genius for organisation, united endeavour and statesmenship if their defensive union becomes a reality in fact and can endure all possible trials and tribulations which it may have to face in the difficult times ahead.

Historical Background

Though Egypt was a prey to European intrigue and suffered from the dreadful effects and hampering influence of the vile 'Capitulations'* and the most galling fetters of internationalism, from which she suffers even today, she now stands as a united and compact state, politically wide awake and fully alive to her past glory and future greatness. After various vicissitudes of fortune under the Pharaohs, Ptolemies, Romans, Saracens, Mamelukes and Ottomans she entered upon the nineteenth century exhausted and spent, with her learning and culture nearly extinguished. The foundations of the Khedivial dynasty was laid by an able Turk, Mohammed Ali who ruled from 1805-1849 and after his death Egypt again plunged into a hotbed of misrule and corruption, intrigue and financial chaos, which paved the way for the beginnings of European control. The Napoleonic occupation of Egypt, though shortlived, had sowed the seeds of French influence in Egypt and the Middle East. The Suez Canal was opened in 1869 due to French enterprise.

Egypt and the Sudan

The purchase of the Khedive's shares in the Suez Canal Co., by the astute 'Jew' Benjamin Disraeli, the famous Earl of Beaconsfield, was a master-stroke. Ismail the Khedive is reported to have said, "This is the best investment for England and the worst one for us." As a result of this transaction Britain came to have a controlling interest in Egypt which further gave her the excuse for actively interfering in Egyptian politics. For a time co-operation between France and Britain was tried in Egypt, but compromise between the two rival powers was found to be difficult and the dual control, which incidentally was ruining the country, cracked beneath the weight of a variety of reasons especially financial instability and misrule, the Arabi rebellion and the fanatical Mahdist revolt in the Sudan. The people were discontended and Colonel Ahmed Arabi became their leader and virtual ruler of the country with the army at his back. The Arabi rebellion having been ruthlessly suppressed British ascendancy became an established fact in Egypt and ignoring the nominal suzerainty of the Turkish Sultan a virtual British protectorate was instituted over Egypt, and

* Concessions and privileges granted by the Khedive to Europeans wishing to reside and trade in the country. They were grossly abused, and they seriously retarded Egyptian progress.

Cromer and others did the rest by ruling her with an iron hand beneath the velvet glove. Peace and order was restored by the British, "the race against bankruptcy" was intensified and irrigation received attention, though "education remained the Cinderella of the State," miserably neglected. Other reforms introduced by the British include the suppression of the "three C's", corruption, the notorious corvee and the dreaded 'courbash'. In spite of plenty of room for criticism, the fact remains that the British did something for the economic and social regeneration of Egypt. The Sudan was reconquerred from the Mahdi and by the treaty of 1899 France made her exit from the Nile Valley for good and an Anglo-Egyptian condominium was declared over the Sudan with Britain as the predominant power.

The Protectorate which was formally established over Egypt only in 1914 was abolished after the termination of the War in 1922. A new Egyptian constitution with a King, bicameral Parliament and Cabinet of Ministers was promulgated and Egypt was declared an 'independent' country. An Egyptian kingdom thus came into being under British tutelage in which the monarch exercised absolute powers and the theory that the power vests in the King and Parliament was found to be a constitutional fiction. This constitutional advance did not satisfy the Egyptian nationalists in the least and the lot of the 'fellaheen', as the bulk of the hardworking agricultural population of Egypt are called, remained as pitiable as ever with little hope of emancipation. Agitation therefore grew apace and it was after many years of ceaseless struggle, confusion and tension that the Anglo-Egyptian treaty of 1936 was signed, which while recognising Egypt's independence provided for the retention of British forces in Egypt ostensibly for strategic purposes and to ensure imperial interests and conveniently left the Condominium Agreement of 1899 over the Sudan severely alone and undisturbed. But by the treaty Egypt secured a measure of independence, integrity, international status and recognition. Her foreign policy and defence still continued to be controlled by an alien power and the treaty was obviously a onesided affair.

Ever since the Wafdists, the premier nationalist party in Egypt under its leader Mustapha Nahas Pasha, the successor of the famous Zaghlul, concluded this treaty there has been continuous agitation for its revision on the basis of equality and reciprocity and the recognition of Egypt's predominant interest in the Sudan which controls the headwaters of the Nile, the life-giving river of Egypt. The Egyptians want to annul this onesided treaty and do away with the special privileges of Britain and the establishment of a fully-sovereign Egyptian State. They are, therefore, clamouring for the withdrawal of British troops from their soil. The British now seem to be and have been balancing the king, the vested interests and the so-called 'liberals,' of whom Ismail Sidky the strong man is typical, against the forces of Egyptian nationalism which is ardently desirous of coming to a peaceful and honourable settlement with Britain.

Irrigation in Egypt

The importance of irrigation to the prosperity of a country like Egypt where "the struggle for water" is so keen cannot be over-emphasized. It is one of the major concerns of the State, for the whole of Egypt except the Nile Valley and Delta and a few oases form part of the vast and rainless Sahara. The very life of Egypt depends on its irrigation. Irrigation is also more important in India where it is an insurance against drought and famine. The desert soil is intrinsically fertile and only needs water for sustenance of life and farming purposes. This is as true of Egypt as of extensive areas in Sind and even of vast arid tracts in eastern Australia, notably in Queensland, where a marvellous transformation has been wrought by the construction of what are called Artesian wells. Under Mussolini the Italian colonists dug bore wells on the coast of Libya and the result was that excellent orchards and farms came into existence. It is common knowledge that where there is sufficient supply of water in a desert either by natural springs or otherwise, fertile spots humming with activity occur which are called oases. There are a few such oases in Egypt like Siwa, Farafara, etc. The camel caravan rests under the shade of the date palm in the oasis after an arduous and fatiguing journey under the burning sun and while quenching their thirst heartily thanks Allah for being at least so much kind and bountiful to them. The desert caravan sighs with immense relief and high glee at the sight of a genuine water spot, as most often they are sadly disillusioned and cruelly disappointed by phantom lakes and ponds which lure them on and on to the unreal haze of the mirage—an interesting phenomenon frequently seen in the desert.

In the case of Sind and Egypt huge irrigation projects, the famous Sukkur barrage in the former and the great Aswan barrage and other barrages, notably the one just below Cairo, in the latter have transformed tens of thousands of acres of arid waste into flourishing agricultural land. The control of the flood waters of the Nile was really a stupendous problem. But modern engineering skill came to the rescue and by means of reservoirs especially the one at Aswan, opened in 1902, one of the greatest of the world's irrigation enterprises, the turbulent and colossal waters of the Nile have been controlled and diverted by means of channels and water-courses to irrigate the scorched wastes of Egypt. No wonder smiling wheat-lands and cotton-fields came into existence in place of the barren desert. Father Nile has showered his bounties on Egypt liberally and without its life-giving waters Egypt would have been a parched desert like the rest of the Sahara. Lord Milner once said, "Egypt as a geographical expression is two things—the desert and the Nile." It is in fact the gift of the great river.

The Nile Valley and Delta

Though the area of Egypt is over 3,50,000 square miles the inhabited portion and the economically important part is the valley of the Nile and its delta. The Nile valley stretches like a narrow ribbon a few miles wide on the average, from Khartoum in the Sudan to the delta. The delta is more spacious and is more than 150 miles wide at the river's mouth. The fertile and developed area of Egypt is only about 14,000 sq. miles. Beyond a few miles on either side of the river, except where the land receives the benefits of irrigation, it is all a chaos of sand dunes, bare rocks and barren hills with its cactus and mimosa thorn, over which the 'Khamsin' exhibits its wild and boisterous fury. The Nile valley is so very fertile that in ancient times it was considered as one of the granaries of Imperial Rome and rival powers had fought for the corn of Egypt.

The Economy of Egypt

The economic significance of the Nile valley and delta and the importance of irrigation in Egyptian national economy has already been alluded to and stressed. Egypt is essentially an agricultural country and the Egyptians have always been great agriculturists. The country is potentially rich and prosperous. Agriculture is gaining more and more in importance with the expansion of irrigation and settled cultivation. The 'basin system' of irrigation in vogue in Egypt a few decades ago has now been supplanted by 'perennial' irrigation, thanks to modern engineering skill. The rich alluvial deposits and mineral matter brought down by the Nile from the Abyssinian highlands and equatorial Africa have ensured the fertility and wealth of Egypt. Wheat and barley are the main winter crops. Rice, sugarcane, maize, millets and fruits, chiefly dates are extensively cultivated. But the pivot round which the economy of Egypt turns is cotton. A great cotton crop is raised and Egyptian cotton is reputed to be of good quality being second only to that of Sea Island cotton and far superior to the Indian variety and is in great demand.

Egypt is deficient in her mineral wealth. She possesses a little iron, oil, salt, etc., but only a statewide mineral survey can reveal her actual resources. There is great scope for the development of water power from the huge irrigation projects which will be essential in any scheme for the development of manufacturing industries. Small industries especially in textiles, sugar refining, tobacco, leather-tanning, etc., have grown up in recent years. The Egyptian pottery industry is one of the most important. There is great scope for the development of industries especially in textiles in the future.

The resources of Egypt as yet unexploited include tens of thousands of acres of arid but potentially fertile areas still awaiting irrigation and development. Another enormous potentiality is the Suez Canal, now controlled by a private Company in which the British Government holds the largest number of shares bringing in a fat yearly dividend to the British Exchequer. The Company's concession terminates in 1968 and if it is not extended then the canal will become the property of Egypt. It will be a welcome windfall but it may also bring in its train heavy responsibilities and complications. The maritime powers of Europe especially Great Britain would, no doubt, press for the reduction of the heavy transit duties now in force and would insist on substantial guarantees providing for the defence and neutrality of the canal. From the strictly economic point of view the unity of the Nile valley would seem to be necessary to Egypt as her lack of raw materials, minerals, etc., can be made up to a considerable extent by the incorporation of the intrinsically rich Sudan. This aspect of the question is discussed elsewhere in this article.

The People and Their Occupations

The population of Egypt is about fourteen million of which about twelve million are Muhammedans, about a million Egyptian Christians, generally called Copts and under a million Jews, Sudanese, Bedouins and other races of whom the vast majority are illiterate. The population is congregated in the Nile valley and delta with which the whole economic life of the country is inseparably linked. If the desert regions be excluded the population of Egypt is very dense. The Muslim and the Copt live side by side in peace and the savage intolerance of the past has departed. The Muslim invokes the name of the Almighty in the Mosque, the Copt in the Church, otherwise the two are hardly distinguishable. In the villages especially "the Crescent and the Cross, the Mosque and the Monastery have stood peacefully side by side for many a long year." The thin and wiry Bedouins, "the people of the tent," a nomadic race, dwell on the outskirts of the valley and in the oasis of the desert to the west and east of the Nile, eking out a bare existence on their camels and dates.

Life in the village is simple and almost primitive, though in the big cities of Cairo, the capital, Alexandria, the chief port, Port Said, a great coaling station and other places, the standard of living of the inhabitants is far higher. Houses except in the big cities are mostly made of sun-dried bricks. The condition of the 'fellaheen', who are the true descendants of the ancient Egyptians, though unenviable is slowly but steadily improving. The Pashas and Sheiks or reactionary landlords, the same type as the Zemindars in India, retard the economic emancipation of this down-trodden and much exploited people through the centuries. Nevertheless in spite of the conservatism of the Egyptian, Egypt is, not stationary but changing, and those who think otherwise deceive themselves.

The chief occupation of the people is agriculture. A good number are engaged in trade and commerce. Industries are slowly developing and are likely to become more and more important in the future. Egypt has a good railway system connecting Wadi Haifa and Assuan (Aswan) in the South with the busy ports and cities of the delta. A brisk trade is carried on between the Sudan and Egypt by the Nile steamer and by railway.

II

The Sudan and the Nile

The Sudan or the Anglo-Egyptian Sudan as it is called is of special significance to Egypt and the Egyptian. The Sudan and Egypt lie contiguous to each other and are conterminous and indivisible from the point of view of the Egyptian. Above all the life-giving river of Egypt, the Nile, flows through the Sudan. Egyptian politicians miss no opportunity to emphasize the essential unity of the Nile valley. They assert that Egypt needs the Sudan and Sudan needs Egypt. Their concern is chiefly with the Nile waters, with their security and control in all circumstances.

The Nile is one of the greatest and longest rivers in the world. which takes its rise from some of the fascinating lakes of equatorial Africa, especially the Victoria-Nyanza, the great African inland sea and the picturesque lake Tsana perched amongst the lofty Abyssinian highlands, over which Emperor Haile Selassie, the erstwhile refugee potentate in London, claims dominion. The Blue and White Niles fed by other tributaries join together near Khartoum and flowing through the Sudan and Egypt empty into the Mediterranean Sea. The Nile is navigable except at a few points where there are 'cataracts' or rapids and here transhipment of cargoes is necessary, though of late this hindrance has been largely overcome by means of canals, etc. It is a great artery of inland communication in Egypt and the Sudan and in spite of the competing railways it remains the more economical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

means of transport and numerous steamers ply on its waters day in and day out carrying produce to and from the different towns on its banks.

The Nile is the only source of pure water for rainless Egypt. Virtually it is the jugular vein of Egypt, its sole means of existence. The Nile quenches the thirst of the parched sands of Egypt. Egypt without the Nile is inconceivable and once this only source of fresh water supply is cut she will soon be transformed into a veritable desert in spite of herself, and even the vestiges of life will disappear from its soil. Father Nile is, therefore, dearest to the Egyptian : it is the life-heart of Egypt. Control of the Sudan would give Egypt control over the waters of the Nile. If a hostile power in control of the Sudan diverts or prevents the free flow of the waters of this great river, it would have calamitous repurcussions on Egypt immediately. Though such a contingency can never reasonably be presumed to occur, its possibility cannot be ruled out for all time, and, in any case the natural apprehension and desire of the Egyptians as regards security of the Nile waters would seem to deserve sympathy and consideration. This factor must be borne in mind in any discussion and determination of the status of the Sudan.

Economic and Other Aspects of Unity

The acquisition of the potentially rich Sudan, which may for all practical purposes be considered as the *hinterland of Egypt,* would go a long way in strengthening the economy and in the making of the future industrial structure of Egypt. The industrial and economic development of Egypt would only be a matter of time if the Sudan is added on to her. From this rich region with its wealth of raw materials and natural resources Egypt would be vastly benefited. The expanding needs of an industrial society can be met by a developed Sudan. It is clear, therefore, that the cry for the unity of the Nile valley is based on economic considerations as well though, it is often asserted that only the anxiety to ensure the safety of the Nile waters is the sole and compelling factor.

It is obvious that economic, political and military considerations all play an important part in the shaping of this demand. *The unity of the Nile valley or control over the Nile waters means in effect the union of the Sudan with Egypt.* Such a union would give great political prestige and importance to Egypt as she would then become one of the biggest States of the world. Her dominions would be so enormously extended as to make it a problem in the matter of defence. It may well prove a liability and strain on the Egyptian State and Exchequer at this stage. But Egypt would become one of the largest countries of the world and her economic resources are bound to be augmented immensely, sooner or later. It will further unite the Arabs of the Nile valley and the dense population of the Nile delta will have ample scope for expansion and development. One would sometimes pause and wonder if the Egyptians are not really ambitious in claiming such a vast and rich territory like the Sudan on the pretext of the security of the Nile waters. But nevertheless, it is equally obvious that Egypt has a better right to the Sudan than any other Power except the Sudanese themselves.

Sudan—A Promising Region

The most striking feature about the Sudan is that it offers a variety of climate, scenery and natural vegetation. It is rich in natural resources and raw materials, especially in her forest wealth in the equatorial forests of the south, with its ebony, acajou, mahogany, bamboo, etc. The rich Savanna region of the central Sudan contains enormous tracts of pasture land, arable land and excellent pasture land. The great north African Savanna or tropical grassland region which lies south of the hot desert of the Sahara and north of the equatorial region and extending from the Abyssinian highlands in the east to Gambia and Senegal in the west, is generally referred to in Geography books as the 'Sudan.' But here we are concerned only with the political entity called the Anglo-Egyptian Sudan or simply with the Sudan. With the development of irrigation and with an industrious and larger population the Sudan can become a great producer of food-stuffs and raw materials especially cotton, rubber, etc. Though much of northern Sudan is arid desert and a large area in southern Sudan marshy and covered with tropical jungle, the vast stretches of fertile savanna lying between the two and well-suited to agriculture and stock raising is really a region of great promise. The chief commercial crop is cotton and it is grown extensively. Millets, dates, maize, groundnuts and other food crops are also produced. There are thousands of acres that yield and thousands of acres more that will, when properly irrigated, yield valuable crops especially cotton. The Sudan possesses large numbers of domestic animals, namely, sheep and cattle and there is an abundance of wild game, such as the elephant, antelope, giraffe, etc., in the parklands of the savanna and in the tropical forests. In the semi-arid regions of northern and central Sudan sheep and cattle rearing are profitable occupations. Sudan supplies much of the beef cattle needed by Egypt. She is also a great producer of gum arabic, ivory, hides and skins, ostrich feathers, etc. Copper, gold, salt and other minerals are utilised.

The Sudan is at present mainly a pastoral country while Egypt is primarily an agricultural country. The most fertile and well-watered area in the Sudan is the region lying between the White and Blue Niles, thanks to the facilities afforded by the Sennar Dam across the Blue Nile. Cotton and food crops are produced by a more or less settled African population who have come to appreciate the benefits of settled agriculture. Khartoum, the capital of the Sudan, has direct communications with Cairo and Alexandria, a distance of about 1,400 miles, by rail and river. Many railway lines have been built lately in the Sudan in order to open up and exploit the country.

The Sudan is governed by a British Governor-General with his headquarters at Khartoum. The country is divided into fourteen provinces and each is administered by a British Commissioner who "has practically a free hand" within his sphere of authority. The Sudan which was the happy hunting ground of Arab slave traders in the nineteenth century, first came under British influence in the second half of the nineteenth century ; but was temporarily lost as a result of the Mahdi rebellion. Mahdism triumphed and the fanatics killed Gordon, the Governor-General of the Sudan, and Egypt herself was seriously threatened. In 1898 Lord Kitchener retrieved British prestige by defeating the Mahdi's successor in the decisive battle of Omdurman. It was a memorable battle for the Dervish army was a magnificent force—superb in its courage, devotion to duty and contempt of death. Even the natural heroic, almost reckless bravery of the Dervishes in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...ave of a rain of shot and shell from British rifles and ...ans was of no avail and Omdurman, the greatest native city in Africa and capital of Mahdism fell to the victors and with it fell the short-lived Mahdi Empire. Khartoum was entered and soon the Sudan lay prostrate. In this reconquest of the Sudan Egyptian soldiers played a prominent part. Cromer himself says, "It is true that the Egyptian treasury had borne the greater portion of the cost of the campaign and Egyptian troops, officered, however, by Englishmen, had taken a very honourable part in the campaign." It was really a composite army which did the job and the part played by Egypt has been urged as one of the grounds for her claims over the Sudan. "Further, it has been proved especially in the last century that the affairs of the Sudan exercised a very important influence on the course of events in Egypt." Without doubt a disturbed and hostile Sudan would be a menace to Egypt in more ways than one. The British stamped out slave traffic in the Sudan and gave her some sort of Government and did a little to promote irrigation and communications. This huge region, which is as large as British India and potentially rich, and blessed with its wealth of natural resources, is one of the most promising regions of the world but only if it is properly developed.

The Sudanese and Union With Egypt

A considerable number of the Sudanese are Arabs and profess Islam. This is especially so in the northern Sudan, where the Muslims form the bulk of the population. It is understandable that Egyptians should desire union with their Arabicized brethren in the northern Sudan. Yet union with the northern Sudan alone is not likely to satisfy Egyptian aspirations, for they would soon raise the plea that the headwaters of the Nile are in the southern Sudan. Cromer says that "the effective control of the waters of the Nile from the equatorial lakes to the sea is essential to the existence of Egypt." Nevertheless the unity of the entire Nile valley here and now does not seem to be feasible and it has to come necessarily by stages. In the central and southern Sudan the vast majority of the people are Negroes. They do not profess Muhammadanism and are mostly heathen. They comprise many tribes like the Shilluks, Dinkas, Nuers, and are very backward and lazy, though in recent years, a few of them have taken to settled agriculture with the facilities afforded by the Sennar Dam and other irrigation enterprises sponsored by the British Sudan with a view to exploit the country. "In contrast with the Egyptians, a most industrious race, the Sudanese tribes, both Arab and Negro, are as a general rule indolent." The chief occupations of the Negroes are cattle rearing, hunting and collecting. Further, the tribes from the north and south had in the last century carried on slave traffic in the southern Sudan and this has rendered them odious to the Negro inhabitants. It is, therefore, debatable whether the Sudanese would willingly acquiesce in the demand for the unity of the Nile valley at present and that they really desire to merge with their far advanced neighbours.

The Sudan and Egyptian Questions Discussed

The Sudan is a very vast territory about a million square miles in area but having only a population of about millions, which is sparse when compared to Egypt. The defence and speedy development of so backward a territory would be well-nigh impossible for the Egyptian state for some time to come with its present population, economic resources, technical skill and military prowess. Further, the Africans in the central and southern Sudan are in a low stage of development so as to make it extremely improbable whether the Negroes will benefit in any substantial measure by political union or fusion with Egypt at this stage. When the Sudanese Negro too becomes at least moderately civilized and advanced the option of becoming citizens of a Greater Egypt may be left to them to decide, especially since they are non-Muslims and belong to an entirely different race, having little or nothing in common with the Egyptians. At present it would neither be just nor sufficiently advantageous to hand over these utterly backward people to the tender mercies of the far-advanced Egyptians. The duty of Britain in the circumstances would seem to be the speedy development of the country and the advancement of the Sudanese economically, educationally and politically so as to make them fit for enjoying a political partnership and union with Egypt, which is visualised as the final and ultimate goal. But any Egyptian demand for the northern Sudan especially north of Khartoum, and the scrapping of the artificial boundary, would be more weighty and feasible. Further, Egypt's paramount interests in the Sudan must be recognised and she must be admitted as an active partner in the governance of the Sudan, which alone would give her an opportunity of vindicating her oft-repeated protestations for the welfare of the Sudanese. The Condominium Agreement of 1899 should be ended as early as possible or within a fixed time limit. This coupled with the withdrawal of British forces to the Canal zone or the Sinai peninsula, as the case may be and the recognition of the complete sovereignty of Egypt both in internal and external affairs, would seem to satisfy the legitimate national aspirations of the Egyptian people. It is more than probable that Britain would assume to herself the responsibility for the defence and security of the Canal in partnership with Egypt or alone, in the former case as the predominant power. The British barracks in Cairo and Alexandria would be shifted to the Canal zone or Sinai where Egypt may be approached to grant bases to her.

The vulnerability and strategic importance of the Canal from a military point of view was demonstrated by the Axis threat to Egypt in the last war. It was a stupendous task indeed to roll back the "Afrika Corps" under its indomitable General, Rommel, beyond the borders of Egypt, but El Alamien sealed the fate of Hitler's dream of a Middle East Empire and the battle proved decisive. The Italian and Axis menace to her security, though over, had made Egyptians realise the necessity for a strong and sovereign Egypt to ward off all future attacks and assure her security. This coupled with the fact that neutral Egypt was transformed into a great military base in the last war without her consent have accelerated the Egyptian clamour for the withdrawal of British troops from her territory. The disposition of strong military units in the Canal zone or Sinai with military and air bases in Palestine, which has been turned into a virtual military arsenal, due to the ill-advised Jewish immigration agitation and Arab resistance, to fall back upon in the event of emergency, would sound a safe strategy for Britain in the Near and Middle East. But nobody knows for how long Palestine will remain a British mandate, torn by internal *hara kiri* and communal strike. Nevertheless this

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

may well prove an acceptable *via media* in the circumstances, especially in view of the clash of the very vital interests of both powers, Britain and Egypt. Such an amicable settlement of the Egyptian question can be followed up by a mutual friendly alliance between Egypt and Britain. A British Mission headed by no less a personality than Earnest Bevin with a full complement of notable Service Chiefs including Lord Stansgate, the Secretary of State for Air, as members have gone to Egypt to explore the possibilities of settling the Egyptian question satisfactorily.

From all appearances it does not seem to be likely that Britain would allow her paramount interests in the Canal zone to be waived or minimised or divest herself of the responsibility for the defence and safety of the Canal in favour of Egypt or any other Power. Imperialist Britain will not allow the Canal being put under international control as in the case of Tangier, where the recent entry of Russia as a partner has very much intrigued her. Her foremost concern would be to safeguard her vital imperial communications to the Far East and Australia, etc., and the security of Egypt and the Middle East from extraneous influences. Neither is it possible that John Bull intends to walk straightway from the Sudan, which is likely to remain a thorny problem. Her policy would seem to be the development and exploitation of the Sudan, while at the same time maintaining friendly relations with Egypt, reconciling herself as much as possible with the Egyptian demand for the unity of the Nile valley or the fusion of the Sudan with Egypt.

The question of the Unity of the Nile Valley or the Sudan Question ranks with the problem of the strategic defence of the Suez Canal as burning issues in which Egyptian national interests, prestige and ambition are equally involved. The British and Egyptian points of view will be one of great divergence. But with sufficient goodwill, tolerance and earnestness on both sides there is no reason why the crucial questions should not be satisfactorily and amicably settled and Anglo-Egyptian co-operation established on a friendly and lasting basis, which will be in the common interests of both Egypt and Britain.

———:O:———

THE PRESENT PLIGHT OF PHILOSOPHY IN INDIA

By Prof. RASVIHARY DAS, M.A., Ph.D.

It is sometimes said that India is a land of philosophers. The statement is not certainly literally true, if it means that every individual Indian is a philosopher or even that a majority of Indians are greatly interested in abstract philosophical questions. But I believe there is a sense in which India may be rightly called a land of philosophers—a sense in which it cannot be called a land of scientists or artists. If we consider the cultural activities of educated Indians throughout their recorded history, even up to the end of the Mahommedan rule, we find unmistakable evidence of their singular concentration on philosophical problems, and we cannot fail to be struck by the massive output of their work in this field, distinguished alike by the wealth and variety of their ideas and by the metaphysical depth and logical rigour of their thoughts. There have been so many thinkers of diverse schools, having really first-class work to their credit. Some of them have left us systems of thought which even today appear very remarkable for the boldness of their conceptions. Whatever else India may or may not have achieved in the past, the record of its philosophical work is glorious indeed. It is not too much to say that the whole of our cultural life was distinguished by a strong and robust philosophic vein. It is not true that there were no scientists or artists in India, but it is certainly true that they were not as numerous or as prominent as the philosophers.

But all this was in the past. What is our present record? I am ashamed to confess that it is extremely depressing.

We continued our philosophic activities right up to the last days of the Mahommedan rule. True, much of it latterly tended to become merely scholastic in character. But still many highly intelligent people took lively interest in abstract logical and philosophical questions, and were greatly concerned about their philosophical ideas. But do we really care for any philosophical ideas now? I doubt very much.

When, with the coming of the English into India, the Western culture made contact with our mind, we felt for a time dizzy. When the state of confusion passed away, we found that we were faced with something which we could not easily accept or reject. We had something of our own which would not easily fuse with the alien thing that pressed against our soul with the conquering might of our rulers at its back. Some of us then disowned their ancient heritage and went wholly over to the other side. They became completely Westernised in their thoughts and ideas. As our culture had some vitality in it, this could not happen to any very large extent. Many, as a reaction against Western ideas, clung ever more tenaciously to our old-time notions. But as English education made steady progress in the country, some compromise seemed inevitable between old India and modern Europe and, as a result, we have now a steady flow of spiritual hybrids coming out of our schools and colleges every year. No synthesis is effected between our old social and religious ideas and the ideas derived from our study of Western science, history and literature, between our old traditions and modern instruction. Our religious, social and domestic life is dominated by ideas derived from our ancient past and we also carry about notions with us which originated with the Renaissance and the Reformation in Western Europe. Just as we go in boots and trousers to work in an office and on our return home again slip into our old Indian costume, so we profess Western ideas in our class-rooms and lecture-halls, but are content to regulate our social and domestic life in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

our old Indian way. There is no question here as to which of the ideas, Indian or European, are truer or more valuable. We merely point to a division in our mental life which no careful observer can easily miss. It can be safely asserted that nothing great or valuable can come out of a mind which is thus divided against itself. No wonder then that the Indian mind now is so singularly sterile in the field of ideas.

Our activity, of late, in the field of literature has no doubt been very much stimulated; but I do not know if we have in the modern period achieved anything which will last through time.

We are probably doing better in science. But science is a highly specialised activity of the human mind, and although the great cultural value of scientific work in its highest form can never be denied,—of science pursued for its own sake, for the knowledge and understanding of the reality which surrounds us on all sides,—yet science, when it is cultivated purely with a view to obtaining some material advantage out of it, science which makes such irresistible appeal to industrialists and militarists cannot surely rank very high in the scale of cultural values. At all events, scientific work does not engage our whole mind or personality; we pursue it with our intellect alone, and our volitions and emotions have scarcely any part to play in it. We do not react to a scientific problem with our whole being, but only with our intellect. It is otherwise with any artistic, literary or philosophic work, in which all the resources of our mind have to be engaged if we are to achieve anything effective and satisfactory. In this kind of work the wholeness of the mind that goes into operation is a necessary condition of success, in a sense in which it is not so necessary in purely scientific work. It is probably because of this that we have been able to do something in science even with a divided mind, with a spiritual division in our inner being, while we have remained so far absolutely barren in the field of philosophy.

During the time we have been having the benefit of Western education, no new theory or fruitful idea in philosophy can be laid to the credit of the Indian mind. Even in America, which no one will claim to be a land of philosophers and which is not particularly noted for any cultural innovations, we have seen the rise (and, probably, fall) of such novel theories as Pragmatism, Behaviourism, etc. In a country of common sense like England, there is no lack of evidence for bold and powerful speculation in the higher regions of metaphysics. Italy and France have made their valuable contributions. It is not necessary here to refer to Germany which since Kant's time has more than maintained its claim to leadership in European thought. There seems no end to the new and fruitful ideas—to the systems and schools of thought—that are ever cropping up in this fateful land. But what is the record of India in this period, of the so-called land of philosophers? As far as one can see, it is perfectly clean, being absolutely blank.

Philosophy is born of a self-conscious activity of the spirit; it represents the reaction of our whole personality to the great problems of life and the world. But when there is a spiritual discord within our own self, when really we are not of one mind, we can but weakly react to the great spiritual problems which face us in life, and the result of our spiritual activity is bound to be very disappointing. It seems we are not now possessed of our own self and are thus utterly incapacitated for the kind of spiritual activity which produces living philosophy.

There are any number of professors of philosophy in this country, but there are, with one or two notable exceptions, no philosophers. It is no exaggeration to say that real philosophical thinking has become very rare indeed. With the best of our efforts we succeed merely in echoing faintly some philosophical thoughts that have once been actually thought at Berlin or Oxford. We seem merely to learn laboriously some words and phrases current in western philosophical literature and repeat them to our students. We do not think for ourselves and do not teach our students how to think, and the result has been disastrous.

Even our students seem to have seen through the sham thing we offer in the name of philosophy. They do not, therefore, come to our classes, with the result that many colleges, even Government colleges, *e.g.*, in Bombay and Madras Presidencies, have ceased to teach philosophy as a college subject. We sometimes hear of certain universities contemplating to close down their departments of philosophy. Such indifference to philosophy, to the great problems of life and conduct, cannot bespeak, in my opinion, any very sane or healthy state of our national mind.

However, I believe this indifference is only apparent and not real. If we could offer real philosophy, there would be no dearth of students to take it up in this country at least. In the present state of affairs, our professors of philosophy do not, as a rule, discuss in the class any real problems which have seriously troubled them in their life nor do they offer in their lectures any solution to the problems which assail the minds of their students. The inevitable result is that our professors, not being themselves seriously interested in the problems which they discuss in the class, cannot bring any earnestness or enthusiasm to bear on their work and thus they naturally fail to interest their students.

With our political enslavement our mind also seems to have become very weak. We do not dare to think on our own account. If we had the courage of our own thought, we should discuss our own problems and also give our own solutions; and the present unhappy condition, in which in our classes we merely reproduce timidly the problems and solutions given in a text-book, imported from England or America, would soon come to an end. How are we, then, to get out of this quandary?

The first thing necessary is to acquire the firm belief that we can really think for ourselves, that however dependent we may be in physical existence on other persons and powers, for our philosophy at least we need not lean upon any, that though our bodies may be in bondage, our spirit is ever free, that not only we can, but we must, form our own view of life and the world in absolute freedom. If we confess our incapacity there, we cease to count as human spirit and deserve no better life than that of lower animals. No, I do not think we have sunk to that level yet. We seem to be bound by an illusion and that illusion has to go. We have to realise that we are not doing any philosophy worth the name, when we simply repeat or reproduce what Plato has taught or Bradley has said. In fact by our words we express no thought at all, when what we say has not been clearly realised in the intimacy of our own personal thinking. Close systematic thinking is not of course an easy matter, but it can be acquired by a constant exercise of our thinking power which is a divine

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gift to a rational mind. To neglect or deny this gift is to neglect or deny our rational or spiritual nature.

The above requirement relates to a change of mental attitude ; it does not suggest any further practical step. As a practical measure, I would suggest that our students should be introduced to philosophy through consideration of views and ideas derived from Indian philosophy. They may study European philosophy as much as they like, but their minds should first be well informed of the ideas which have actually shaped the life of the community in which they live. This will give their minds a firm foot-hold in the concrete spiritual reality from which they draw their sustenance and which they can ultimately modify and enlarge to the enrichment of their own life and of the life of the world at large.

In the present state of things, a student by being initiated into philosophy through Western ideas, is lifted up, as it were, in the mid-air from his actual spiritual moorings and is left there alone, unable to derive any proper nourishment for his philosophic self from his social environment, with which he is no longer in tune. No wonder that he cannot react powerfully to his surrounding world and he cannot produce anything substantial of his own.

My suggestion is that our students should begin with a study of Indian philosophy under the guidance of teachers who have themselves studied the subject in original Sanskrit. It is not desired that the students should tie themselves to the various dogmas of Indian philosophy. They should also study the critical works of European thinkers, and their ultimate aim should be to rise above Indian and European philosophy to pure philosophy which recognises no provincial, sectarian or any other barrier.

Thirdly, our students should learn philosophy through the medium of the vernacular. I have the impression that philosophical ideas conveyed through the medium of English do not enter deep into our mind. The exact significance of many philosophical ideas is not clearly realised because of the linguistic barrier. The language remains a barrier even when we have learned to use it grammatically. Because of our exclusive preoccupation with the structure and sound of this difficult foreign tongue, our mind acquires a sort of hyper-sensitiveness to its verbal form to the neglect of its intellectual content. It has thus come about that even when we are ostensibly engaged in learning philosophy, our attention is constantly directed to the niceties of language rather than to the exact significance of the ideas meant to be conveyed. And the result is that our so-called philosophical education gives us merely a verbal dexterity in the use of certain words and phrases. In the examinations too, the candidate who has a greater facility with the English language is usually found to fare better ; and since our teachers of philosophy are generally chosen mainly on the result of university examinations, it is almost always the case that one, who can talk glibly or wields a facile pen, has a better chance of getting the charge of teaching philosophy than another candidate who, even with a halting tongue or pen, may have a real gift for original thinking. The result is seen reflected even at the top. People, who are supposed to be in the front rank in the field of philosophy in this country, are noted rather for their fine eloquence than for any depth or soundness of their ideas. It seems that the distinction between a talker and a thinker is not often marked. I am sure this state of things will be modified, at least partially, if we choose the vernacular as the medium of our philosophic discourse.

ENGLISH

SATYAGRAHA : ITS TECHNIQUE AND HISTORY : *By R. R. Diwakar. Foreword by Dr. Rajendra Prasad. Prefatory observation by Kishorlal Mashruwala. Hind Kitabs, 107, Mahatma Gandhi Road, Bombay. 1946. Pp. xxii + 202. Price Rs. 5-12.*

The last World War has taught humanity, at least this lesson that although war is undertaken to bring about great decisions, to reshuffle the relations between human communities, yet the price which men have to pay for it is often much more than what they actually gain by it. New forces are raked up by the violence employed, which sometimes defeat the very purpose for which war was undertaken. Under these circumstances, it is natural that more and more attention should be paid to methods of social change which do not suffer from the shortcomings of war. The experiments in nonviolent organization, which have been carried on in India during the last thirty years for the redress of economic, social and political wrongs, have naturally drawn the attention of every serious student of human affairs.

Shri Diwakar's present publication on the technique and history of Satyagraha is, therefore, a very timely one. He has devoted fifteen out of twenty-five chapters to a theoretical treatment of the subject. The principles underlying Satyagraha have been discussed with care and its organizational aspect described in detail. Shri Diwakar then gives us a historical account of the most important Satyagraha campaigns undertaken in India. This is followed by a chapter on similar experiments outside India. An appendix containing pledges taken by Satyagrahis on different occasions, a bibliography and a glossary of certain terms used in the book, come at the end.

The treatment of the theoretical aspect is fairly exhaustive, although it may fail to satisfy the more serious student who wishes to go deeper into the psychological bearings of Satyagraha. Similarly,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

chapters devoted to history would perhaps have gained by a less narrative and more critical treatment. But as the first systematic account of Satyagraha in India, the book deserves to be warmly welcomed. Shri Mashruwala has contributed a very valuable chapter by way of introduction.

SWARAJYA-SASTRA (The principles of a non-violent political order.) : *By Vinoba Bhave. Translated in English by Bharatan Kumarappa. Padma Publications, Ltd., Bombay. 1945. Pp. 68. Price Re. 1-8.*

The book is a collection of notes made of talks given by Shri Bhave while he was in prison : they consequently lack the fulness which one usually expects in a treatise of the present kind. The questions dealt with are of a fundamental nature, and deal with subjects like the function of a state in a people's life ; the political and economic implications of non-violence; non-violence as a means of self-protection available to the common man, and so on. Shri Bhave has something original to say with regard to each of these questions ; for he is not only a philosopher by temperament, but has also had the advantage of an unbroken series of experiments in the organization of non-violence extending over nearly a quarter of a century or more.

One may find the discussion on the historical role of the state unsatisfying here and there ; but this is amply made up by what the author has to say with regard to the structure of a non-violent society, which forms the major portion of the small book.

NIRMAL KUMAR BOSE

THE MILLAT OF ISLAM AND THE MENACE OF 'INDIANISM' and THE MILLAT AND THE MISSION : *By Choudhury Rahmat Ali.*

THE FOUNDER OF PAKISTAN : *By Khan A. Ahmed. 16, Montague Road, Cambridge.*

It is a patent trick of Imperialism to try to divide their colonies and subject countries when the inevitable forces of history compel them to quit. Ireland had the bitter taste of this trick, Palestine has been suffering on this account. The old maxim of *divide et impera* has now been turned to Divide and Quit. That patent device is now being applied to India and experiments at partition and division of a subject country are being carried on on a scale so vast as the world has never seen before. What is now being represented as the deep urge of a particular community will, after careful historical analysis, be found to be nothing but the artificial demand of reactionary elements fostered carefully by British Imperialism. It seems strange today that Sir Syed Ahmad said : "Just as the Aryan people are called Hindus, even so are the Musalmans—Hindus, that is to say, inhabitants of Hindusthan." He further said : "The word nation (Qaum) applies to people who inhabit a country . . . Remember that Hindu and Musalman are religious words ; otherwise, Hindus, Musalmans and even Christians who inhabit this country—all constitute, on this account, one nation. When all these groups are one nation, then whatever benefits the country, which is the country of all of them, should benefit them all . . . Now the time is gone when only on account of difference in religion the inhabitants of a country should be regarded as of two different nations." (*Vide*, Dr. Rajendra Prasad's *India Divided*, p. 94). Such sanity of logic has been unfortunately lost in the mad welter of communal politics.

The pamphlets under review are supposed to contain the first Pakistan plan and were published long before the Muslim League resolution on Pakistan. This idea of independent sovereign Muslim states was put forward by the author, Mr. Ali as a protest against the betrayal by the Muslim delegates to the Round Table Conference of the cause of the Millat by accepting a Federal Constitution. A fierce protagonist of the two-nations theory, or rather of a number of Muslim states all over India, he has seven commandments, *viz.*, (1) Avoid Minorityism, (2) Avow Nationalism, (3) Aquire proportional territory, (4) Consolidate the individual nations, (5) Co-ordinate them under the 'Pak Commonwealth of Nations', (6) Convert India into 'Dinia', (7) Organize Dinia and its dependencies into 'Pakasia'. Thus he will not only have two Muslim zones but many. He would have Pakistan in the west, Bangistan in Bengal and Assam, Usmanistan in Hyderabad, Siddiqistan, Faruqistan, Hindustan, Moministan, Moplaistan, Safistan and Nasiristan. There will thus be not only three independent states of Pakistan, Bangistan and Usmanistan, but there will also be seven Muslim nations settled in the Hindu region in their own territory proportionate to their population and all these will make up the Pak commonwealth.

Ordinarily such a plan, which implies the entire negation of history, would have been dismissed as sheer lunacy or ravings of a distorted mind, but nothing seems to be impossible today. Dr. Rajendra Prasad, in reviewing this scheme in his book *India Divided*, has commented : "Who knows that in course of time the other parts of his scheme already published and yet to be published will also be not accepted by the League and thus Indians must be prepared to look forward for the day when the very name India will have disappeared." The sooner such schemes are buried and buried once for all, never to be resurrected, the better for all the communities living in India and for the world.

MAKING THE MOST OF YOUR INCOME : *By R. E. M. Beale. D. B. Taraporevala and Sons and Co., 210, Hornby Road, Bombay. Pp. 170. Price Rs. 2-8.*

This book is based on the methods of the best known efficiency experts with practical examples from the lives of J. D. Rockefeller, Mahatma Gandhi, Benjamin Franklin, George Washington, etc. The financial education of the individual has been neglected in our country and it should be directed toward a true appreciation of the value of money. In more ways than one saving can make a man poorer and spending can make a person richer. The best investment that young people can make is in themselves. If the reader agrees, he should buy this book which is one of the most interesting and useful volumes on self-improvement.

J. M. DATTA

POEMS FROM INDIA : *By Members of the Forces. Chosen by R. N. Currey and R. V. Gibson. Oxford University Press. Pp. 94. Price Rs. 3.*

This anthology of verses includes entries for H. E. the Viceroy's first verse competition and other poems collected through private channels.

It represents a group of young but promising poets who were on active services in India, including a few Indian writers. Among the women writers Muriel Wasi displays a delicate sensibility in her *To India*, and Tara Ali Baig gives a touching description of the Bengal Famine.

The first effect of War on man is not poetry. Yet one must agree with the writers of the Preface that poets today require poetry to do far more for them than their grandfather did. The urge for poetry is undeniable and in this volume, it has called forth a varied and delicate harvest from these hardy men of the war. The tender nostalgia from an alien field, the simple, the natural and human interest in the expressions of beauty, and above all, the undying human heart, "aching for the immense and tremulous coming of dawn's light," (Stuart Piggot),—these refuse to be crushed by war, and live unvanquished on the pages of this book. To Keith Watson "the gates of heaven are but the cliffs

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of Dover." To Barry Amiel death is a matter of mathematics. Alun Lewis sings beautifully, in the manner of Hardy, of the peasants outwatching the course of history. Paul Widdows' Minutiae are beautiful little moth-like things, H. E. the Viceroy contributes a nice little poem to this volume. Clive Branson, of *British Soldier in India* fame, contributes an interesting verse, and I. N. Bartley's *The Sickle Moon,* based upon the Bengali of Bishnu De, deserves mention.

According to the writers of the Preface "the book aims at increasing understanding between British and Indian." It would however be difficult to say that it has completely succeeded in this particular mission. For, the poets, except a few of them, do not give any evidence of an appreciation of India's traditions, her political ills and aspirations. Writing physically in India, the poets are mentally far away from her deeper existence. That however does not take away from its sheer poetic merit which deserves to be appreciated. The volume offers a rich banquet, and while Brooke and Owen relive in many of the poems, it explores far other sentiments than only the "pity and horrors of War."

THE CRIMSON THORN : *By John Gasworth. Published by Susil Gupta, 1 Wellesley Street, Calcutta. Pages 64. Price Rs. 3.*

The essence of poetry is timeless. Poets are our contemporaries, because they are extra-contemporaneous, they are super-temporal singers of unchanging values. The essential world of poetry has made a resplendent appearance in the poems of Mr. Gasworth, of which the present volume is a representative collection. Mr. Gasworth has already acquired an outstanding position in English poetry, and these poems, representing as he himself says, his "preliminary efforts," can claim a delicate mastery of art. The poems centre round the age-old theme of love but are rendered reviviscent with refreshing varieties of experience.

SUNIL KUMAR BOSE

INDIA SPEAKS—Inauguration Volume, May 1946 : *Edited by Krishna Hatheesingh and Amiya Chakravarty. Published by A. Banerjee, 2 Commercial Buildings, Calcutta. Price Rs. 3.*

The ninety pages of this volume are replete with poems, short stories and articles from the pens of the best writers and thought-leaders of the land. Among its contributors are such great names as Rabindranath Tagore, Jawaharlal Nehru, Sarojini Naidu, Abanindranath Tagore, C. P. Ramaswami Aiyar, C. Rajagopalachari, Saratchandra Chatterji, Pramatha Chaudhury, Indira Debi Chaudhurani, G. L. Mehta, K. T. Shah, Yusuf Meherally, M. R. Masani, Annada Sankar Ray, Asoka Mehta and others. Saratchandra's unique story "Mahesh" has been rendered into English by John D. Burit. Pramatha Chaudhuri's "Binabai," one of a remarkable series of Ghosal stories, is a brilliant piece of fantasy. In his article entitled "The International Mind" Amiya Chakravarty gives us a survey of Rabindranath's educational work. In her notes Krishna Hatheesing observes, "India has contributed much to the civilization of the world and she will continue to do so even in the future. India speaks for freedom and peace." The editors of the journal are to be congratulated upon their success in securing the co-operation of a host of able litterateurs. The printing and get-up are excellent.

S. L.

LIFE BEYOND DEATH : *Pp. 292. Price Rs. 6-8.*
OUR RELATION TO THE ABSOLUTE : *Pp. 208. Price Rs. 6.*

Both these books are from the pen of Swami Abhedananda and published by Ramakrishna Vedanta Math, 19-B, Raja Raj Krishna Street, Calcutta. Both the books treat of subjects, which, though not exactly identical, are closely allied and, therefore, permit of joint review.

We shall first of all point out some of the defects of the publications for which the publishers, and not the author, are responsible. The spirit of advertisement rampant in the books, is somewhat distasteful to us. A list of distinguished men with whom the author was acquainted during his life, is irrelevant to the valuation of his work as author. And newspaper reports of his speeches and his movements appear rather undignified in books of this kind.

There are many Sanskrit quotations in Roman character in the books. But diacritical marks have been seldom used and the international system of transliteration also has not been followed. This makes them difficult reading.

Use of hyperboles is of tactical advantage in public oratory but somewhat out of place in sober writing. In *Life Beyond Death* (p. 48 ; *cf.* also p. 63), our author says, "The question what becomes of the human soul after death is as old as the first appearance of man on earth." Did the first man really ask this question as soon as the ape-mother brought him into existence? It is an ancient question no doubt, but certainly not as old as man himself. Again, on page 64, we have : "Motion produces nothing but motion." Is not this a somewhat loose statement? In *Our Relation to the Absolute* (p. 15), we have : "True psychology has not been taught in the West. It has been taught in the East." It is self-laudation, but is it correct? We should not expect such statements from our learned author.

Ignoring these and similar small defects some of which any rate of which the publishers could have easily avoided, the books before us can be regarded as presenting interesting reading. We have a happy combination of the preacher and the philosopher in the author; and his reputation is a guarantee of the worth of his work. The conclusions of the books have been arrived at by sober philosophy and preached with the ardour and eloquence of one who believes in them. Let us add that the philosophy in these books is mingled with accounts of clair-voyance and clair-audience, telepathy, television and tele-kinesis and ordinary hypnotism and higher spiritualism and mediumship. By some this will certainly be regarded as an added lustre to the ratiocinations of the books.

The printing and get-up leave little to be desired.

U. C. BHATTACHARJEE

AUTOBIOGRAPHY : *By Sitanath Tattvabhusan. Published by the Brahmo Mission Press, 211, Cornwallis Street, Calcutta. Pp. 127. Price eight annas.*

Pandit Sitanath was a veteran missionary of the Sadharan Brahmo Samaj, an outstanding scholar of Vedanta and a popular author of a number of religious books in English and Bengali. The interesting story of his long life, extending for about nine decades, is told by himself in the 26 short, simple chapters of this book. His autobiography reads like a drama, and is, in a sense, a chapter of the eventful history of the great Brahmo movement. He was the dynamic philosophy of the Brahmo Samaj and his treatise on the Philosophy of Brahmoism is a masterly work on Indian theism.

The twelfth chapter of the book, under review, is especially instructive. In this chapter, entitled "Brahmaism and Vedantism," the author gives out his matured experiences. Therein he says that Brahmaism is not different from the Brahmavada of the Upanishads. "The Brahmavada of the principal Upanishads," aptly observes the author, "which constitutes the Vedanta in a primary sense, is fundamentally identical with what I understand and accept as Brahmaism . . . Maharshi Devendranath made a mistake, in the period of his ascendency of the Brahmo Samaj, in discarding Vedantism, which was up to that time, recognised as the religion of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Brahmo Samaj . . . Raja Ram Mohan professed and preached Vedantism. His Vedantism consisted in the acceptance of the fundamental teachings of the Upanishads" (pp. 105). The thoughtful author rightly believes that the discarding of Vedantism by the Brahmo Samaj under the Maharshi was a great mistake, one which has, in his opinion, done and is doing a great deal of harm to the Brahmo Samaj. "It had led," he remarks, "to a neglect, on the part of the Brahmos, of our ancient scriptures and was thus discouraging scholarship and causing spiritual sterility. It had also created an unnecessary gulf between the old and new society, leading many Brahmos to call themselves non-Hindus and cease from taking a just pride in the glorious literary and the spiritual achievements of the Hindu race" (p. 106).

What he believed, Pandit Sitanath Tattvabhusan practised and preached. He confesses that a part of his life work was to popularise the chief works of Vedantism by way of cheap editions, lucid expositions and annotated translations in English and Bengali. The prophetic observations of this great Brahmo thinker, made at the close of his missionary career of about sixty years, should be received by the members of the Brahmo Samaj as sincere and sound warnings.

SWAMI JAGADISWARANANDA

WOMEN AND SOCIETY IN FOREIGN COUNTRIES: *By Mr. K. C. Banerjee. Published by the author from Garia, 24-Parganas. Pages 102. Price Rs. 2.*

The author of this book is a world-tourist, who returned to his country just before the second world war began. He started only with a few rupees in his pocket and went round the world and returned with a wealth of experience and first-hand knowledge about men and things which his countrymen very much appreciated as the popularity of books published by him in English and in Bengali shows. In the present book, the author writes about the women of Japan, China, Burma, Indonesia, Persia, and Near East. Although everything Japanese is now decried, the author has everything good for Japanese women. Although modern in every sense, the Japanese woman is true to her national culture and ancient civilization. Although of the same Mongolian stock the Chinese woman is quite unlike her Japanese sister. She is mere like her Indian sister in manners, modesty and conservatism. Burma gives a different picture altogether. Here is the truest woman of the world—of the East and the West taken together. In Burma, men depend upon women, and not vice versa as everywhere else. The women of Malay, Java, Bali and other East Indian Islands are Indians in a new garb. The women of Iran and Turkey are no longer oriental but western in every sense, thanks to Bahai movement and Reza Shah in the former and Kamal Pasha in the latter country.

Freedom and progress of women mean progress of the country concerned. It is no longer tenable that freedom means moral degradation of the fair sex. Women are women in every country as sisters, wives and mothers of the nation and in their progress, lies the progress of mankind. This is the lesson our author has drawn from his travel experience and we fully agree with him.

A. B. DATTA

BENGALI

GO-DAN : *Prem Chand. Translated by Sri Priyaranjan Sen and Sri Swarnaprabha Sen. Saraswati Press, Benares. Price Rs. 5-8.*

It is high time that Indians should get rid of their provincial narrowness. Efforts are being made through social and political work to bring us closer to one another. But few of us still realise what a tremendous force literature can exert towards the achievement of that ideal. The people of India from one end to the other are nourished by the same tradition, saturated with the same ideals and living under the same social conditions. Only ignorance keeps them apart. The literary works of our master-minds have revealed to us our profound kinship and inspired us with a new vision. In the portrayal of our present-day social life, there is no one to compare with Prem Chand in Hindi literature. Critics have often compared him to Bankim and Sarat Chandra. By rendering this exceptional novel of peasant-life into Bengali, the translators have not only enriched our language but done a real national service.

D. N. MOOKERJEA

MAHANAGARI : *By Rampada Mukherji. General Printers and Publishers, Ltd., 119, Dharamtala Street, Calcutta. Price Rs. 4.*

The novel has been named *Mahanagari*, because the story is set in the background of the Great City, the capital city of Calcutta, which is always full of colour and life with its wide streets resounding with the ever-busy roar of traffic, with its gaudy array of palaces and parks, with its dazzling cinemas and restaurants, with its multifarious clubs and associations and with its many-sided activities dealing with the various problems of life ever changing with the course of events of the world. How this colourful and kaleidoscopic life of the great city reacted upon Supriya, a young man coming fresh from his native village to earn his livelihood in the great city, forms the subject-matter of the novel.

Supriya, the hero of the novel, though born and bred in a village and educated in a moffusil town, is a talented young man with literary aptitudes and poetic susceptibilities. He finds himself ingrafted in the capacity of a private tutor in the wealthy and aristocratic family of Nitish Das, who, though born in affluence, has devoted his life to the cause of his motherland by being an active member of the Congress and other national institutions. His youngest son Smarajit and granddaughter Ila have got a circle of friends, Reba, Rini, Anu, Ranjit and others who have their rendezvous both in the residence of Nitish Babu in North Calcutta and in the palatial quarters of Mr. Ranjit in Ballygunge, the well-known quarter in South Calcutta of fashionable and aristocratic society enjoying freely the superfluous amenities of life.

The story is full of charming episodes and brilliant dialogues and the copious but complex life of the great city is portrayed with an admirable skill. Supriya in the end is engaged to Anu, a modest and fair girl, while Smarajit and Reba are a romantic and interesting pair who, however, meet a tragic end for the service of the motherland.

The author has in this novel omitted to look upon the dark side of the great city. He has ostensibly shut his eyes to the dreary and cheerless life of deprivation led by the lower-middle class and the proletariat, which he has reserved for his numerous stories appearing in periodicals. This appears to be both the strength and the weakness of this masterpiece of a novel, which is otherwise a finished work of literary excellence.

B. K. SEAL

KRISHAK ANDOLAN O MADHYABITTA : *By Sushil Kumar Basu. Published by S. K. Mitra, Panjia, Jessore. Pages 86. Price twelve annas.*

This is a book in which the writer advocates the immediate abolition of the Permanent Settlement in Bengal but it is not clear whether he wants it with or without compensation to the zemindars. He wants ownership of land for the tillers of the soil. He expects that industries will revive after the abolition of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

present zemindary system as its abolition will set free a huge amount of capital for investment in industries. The author is a believer in large-scale state industries, but it is not easy to follow him when he wants to do away with the middle class hold of the current Indian politics and economy. According to him, the middle class, particularly the lower middle class is helping the capitalists and the zemindars in the matter of their exploitation of the lower classes and workers. But he forgets that the middle classes are exploited as well by the capitalists. His advocacy for the cause of the down-trodden toilers of the soil is deserving of serious attention by authorities of the country who controls the public opinion and the state for the simple reason that the progress of the country means the uplift of rural India. The solution lies in India determining her own destiny.

A. B. DUTTA

HINDI

SADHANA KE PATH PAR : *By Haribhau Upadhyaya, Navayuga Sahitya Sadan, Indore. Pp. 237. Price Rs. 3.*

MANAN : *By Haribhau Upadhyaya. Navayuga Sahitya Sadan, Indore. Pp. 113. Price Re. 1-4.*

VISHVA KI VIBHUTIAN : *By Haribhau Upadhyaya and Chandragupta Varshaneya. Hindi Mandir, Allahabad. Pp. 149. Price Re. 1-8.*

The first is an unusual sort of an autobiography. It is a record of a number of experiences and events to which the writer has reacted in the spirit of an earnest adherent of the ideal of non-violence in thought, word and deed. It is marked by rare honesty and humanity, something similar to those which have characterized Gandhiji's classic story of his own life. And if, as they say, one ounce of eloquent actuality is more than a hundredweight of hair-splitting theory, then Shri Haribhau Upadhyaya's life is bound to be a convincing sermon on the sovereign human virtue of love and its sure ultimate victory under all circumstances. *Sadhana Ke Path Par,* thus, will be a source of abiding inspiration.

Manan is a miscellany of Shri Upadhyaya's meditations on the True, the Good and the Beautiful, the Inner Light and such other outstanding values and verities of life. They are pin-points of profound philosophical reflections.

The third book, *Vishva Ki Vibhutian,* is a collection of sixteen sketches of the world's great prophets and poets and philosophers, and singers and scientists, of past as well as present, of both East and West, like Gandhiji, Joan of Arc, Socrates, Rabindranath, Edison and Jagadish Chandra Bose. The publication is primarily intended for the students of schools so that they may be imbued with an attitude of obeisance to those who have achieved greatness in any of the many fields of human idealism and endeavour.

G. M.

MARATHI

JATYAVARCHYA OVYAN : *By S. L. Karandikar, M.L.A. Published by Mrs. Sita Karandikar, 399/1 Sadashiv Peth, Poona 2. Price Re. 1-8.*

This booklet comprises of 17 skits written by Mr. S. L. Karandikar as Editor of *Trikal,* whenever he felt the necessity or urge for writing something spicy and humorous. Some of these skits remind one of the master of Marathi sarcasm, irony and banter, the late Prof. S. M. Paranjpye. All of them have one or other moral implicit in them, by reason of the treatment given to the subject-matter of his short essays by Mr. Karandikar. His earlier works, *viz.,* biographies of Savarkar and Tilak, as well as "The Menace of Pak-stan" were quite serious and well documented. Those who know their Karandikar from only such works will be agreeably surprised to discover the hidden talent of Mr. Karandikar for grim, sometimes sardonic humour.

T. V. PARVATE

GUJARATI

RANG TARANG, Part V : *By Jyotindra N. Dave, M.A. Printed at the Gandiva Press, Surat. 1944. Paper-bound. Pp. 158. Price Re. 1-4.*

Jyotindra Dave, at present oriental translator to the Government of Bombay, is spare of body, thin to the extreme of spindleshanks. No one would suspect that this spare body and unproportionably big head carries within it the quintessence of wit and humour, both at his desk and on the platform. He has been awarded a Gold Medal for this, his singular characteristic, always in demand in Gujarati. His study of the subject, *i.e.,* Hasya-rasa is deep and intimate. This collection of thirty pieces would provoke laughter in any man, quiet, not side-splitting. Dave can make others laugh, himself remaining silent, solemn, quiet, even glum. He has written largely in this vein and is still at it. We welcome all his efforts as attempts to relieve the dullness and drabness of our lives and literature.

GRAM CHITRO : *By Ishwar Petalikar. Printed at the Charotur Printing Press, Anand. 1944. Cloth-bound. Pp. 187 + 14. Price Rs. 2-8.*

Each village has its headman, saucar, sweeper, carpenter, school-master and various other functionaries and characters. As to what sort of persons they are and as to how they carry out their duties and fulfil their functions, is set out in this delightful little book of *vignettes* with a realistic touch by the young author. We have nothing but admiration for the pen of this rising writer.

RAS RAMANAM : *By Raj Hans. Printed at the Raichura Golden Jubilee Printing Works, Baroda. 1944. Paper cover, pp. 93. Price Re. 1-4.*

This first part of a collection of 59 Ras (Lyrics and Lovesongs), bearing on Krishna Jivan (21), Rama Jivan (7), Beautiful scenes of Nature (5), Erotics (9), Life of women villagers (6), Pangs of separation in case of a Beloved (6', Virrasa (epics) (2), Life of Children (1), Home Life (1), and relating to the Life of the Poet Prince Kalapi, into whose footsteps Raj Hans has stepped. The variety of subjects related by the writer is arresting and he has done equal justice to all, in a style which tolerably correctly follows the vogue in which such songs are written. He has fully entered into the spirit of this branch of Gujarati poetry.

RUP LALSA : *By Raj Hans. Printed at the Raichura Golden Jubilee Printing Works, Baroda. 1945. Cloth-bound. Illustrated. Pp. 202. Price Rs. 3.*

In this story the author depicts events which remind one of the eternal triangle between the four main characters, Shodhan and Rajendra, Sharda and Lata. Interesting complex situations arise, which test the standard of the morality of each of them. Lata is prepared to remain unmarried for her whole life, while Sharda, although wedded to the ideal of a Sati, suffers a moral lapse. These complexities are woven into an attractive whole and very well serve to show the Red Lamp which means this far and no further.

THE MIRACLE MAN *WITH* UNRIVALLED POWER

India's Greatest Astrologer & Tantrik-Yogi

RAJ JYOTISHI, JYOTISH-SHIROMANI PANDIT RAMESH CHANDRA BHATTACHARYYA, JYOTISHARNAV, M.R.A.S. (London) of International fame, President—World-Renowned All-India Astrological & Astronomical Society. (ESTD. 1907 A.D.)

He is the only Astrologer in India who first predicted the Allies Victory in the present world war on 3rd. Sept., 1939 within 4 hours the very day of the declaration of war which was duly communicated to and acknowledged by the Secretary of State for India, the Viceroy and the Governor of Bengal and who is also the consulting Astrologer of the **Eighteen Ruling Chiefs of India.**

It is well-known that the Astrological predictions of this great scholar, his wonderful methods of redressing the pernicious influence of evil stars, his power to bring success in complicated law-suits and also to cure incurable diseases are really uncommon.

Many Ruling Chiefs of India, High Court Judges, Commissioners of Divisions, Advocate-Generals, Nawabs, Rajas, Maharajas, etc,, and also many reputed personalities of the world (of **England, America, Australia, Africa, China, Japan,** etc.) have given many unsolicited testimonials of the great Pandit's wonderful powers.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji. He is a great Tantrik." **Her Highness The Dowager 6th Maharani Saheba of Tripura State** says :—"I am feeling wonder at the marvellous Tantrik work and excellent efficacy of his Kavachas. He is no doubt a great personage with miraculous power. **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt.,** says :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son."...**The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt.,** says :—On seeing my son, his prophecy about my future is true to words. He is really a great Astrologer with extraordinary power." **The Honourable Justice Mr. B. K. Roy of Patna High Court** says :—"At a glance on me, he began to disclose my mental thoughts and he predicted marvellously many things. He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot** says :—"The wonderful power of calculation and Tantrik activities of Panditji on several occasions have struck me with greatest astonishment. Really he is unique in his line." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court,** says :—"Panditji has bestowed the life of my dead son. I have never seen in my life such a great Tantrik-Yogi." **Mr. J. A. Lawrence, Osaka, Japan,** writes :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2724, Popular Ave., Chicago, Illinois, U. S. America** :—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mrs. F. W. Gillespie, Detroit, Mich., U. S. America :**—"I am wearing your special Dhanada Talisman and so far my luck has been with me a great deal better than in the past." **Mr. K. Ruchpaul, Shanghai, China** :—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Eita, Govt. Clerk & Interpreter in Deschang, West Africa** :—"I had orderd some Talismans from you that had rendered me wonderful service." **Mr. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon** :—"I got marvellous effects from your Kavachas. I have had transactions with you almost every year for the last 20 years for about Rupees three thousand." Etc., etc. and many others.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. It will give even a beggar the wealth of a king (as written in Tantra). **Price Rs. 7-10.** Special and capable of giving immediate effects **Rs. 29-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special and capable of giving immediate effects **Rs. 34-2. (The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha).**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-8.** Special **Rs. 34-2.**

INDIAN PERIODICALS

First Thoughts of India

Dunis Gray Stoll writes in *The Visva-Bharati Quarterly*:

My first contact with India was, in the neat Bengali phrase, *mone mone* (through the mind). Necessarily it was based on second-hand knowledge through books and personal intuition. But it was a genuine experience that set me vibrating within, revealing much to me of a great people and a great country.

Before I came to India, my reading and the many good Indian friends I had made in England, had shown me a vigorous pattern of life, a culture warm and fertile with the genius of the human spirit and Mother Earth. It was a society very acceptable to me though different from my own.

Early this year I arrived in Bengal to see this pattern of the mind take shape in fact, turning in living forms of humanity like a variegated kaleidoscope. Ever since my five senses have been busy confirming and correcting preconceived ideas. Much of Bengal has come to meet me like an old friend; but there are other things, of course, that have proved unexpected and strange.

The villages are exactly as I had imagined them. Towers of fan-spread palms, scarlet splashed simul trees and dark shady pools. Little bamboo, mud, matting and thatch homes rising from the soil, hidden within them a peasant woman's busy world of family, kitchens and motherhood. Every village has its problems of dearth out of a primitive life of pitiful frugality. Yet every village is potentially rich, with its heritage of natural simplicity to treasure with pride, with its power to nurture its sustenance from the earth. The peasant stock of Bengal has proved again and again its admirable capacity to endure reverses with patient gentleness. They have stubborn strength like the persistent drone of Indian sunlight. They are the meek who will one day inherit their own earth.

On my second day in Bengal, by a happy chance, I was privileged to meet Mahatma Gandhi. This gave me a definite introduction to India. One has to open a conversation with a nation somewhere, and I was indeed fortunate to begin with a revered figure so close to the people's heart. Later on, I looked forward to meeting other leaders of thought, representing the many varied aspects of their country's aspirations.

With thousands of reverent humble people in a crowd of quietness, I joined Gandhiji's prayer meeting at Sodepur. Our voices rose and fell to the lilt of the Indian responses, pulsing with beautiful and simple expressions of faith, accompanied by the rhythmic peal of instruments and clapping of hands. It seemed to me that the congregation was united in the corporate clasping of human souls together, sons and diughters of Mother India reaching out their hands in worship of the World Mother.

Gandhiji impressed me as a true peasant son, his feet firmly planted on the earth's immediate issues, his eyes fixed on the ideal and distant stars of God. His sensitive and expressive eyes beamed on me through his steel-rimmed spectacles glistening in the sun.

He opened our conversation with the shrewd good-humoured comment: "I hear you are a lover of peace. Of course, there are pacifists *and* pacifists."

His concise English was clear and straight to the point. He struck me as being purposeful in argument, his mind steady on its course like the needle of a compass.

A worldwide reputation for saintliness has not prevented him from being more practical and sensible than most politicians. He has a perfect focus of what is wrong with India's 700 000 villages, and advocates co-operative schemes for restoring them to health. He recognises that peasants are the roots and sap of the country. Unhealthy roots produce poor crops.

Obviously the god of mass-production has not persuaded him to bow down to the dialectical dogmas of a swift Industrial Revolution. Gandhiji has the modesty to learn from the mistakes as well as the successes of the West. Almost alone among the paper planners for India's future he has faced up to the fact that food cannot be grown in tins. A city factory may turn out millions of tin cans a day, but the cans will go empty if the village dies of neglect.

Gandhiji believes that the preservation of village India is a spiritual as well as an economic necessity. The big industrialised city unit drains the country of of its rivers of peace and everyday stability. The peasant, compelled by poverty to work in a slum area, is a restless and unsatisfied man. He is lost in the teeming chaos of an alien urban environment. He is helpless in the festering squalor which facile imitation of some less desirable aspects of the Industrial Revolution has imposed upon him. He turns in despair to vulgar artificialities and ways of life that are substitutes for his real spiritual back-ground and social traditions.

Through the pitiful darkness of the city slum, the rustic common sense of Mahatma Gandhi's message shines like clear sharp stars.

I am not one of those who credit Gandhiji with a monopoly of God's truth and wisdom. But I do think that he is a shrewd far-sighted patriotic son of India. His conception of the country's agriculturists and craftsmen progressively adopting machinery at a pace strictly conditioned by the basic needs of the home consumer is highly sane. He is all for self-sufficiency and putting first things first. He would provide the Indian housewife with necessities before luxuries, with good clothes and food for her family before lipsticks

and outings to the cinema. She would have electric light and cookers in the kitchen, if Gandhiji had his way, long before a car appeared in the garage.

Gandhism and science are popularly misrepresented as being incompatible. As I see it, the reverse is the cise. I would go so far as to suggest that neither can survive without the other. The main difference between Gandhism and science is a matter of stress on essentials and emphasis on values.

"Machinery has its place," the Mahatma declared. "It has come to stay."

One of the most curious and unexpected things that have struck me about India, is that it is not the saint who refuses to meet the great man of science half way, but the great man of science who refuses to meet the saint. A leading Indian scientist told me : "Gandhi's ideas are all bunk." Some of their clashes of opinion are quaintly paradoxical. For instance, the Mahatma advocates the spreading of India's crafts and industries widely over the land, because this policy seems to him conducive of social happiness and health. The scientist, on the other hand, favours the concentration of industry in large city areas. This appears to me a suicidal policy in an age menaced by atomic bombs. Again the saint is surely the more practical man ?

It has been a shock to find modern Indian scientists taking the dust off the feet of the Swami called *What was good enough for Europe yesterday, is good enough for India tomorrow*. I envisage India tomorrow as a country not content blindly to copy the past, whether of East or West. I see old Mother India as a peasant mother in Renaissance, a country rooted in her own mature traditions, but spilling over with youth's life and fresh ideas. It is in this faith that I am continuing my conversation with India, passing on from my first thoughts to wider revealment, I trust, and deeper understanding.

Retrograde Outlook

The New Review observes :

In our view what is most unsatisfactory in the constitution recommended by the Cabinet Mission is that it is at best accommodated to medieval conditions of life. Space-time relations have so altered, solidarity has become so complex and binding, scientific progress is so rapid that modern economies have to be on a scale which was unthinkable in former ages. As we have repeated time and again, the only countries of sufficient dimensions to allow full play to solidarity and progress are the U.S.A., the U.S.S.R., and, under certain reserves, the British Empire. In other words, centralisation has become so necessary and at the same time so easy that most departments of public life must cover the national territory, and the larger the territory, the more efficient and beneficent centralization becomes. It is only in the matter of personal development and individual life that local autonomy does justice to civic requirements.

Only befogged medievalists can contemplate that currency, customs, tariffs, etc., be not attributed to the central administration of future India. The Bengal Famine of 1943 and the present scarcity should have shown that even so individualist a profession as farming profits by national solidarity. The retrograde outlook and the illogism of the Union plan are equally apparent in the matter of residuary powers. The Congress itself has on that point regrettably renounced the views of C. R. Das and seems to take it for granted, as all other parties to the proposals do, that, after a few subjects have been reserved for the centre, all remaining powers should be best left with the provinces. Such a measure is a rash challenge to the accelerated tempo of India's industrial, commercial and social life and is a gamble on the future. Where is the logic of centralising communications, (including bicycle-paths and bullock-roads), and leaving to the provinces 'residues' like [illegible] vision, industrial atomic power, and the unsuspected scientific inventions and discoveries of the coming decades ?

Measured in the life-dimensions of the present day India is a middle-size overcrowded land which can hardly live and progress unless mass-welfare is secured on a national scale, and its cultures are so many and so varied that they demand a large measure of autonomy. The principle that should command the distribution of powers between centre and provinces should be : one national economy and several autonomous cultures.

Pakistan Showing Through

The same *Review* observes :

Lord Pethick Lawrence called the White Paper 'not an award but a recommendation.' Yet on two leading points it is distinctly an award : the composition of the Constituent Assembly, and the unity of India. Pakistan (whether the large-size variety with its two areas in the north-west and the north-east, or the small-size type with its three districts, north, north-west, and north-east) was definitely rejected. It offered no acceptable solution ; it failed to give protection and security to the Muslim minorities in Hindu majority regions or to Hindu minorities in Muslim majority districts. Moreover administrative, economic, and military considerations ruled it out. Transportation, postal and telegraph systems would be disintegrated ; the Indian armed forces would have to be broken into two with a consequent loss of efficiency for national defence, and in any case strategy demanded a deeper hinterland than Pakistan could possibly provide. Finally, the Indian

States would feel little inclined to join a divided India, and a Pakistan State made of provinces seven hundred miles apart with its essential communications across the Hindu State would be no attractive or even workable proposition.

Consequently, and here is a sample of political artistry, Pakistan which was unthinkable on the inter-national plane, was calked down on a national plane. Within the Union of India, in charge of a minimum number of national interests, there was envisaged the formation of three 'Groups' of provinces. These groups correspond to the three Sections which will separately discuss their regional structure before they coalesce with the States Section to form the All-India Constituent Assembly, and which will be elected by the provincial Assemblies on a communal basis. Section A comprizing Madras, Bombay, the United Provinces, Bihar, the Central Provinces and Orissa, will have 167 non-Muslim and 20 Muslim representatives. Section B (the North-West Frontier Province, Punjab and Sind) will number 22 Muslims, 4 Sikhs and 9 non-Muslim non-Sikhs. Section C (Bengal and Assam) will have 36 Muslim and 34 non-Muslim representatives.

From the text of the White Paper and Lord Pethick Lawrence's explanation, these sections (Hindustan, Pakistan A and Pakistan B) would be empowered to frame the constitution of each of their provinces. Such a provision ill accords with the 'residuary powers' left to each province; the Premiers of Hindu Assam and Muhammedan N.-W. Frontier province have protested and the Congress has taken up their case.

There are many other posers arising out of the White Paper. The Cabinet Mission could not and had not to foresee every possible loophole. Their sincerity and their perseverance have been duly appreciated by all parties. But their political structure, a weak Centre, three Groups potentially strong and mediatized Provinces, looks like a futuristic picture drawn in an obsession for a compromise between the major communities.

The Rt. Hon. Srinivasa Sastri

In an article in *The Indian Review* G. A. Natesan pays tributes to the memory of Srinivasa Sastri. In the concluding portion of his article he observes :

Sastri was essentially a man of courage. The story is told and we have it on the authority of Dr. Pattabhi Sitaramayaya who wrote about it in his *Janmabhumi*, that on the Poona railway station platform years ago, as they were returning from a Congress Session, a number of people were squatting, some lying with their luggage, waiting for the train to arrive. Two or three soldiers were strolling up and down. Sastri found one of them kicking an Indian who was sleeping, using his luggage as his pillow. Sastri's rage knew no bounds ; he rushed up and accosted the soldier with words like these : "You scoundrel, how dare you kick that poor Indian ?" The soldier was dumb-founded, and his comrades quietly pulled him away from the scene.

In all his public career, Mr. Sastri displayed independence of a high order. His speeches were bold and pointed. In exposing the faults of the bureaucracy, he did not mince his words. Though he was often known as a Moderate, yet those who knew him intimately could say without contradiction that he was really an extremist at heart. If in the course of some of his great speeches and orations, he weighed his words and spoke with deliberate caution, it was due to the scrupulous care which he always took not to offend the susceptibilities of any one or in the slightest degree damage the cause which he had been asked to represent. He was ever bold, but never reckless in the use of his language. He could never stoop to play to the gallery.

No temptation would ever make him deviate from the path of duty. Here is another incident to which I can bear testimony, and that happened in Lord Chelmsford's regime :

The story of the Jallianwallah Bagh massacre and the atrocities of the Martial Law Administration in those days had plunged the whole country into deep indignation. And so at the Amritsar Session of the Indian National Congress a resolution for the recall of Lord Chelmsford had been tabled. On his way to Amritsar, at one of the railway stations near it, Mr. Sastri found an important member of the Viceroy's Council entering his compartment ; and in the course of conversation, the visitor suggested and later implored Mr. Sastri to raise his powerful voice against the contemplated censure on Lord Chelmsford. But Mr. Sastri had only one answer to give, and that was "No." It is well-known that on account of this refusal, Mr. Sastri was passed over when a vacancy next occurred in the Viceroy's Executive Council.

Indeed it is the way with the foreign bureaucracy to pass over patriotic men who cannot easily fit into their scheme of things.

At the First Round Table Conference held in London, Sastri expressed himself strongly in favour of giving India what was long overdue—Home Rule, i.e. Dominion Status. It is wellknown that he advocated the right of secession also. Mr. Churchill in his great campaign against India addressing his party meetings mentioned this as one of the grounds for opposing Home Rule to India.

Sir Samuel Hoare who felt that Sastri had been so troublesome to him would not think of having him again for the subsequent Round Table Conference. The reason publicly given was solicitude for Sastri's health. But everybody knew, it was merely an attempt to eliminate inconvenient men. About the same time the Presidentship of the Council of State was offered to him, which he had no hesitation in declining.

During the last two years Mr. Sastri was agitated over the question of Pakistan, and he wrote and spoke strongly against any attempt to break up the fundamental unity of India. He did not like C. R.'s scheme to appease Mr. Jinnah and the intransigents and he made no secret of his attitude. Nor did he approve of Gandhiji's agreement with C.R.'s proposal. He took a definite stand against disruption of the country in any fashion. But Sastri was habitually tolerant, and though he differed from Mr. Rajagopalachariar on the point he expressed his conviction that C.R. should be brought back as the leader of the Province.

Sastri was indeed so consumed with thoughts of the country and so anxious about its future that one could say that even during his prolonged illness, he was ever musing by day and dreaming by night of the freedom of India and its unity.

I should like in conclusion to stress what I consider the essential greatness of the man from my long and close friendship with him. His spirit of independence and his desire to act up to his convictions, in spite of protests and entreaties even from those near and dear to him have been the outstanding features of Mr. Sastri's life. Mr. Sastri never hesitated to give expression to what he felt as the right thing to do, even on occasions when public feeling ran high and passions were roused to an undesirable degree.

We do not often come across in our public life many men of Mr. Sastri's calibre so sincere and upright. He leaves behind him, as Trevelyan said of Macaulay, "a great and honourable name, and the memory of a life every action of which was as clear and transparent as his own sentences."

The Ancient Wisdom

The Theosophist writes editorially :

The three words, so significant to all Theosophists, "The Ancient Wisdom," suddenly appeared lately one morning in England as the title of a leading article in the London *Times*. Little wonder that one at once read the leader to know what miracle had happened in insular Britain. The miracle was, however, very simple. The forty-fifth President of the Classical Association gave an address, once more emphasizing the value to the modern mind of an acquaintance with the leading minds of Greece and Rome.

It is true that a good acquaintance with "classical" thought does help to clear one's mind from the fog created by the modern novel, the detective story and the cinema. All this, however, is an academic discussion. But the important fact is that the *Times*, the best representative of the best British mentality, never dreamt that there are other civilizations than Greece and Rome that have the "Ancient Wisdom." Two older civilizations far older than either Greece and Rome, are completely ignored, as if they just did not exist for England. They are India and China.

In this ignoring the value of Oriental thought, British universities, and I presume on the whole American universities, are unique. They are unique because there have been European minds which have tried to incorporate into their philosophy what other countries, especially India, had to give. When over a century ago the first German translation of a few of the Upanishads fell into the hands of Schopenhauer whose influence is profound on Western philosophical thinkers, he wrote as follows in his *Parerga* II :

"From every sentence deep, original and sublime thoughts arise, and the whole is pervaded by a high and holy and earnest spirit. Indian air surrounds us, and original thoughts of kindred spirits. And oh, how thoroughly is the mind here washed clean of all early engrafted Jewish superstitions, and of all philosophy that cringes before those superstitions ! In the whole world there is no study, except that of the originals, so beneficial and so elevating as that of the Upanishads. It has been the solace of my life, it will be the solace of my death !"

There fell into Goethe's hands a German translation of Kalidasa's famous drama *Sakuntala*. (It has lately been atrociously vulgarized in an Indian film). But this is what Goethe wrote in 1787 :

"How often has the cursory reading of a book, which irresistibly carries one with it, exercised the greatest influence on a man's whole life, and produced at once a decisive effort, which neither a second perusal nor earnest reflection can either strengthen or modify. This I experienced in the case of *Sakuntala* ; and do not great men affect us somewhat in the same way ?"

More famous still is Goethe's verse in four lines about Sakuntala, thus translated by E. B. Eastwick :

Would'st thou the young year's blossoms, and
the fruits of its decline,
And all by which the soul is charmed, enrapt-
ured, feasted, fed,
Would'st thou the earth and heaven itself in
one sole name combine ?
I name thee, O Sakuntala, and all at once is
said.

What of China—of Confucius and Lao-Tze ? What a civilization has persisted, strong and rooted in its soil in spite of every calamity, flood, famine and invasion for four thousand years, and is "still there, going strong," is it not time to ask if there is not some "classical" quality that should be incorporated into the thinking of a modern man and woman who considers that he or she is a representative of the "best" thinking of the people? But who reads Confucius' *Analects* today or Lao-Tze's *Tao Teh King* ? If ever there was a thinker who can give us the principles for which we are groping in the dark to define to us what is true "Democracy," it is Confucius, the man who threw open all careers to all, especially in municipal and provincial and central administration, by stating clearly what is a "gentleman." When one is the Confucian 'gentleman" he is fitted for all careers in the State, while retaining his own unbending integrity as a "gentleman."

And the "old Boy", Lao-Tze ? How refreshing in these days when one has to fill up forms and be indexed and classfied, to come across his saying : "You must govern a state as you cook a small fish ; don't overdo it." Certainly Greece greatly, and Rome in a minor manner, had the Ancient Wisdom ; but not less two older civilisations, India and China.

Proto-Historic Indian Pottery

Ancient pottery is always fascinating, and in a sense it is more so than even ancient sculpture or painting. P. Joseph observes in *The New Review*:

This is perhaps because pots are so much interwoven into the very life of a people that they are the most representative remains. Yet another reason, that may conduce to the fascination, is that pottery gives an insight into the artistic notions and the character of the makers.

The study of the pottery of several countries, like Egypt and Mesopotamia, has been so thorough that it has become an almost exact science. In India conditions have not been so very favourable for want of materials. Nevertheless Indian ceramic study is interesting.

The most ancient Indian pottery has been unearthed from the Indus valley.

The innumerable pieces, mostly broken, give us the impression that the Indus people did almost nothing else besides making pots. Such vast quantities can have only one meaning; that the people used mud pots almost to the exclusion of metal vases. The material was evidently the alluvium from the Indus valley, for we find many particles of sand in the pottery. Most of it was made on the wheel, and fired in circular kilns possessing heating arrangements beneath a floor provided with glues. The superiority of technique is seen in the fact that almost all the vessels are very well fired.

First comes a class of pottery called bichrome.

Leaving out of consideration the miniature pots, less than half an inch in height, which have excited the admiration of all, we may take the larger ones. Speaking chronologically the most ancient kind of pottery discovered so far was thinly painted and called bichrome, because decorated with two colours. The body of the pot is coated with a thin layer, called a slip, of a pale red substance, probably ochre. It is finely polished with a burnisher, and this leaves a smooth surface. The pale red or buff slip is painted in two colours, black or chocolate and red. The black or chocolate is used for the designs, which are purely geometric, and the red for thick horizontal bands to separate the registers containing the designs. Among the patterns may be easily recognized lozenges in row, either solid or filled in with hatchures, chevrons, rectangles and sigmas. Three shapes are usually found among the pale ware; the straight-sided beaker, the hemispherical bowl and the squat pot, all of them rimless.

Following the above class comes a thick ware, called monochrome.

The body is invariably dark red, which is also the shade of the slip of red ochre. On the red background are painted patterns in black. Most of the designs are still geometrical, but curvilinear rather than entirely linear. Together with geometrical patterns appear figures of animals, birds and plants, which are true to life with naturalistic detail. The shape of the vessels are mostly different from those of the bichrome ware. They show many variations. Among the common types are pointed-bottom vases, high-footed dishes, tumblers with flat base, goblets, longish jars with flared mouth or narrow-mouthed jars with a tapering stem. Most of the pots are rimmed.

Next to the monochrome ware is the plain red ware.

This ware contains the dark red slip we have already referred to. As a matter of fact, the monochrome and the plain wares are so similar in make and shapes that it seems the same people fabricated both.

A kind of bichrome ware seems to have been displaced by plain red pottery; but this two-coloured pottery is quite different from the earlier bichrome ware. The later ware introduces new types and is very coarse in make and design. While the earlier is wholly geometric in pattern, the later contains more plant forms. The geometric designs in the later pottery are extremely limited. All the painted motifs possess none of the fineness of execution seen in the earlier ware.

Finally appears a kind of black pottery with incised patterns.

Just like its immediate ancestor this ware too characterises an era of deterioration It would appear that the stages, marked by the last two kinds of pottery, were in vogue in the declining days of the Indus civilization.

Besides these common types of ware, which we have described in chronological order, there are others. Some of them are stray ones, while others belong to a class, whose chronolgical position is not yet clear. The most characteristic of the stray ones is the kind of pot with knobs on its body. This knobbed pottery, not found in large numbers, has defied the ceramic experts as to its specific use. Another rare type of pot is cylinder-shaped with perforations all over the body. It seems to have been intended as a heater or brazier. One more uncommon kind of vessel is the one called 'Reserved slip' ware. Its technique consists in covering the whole pot with a thin fine slip, and then wiping it away partly so as to expose the body, thus making by contrast of colour and texture an unobstrusive but not ineffective ornament. The slip applied to this ware is as in most of Indus pottery, dark red.

The class of pottery, whose place is not yet fixed in the sequence is known as polychrome. It is so called because more than two colours are used. The usual slip is there, on which green or white is employed together with the red and black pigments. The decorations are mostly geometric in design; rarely are introduced animals and birds, (bull and peacock).

Pottery gives us an insight into the artistic notions and the character of the makers. Pottery embodies the artistic standards of a people.

From the purely geometric motifs on a certain kind of pots we can deduce that those who drew them were yet in a rudimentary stage. They certainly were adepts at painting inanimate objetcs, and were not yet confident at reproducing the dynamism of the animate world, say of animals. We observe the progress made in the pottery with animal designs. In this stage the painters felt they could rise confidently above the easy world of squares, triangles and circles to the more difficult one of bulls, ibexes, fowls and peacocks. What is more, they could not only outline animals, but at the same time bring out the inner being of the animals. We find in the monochrome painted ware not merely illustrations that suggest the presence of bulls and ibexes. We do not merely feel that the animals are there; we actually see them. There is a very important point to note with regard to the artistic standards of the monochrome post-painters. They drew their animals giving them all the dynamism that a very thick brush could possibly impart. They showed what an ibex or a bull really was like. If we are to use a label we should say that their art was realistic.

This realistic standard of art seems to account for a trait in their character, which is in evidence in their pottery. Realism tended to make them practical. As time progressed they curtailed their practice of vase-painting. This is borne out by the fact that from the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

use of two colours they went to the use of one. It is more clearly borne out by this that the shape of the monochrome ware and the plain one that followed it are absolutely alike. We are thus forced to the only conclusion that the vase-painters in a fit of utilitarianism seem to have decided to give up painting altogether in favour of plainness. It is true there was a revival of painting later on; but it was so degenerate and decadent that it only proves that painting vases did not accord well with the change in the nature of the people.

Cost of Planning

J. C. Kumarappa writes in *Gram Udyog Patrika*:

There have been ideas and blue prints as to how to organise the life of the people but there were two obstacles that kept the flood in check. The funds calculated to be essential to execute these nebulous schemes were so enormous that people were dubious as to whether such investments will make them richer or poorer, even granting that the fabulous capital could be found. The second difficulty was the lack of political power which would be needed to put through schemes of such magnitude.

With the dim light of the dawn of a National Government we may be pardoned for hoping that the second of these difficulties will vanish as the morning mist. Furthermore, if the schemes are such as to be within the capacity of the average citizen to execute them and if the wisdom of the plans is made so plain that the man in the street can comprehend it, they would not call for much Governmental backing to put them into practice. Therefore, one essential factor is that the plans should be simple and also inexpensive.

As regards the cost, plans that call for the investment of thousands of crores in a country, where getting one square meal a day is an achievement with the majority, are destined to be largely left on paper. If we wish to be practical, the cost must be capable of being distributed amongst the people in such small amounts as to fall within their meagre means. The conception itself should be such as to catch the imagination. If this can be done then the people's operation can be obtained without any coercion.

To adjust our schemes accordingly it is of the importance to remember that ours is an agricultural country where over 70 per cent are occupied on the exploitation of the earth and an additional 18 per cent on industries connected with it. Hence it would be foolish to ignore this section of the public in our plans. Indeed, any plan worth the name, should start by planning the life of this section first. That means we have to initiate a systematic and an efficient production through a careful reorganisation of village industries.

In the nature of things, these will not call for much capital, and if the people concerned are convinced they would take to working the schemes on their own. Of course, certain functions of Government, ancillary to these occupations, such as irrigation, land and forest conservation, etc., will need funds but these would be modest in comparison with the demands of the schemes put forward to "Industrialise" the country.

In tackling this end first we would have arranged for the gainful occupation of nearly 90 per cent of the population without much difficulty. Having done this the Government may turn its attention to public utilities, key industries and communications. It would not to be a herculean task to find the capital needed for this part of the work if the first step taken is to arrange for the 90 per cent of the population that has resulted in their increased productivity.

We trust that the Government that will now assume power will put first things first and go about their work in such a systematic manner as to reduce both the money cost and human cost of ushering in a planned economy.

FOREIGN PERIODICALS

The Co-operative Movement of China.

Kuang-mien Lu, Director, North-West Headquarters, Chinese Industrial Co-operatives, writes a short historical sketch of the co-operative movement in China in *The Asiatic Review*, April, 1946 :

According to the latest data, up to June, 1944, there were 173,328 co-operative societies in China, with a total membership of 15 191 823 and an accumulated share capital of CN $501,517,132. The co-operatives are roughly divided into four kinds—credit, consumers, marketing and producers. Many of our existing co-operatives are credit societies, about 50 per cent. These are then followed by marketing or agricultural societies, about 34 per cent, consumers' societies, about 11 per cent, and producers' societies, about 5 per cent.

The development of the co-operative movement in China is only a matter of twenty-five years. The first co-operative, the People's Co-operative and Savings Bank, was organized in Shanghai in 1919 by Professor Hsueh Hsien-Chow, together with a number of his colleagues and students of the Futan University. Professor Hsueh studied for many years in Germany and was much impressed with the German co-operative credit movement, which was started in Germany around the sixties of the nineteenth century, ten years after the Rochdale Pioneers, and later became a very strong movement spreading over cities and countryside. However, Professor Hsueh's Co-operative Bank in China was not able to last very long, and closed with his death a few years later. Hsueh wrote many books and also published a paper called the *People's Weekly*, expounding co-operative principles and reporting co-operative achievements abroad. Though Professor Hsueh was not able to accomplish much himself, the co-operative seed was sown for later development and growth.

In 1924 farmers' co-operative credit societies were organized in Hopei, a Province of North China, with the help and direction of the China International Famine Relief Commission. The Commission is a combination of a number of relief organizations in North China which helped to tackle the most serious famine of 1920, resulting from drought for two succeeding years in the Provinces of Hopei, Shansi and Suiyuan. In 1921 there was a good harvest and the relief organizations joined together and formed a permanent relief body, the CIFRC. with the object of devising ways and means of preventing any further repetition of famines. One of the first steps taken by the new Commission was the promotion of the co-operative organization among the farmers. In granting small loans at a very low interest rate to the farmers for productive purposes through the co-operative credit societies the Commission was aiming on one side at freeing the farmers from the exploitation of the moneylenders and on the other side at re-equipping the farmers with the cattle, tools, seeds and fertilizers necessary for their farm work. The number of co-operative credit societies increased steadily after 1922, and by 1930 there were established altogether over 900 societies, mostly located in the Province of Hopei, with a total membership of 25,000.

Meanwhile co-operative organizations were spreading far and wide in Central China, principally in the two Provinces of Kiangsu and Chekiang in the years after 1928, when the Nationalist Government was established in Nanking. Two farmers' banks were established in Kiangsu and Chekiang in 1929 with the sole object of financing the co-operative credit societies. In 1934, after five years of promotional work under the Provincial authorities of these two Provinces, over 3,000 societies came into being with a total membership of 9[illegible]. Later a National Farmers' Bank was established and co-operative works were extended to nearly all the Provinces under the National Government. In 19[illegible] National Co-operative Conference was called by the Executive Yuan, and resulted in the promulgation of the Co-operative Law. A Central Co-operative Bureau was established under the Ministry of Industry for the registration and promotion of the co-operative organizations throughout the whole country, with branch offices attached to the Provincial Governments. Later the Bureau was reorganized into the present Central Co-operative Administration and placed under the direction of another Ministry, the Ministry of Social Affairs.

A number of educational and social institutions such as the Mass Education Movement, the University of Nanking, the Nankai Institute, the Rural College of Choping, the National Christian Council, the National China Farm Products Marketing and Research Committee, together with a number of private and commercial banks, were all taking an increasing interest in the promotion and financing of the co-operative movements. Some of them were making most valuable experiments, and were carrying on a great deal of educational work such as the training of co-operative students and organizers. So far the co-operative movement in China up to 1937 had not been able to extend further to a considerable extent beyond the scope of credit and agricultural marketing. The consumers' and producers' movements had not been able to take root in China until after the war started with Japan in 1937. There were only a growth of the last seven or eight years. The statistics in 1937 show that there were altogether 16,983 co-operatives of various kinds in the whole of China, and the total membership was well over two million.

During the last few years of war the co-operative movement in the occupied territories must have suffered greatly, but statistical data show that the war gave new impetus to the development of the co-operatives in China. A great number of consumers' co-operatives were established in the cities. They were attached mainly to Government offices and public organizations, and were entrusted sometimes by the Government with the distribution of controlled goods such as sugar, cloth, salt and various other articles. Many of these co-operatives were not real co-operatives owing to the fact that the members were usually not taking a very active part in the running of the co-operative businesses. The managements were often in charge of people directly appointed by the administrative heads of the organizations concerned. However, these co-operatives sometimes rendered very useful service to members in obtaining for them a fair share of daily necessaries at controlled prices, which otherwise would be [illegible] difficult to get. Of course, there are exceptionally few and really democratically controlled consumers' societies such as the Sa Ping Pa Society in Chungking. They are, however, few in number, and the bulk of the consumers' movement in China reveals a general lack of understanding of co-operative principles.

Another line of co-operative achievement during the war was the organization of the Chinese Industrial Co-operatives. The Association for the Advancement of the Industrial Co-operatives was established in Hankow in 1938. It was a semi-governmental organization under the leadership of the chairman of the Executive Y[illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with four regional headquarters situated at strategical points at the various Provincial cities undertaking the promotion and financing of the industrial co-operatives. Owing to the shortage of all kinds of manufactured goods in the interior of China, and with the active participation of hundreds and thousands of refugee labour and skilled workers as the result of the evacuation of the coastal Provinces, the movement grew very rapidly during the first four years after 1938. According to the data of the CIC Association, the number of industrial co-operatives in 1942 was a little below 2,000, with a total membership of around 30,000. The actual number of industrial co-operatives must be more than this, as a great number of these industrial co-operatives were established spontaneously by the workers themselves following the examples of the workings of other co-operatives in the neighbourhood, and they were not necessarily receiving any financial help from the CIC Association. In 1944 there were well over 5,000 industrial co-operatives registered under the Ministry of Social Affairs. These industrial co-operatives have done a great deal during these years of war in the mobilization of all available man-power and natural resources manufacturing innumerable articles to meet civilian and military needs. The co-operatives were owned and run by the workers themselves, and they have been able to form a number of federations through which joint business and educational activities were carried on with very successful results. Indeed these industrial co-operatives have achieved something more than just helping the national cause. They have been able to demonstrate to the ordinary working-class people a new form of life by which they get practical lessons in the workings of democracy and learn to become masters of their own destiny.

Is America Fair to Islam ?

Under the above caption John Earle Uhler discusses the much-vexed problem of Arab-Jewish controversy over Palestine in *The Catholic World*, February, 1946 :

The General Assembly of the United Nations has just convened to consider, among other serious problems, the Arab-Jewish controversy over Palestine. President Truman has already expressed himself in favor of the Jews, thus throwing the influence of America to that side. In November he made public a letter he wrote on last August 31st to Prime Minister Attlee, in which he urged that 100,000 Jews be admitted to Palestine at once. In December, both the United States Senate and the House passed a resolution to the effect that the American government should use its good offices with Great Britain to permit unrestricted entry of Jews into Palestine for the purpose of establishing a national home.

These are the latest of the many such efforts made by American politicians in answer to England's White Paper of 1939. In this document London announced that immigration of Jews into Palestine would be banned after March 31, 1944. It stirred many Jews of America to make an appeal to the President of the United States—then Franklin D. Roosevelt. According to Senator Robert F. Wagner of New York, the President agreed to intervene on behalf of the Jews (although later, after a conference with Ibn Saud, head of Saudi Arabia, he appeared to have grown cool to the project). On March 27, 1941, the Jewish Telegraphic Agency announced the establishment of the American Palestine Committee, with the purpose of preparing Palestine for "large-scale" Jewish immigration. It was a committee of no mean political influence. Senator Wagner accepted the chairmanship, saying that he was "looking forward to the day when the Jewish Commonwealth will take its rightful place among the free nations of a peaceful world."

So vigorously had the American government thus encouraged this movement that the Zionists have been heartened to make rugged statements about their plans. Doctor Abba Hillel Silver, chairman of the executive committee of the American Zionist emergency council, at a hearing of the House Foreign Affairs Committee, said, "The Jewish people must be permitted and helped to develop their homeland in Palestine in such a way as to be able to drain off, in a relatively short time, two or three million Jews from the crowded and economically tensioned centers of central and eastern Europe." Doctor Chaim Weizmann, the leading spirit of the Jewish Agency, wrote, "The Arabs must be clearly told that the Jews will be encouraged to settle in Palestine, where they will establish "a state of their own." He added, "If any Arabs do not wish to remain in a Jewish state, every facility will be given them to transfer to one of the many and vast Arab countries."

American sympathy with the movement headed by such able and fervent leaders as these was given impetus during the war by the persecution of the Jews at the hands of the Nazis. But the movement itself has an ancient origin. It goes back—dimly—to Moses, who led the "children of Israel" from their persecution in Egypt to the land of their ancestry. This was the birth of a nation. After many vicissitudes, including, on the one hand, the construction of the first Temple at Jerusalem by David and Solomon, and, on the other hand, the captivity of the Jews in Babylon, many of them were again restored to "the promised land" under the headship of Zorobabel. They began the reconstruction of the Temple, which had been destroyed by the Babylonians fifty years before. It again fell into ruins and was again restored, this time by Nehemias under Persian benevolence. Still another such cycle of decay opened, and was closed by Esdras, who revived the old glories of the Temple. Then began the domination of the West. Under Hellenic rule, the dispersion of the Jews was expanded. Antiochus Epiphanes, a political off-shoot of Alexander the Great, was partly responsible. He set up a statue of Jupiter in the Temple, commanded the sacrifice of swine on the altar, destroyed the sacred books, and drove the faithful to the mountains. And yet again the Jews fought their way back under the leadership of the Machabees, who cleansed the temple and guided their people, until the invasions of the Romans. These new enemies killed thousands of Jews and sold other thousands into slavery. They plundered the Temple, but still once more a chief arose from Zion—Herod the Great—who conciliated the Romans, was made king, and rebuilt the Temple into a magnificent structure. Then came the crash of the finale. The Jews rebelled against the Romans and were defeated. Jerusalem fell. The Temple was destroyed, A.D. 70.

The Jewish state vanished and has never again been restored. Soon afterward, Jews were forbidden even to enter the Holy City. Then, almost two thousand years passed, and there were only fifty thousand Jews in all of Palestine.

During these two millenniums, however, the dream of a Jewish state remained vivid. In the early centuries of the Christian era, the Talmud was completed. It has no immediate bearing on a political state of the kind now being contemplated, but it gave to the scattered Jews a common point of contact. With the Old Testament, it was their spiritual capital and emphasized the antiquity of their traditions. For about a thousand years of the Christian era, they even had an Exilarch—Prince of the Exiles—the glories of whose office are described by Disraeli in his novel *Alroy*. Their restoration to Zion was sung by poets like Juda Halevi and Solomon ibn Gabirol. It was promised by claimants to the Messiahship, like Sabbatai Zevi. And the credulity of thousands of followers attests to their nostalgia.

In the mid-nineteenth century, the dream seemed to be coming true when England was vying with France for the control of the Levant. English statesmen, including Disraeli, envisioned a Jewish state in Palestine under the influence of London as a means of defending the route to India. The vision enlarged with the building of the Suez Canal. It was brought into clear focus when the first international Zionist congress convened at Basle in 1897. In appreciable numbers, Jews began to immigrate into Palestine. They bought property through the Jewish National Fund. In America, they were aided by an organization led by Mr. L. D. Brandeis, later Justice of the United States Supreme Court. And then, after the first World War began, their dreams seemed to break into reality when, in 1917, the British foreign secretary Lord Balfour, wrote to Lord Rothschild, that the Cabinet had approved "the establishment in Palestine of a national home for the Jewish people." Britain's allies agreed, Woodrow Wilson expressing emphatic approval. In 1919, the Supreme Council of the Allies made Palestine a mandate of Great Britain, with the understanding that the Balfour Declaration should be put into effect.

The Jews took all this at face value. Thousands of them, specially from Europe, poured into the Holy Land, their population there increasing about a thousand per cent, from 50,000 to a half million. Land that they purchased had increased, since 1918, from 180 square miles to more than a thousand, or over one-third the arable land of all Palestine. Many of them congregated in the cities, chiefly Jerusilem, Jaffa, and Haifa. They virtually founded the all-Jewish town of Tel Aviv. They opened towns and factories. With Jewish capital and under Jewish management, they established almost a thousand large industries—among them, the Palestine Electric Corporation, which furnishes light and power to an extended district. For the education of their children they built a number of schools. They organized technical and agricultural institutions. In 1925 they opened the doors—Balfour himself honoring the inauguration—of the Hebrew University of Jerusalem. They encouraged the use of Hebrew as the national language. The children of Israel were once more shaking off their bondage and prospering in the Promised Land.

With this history in view—stressed a thousandfold by the recent persecution of the Jews in Europe—it is with reluctance and trepidation that a denial of Jewish aspirations can be expressed.

The Arabs, however, have their side—a side that is not being heard in America.

For the first time in their history, the various and far-scattered Arab peoples were united, thirteen centuries ago, by a common bond—Islam. At that time Palestine was part of the Byzantine empire. It was Christian, not Jewish. It was taken from Christians by Mohammedans

ASOKA & HIS INSCRIPTIONS

By **Dr. Beni Madhab Barua,** M.A., D.Litt. Price Rs. 15 only.

Of Asoka *H. G. Wells* said :—

"Amidst the tens of thousands of names of monarchs that crowd the columns of history, their majesties and graciousness and serenities and royal highnesses and the alike, the name of ASOKA shines, and shines alone, a star."

This evaluation of the great Maurya emperor finds a striking confirmation in the present monumental work. The entire position of the history of Asoka has been critically reviewed mainly from a first hand study of the inscriptions and other source materials. And in this searching analysis nothing has been taken for granted, no reliance placed on foregone conclusions. It is a challenge to traditional thinking in Asoka and a blow to many of our cherished notions in the field. An expert, authoritative, well-documented study. Indispensable alike to historians, students and general readers. (Size—Royal. P. 500).

THE MIDDLE EAST AT THE CROSSROADS

By **T. Cliff.** Price Re. 1-4 only.

An expert, authoritative, well-documented study of the Middle East. Wide in its range and unique in its approach, the book will be of immense help to those who want to understand the problems of the Middle East.

THE LEAGUE DEMAND

By **Dr. Rajendra Prasad.** Price As. 12 only.

A unique study of the communal problem of India in all its facets. A 'must read' book for every Indian.

Under Omar, the Arabs besieged Jerusalem, 627 A.D. The Christian commander, Sophronius, surrendered. At the suggestion of the conqueror, the two leaders then made a search for the ruins of what Omar called "the Mosque of David," the Temple that had so often been destroyed and rebuilt—and last razed by the Romans in A.D. 70.

And thus they entered. It was a place from which all traces of the Jew had been so wiped out that nothing but a rubbish heap remained. To Omar and all other Mohammedans it was a place of special adoration. There lies the Holy Rock. There, so the Prophet Mohammed declared, one prayer is better than a thousand elsewhere. He prayed there. He ascended from there to heaven on the back of El Burak, the sacred steed, which left the imprint of its hoof. An angel kept the rock from following the Prophet to heaven, and the mark of the angel's hand is there. At the last day, the holy Kaaba of Mecca will come there, and there Gabriel will blow his triumpet. Allah's throne will be there, and there the Faithful will assemble.

After Omar's conquest, a mosque arose near the spot and bore his name. Since his day—except for a short time during the Crusades when Christians re-possessed the land—this Holy Place has been in the hands of Arabs.

To them, the glory of Abraham, Isaac, Jacob, Moses, and of all the Prophets of the Old Testament means as much as to the Jews. They differ under this head upon but one point. Islam looks upon Jesus Christ as the greatest of the Prophets, with the exception of Mohammed. It, therefore, sees in everything connected with the life and death of the Savior a heritage of Mohammedanism. So the Moslem regards all of Palestine as sacred soil. In worship, the knee not only of millions of Jews but also of fifteen times as many Mohammedans bends to this shrine.

In spite of differences in religion and even in view of the increasing pressure of population, the Mohammedans have always been tolerant of the Jews—that is, until 1920.

The peace of this conjunction was broken by the militancy of modern Zionism. Three years after the Balfour Declaration, or by the time of the Easter Sunday riots of 1920, the Mohammedans were growing alarmed at the steady increase of Jewish immigration. When Balfour wrote his famous letter, there were about 50,000 Jews in Palestine. This number swelled to 85,000 by 1922. In 1932 alone, 10,000 Jews moved in. In 1933—30,000. In 1934—40,000. In 1935—over 60,000. Later, when the British government cut the quota down, they were smuggled into the country in numbers that are not known. The Arab saw that the streets of the cities were being crowded with Jews. In the market, he began to feel the pressure of increasing Jewish competition. He awoke to the fact that mile after mile of cultivable land was going into Jewish hands. He found himself elbowed from his *mihrab* by thousands of foreigners performing rites different from his own.

Against further encroachment, the Ulema, or the spiritual leaders of the Mohammedan world, took their stand. The Ulema of Al Azhar at Cairo, the leading Mohammedan theological institution of the world, appealed to leaders in all Moslem countries to protect Arab Palestine. And their word has gone out to the millions of the Faithful.

The Arab-Jewish problem is represented in an impressive drama on Friday evenings in Jerusalem. Outside the pale of the Haram esh Sherif (the Place of the Temple), the Jews gather at the Wailing Wall. Their leader chants, "For the palace that lies desolate, sit in solitude and mourn." and the response sounds from the congregation, "We

But Americans do not hear the Moslem muezzins who mount to the top of the minarets inside the walls and chant their calls to prayer. And if Zionism imposes a political state on their Holy Land, a cataclysm of blood will begin again to drench the earth.

MARXIST-LENINIST BOOKS

SELECTED CORRESPONDENCE OF MARX AND ENGELS :

500 pp. Cloth bound. **Rs. 5**

The character and contributions of two correspondents give this book an extraordinary fascination. They discuss their practical work in the labour movement, comment on current political events, elaborate their REVOLUTIONARY THEORY, and discuss in outline their fundamental books.

A TEXT BOOK OF DIALECTICAL MATERIALISM :

By DAVID GUEST. 90 pp. **12 As.**

Written by a brilliant young English philosopher who was killed in Spanish Civil War in 1938, the book deals briefly and lucidly with such aspects of dialectical materialism as the general nature of dialectics, dialectics and society, and the philosophical struggle today. It also includes suggestions for further reading.

FASCISM AND SOCIAL REVOLUTION :

By R. P. DUTT. 390 pp. Nicely bound. **Rs. 4-8**

This is incomparably the best book on Fascism that has yet been written. It is not too much to say that it is the duty of every anti-fascist in the world not only to read but master thoroughly every word of it.

V. I. LENIN :

A BRIEF SKETCH OF HIS LIFE AND ACTIVITIES

Prepared by

Marx-Engels-Lenin Institute, Moscow.

284 pp. Nicely bound. **Rs. 3-8**

This is a text-book of Marxism as put into practice by Lenin and can best be compared with the "Short History of the Communist Party of Soviet Union (Bolshevics)". It will appeal to the academic mind which wants to make a thorough study of Lenin's work. It is a concise, well-documented account of Lenin's life and work as revolutionary leader and man of action, and as thinker and philosopher. It is a piece of research, the work of people who are thoroughly acquainted with the subject, and who are at the source of all information available.

NATIONAL BOOK AGENCY LIMITED, 12, College Square, Calcutta.

Democracy and Nature

W. S. Taylor observes in *Unity* about the Essence of Democracy :

Many people seem to think that democracy derives from a supernatural world, and that democracy is therefore contrary to nature. From that point of view "justice for all" is democratic, while "dog eats dog" is wholly unrelated to the democratic.

When, however, we contrast democracy with anarchy and despotism, and see what democracy essentially is, we find that democracy is a natural and superior development.

Democracy is primarily a defense against despotism. This appears in many traditional statements of democracy. For example : "Freedom has a thousand charms to show. That slaves, howe'er contented, never know." "A free multitude is guided more by hope than fear ; a conquered one, more by fear than hope ; inasmuch as the former aims at making use of life, the latter but at escaping death." "Liberty, equality, fraternity." "The worth and dignity and creative capacity of the individual." "All for each and each for all." "Government of the people, by the people, for the people."

Apparently every genuine democracy attempts to realize the following practices : maximal freedom for each individual, considering all individuals ; free competition of ideas ; essential education for all ; majority control of laws and governors, including, ultimately, majority choice of any constitution, bill of rights, or "law above the laws"; government by law ; individual equality before the law ; recognition of individual differences in capacities ; individual responsibility according to capacity ; reward, in satisfaction at least, according to use of capacity ; fellow feeling ; advancement of truth, beauty, and goodness ; and achievement of harmonious happiness.

From the individual point of view, democracy is the way for every person to live as fully and richly, to have as much individual power, perfection, and happiness, to be as well-developed a person, as possible. Thus democracy is *the way for every person to be his best.*

The immature person tries to be his best through satisfying, by his own efforts, his selfish interests. He learns, however, that to be one's best requires help both from and to others. Accordingly, from the social point of view, democracy is *co-operative self-realization.*

Co-operative self-realization means sharing in constructive enterprise. Such enterprise may be primarily religious, as in the early Congregational churches ; political, as in the early United States ; economic, as in the mutual insurance companies and the co-operative societies ; educational, as in certain adult study groups ; recreational, as in various sports organizations ; or a combination of interests, as in the later democratic nations. Whatever the enterprise or the combination of enterprises, in so far as it is constructive, it is a part, and a most creative part, of evolution. Accordingly, from the cosmic point of view, democracy is *sharing in creative evolution.*

These three definitions of democracy are really synonymous : broadly considered, the way for every person to be his best is through co-operative self-realization, which means sharing in creative evolution ; and sharing in creative evolution means co-operative self-realization, the way for every person to be his best. Moreover, each of the definitions formulates living most abundantly. It follows that the three definitions can be reduced to one, namely : *Democracy is the most progressive living.*

Democracy makes for survival because it makes individuals and groups most fit to survive. More than any other system, democracy makes self-directing men. men who develop and defend themselves, their groups and their larger interests, steadfastly and intelligently. Also, more than any other system, democracy makes an enlightened group, a group in which each individual enjoys a place, understands the group needs, and works together with his fellows in common interests.

THE MODERN REVIEW

AUGUST 1946

VOL. LXXX, No. 2 WHOLE No. 476

NOTES

The Task Ahead

It is not desirable from the point of view of the Western Nations that India should ever develop into a first-class Power. The idea itself seems Utopian at the first glance, judging from the pass this country has been brought to after two centuries of foreign intrigue and rule, but there is no reason on earth why it should not be so within the next twenty years, if we could but overcome the three main handicaps imposed on us by foreign vested interests. These handicaps are, in order of their importance, ignorance, indiscipline and inefficiency. And chapter and verse can be given in support of the statement that all these have been imposed on us by the foreign interests whose imperial aims and objectives are best furthered so long as these disqualifications hang round our necks as our badges of inferiority. But merely blaming the British will not get us anywhere. For, indeed, the longer we are content with merely blaming them—or their henchmen—the longer would this foreign dominance continue. We have to set about in getting up a fighting programme, to fight political intrigues and opposition and to get rid of our main disabilities.

Our geographical position is eminently suited for the leadership of all Asia. Our resources of strategic materials are superior to that of any other nation on earth, specially if we take into account our means of easy access to that of our neighbours. In man-power, hydro-electric potential, communications and economic possibilities we are second to none. And what is more, forty years of sustained struggle has brought us on the threshold of self-determination. Once that is firmly in our hands it is only the lack of leadership and initiative that can prevent us marching forward to the place in the comity of Nations that is our birthright.

Are the handicaps too heavy? Are the barriers erected through the intrigues of foreign vested interests, as for example, the intransigence of the Muslim League insurmountable? Are we in reality a third-class race, ignorant and inefficient to the core as the propaganda of our enemies would make out?

We are of the same race that led the world for a millennium in arts, sciences and in the philosophy of living. Indian Industry of the present-day shows clearly that in spite of all handicaps we can hold our own against the European. And the anti-Indian campaign in Africa is, in fact, an admission that the European settler is no match for the Indian in any sphere even though he has unlimited aid from his motherland and the Indian has every possible obstruction raised in his path. As for the opposition from the Minority groups—or rather the Muslim League—it is but a new shape of the opposition of British vested interests. India is filled with the monuments to the success of the intrigues of the East India Company, during the eighteenth and early nineteenth centuries, in the form of certain Native States ruled by the descendants of those who furthered the interests of John Company through traitorous and mercenary action against the nationals of the Fatherland. If, the Muslim League chooses that path, knowingly or in blind ignorance, it will have to be fought with all weapons, stratagem with stratagem, force with force. It must be remembered that the ultimate gain will go to the British, the Muslim League is but a pawn in their hands. Even the latest sign, received at the time of writing, of the rescinding of their acceptance of the Long-term and Interim plans, only clearly indicates another move by the British vested interests. We have not the slightest doubt that the League has taken this sudden turn after being assured, by the reactionary British officialdom in India and their supporters in the ranks of Mr. Churchill's group, that they would receive all possible aid from them. The giving of jobs galore, regardless of qualification or fitness, by British bureaucrats and of contracts and agencies with all possible loopholes for profiteering and black-marketing has provided the reactionary with the sinews of war and enabled him to entrench himself in all walks of public life. British-owned newspapers and the British-controlled radio has been his most powerful means of publicity and the Tory Last-Ditcher in Britain his last hope. And conversely Mr. Jinnah is the blue-eyed boy of Winston Churchill and his gang! So, the British Die-hard with his ill-gotten interests in India, every farthing of which has been filched from us, is our enemy and whoever is in league with him must be treated as an enemy as well.

British vested interests are counting on the Congress either listening to counsels of despair or else being outmanoeuvred into handing the balance of power—that is the control of reins—to British officialdom. The Police in most places are rotten to the core and largely officered by reactionaries, *the Congress in its folly has not made any intimate contact with the army, despite all historical precedents and all opportunities presented by the circumstances of two great World Wars,* and the executive is dominated by that autocratic remnant of medievalism, the "Indian Civil Service" which, in parallel with the Holy Roman Empire, is neither "Indian" in structure, nor "Civil" in its attitude and nor yet has it any concept of "Service." The Congress has, indeed, a formidable task ahead of it, and it is on that that our opponents, at home and abroad, are banking. But the country is, in the vast majority, solidly behind the National movement for Liberty and given the correct lead will march forward unflichingly, overcoming all handicaps and surmounting all barriers.

Let us then get rid of our complexes and go on with the making of a definite plan of campaign, cutting ut any further metaphysical discussions and dissertations and avoiding all minor issues that tend to side-track the main objective. False values in nationalism must be at once dropped. They constitute, with their attendant shibboleths, the greatest obstacles to the formation of new projects and the reform of old ones. We cannot look for aid from any quarter at this juncture for, as we said at the beginning, it is to nobody's interest, excepting our own, that the nationals of this country should attain self-sufficiency, efficiency and mastery over their own destiny. But once we definitely march forward we shall find allies, and so let us maintain the closest of contracts with our friends and get on with the job.

A.-I. C. C. Ratifies Delhi Resolution

The All-India Congress Committee, at its Bombay session held on July 6 and 7, passed by an overwhelming majority Maulana Azad's resolution of the Working Committee, deciding to enter the Constituent Assembly, 204 members voting in favour and 51 against. Maulana Azad moved the resolution and Sardar Patel supported it. Nineteen speakers spoke on the resolution, of whom nine supported and ten opposed it. The most outstanding event was Gandhiji's address on the second day. In his concluding remarks Pandit Nehru emphasised that it was wrong to think that the Congress had accepted this plan or that plan. Nothing had been accepted. The Congress had only decided to enter the Constituent Assembly to frame a new constitution for a free and independent India. He made it quite clear that there was no other commitment of any kind. If the Congress found after going to the Constituent Assembly that it could not be worked, there was nothing to prevent the Congress from walking out of it.

Moving the resolution, Maulana Azad said that for many years the Congress had been pressing for India's right to decide her own future and to frame her own constitution. In accepting the long-term proposals there had been no compromise whatsoever on the fundamental ideals of the Congress—complete independence and unity of the country. In the negotiations carried on with the Cabinet Mission he had been given the assurance that the independence of India was no longer in dispute. Explaining the position that the Cabinet Mission's proposals gave us the right to summon a Constituent Assembly to frame our own constitution Maulana Azad said :

This is what we have been demanding all these years. What will be our position if we refuse the offer ? If we refused the offer, then there would be no meaning to our demands. The things that we have been asking for years has been accepted and we have now to work our own way. Therefore, the Committee had no choice. It had to accept the offer so long as the Committee felt convinced that it would lead the country to the end the Congress had before it.

The plan envisaged by the Cabinet Mission in their White Paper of May 16, consists of two aspects, political and communal. As far as the political implications of the proposals are concerned, the proposals make it clear that the Constituent Assembly will have the fullest rights to frame a constitution for a free and independent India and such a constitution will be accepted by the British Government. We have been given the freedom to decide whether we wish to remain within the British Empire or be completely independent. It is for us to decide this vital question and the British Government does not wish to dictate to us in this respect as they have hitherto been doing.

In my first interview with the Cabinet Mission I made it absolutely clear to the delegation that the Constituent Assembly we wished to summon should have unfettered freedom to frame a constitution for a free and independent India. The British Government has accepted this demand and has made it clear that the freedom of India is not under question and it has been granted without any question. Why then should we raise doubts in the face of such unequivocal declarations by the British Government?

The Cabinet Mission's proposals also have once and for all time cleared all doubts about the question of the division of India. These proposals have made it clear beyond a shadow of doubt that India shall remain an undivided single unit with a strong Central Government composed of the federating units.

Our main demands having thus been accepted by the Cabinet Mission, you will agree the Working Committee had to accept the proposals after pointing out the defects in them. This is what the Working Committee has done by its resolution of June 26. My answer to those critics who say that we should not have accepted this proposal is that if we rejected this proposal now, it may not be possible at a later date in the future to secure a proposal acceptable to us.

For some time now the Congress had been convinced that a completely unitary form of Central Government was unsuited for India as it is impracticable. The Congress had also felt convinced that a division of India as demanded by the Muslim League would prove disastrous to the country. The Congress had, therefore, decided to pursue a middle course. That is the reason the Congress recommended a federal form at the Centre, with maximum autonomy to the federating units including residuary powers. This helps to keep India undivided, at the same time ensuring utmost autonomy to the units to develop themselves individually and freely to the maximum extent.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Maulana Sahab said that up to this point, the Mission's plan corresponded with the Congress proposal. The only new feature of the Mission's plan, "to which the Congress had not agreed fully, was the one relating to grouping. The Working Committee has, therefore, made it clear that there should be no compulsion in the matter of grouping. The provinces should be free to decide whether they wish to join a particular group or not." Maulana Azad was confident that the interpretation Congress had put on the grouping clause was the correct interpretation.

Seconding the resolution, Sardar Patel dealt with the question of Provisional Government and said that the Congress had made it clear to the Cabinet Mission that the proposed Constituent Assembly would not prove a success if a responsible representative Provisional Government at the Centre was not established soon. Regarding grouping and the unity of India, the Sardar said:

> Consistent with the existing circumstances we have secured the widest franchise possible for the election to the Constituent Assembly. The most dangerous proposal in the Constituent Assembly scheme is the one relating to grouping. Our interpretation of the relevant paragraph in the State Paper is that the provinces are free to decide at the initial stage whether they wish to join a particular group in which they have been placed. No province can be compelled to join any group against its own wishes.
>
> The difficulty about Europeans participating in the voting to the Constituent Assembly election has been practically overcome. We have thus secured a Constituent Assembly almost on the lines we have demanded all these years. Furthermore, under the proposed scheme, the transfer of power from British to Indian hands will be smooth and peaceful. It is, therefore, our conviction that we should take advantage of the scheme and not plunge the country in a struggle.
>
> At the very commencement of our negotiations with the Cabinet Mission we made it clear to them that we could talk to them only on the basis of a free and independent India. The British Mission accepted this and made it clear that their acceptance of our demand was without any reservation. In the face of such assurance it is difficult for us not to believe them.
>
> We have also made sure that there shall be one undivided India with one Central Government. What the shape of that Central Government will be, is a matter for the Constituent Assembly to decide. The Muslim League sees the germ of Pakistan in the scheme. We see a United India. It is for the Constituent Assembly to decide who is right.

Mr. Jaiprakash Narain was the principal opposition speaker. On the second day Gandhiji addressed the A.I.C.C. for an hour. In an impassioned speech he called upon Congressmen to give a full and fair trial to the Constituent Assembly scheme and make the best out of it. He had no doubt that if the task was properly approached, they could produce a Swadeshi constitution for India. Some people talked of the British deceiving the people of India and the Congress. He, as a true Satyagrahi did not believe that any one, not even the British, could deceive true Satyagrahis. He said:

> The proposed Constituent Assembly, I know, is not a free Assembly. There are many defects in the scheme, but since we have been fighting for the last so many years, why should we be afraid of the defects in the Constituent Assembly scheme. We can fight the Constituent Assembly itself if we find the defects are unremediable.
>
> As true Satyagrahis and fighters we have no right to be afraid of any hardships or difficulties in our way. I was, therefore, surprised when I heard Mr. Jaiprakash Narain saying yesterday that it is dangerous and useless to go into the Constituent Assembly. Supposing we go into the Constituent Assembly and lose, why should we be afraid? A true Satyagrahi never thinks in terms of losing. No one can defeat him. He can never be deceived or cheated by anyone.
>
> As Satyagrahis we have no right to say that the British are dishonest. How can we say that? There are good and bad people in all countries. We quarrelled among ourselves in the past and, therefore, the British who came as traders to this country established themselves as our rulers. We have been fighting them as our rulers, not because the British people are dishonest or bad, but because they have no right to rule over us. They have now told us that they are ready to quit. Our task now is to see how their quitting can be smooth and peaceful.

Summing up his speech, Gandhiji finally said, "I am sure we are still capable of going through difficulties, and, therefore, I do not see any reason why we should be afraid of going into the Constituent Assembly. I know there are many defects in the Constituent Assembly scheme, but then it is in your power to improve it or to bury it. The Constituent Assembly scheme looks like iron ore. We can convert it into pure gold by our own efforts. Whatever loopholes there are can be remedied. My advice to you is to accept the scheme even in spite of its defects, for as Satyagrahis, we have no reason to be afraid of anything. I feel that the scheme is capable of improvement and therefore my urge is in favour of its acceptance. We have asked the British to quit India. This does not mean that we wish to ill-treat them. We want the British to quit honourably and smoothly. The Constituent Assembly proposal is to enable us to make the British quit India. I, therefore, feel that we should accept the Constituent Assembly scheme in spite of its defects, as we are competent to remedy the defects. I know it is a British sponsored scheme, but have not the British openly stated that they have done this with an open mind and without any reservation to enable Indians to frame their own constitution for a free and independent India?"

The speeches of the members who opposed the resolution betrayed their deep suspicion of the British motives. The burden of their contention was that the State Paper was nothing but a trap, it would weaken the Congress organisation if the proposals were accepted. Replying to these criticisms, Maulana Azad said, "I am unable to agree with those who say that by going to the Constituent Assembly we shall be weakening the Congress organisation. Whatever difficulties may stand in our way, we will overcome them as we are determined to reach our final goal. We will not in any event sacrifice any of our fundamental principles. If unfortunately any insuperable difficulties crop up in direct conflict with our fundamental principles, we shall not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hesitate to kill the Constituent Assembly, We have won our struggle for freedom through sheer sacrifices and suffering and I will ask you now not to falter and fritter away the fruits of victory by adopting a gloomy outlook and fear complex. Statesmanship demands that we should be practical in our approach to problems. We must utilise opportunities as they present themselves to further our own ends. I want to emphasise that by accepting the Constituent Assembly proposal we shall lay at rest one of the longest standing communal problems. The Muslim League has been demanding all these years the division of India into Hindustan and Pakistan and two separate Constituent Assemblies to draw up separate constitutions. Both these things have been abandoned by the Muslim League through its acceptance of the Cabinet Missions proposals of May 16. The result of this proposal is that there shall be one United India and one Constituent Assembly with one Central Government. The door to the Constituent Assembly is open to enable us to draw up our own constitution. Victory has come into our hands and please do not turn it into a defeat."

Problem of Grouping

Of all provisions in the Cabinet Mission's Plan, the one relating to grouping has come in for the largest amount of criticism. Two diametrically opposed views have been advanced in relation to it. The Congress says that it is optional at the initial stage for the provinces to decide whether they would like to join the group or not. The League holds that joining the groups is compulsory, the provinces have the right to opt out only after elections are held under the new constitution. The provisions in the State Paper and their explanations by the Ministers are vague and open to variable interpretation. Three days after the conclusion of the A.-I. C. C. session, Pandit Nehru, at a press conference, said, "The big probability is that from any approach to the question, there will be no grouping. Obviously Section A will decide against grouping. Speaking in betting language, there is a four-to-one chance of the North-Western Frontier Province deciding against grouping. Then, Group B collapses. It is highly likely that Assam will decide against grouping with Bengal." In fact, a resolution passed in the Assam Legislature has made it mandatory for the Assam M.C.A.'s to vote against grouping.

Referring to grouping, Mr. Jinnah said in the League council meeting, "Pandit Nehru has stated that the Congress was not bound by paragraph 19 of the State Paper which regulates grouping and which also regulates the functions of the Constituent Assembly. The essential part of the scheme, from the Muslim League point of view, is grouping in B and C and it is that part of the scheme which has been unequivocally repudiated by the Congress which asserts that provinces in Groups B and C are free to opt out from the very beginning and not as is provided until the Group constitution and provincial constitutions are framed and elections are held under the new provincial constitutions." Sir Ghulam Hosain Hidayetullah revealed in his speech how grouping plan in Section B was also foundering. He said, "The Congress had already begun to work against the proposed grouping of provinces. In Assam, the members elected to the Constituent Assembly had been given a mandate to vote against grouping. A similar resolution would probably be moved in Sind where there were some quislings amongst Muslims. Frontier is also against grouping. Frontier Province and Sind fear that their separate cultures would be killed once they agreed to grouping in which the Punjab would naturally dominate. Frontier Pathans and the Sindhis have developed separate cultures of their own and they do not want to be submerged into the Punjabi culture once again.

In paragraph 15 of the State Paper where the Mission recommends the basic forms that the constitution should take, it has been provided in sub-paragraph 5 :

> Provinces should be free to *form* Groups with Executives and Legislatures and each group could determine the provincial subjects to be taken in common.

This clause may certainly be interpreted as providing that entry into the groups at the initial stage is voluntary and that the provinces as provinces will decide whether to enter into the Groups or not. In paragaph 19(5), it is provided that

> These sections shall proceed to settle the Provincial Constitutions for the provinces included in each section, and shall also decide whether any group constitution shall be set up for those provinces and if so with what provincial subjects the group should deal. Provinces shall have the power to opt out of the groups in accordance with the provisions of sub-clause 8 below.
>
> (8) As soon as the new constitutional arrangements have come into operation, it shall be open to any province to elect to come out of any Group in which it has been placed. Such a decision shall be taken by the new legislature of the province after the first general election under the new constitution.

The main points of difference between paragraphs 15 and 19 are that while the former enables the provinces to decide whether to join the group or not, the second one bestows this important power on the members forming a section. In his press conference of May 17, Lord Pethick Lawrence gave the following opinion on Grouping : "The provinces automatically come into the Sections A, B and C which are set out in the statement. Initially they are in the particular sections to which they are allocated in the statement and that particular section will decide whether a group shall be formed and what should be the constitution. The right to opt out of the group formed by that section arises after the constitution has been framed and the first election to the legislature has taken place under that constitution. It does not arise before that."

It will be seen that the meaning of the two paragraphs have not been made sufficiently clear. In the light of the Secretary of State's clarification they can be construed so as to mean that entry into the Group is voluntary but once the decision to join the Group has been taken no province can opt out before the first general elections, and that the right to decide whether to join the Group or not rests on the members of the Sections and not on the provinces separately. The position has been made still more vague in the Parliamentary speech of the Secretary of State on July 18, where he said, "The three-tier basis is nothing more than our recommendation to the Indian peoples, but on the basis of these proposals we were asking the parties to join in the formation of a Constituent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Assembly. It was necessary, however, to stipulate that the provisions should not be altered without a majority of the two major communities."

India in the Houses of Parliament

Now that the Muslim League has rescinded its acceptance of the Long-term and Interim proposals of the Cabinet Mission and the Viceroy, there seems to be little point in reviewing the speeches made in the Houses of Parliament on the 18th of July. Everything now seems to proceed according to well-laid plans to torpedo the British Labour Cabinet's endeavours to honour the pledges given to India during the War and previously. Breaking pledges is nothing new to British Tory-dilchers nor is that dishonourable act of any consequence to reactionary British officialdom and their colleagues, the *Pucca Sahibs* of India, and so there is nothing far-fetched in the idea that the whole thing might be engineered from behind. Of course, there is nothing new in this move, for the Muslim League has always shifted its position whenever it thought some more advantages might be gained thereby. Mr. Churchill in his speech on July 18th gave ample indications that his party would back the League if they rescinded their acceptance of the proposals. He said, with his usual disregard for truth :

> Then there are the Moslems who number about 90,000,000, and who make up *so large a majority* of the martial races of India. There is no doubt that there is complete lack of agreement at the present time between the two principal communities.
>
> The Mission have laboured hard and they have dealt particularly with those two communities allowing many other valuable and gallant forces who have a right to live also to fall back into the background.
>
> The gulf between these two communities was never more wide than it is at the present moment. The outlook is very grave.
>
> Acceptance by the martial races of the final settlement which we make before we leave India is indispensable to future peace.
>
> If all minorities are added together they constitute among them much more than half of the inhabitants of India. I am glad to say that so far as I understand the position, the British Government have not renounced the principle of their discharge of their responsibility towards the minorities in India which aggregate at least 225,000,000 out of 400,000,000.
>
> All arrangements which are being made by the Constituent Assembly and any treaties which may subsequently be brought into existence between the Crown and Parliament of Great Britain and a new sovereign, independent Government of India, must be subject to the fulfilment of our honourable discharge of our obligations.
>
> I hope that we all agree with that. A bill or perhaps several bills will have to be presented to Parliament and they will have to pass through all their stages and that is the time when the final decision will have to be taken. *Nothing must be agreed to by us at the moment on the transference of sovereignty which will be any abrogation of our solemn undertakings.*
>
> A great part of the Mission's work in India was devoted to a vain attempt to form a Coalition Cabinet acceptable alike to Moslems and Caste Hindus. The failure of the Mission in this respect had led to temporary reversion to the Government of well-tried and experienced officials. For the moment, Indian affairs have turned the full circle and we are back again at the start.

Mr. Churchill quoted the terms of paragraph 8 and continued,

> The Moslem League agreed to enter this (Coalition Government) and when the Hindu Congress members refused and it broke down on a point of procedure, I understand the Moslem League made a violent complaint.

Sir Stafford Cripps interjecting said :

> As to the timing, Mr. Churchill had said that the Moslem League had accepted and that the Congress had refused. The Congress had refused before the Moslems arrived at any decisions, and they knew that before they arrived at a decision that it was useless arriving at a decision because already the scheme had gone.

Mr. Churchill continuing said :

> I am not making accusations against the Government. The General Secretary of the Moslem League has gone so far as to say that unless the situation is clarified, it would be suicidal for the League to enter the Constituent Assembly.
>
> All this raises the most formidable issue. Those who have been to India know well that agreement of the Moslems to the new system will affect the whole foundation of the problem.
>
> One cannot contemplate British troops being used to crush the Moslems in the interests of the Caste Hindus. Whatever our responsibilities may be and whatever may be the appointed day when we will quit India, we must not make ourselves the agents of a Caste Government or a particular sectional Government in order to crush by armed force and modern weapons another community which, although not so numerous, is numbered at 90 millions.

It is to be noted that 90 millions become 99 millions easily when Mr. Churchill deals with Indian Moslems and 36 per cent (the percentage given by Sir Jogendra Singh as that of Moslems in the Indian army) becomes "so large a majority." Similarly the minorities *add up to 225 millions,* the Indian States account for 95 millions, leaving only 80 millions as the following of the Congress in India !

Leaving this great friend of India, and of human rights and liberties, to shed his crocodile tears, let us turn to other friends nearer at home. We find the reaction of the *Statesman* of Calcutta (*with which the Friend of India is incorporated*) is a veiled expression of joy at the League's latest move. The main editorial of its issue of 31st July—there was no issue on the 30th —contains an open attack on the Cabinet Mission and the Congress. This mouth-piece of British vested interests has all along championed the League and, boosted up all reactionaries. But this last editorial is a marvel even for the *Statesman* and goes far to show which way lie the interests of Imperialism. The Muslim League, according to the *Statesman,* "hitherto this year has been commendably accommodating, positive, statesmanlike." Further, according to the same authority, it is not surprising that it "should have chosen this lamentable new path." For, "during the last five weeks there has been provocation." "Many besides Leaguers—*including this newspaper*—were shocked by the Mission's and the Viceroy's interpretation on June 26, of under-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

takings publicly given only ten days before." The aforesaid interpretation was "a deliberate lawyerist lowering of the Mission's previously very high ethical standards in negotiation." Mr. Jinnah's allegations before the League Council on the 20th of July "need answer." Regarding provocation it remarks that "Provocation came soon afterwards—worse provocation, because reiterated and *manifestly deliberate*—on behalf of the Congress Party, from the *impetuous Pandit* who on July 6 became its President."

After justifying the League's action and some further verbiage the editorial proceeds to say that it attached *greater importance to the short-term aspect of the Mission's work*. And therein lies the key to the whole situation! For, if the Mission had not laid its cards on the table in an honourable and straightforward manner by formulating the long-term plans, but had proceeded in the time-honoured "Perfidious Albion" fashion by placing progressively difficult hurdles in the path of India's problems through the working of the short-term plans galore, then the "Pucca Sahib's" interests would have been assured for ever—at least till the next World War. The Congress would have been driven into jails again and the helm of the ship of state would have been given to the League, the Captain being, of course, the aforesaid *Pucca Sahib*.

The League's action has many implications, however, which the Congress would do well to consider very carefully. It must not commit itself by word or by action, without sufficient deliberation. It must weigh all possible consequences and deliberate over its own course of action. It is plain that the League's action is part of a concerted move and as such the Congress must not rush into any traps.

The Jail Qualification

Mahatma Gandhi has brought forward in his article, "The Real Danger" in the *Harijan* of July 14, the question of imprisonment as qualification for office-seeking Congressmen. Of all false values now obtaining in the Congress this is perhaps the most vicious and degrading. Mahatmaji's pointer comes rather late in the day, if we might say so, and the condemnation does not go far enough. All the same it is of immense value in disabusing the public mind, which has been confused deliberately in the respect of elections and appointments, of incorrect and dangerous assumptions. Gandhiji writes:

> My purpose here is merely to point out the danger from within. The first in importance is laziness of mind and body. *This comes out of the smug satisfaction that Congressmen having suffered imprisonment have nothing more to do to win freedom and that a grateful organization should reward their service by giving them first preference in the matter of elections and offices. And so, there is an unseemly and vulgar competition for gaining what are described as prize posts.* Here there is a double fallacy. Nothing should be considered a prize in the Congress dictionary and imprisonment is its own reward. It is the preliminary examination of a Satyagrahi. Its goal is the slaughter house even as that of the spotless lamb. Jail going is, instead, being used as a passport to every office accessible to the Congress. *Hence there is every prospect of Satyagrahi imprisonment becoming a degrading occupation like that of professional thieves and robbers.* No wonder my friends of the underground variety avoid imprisonment as being comparatively a bed of roses. This is a pointer to the pass the Congress is coming to. (Italics ours.—Ed., *M. R.*)

We have deliberately said Mahatmaji's pointer does not go far enough. "Satyagraha and Sacrifice" has already been converted into a business proposition by some groups of careerist Congressmen in certain provinces, notably in Bengal. Needless to say the careerist, like the mosquito in Chanakya's *sloka*, is more adept at flattery and more pushing, where the leaders are concerned. And he is the most vociferous in howling down any constructive or critical move. "Leaders" in certain provinces are in danger of degenerating into being "Led by the Nose" through the action of such persons. The greatest danger, however, lies in the fact that this "Bachelor of Jail" qualification is acting as a barrier preventing any new ideas or new blood from coming into the field of nationalism.

The Leaders have to make up their minds. Is the initiative, in all matters of public interest or weal, going to be taken by them or are they here merely to follow up any movement initiated by others and to accelerate, applaud or orientate the same as time and opportunity might indicate? Leadership cannot be totally divorced from opportunism we know, but leaders without any plan, without any sense of values and *without any idea about the comparative importance of realities*, cannot but bring disaster and chaos to the national life. The country is being torn up by factions, strikes, labour movements, student disturbances and the like. They are all needed for the betterment of a nation in the long run, no doubt. But is it not a fact that most undesirable elements are jockeying for power through all these just now? The public is confused and confounded and distress is mounting up all round. Who should take the initiative and guide all these movements into the nation-building channels?

The Congress has the titanic weight of public sanctions behind it. It has vast dormant powers, of which the August '42 movements were but a mere fraction. Given correct leadership, nothing on earth can prevent us from attaining our goal.

Dr. Ambedkar in the Constituent Assembly

Dr. B. R. Ambedkar has entered the Constituent Assembly from Bengal. He has very little connection with the depressed classes in Bengal, as barring a few educated people nobody knows him in this province. His entry augurs ill for Section C of the Constituent Assembly.

Dr. Ambedkar's scheduled caste movement may be boiled down to two demands,—the claim for the recognition that the depressed classes are not Hindus and the demand for a separate electorate for them. During the last general elections, Dr. Ambedkar's party had been swept out and he could not get a foot-hold even in his home province. Taking advantage of the small quota of general seats in Bengal in the Constituent Assembly elections, he has succeeded in squeezing himself in.

The worthlessness of his claim to represent the depressed classes of India has now been admitted even by the spokesmen of the British Government. In the India debate, the Secretary of State declared that the interests of the scheduled castes are safe in Congress hands and it is the Congress that really represents them.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The scheduled castes have now rallied under the banner of the All-India Depressed Classes League. Mr. Jagjiwan Ram, President of this League, in a recent press conference said, the problem of the Scheduled Castes, contrary to Dr. Ambedkar's views, was not religious but economic. He held that the proposition that the scheduled castes were not Hindus, and were entitled to special minority rights, was not correct. The Depressed Classes League had always regarded the depressed classes as part of the Hindu community and it wanted only special protection. He visualised a future when untouchability would completely vanish and the gulf between Caste Hindus and Scheduled Castes bridged. Asked about the demand for the abrogation of the Poona Pact, Mr. Jagjiwan Ram said that he favoured the scrapping of it not for the introduction of separate electorates, but for joint electorates. He added, "We will have to hit on some formula which will give protection to scheduled castes along with joint electorates."

The Postal Strike

The Postal Strike is passing through its third week. In the meantime the Adjudicator's Award has been published and accepted by the Government. About two months ago, when the Postal Federation gave the first strike notice, Mr. Justice Rajadhyaksha was appointed Adjudicator and the notice was called off. The Federation accepted Mr. Rajadhyaksha as adjudicator. In addition to the employment of the Adjudicator to go into grievances and suggest interim as well as long-term remedies, a Pay Commission was also appointed to revise the scales of pay of all employees under the Government of India .The Lower Grade Postal Employees became impatient and without waiting for either the Adjudicator's Award or the report of the Pay Commission, they called a strike. When the Adjudicator's Award was known, it failed to satisfy them.

The strike has been received with mixed feelings. Among the labourers it found enthusiastic support. Madras, Bombay and Calcutta had one day's sympathetic strike each. The Congress leaders were approached but not for mediation. Pandit Nehru, in a statement on July 24, stated, "The demands of the strikers have an important effect, for inevitably they produce their reactions on other services and on the national budget. The burden must fall on the community. So it is essential that the problem be viewed in its entirety and not isolated from this wider context. Most of us sympathise with the desires of the lower paid members of the essential public services to raise their standards of living. They are hard worked and deserve well of the community. Indeed, higher standards of pay and living will mean greater efficiency also. At the same time, it has always to be remembered that one essential service should not hold up the nation's work or profit by virtue of its strategic position at the cost of other services or the people at large. If this happens, there will be a reaction against that service and the sympathy that exists today will vanish."

Even after this outspoken statement no improvement is visible in the strike situation. The Government and the strikers both seem to be equally adamant. Sir Eric Conran-Smith has announced Government of India's firm decision to give P and T employees no more relief than that recommended by the Adjudicator. He said "Government consider that they have done the right and proper thing in accepting as it stood the award of the Adjudicator. A halt must be called somewhere to the expenditure of the tax-payers' money on what is intended to be interim relief pending the report of the Pay Commission."

A Postal or a Railway strike must be viewed from a totally different angle of vision. Such strikes cannot be classed with ordinary industrial strikes. In their case, the employer is the State and the tax-payer must find money for them. They have a forum at the Legislature to ventilate their grievances. In this, they have a great advantage over the industrial labour of the country. We believe that where tax-payers' money is concerned and a national question is involved, the proper step for the Postal Employees would have been to ventilate their grievances before the budget session of the Central Legislature opened and not *after* it. We are afraid that the strikers have been ill-advised and in case the consequences of the strike are not up to their expectation, it would be their leaders, responsible for precipitating the crisis, on whom the blame should rest.

The latest strike situation has revealed an increasing rivalry between the Federation of Posts and Telegraph Unions and the All-India Postmen and Lower Grade Staff Union. The Federation is continuing negotiations with the Government. An *A. P.* and *U. P.* message states that all postal, telegraph, telephone, and R.M.S. employees who are members of the Unions affiliated to the Federation but went on strike, have joined their duties in all stations. On the other hand, the President of the Council of Action of the Striking Unions has warned the Government that the negotiations that Dewan Chamanlal is carrying on with the Government as President of the P. and T. Federation are "unauthorised and the Council of Action will not be bound by the terms of any settlement he may conclude with the Government" This rivalry between the two organisations has been an unhappy feature in this struggle and there is no doubt that it has harmed the cause which led the men to stop work. Names of Maulana Azad and Pandit Nehru have been raised in connection with mediation and a report was circulated that Maulana Azad had offered to mediate and that he was calling a conference in Delhi for the purpose. Maulana Saheb in a statement has stated that he has made no such offer. The only thing that he told certain representatives of the Federation was that if he or any of his colleagues could do anything to ease the situation, they would not deny to do so. Regarding Delhi Conference, Maulana Saheb says, "A conference would not be of much help in the present circumstances."

Labour in India

In all democratic countries, Labour has the right to organize and bargain collectively through representatives of its own choosing and is free (or at least has the right to be free) from interference, restraint or coercion of employers of labour, or their agents, in the designation of such representatives. It is equally free, in democratic countries, from all hindrance in self-organisation or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection. In all such countries the maximum hours of labour, minimum rates of pay and other conditions of employment are settled between the Chief Executive of the State, or his nominee, and the accredited representatives of Labour. In Totalitarian States, Labour has no such right, it has either to carry out the orders

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Dictator, on whatever terms he might approve or else it has to face dire consequences—even death or "liquidation."

We have had enough of slave-driving in India and so no right-thinking person can think of depriving a worker of his rights. And there can be no denial of the fact that labour in this country is badly in need of amelioration of the conditions of living and all-round raising of standards. When we say labour, we mean labour in every sphere, agricultural, industrial and that in Public Utility services. But at the same time it must be admitted that this amelioration should be attained uniformly all over the field, so that there be a steady rise in the standard of living all round. There must be no attempt by any individual group to gain advantages for itself at the cost of others. Labour should at the same time keep a keen eye on the rise in efficiency with each step in the rise of wages and the conditions of living as otherwise there can be no progress. Leaving aside all controversial topics, in these days of mass-hysteria, we think it will be admitted that a rise in the standard of living *has to be worked for and that this rise can be maintained in a steady upward curve only if the production or output increases steadily with it.* Nowhere in this world has labour thrived merely by refusing to work. We are not trying to justify low wages, we are only asking that Labour in India should learn the lessons that British Labour has to give. Mass-unemployment will be the only result if that lesson be not learnt, and the Labour movement be not guided by cool, hard-headed and hard-working executives instead of irresponsible mob-orators jockeying for power.

British Labour is the most experienced body of workers in the democratic world and it has attained its present dominant position in the State through having learnt its lessons the hard way, through the collapse of British industries and the consequent mass-unemployment of millions. Let us see how it is planning for the Post-War period. We append extracts from an American's report on the labour conditions in Post-War Britain :*

> To get British industry going again full blast, new wage and hour settlements have been voluntarily negotiated in coal, agriculture, cotton, the building trades and in many smaller industries. Cherished trade union practices have been modified.
>
> The consequence that means most—more than Marx on the Left or Capitalism on the Right—is a higher British standard of living. There is one way to get that, says British trade unionism. Shake the backwardness and inefficiencies out of British industry ; by the best and shortest route, put it into maximum peacetime production.
>
> A leader in the Trades Union Congress recently said : "A considerable amount of satisfaction can be derived from 'beating the bosses.' But it is very bad for industry and it is very bad for production. In meeting post-war demands we shall all require a united pull. I suggest that an honorable partnership is the best way of securing it."
>
> The end of the war did not blow off the lid. Instead, from January 1 to October 1, 1945, the total of man-hours lost by strikes was only one-third as high as between January 1 and October 1, 1944.
>
> This does not mean that labor has ceased seeking better wages and working conditions. It means that labor is accepting its share of responsibility for the productive well-being of the industrial goose from which it expects to get many golden eggs.
>
> In Great Britain, organized labor has now reached a more powerful position than in any other industrial nation.
>
> No law compels British trade unions to make annual reports to the government of receipts and expenditures. But virtually all of them do.
>
> In a plant I visited near Manchester, the chief shop steward, co-chairman with the plant manager of the JPC, pointed to certain machines. "Formerly," he said, "it was a man to each machine in this department. In the old days, we, on the labor side, would have insisted on keeping it that way. But here the men worked out their own labor-saving methods. Now, instead of operating only one machine each worker operates three."
>
> The organized workers in this plant lodged complaints against three supervisors—union members—on the ground that they were inefficient and slowed up production. They got the men fired.

Labour in India must agitate for its rights. It must agitate and work and work and agitate, all according to a definite plan. And, it must learn to choose leaders who know that in the cutting of the cloth allowance has to be made for the cloth to go all round, else there would be no coats, only scraps.

Anti-Corruption Move in Bengal

The Congress Ministries in different provinces have begun to take drastic steps for eradicating corruption and black-marketing. In Bengal, a Committee was set up to enquire, amongst others, into the causes of corruption and suggest remedies. It is a long time since this Committee, the Rowlands Committee, has submitted its report but no action has yet been taken. The findings of the Committee are no doubt damaging for the Administration, but it has failed to suggest remedies which would be effective for the eradication of bribery, jobbery and corruption which have sent roots deep down the social, economic and administrative spheres in Bengal. A shrewd suggestion in this respect has been made by Mr. T. S. Pillai in the *India* monthly. Urging the appointment of District Corruption Enquiry Committees, he suggests that such a Committee should be given plenary powers to investigate and prepare a statement of income of every man within a district suspected of having made a sudden accretion of wealth. An account of his landed properties, houses, bank deposits, jewelleries and stocks and shares held by him should be prepared. It will find out the total assets of each individual in 1938-39 and 1944-45. The difference between the value of his properties between these years would give the net addition to his wealth. If this difference shows an abnormal increase than is natural under the circumstances for the person to accumulate, the onus of proving that the money was not ill-gotten should lie on him. This method of detecting corruption has been suggested by the Rowlands Committee in respect of Government servants. Such drastic action specially against highly placed Government servants is certainly called for. If they fail to give satisfactory explanation for the accrued wealth, the whole of it should at once be forfeited and the person criminally prosecuted.

* Stanley High in the *Reader's Digest* for February, 1946.

"Second Phase" of Indo-British Relations

Discussion of the future Indo-British relations at a meeting of the East India Association, London, gave many members an opportunity to express the hope that India will forget unhappy memories of the past and choose to remain within the Empire. Confidence was also voiced that "British ideas" and "British way of life" would continue to influence India long after the severence of political links with Britain.

The discussion was opened by Dr. Percival Spear, late of the Delhi University, who read a paper, in which he argued that the "present crisis should not mark the end of British connection with India, but the completion of one phase and the opening of another in the history of Indo-British relations."

In order to preserve and develop this connection, Dr. Spear suggested that a "British Institute" on the model of the Rhodes Trust and Leverhulme Fellowships should be set up with centres at Bombay, Calcutta and elsewhere, in order to arrange cultural contacts and exchange between the two countries. In this connection, Dr. Spear said that Oxford and Cambridge could make a most valuable contribution for giving research fellowships to Indian scholars. "Many Indians know college life from the under-graduate angle but practically none from the high table, and such experience carried back to India could not but be productive of good. Without planned effort along such lines, British culture would not be cast aside indeed but would likely, like other cultures before it, slowly fossilise and in 50 years' time 'English-knowing' man would be as remote from current realities as 'Persian-knowing' or 'Sanskrit-knowing' man of today." Britain's mission in the present-day world is a moral mission, concluded Dr. Spear and she must by methods of persuasion seek other peoples to adopt the British way of life.

Dr. Spear also said that two types of English businessmen are likely to go to India in future—the individual adventurer, hoping to make a fortune in the service of Indian firms as in the days of John Company, and the employees of big British Corporations. "For the sake of British name—remembering their eighteenth century prototypes—I hope that representatives of the first type will be few," said Dr. Spear.

Sir Henry Sharp, however, took exception to this view, saying he hoped "adventurers" would play a useful part not only in business but in the administrative services, Army and other fields. "There will be a period of rough and tumble," Sir Henry added, "I hope the rough won't be too rough and the tumble too severe. We have plenty of fine young people here—let them loose. British tough guys will do better than any other tough guys from any other country."

Declaring that English ideas and ways would persist in India for generations, Lord Erskine said, "I have no personal knowledge of the north but in the south we have been there far too long and our language has persuaded far too widely for anything else to happen."

"We have a great future in India," he added, "Independence and Dominion Status—it is a distinction without a difference. I hope India will decide to remain within the Empire and carry on the system of law and justice which is so famous and which we have introduced into India."

Sir Lancelot Graham, contributing to the discussion, deplored the continued habit of talking of British India and Indian States. "I hope the distinction will pass altogether and there will be no British India at all." "We of all people," continued Sir Lancelot, "must not blame Indians for being suspicious of the gifts we bring. When they realise the extent of those gifts the old feeling of dislike and distrust will die out. I only hope that we shall not have to say of Indians that their memories are as long as those of the Irish."

Dr. Ruth Young expressed anxiety about the position of Indian women in the future. Indian women in professions have had "scarcity value," he said. "Would this privileged position continue? I wonder if they would have to come back to us to learn how to struggle for their rights and privileges." Referring to the value of the services rendered by the missionaries, she said that they must in future "go as friends and if necessary subordinates without trying to boss the show."

Sir Frederick Whyte, who presided, deprecated the use of the word "abdication" to describe the present phase of Indo-British relations. "Fulfilment" is the right word, he said. "Some of us may regret the disappearance of the steel frame," he continued, "but we cannot but rejoice if Indians win their freedom—although it may be premature to rejoice." Referring to the strength of Indian admiration for British ideas and institutions, Sir Frederick said that the late Pandit Motilal Nehru was so impressed with the judicial wisdom and impartiality of the Privy Council that he once expressed the hope that at least the judicial link between Britain and India would continue when all others had gone.

Anti-Indian Bill in East Africa

After South Africa comes disquieting news from East Africa. For ages past Indians have been established on the coast of East Africa. Indian settlers played a very important part in establishing peaceful outposts in the farthest corners of East African territories. The opening up of the vital lines of communications between the Eastern and Southern parts of Africa was achieved primarily through the efforts of the Indian emigrants. Indians played a conspicuous part in the gradual and progressive development of the trade relations of Africa with the external world. Indian blood and Indian money flowed freely there when the defence, conquest and consolidation of the African continent was needed. Once this purpose is achieved, the South and East African whites have come out in their true colours with anti-Indian Bills which aim at a total extinction of the Indian settlers. Time has proved that the European settlers are no match for the Indians in intelligence, education and enterprise. Political power is, therefore, utilised for ousting the Indians from the African soil.

Mr. P. D. Master, Honorary General Secretary of the East African Indian National Congress, has given a vivid account of the position of Indian settlers in East Africa. In an article contributed to the *Leader*, he writes:

> As long back as 1875, Lord Salisbury, the Secretary of State for India, advocated the emigration and settlement of Indians, accompanied by sufficient assurance of profitable employment and fair treatment, on grounds of humanity and also from an imperial point of view. One of the chief reasons advanced for granting a Royal Charter to the Imperial British East Africa Company was that it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'would be advantageous to the commercial and other interests of our subjects in the Indian Ocean who would otherwise be compelled to reside and trade under the government or protection of alien powers.'

Even Mr. Winston Churchill was in favour of encouraging Indian immigration into East Africa, but the presence of the Boers from South Africa and the World War I altered the situation. While Indian soldiers were shedding their blood on the battlefields, the European settlers in East Africa were manoeuvring to eliminate Indians from East African territories. South Africa had successfully closed the door to Indian immigration. The South African agitation spread to East Africa and European settlers in Kenya (formerly British East Africa Protectorate) demanded, 'South Africa has shut the back door to Indians in Durban, we must shut the front door in Mombasa.' Then there arose a struggle between the European and Indian communities in Kenya which resulted in the notorious settlement contained in that preposterous document known as the White Paper of July, 1923, which Indians in Kenya never accepted. The Government of India reserved its right to reopen the whole question on some further occasion.

It is now an open secret that the settlement was concluded by the European settlers in Kenya under the threat of a rebellion. The relevant paragraph on the question of Indian immigration reads : "It may be stated definitely that only in extreme circumstances could His Majesty's Government contemplate legislation designed to exclude from a British colony immigrants from any other part of the British Empire. *Such racial discrimination in immigration regulations, whether specific or implied, would not be in accord with the general policy of His Majesty's Government and they cannot countenance the introduction of any such legislation in Kenya.*"

Furthtr it went on to say : "The existing Immigration Regulations of the colony are of quite general application. It is clearly as important in the general interests of Kenya to prohibit the entry of undesirable persons from Europe or America as from Asia. The primary duty of the Colonial Government is the advancement of the African, and it is incumbent upon them to protect him from an influx of immigrants from any country that might tend to retard his economic development."

As to the course to be followed thereafter the White Paper stated : "In course of time as the natives progress intellectually, they will no doubt take the place which Africans hold in other parts of British tropical Africa in mechanical and subordinate clerical work and in small trade, and it must be the aim of the British administration to further this development by all possible means. With this object the Colonial Government must weigh, so far as may be practicable, the effect on native interests of the admission to the colony of would-be immigrants of any race. Further, some arrangement must be devised for securing a strictly impartial examination of applications for entry into Kenya, possibly by a board on which the various communities, including the natives, would be represented. It will, therefore, be an instruction to the Governor of Kenya to explore the matter further on his return to the colony and in concert with the Governor of Uganda, to submit proposals to the Secretary of State for the Colonies for giving effect to that amount of control of immigration which the economic interests of the natives of both dependencies require."

Soon after the publication of the White Paper of 1923 and in accordance with the instructions to the Governor of Kenya referred to in the last paragraph, the Government of Kenya with the consent of the Colonial Office published a bill entitled 'An Ordinance to Consolidate and Regulate Immigration and Employment.' The provisions of that bill made no specific reference to Indians but if it had become law, Indian immigration to East Africa would have ceased in 1923. But fortunately the Government and the people of India went to the rescue of their countrymen in Kenya and the bill was dropped altogether.

Features of the East African Anti-Indian Bill

Explaining the main features and purpose of the Bill, which clearly shows up the malicious intent of its protagonists Mr. Master writes :

> But the efforts of the European settlers in Kenya to oust Indians from East Africa did not cease. During the World War II, they continued to agitate and manoeuvred in order to induce the three Governments of Kenya, Tanganyika and Uganda to introduce the Defence (Admission of Male Persons) Regulations, 1944. Though ostensibly non-racial, these Regulations were and are calculated and intended to prevent Indian immigration only. The way in which these Regulations have been administered supports that contention.
>
> The Governments of the three East African territories had assured both Indians in East Africa and the Government of India that these Regulations were introduced in view of the food shortage and would be withdrawn after the conclusion of the War. Therefore, the East African Indian National Congress at its session held at Mombassa on 6th October, 1945, passed a resolution requesting the Government to repeal them in fulfilment of the undertaking given by them to the Government of India and to the Indian community and at the same time urged the Government of India to do everything possible to have the Regulations repealed by the Governments concerned in the implementation of their promises. The Executive of the East African Indian National Congress made the necessary representations to the Government of Kenya and the Government of India in their behalf. His Excellency Sir P. Mitchell, the Governor of Kenya, informed the Hon. Mr. A. B. Patil, President of the Congress, that the Defence Regulations would be withdrawn after the bill now published had become law.
>
> The bill is to be simultaneously introduced in the legislatures of Kenya, Tanganyika and Uganda in their sessions to be held in the first week of July this year. Hence, it is necessary that urgent action be taken.
>
> The main features of the bill, of which Indians entertain great fear, are that if it became law in its present form, it would arm the Governor-in-Council of the different territories of East Africa to administer the law on a racial basis. The composition of 'the Board' and 'the Authority' provided for in the bill is not stated. It is necessary that, there should be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

equal representation of Indians. The provisions of clause No. 5 are such that even persons like Mahatma Gandhi, Pandit Nehru and Maulana Azad are not eligible to enter East Africa even for a temporary cultural visit. The deposit of £75 or Rs. 1,000 is excessive when compared with £5 provided for in the law at present in force. Clause No. 7 makes it virtually impossible to get a residential certificate if an old resident has left East Africa prior to 31st August, 1939, or has not stayed for five years in the aggregate within the last eight years from the date of application. Those who left under voluntary evacuation during the war, including the students who left for higher studies, will be prevented from re-entering the country.

In short, though the bill is non-racial in character, it has been designed to oust Indians from all walks of economic life in the East African territories. Ordinarily there should have been no permits for inter-territorial movement when attempts are being made to bring the three territories together under the inter-territorial organisation. But it is in keeping with the design of European settlers that Indians should not move from Kenya to Uganda or Tanganyika. When it is remembered that Indian immigration into East African territories is governed by and follows economic factors obtaining there, the present bill would appear to be redundant and uncalled for.

But, as stated in the memorandum of objects and reasons of the bill, it has been designed to carry out 'main matters of policy.' European settlers who demanded prohibition of Indian immigration in the first place stated that it should be done in the interests of Africans. Later on, they stated that it should be done not in the interests of the Africans but in the interests of the Europeans. The policy is, therefore, to serve the interests of European settlers and to help them to exploit the Africans more by removing the Indian settler who has proved a thorn in their side.

As regards the interests and progress of the Africans, there have been innumerable testimonials from high authorities to the effect that Indian settlers have played a useful part. Sir Harry Johnston in his report for 1901, wrote, 'Indian trade, enterprise and emigration require a suitable outlet. East Africa is and should be from every point of view the America of the Hindus (of course, he meant 'Indians' generally). We do not naturally desire to see all the Indian enterprise in Eastern Africa sheltered by a flag that is not British.'

Indians as a Factor in Civilising the African

The Hilton-Young Commission, appointed in 1927, also known as the Closer Union Commission, made recommendations for more effective co-operation between the different East African territories. They admitted in their Report that the Indian had been a potent factor in the process of civilising the African. He at the same time helped the British merchant by carrying this ware into the remote native areas. The Report stated :

> There can be no doubt that the Indian community has played a useful, and in fact an indispensable part in the development of these territories. *The Indian has been a potent factor* in the process of civilising the African. *The Dukanwala or petty shopkeeper has carried his wares far and wide into remote native areas and introduced the products of European industry among the most primitive tribes.* By increasng their wants he has created an incentive to effort and thus sown the first seeds of economic progress. The Indian dealer has performed another useful function in marketing the products of native agriculture. For instance, the greater part of the valuable cotton crop in Uganda is handled by Indian buyers, and their activities have undoubtedly stimulated the spread of cotton cultivation. The middleman generally survives as a necessary link in the chain of distribution and it must be recognised that the Indian middlemen are doing useful work for which no other agency is at present available. The European cannot afford to trade on the small scale and with the small margin on which the Indian subsists, and the African generally is not yet sufficiently advanced to do so.
>
> It may be pointed out that Tanganyika is a quarter of a century behind Kenya and there is no other agency in that territory which can perform the task the Indian has been doing.

The European Settler in East Africa

The case of the European settlers has been explained in the following passage of the Joint Parliamentary Committee Report on the Closer Union Commission of East Africa :

> In the course of the evidence an interesting analysis of the economic basis on which White settlement has hitherto rested was submitted to the committee, the general conclusion of which was that White settlement had not been really self-supporting but only made possible by a very considerable measure of direct and indirect financial assistance, and that the tendency of the future would be to eliminate the farmer settler in favour of the plantation manager. This view and its implications were opposed by a considerable body of evidence. When allowance is made for the severe set-back which the young settler community suffered owing to the war, and for the difficult economic conditions of the post-war period, the progress made so far certainly compares not unfavourably with that of other countries at the same stage in their history. On the other hand, even when the initial stage of taking root has been overcome, the possibilities of any large expansion would seem to be precluded by the limited area of the temperate highlands as well as by the narrowly restricted sphere of occupations which the White man is prepared to take up. *In the meantime the Committee consider that the figures and arguments submitted to them merit serious consideration before any policy of further intensive White settlement is adopted.*

In spite of this, efforts have continued to increase European settlement. Even during World War II, the Kenya Government approved proposals for settling two hundred Europeans in Kenya, while no such scheme has been devised for the settlement of Indians who have played and still continue to play a very important role in the development of Africa.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The present Bill is clearly designed to hit the Indian community. The measure does not only affect the vested interests and self-respect of the Indians in the four East African territories alone, it is an affront to India.

1942 Revolution in Tanganyika

The extension of the Quit India movement to the African continent has recently been revealed. It is, however, a strange paradox that it was left to young Indians in the Government service to hold the Flag salutations and distribute bulletins in 1942 in Tanganyika, East Africa, while Indian leaders there were anxious not to lose Government contracts or incur official displeasure.

The following is the full account of the struggle, written by Sri Oza and published in the *Bharat Jyoti* :

That the "August Resolution failed to stir the Indian leaders in Tanganyika and exposed the apathy of the Indians in general towards the problems of the Mother land" is a very far-reaching statement. I agree, but nevertheless it sums up general reactions to the movement. Not that Tanganyika Indians could have done anything in a practical way to demonstrate their oneness with India as the Government of the country is entirely different and is in no way connected with India Office nor can the Indians launch a movement against it simultaneously as in India. What they could and should have done was to have rendered financial help to the Congress, held protest meetings, distributed correct literature and above all sent up volunteers to India. That is exactly what they did not do—"they" means the leaders and the mercantile community. Whatever little that was done was by the smaller fry—the official and the clerical section of young Indians inspired by a burning fire of patriotism which prompted them to incur the wrath of the Government on one hand and the Indian leaders on the other. Almost all who were involved were either Government servants or employed by business firms.

The attitude adopted by the Indian Association —the paramount body of the Indians—was that of active co-operation in war efforts and severe exclusion of any action on Indian question which, according to them, was likely to prove detrimental to the Indian settlement and followed this policy even where they should have warned the Government against flooding the country with anti-Indian literature likely to poison the minds of those who showed any sympathy towards Indian aspirations. Not only that, but the Government went on inserting libelous propaganda in African language papers for the consumption of the natives and yet, afraid of losing their seats on Councils and Committees, the so-called leaders raised not so much as a protest against this flagrant violation of the policy. When the Editor of the *Tanganyika Opinion* raised this issue and counteracted the false statements by vigorous and biting articles he was informed that he was *persona-non-grata*. With his departure for India, Tanganyika had nobody worth his name who could raise a protest against this. And so at the time of the movement it was left to us to try to do something to show that no matter where we reside we carry a sense of patriotism and feeling for country with us.

It had been evident ever since the failure of the Cripps Mission that a flare up in India was certain and a move was already afoot to found an Indian Youth League with a view to cultivate public opinion, enrol members who would go to India and to collect funds for helping those who suffered in the Movement. Preparations were not yet complete when on that memorable day I heard a Jap station announce at 6 a.m. in the morning that, "the reputed leaders of the Indian National Movement were arrested in the early hours and are now being removed to an unknown destination." The news came somewhat in the nature of a shock to me as I had not expected so swift an action. At that early hour on Sunday I rushed out and saw the President of the Hindu Volunteer Corps which was Hindu in social work and essentially Indian where political and national questions were involved and which worked in co-operation with other Muslim and Hindu sectional bodies. It was a powerful body of youths and had the courage of celebrating a national occasion like Gandhi Jayanti which the Indian Association was afraid to do.

An emergency meeting of the Working Committee was called at nine in the morning. I put up a resolution condemning the action of the Government of India and requesting the Indian Association to forward it to the Government of India after passing it in a mass meeting, which was to be held the same afternoon to mourn the death of the Hon. Mr. J. R. Pandya of Kenya Legislative Council. The resolution was squashed by the President of the Association who appealed to the people not to be swayed away by events in India and to live as Tanganyikans and not Indians.

Infuriated, we sent up the resolution ourselves. News about atrocities began pouring in through Jap and German stations. Censorship was tightened and all newspapers from India were thoroughly examined before being sent to Tanganyika. I, however, managed to circularise provincial youth leaders and decided to try to smuggle out volunteers. The Indian Assistant Director of Manpower got wind of the move and he stopped granting exit permits to any youth Indian. We managed to send out a couple of chaps on medical grounds. By that time Congress Bulletins and copies of the *Quit India* resolution arrived packed in bales of piecegoods. These were typed and distributed. However, after a few numbers were sent out, the Government was obligingly informed by an Indian Member of the Legislative Council about it. Then it was child's play for the C.I.D. to trace the culprits. They could establish that the bulletins were distributed through a Government Department. The distribution was stopped.

Ceylon Saved Through Indian Help

A long statement setting out in detail the various occasions on which India had helped Ceylon with supplies of foodstuffs has been issued by Mr. M. S. Aney, Government of India's Representative in Ceylon. The statement has been issued in view of the recent Ceylon press reports, as well as allegations by certain speakers from public platforms. Recently Mr. Ananda Tissa De Alwis, Publicity Officer of the Post-War Reconstruction Committee, Board of Ministers, Ceylon, in a broadcast over the Colombo Radio, purporting to refute "mis-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

representations" about Ceylon was reported to have stated that not a grain of rice had been coming into the island from India in renent years. It is also reported that at the Kalutar co-operative conference, Mr. D. S. Senanayake, Leader of the State Council, told the audience that India had not sent a grain of rice to Ceylon and Ceylon obtained all her foodstuffs through the good offices of England.

Mr. Aney has done well in flinging this refutal at these false propagandists who evidently wanted to aggravate the anti-Indian temper prevailing in Ceylon at the present moment.

Giving details of supplies of foodstuffs from India, Mr. Aney says that after the fall of Burma, Ceylon turned to India for foodstuffs, particularly rice, to bridge the gap in her import requirements. This was a time when a large deficit in the supply of foodstuffs in India also became apparent. The famine in Bengal which took its toll in loss of life evoked as much sympathy in Ceylon as in India.

Yet during the first six months of 1943, India exported to Ceylon 57,000 tons of rice and a total of about 79,000 tons of foodgrains. After the famine in Bengal began and between July and October 1943, 1242 tons of rice, 20,490 tons of wheat and wheat flour and a total of 31,000 tons of pulses were exported.

On November 1, 1943, the Government of India were compelled to place an embargo on the export of all foodgrains from India but as a result of representations made by the Government of Ceylon 2,000 tons of rice per month were allotted for export to Ceylon from December, 1943.

During 1944, the food position in India was extremely serious. Only pulses were allowed to be exported to Ceylon and that too in smaller quantities than were originally allotted. During that year 9851 tons of pulses were exported to Ceylon. During 1945, in response to the urgent demand from Ceylon, the Government of India loaned to Ceylon Government 25,000 tons of rice during February and March which His Majesty's Government agreed to replace by equal quantity of rice from Egypt. In response to another request in May 1945, a further loan of 25,000 tons of rice was made, export being completed by the middle of September. In December 1945 arrangements were made to ship at short notice a further loan of 6,500 tons of rice from Travancore. All these loans were made owing to non-fulfilments in the programme of arranged shipments to Ceylon and in order to avert breakdown of the food rationing system in Ceylon. It was admitted in the State Council on February 12, 1946, that during 1945, Ceylon took from India a loan of 55,000 tons of rice on the guarantee of replacement by the Food Ministry in London. Export of pulses were resumed in 1945. Eighteen thousand tons were allotted for the second half of 1945 and greater part hereof had been exported to Ceylon before the present serious situation intervened and compelled the Government of India to prohibit further exports.

In June 1946 on representations made by Ceylon, the Government of India agreed to the diversion of shipment of cereals intended for Bombay to Colombo. In reply to an appeal by the Ceylon Indian Congress President in this behalf, the Government of India replied, they had already agreed to the diversion of one ship on the promise of replacement and could not do more, in view of the present crisis in India.

Mr. Aney says that India remained and remains practically the main supplier to Ceylon from abroad of sheep and goats, curry stuffs, eggs, dried fish, etc. Mr. Aney points out that it is necessary to view all these exports against the background of the situation in India during 1943, 1944 and 1945 and the beginning of 1946.

Mr. Aney says, "Today the people of India would be more than glad for a mere loan of two million tons of foodstuffs to be replaced in 1948 when our granaries are full. The effect of an import of food is to be judged not by considering whether it is loan, gift or sale but from the benefits derived from its immediate arrival. All requests for such loans or sales of food have to pass through Washington and in cases of empire countries through London also. *In June 1946, the Ceylon Commissioner for Food Supplies in Delhi was reported in Ceylon as having stated that the Government of India had always come to Ceylon's assistance in times of extreme necessity and would help again.*

On April 25, 1946, the Ceylon press reported Sir Oliver Gonnetilleke as having acknowledged the support by Indian and South African delegations at the London Food Council for Ceylon's claim for special treatment with regard to rice and flour supplies. He has also acknowledged gratefully the support received by him in presenting his claim at Washington from the Indian delegation.

Independence for the Philippines

The Philippine Republic has been formally inaugurated on July 4. This day is auspicious for America because it was on July 4 that the thirteen colonies had started their own career of independence.

The Philippines were discovered and conquered about four hundred years ago by the Spaniards and named after Philip II. Contact with the outside world soon lifted the natives from the rudimentary phase of civilisation. The islands changed hands, and for two centuries remained under the British but again came back to Spanish hands. Towards the close of the last century, at the conclusion of a war between Spain and America, the islands were ceded to the U.S.A.

The Philippines, no doubt, have come to enjoy formal independence, but is that independence absolute? Pandit Nehru's message to her brings that point into relief. He said :

> We hope that this really signifies independence, for this word has rather become hackneyed and outworn and has been made to mean many things. Some countries, that are called independent, are far from free and are under economic and military domination of some great power. Some so-called independent countries carry on with what might be termed *puppet regime* and are in a way client countries of some great power.

With India in the past, the people of the Philippines, as of all other countries of South-East Asia, have had contact. India would, therefore, be all the more happy if she could feel that this independence were real. The declaration of Manuel Roxas, the first President of the Philippines Republic, made on this occasion, tends to show that the islands will remain a client state of the great Power which has formally made her independent. She remains committed to support the U. S. International programme. American military bases will be there. The economic interests of the islands will also continue to be dominated by American capital. These vital facts will tend to indicate that the *indepen-*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dence that has been granted is a qualified article. The connections between the U.S.A. and Philippines that will obtain from July 4 will be clear from the following portions of President Roxas' statement :

> As President of the Philippines, I will so arrange the defence of these islands that it may be intimately co-ordinated with the plans of the United States for the maintenance of defensive bases in the Philippines. We will maintain as large an army as our resources permit and it will co-operate very closely with the armed forces of the United States based in the Philippines.
>
> Also I am committed with reservations in favour of stimulating the influx of American capital into the Philippines. After the destruction we have suffered, due to war, it can be truthfully said that the Philippines constitute an almost complete economic vacuum.
>
> We do not have enough of our own capital to develop the country and, therefore, unless American capital comes to our aid we will have to depend on other foreign capital.
>
> I wish to safeguard against this in order to avoid any future political complications which might prove most dangerous to the independence of the Philippines.
>
> Most of the people in the Philippines, without exception, profess the most profound affection and gratitude to the people of the United States. It is not merely because America has shown us the ways of real democracy and thus inspired us with an even greater love for freedom and equality. It is also because of America's liberation of our country from the hands of a cruel and inhuman enemy.
>
> We have drunk very deeply at the fountain source of America's great history and traditions.
>
> After we receive our independence we will continue to seek and to maintain as close a relationship with the United States as possible. Perhaps not always shall we be able to maintain a close political relationship, but intimate co-operation with American institution will remain and endure.

Madras Government's Cloth Distribution Scheme

Mr. T. Prakasam, Prime Minister of Madras, has submitted a draft proposal for the equitable distribution of mill-cloth through village committees. He does not seem to favour the introduction of a rationing scheme for cloth. The Muslim League members of the Madras Council opposed the Premier's proposals and characterised his scheme as "impracticable and unwarrantable." The League members demanded immediate introduction of mill-cloth rationing and urged that the "ration be fixed according to the requirements of the various classes of consumers in regard to the quality, quantity and variety." One of the League members said that there was nothing in the Premier's proposals to eliminate the possibility of abuse of power by the committees or the autocracy of subordinate special officers. He urged that the representatives of the major political parties should be chosen for the committees. One other objection to the village committees functioning, as distributors of cloth was that it would encourage factions.

The Prime Minister gave a fitting reply to the objections. In his statement made to the House in Gujrati mentioned that there was a widespread complaint that mill-cloth was not reaching the poor class of consumers and that the Government had a scheme for the equitable distribution of the available supplies under which it was proposed to utilise the services of the Village, Taluk and District Committees proposed to be formed for the procurement of foodgrains. The proposals are as follows :

In consultation with the District Committee, the district quota of mill-cloth will be apportioned equitably among the Taluks in the district.

In consultation with the Taluk Committee, quotas will be fixed for each village.

Monthly quotas of mill-cloth will thus be fixed for every village and taluk.

The Textile Control Department will specify the dealers carrying on business in the village, and if necessary, outside it and as near as possible to the village, who should supply mill-cloth to the village under the instructions of the Village Committee.

With reference to the monthly quota of the village, the village committee will draw up a basic scheme of distribution indicating the yardage of mill-cloth which will be supplied to each family in the village during the year. It is recognised that there can be no guarantee of supplies in terms of varieties.

Having due regard to this basic scheme, the village committee will settle as to how each consignment of cloth received by the dealers allotted to the village should be distributed, that is, it will issue in writing distribution instructions to the dealers concerned specifying the families to whom the consignment should be distributed and the quantity in each of the available varieties to be sold to each such family. All purchasers of cloth will be asked to produce their food ration cards at the time of the purchase, to enable the dealer to satisfy himself that the cloth is being given to the authorised persons.

The full District Committee may, whenever it considers it necessary, meet and discuss matters relating to cloth control in the district. But in order that the Collector may be free to concentrate on this work relating to food control, it is considered desirable that the District Committee should appoint a sub-committee, consisting of all the non-official members elected from the Taluk Committees, two members of the Legislature selected from among the representatives of the Legislature on the District Committee, the three dealer members referred to above, with the Inspecting Assistant Textile Commissioner as Chairman, and that the sub-committee should be made responsible for performing the District Committee's functions in regard to cloth.

Each Village Committee will be asked to appoint a sub-committee from amongst its members consisting of the Chairman, one of the dealer members and one of the other members of the committee who is not engaged in any trade himself. The sub-committee so appointed will be entitled to visit any cloth shop in the village and ask for information regarding the distribution of cloth made by the dealer. It shall be entitled to look into the cash receipts or credit notes, as the case may be, evidencing the sales made by the dealer. These inquiries and the intimations, which will be given to the Committee in advance furnishing full particulars of every consignment of cloth received by every dealer who has been asked to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

supply mill-cloth to the village, will enable the sub-committee to see how far the dealer's distribution has been in accordance with the committee's distribution lists.

Proceeding to deal with the Opposition's criticism, Mr. Prakasam said that one main point urged was that the Village Committees could not be trusted and that reliance could not be placed on their competence. It was not for them to say that villagers were incompetent simply because they were uneducated. As for factions and stray assaults, that occurred owing to ignorance, it was their duty to see that those things were stopped. A foreigner might be pardoned for saying that people of this country did not know how to govern themselves : but not their own countrymen. A democratic system of Government was known in this country long before Britain could evolve a democracy of its own. As for factions, were there not factions among educated men ? Were not educated men standing in the way of effecting a settlement of the political problem of the country ? The Indian villager was intelligent. He could understand things if they were properly presented to him. The existing machinery had failed and he had to trust the whole matter into the hands of the people themselves. Let them not think in terms of Hindus and Muslims. Let his Muslim friends come with him and he would show them that in certain villages, *where the Congress had organised spinning, nearly eighty per cent who benefited were Muslims.*

Continuing Mr. Prakasam suggested that under the stress of the present crisis, they might give this opportunity to the people of the villages to restart on their old system of administering their own affairs. He was sure, that it would be an effective means of dealing with the present crisis and in the long run help to re-invigorate village life and restore it to its ancient greatness. He was sure, given full opportunity, the villages would become the basis of an economy of self-sufficiency of the whole country.

Chemical Laboratory for India

A plan for the establishment of a National Chemical Laboratory for India upon a 430-acre tract of land at Poona has been submitted by the Planning Committee of the Council of Scientific and Industrial Research.

Under the proposal, the laboratory would have available Rs. 38,90,000 in the form of cash and equipment. The Government would grant Rs. 25,00,000, the Sir Dorabji Tata Trust Rs. 8,30,000 and the existing chemical laboratory of the Board of Scientific and Industrial Research—which would be absorbed in the National Chemical Laboratory—Rs. 5,60,000 in equipment, chemicals, apparatus and library.

The object of the Laboratory would be "to promote research in industrial chemistry and the chemical utilisation of the raw material resources so as to help the development of the country and its resources."

New processes evolved would be developed up to the pilot plant stage to enable chemical and other industries in need of research in general to derive benefit from the investigations. The main divisions projected are : Inorganic chemistry including analytical chemistry, physical chemistry including electro-chemistry, chemical engineering, survey and intelligence, and organic chemistry.

Among the immediate problems of national importance which the laboratory would study are surveys of raw materials and their industrial potentialities, utilisation of by-products from existing industry and the development of key industries. An Advisory Committee composed of leading chemists, scientists and industrialists would serve to help chalk out the programme and to help co-ordinate the laboratory's work with that of the Universities and other research institutions of the country.

Starvation or Murder ?

Philip Bolsover of the *Daily Worker* makes scathing comments on the Food administration of the United Nations. He says that millions are facing death in Asia. Millions more are on starvation rations in Europe. Japan and Germany are pushed to the head of the world's dinner table for reactionary political reasons. Britain's agriculture is being allowed to slip back to pre-war standards. But none of these things need have happened.

Bolsover says : "People are already dying from starvation in India ; people will die in Europe, and they are not only dying. They are being murdered ; just as surely as though they had each been poisoned or shot. Atom bombs would not slaughter them on such a scale.

"In a world ruled by a sane economic system they would not die. The world has had six years of war, it has had droughts, it is maintaining men under arms instead of in agriculture, it is short of transport. These are some of the reasons why men and women are starving, but a Socialist economic system would have dealt with these causes of food shortage. People are dying, *because it is more profitable for the North American farming interests, under the control of the banks, to hoard their wheat until prices rise, instead of selling it now to save starving people. (North Dakota, for instance, has millions of tons of wheat stored.) Because it is more profitable to give grain to cattle than to send it to hungry human beings. (Grain fed to animals in the United States has jumped by 32½ million tons over the pre-war figure—enough to save millions of lives). Thanks to lifting up of meat rationing by President Truman it is more profitable to feed animals with grains than to export grain to needy countries. Because it was more profitable to burn wheat in Argentina than to store it to meet the needs of other countries. (In the last four years Argentina has burnt 1,280,899 tons of wheat and 7,28,462 tons of maize as fuel.)*

"These are the distortions of a vicious and immoral economic system. They are certainly not the wish of the mass of American people, who have never refused to allow food cuts nor of the British people, now tightening their belts.

Equally malevolent are the political distortions.

In Asia, food supplies are being diverted to Japan to bolster the power of reactionary forces installed under American protection. For food, or lack of food, is a profound factor in a political situation.

In Europe, attention is focussed by Britain and America on Germany, though urgent claims come pressingly from other quarters. Why ? Because reactionary British and U.S. politicians fear the contrast between the rations in their sectors of Germany and those in the Soviet zone.

While these policies are followed, while supplies are diverted, India's hungry millions, whose need of food is the greatest in the world, see their hopes of life fade.

These things—the profit-hunting, the political gang-ster-ism—are the factors that are slowly killing thousands of simple, ordinary folk all over the world.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

And the reverse side of the picture ?

The distribution of tractors, stock and agricultural implements to peasants in Eastern Europe and the Soviet zone of Germany is part of the reverse side.

The division of the big landlords' estates, giving East Europe's peasants a new incentive to produce, is another part of the reverse. In Poland, Rumania, Yugoslavia, Bulgaria—all over Eastern Europe—peasants are being rescued from an incredibly low standard of living by their new governments. They have help and organisation—above all they have hope.

And a third part of the reverse side is the fact that the Soviet Union plans to increase its agricultural production so rapidly that it will be harvesting 127,000,000 tons of wheat in 1950—seven per cent more than in 1939. This in spite of the fact that 40 per cent of the cultivated area in the Soviet Union was occupied by the Nazis, with the accompaniment of unequalled ruin and repopulation. War or no war, drought or no drought, Socialist harvests will not fail.

Bolsover then criticises Hoover, President Truman's Food Emissary to Europe and Asia. He writes :

> Can we trust him ? Can he be trusted not to use food as a weapon of political blackmail against the democratic Governments of Europe ? asks I. Starobin in the *Daily Worker*.
>
> President Roosevelt didn't trust him. There was considerable pressure on Roosevelt to give Hoover public office, but the President refused to yield—he saw in such action a betrayal of progressive policies.
>
> On the other hand, the Nazis trusted Hoover. When he visited Berlin in 1938 he was acclaimed by Hitler's associates. He went to a meeting in Basle that was intended to be secret, and was there toasted by the Nazis with the remark : "We expect much from Mr. Hoover."
>
> As relief administrator in 1919, Hoover boasted publicly that with food as a weapon he had saved Europe from Communism. What he meant was that he had installed Fascist regimes in Hungary, Poland, Finland and the Balkans.
>
> In 1921, Hoover wrote to a friend : "The whole of American policy during the liquidation of the Armistice was to contribute everything it could to prevent Europe from going Balshevik or being overrun by their armies."

Altogether, there seem to be quite a lot of reasons why one really should not trust Mr. Hoover.

Indian Buyers' Activity in London Share Market

Buying from India is becoming an increasingly important feature of the industrial share market in London. Large Indian investors with ample funds are buying shares of companies operating in India though controlled from London. The ultimate result, assuming continuity, will be a change in control from Britain to India.

India has long been active in buying shares of lesser known tea companies. During recent months many thousands of British shares have been occupied by Indian investors. Jute shares have also attracted Indian buyers and about 60 per cent of these shares have passed into Indian hands. Rises in the prices of the shares of the Calcutta Trams, Calcutta Electric Supply, Indian Iron and Jute on the London share market, are due to buying orders from India. The sudden rise of Madras Electric Company early in J... last has resulted in the transfer of roughly ten thou... shares to India.

These transfers of shares to Indian hands ... necessarily raised the question of management. It ... believed that in some cases the shares held by M... ing Agents have fallen short of the safe margin. ... consequence, complete transfer of management of ... British firms to Indian hands have taken place. In ... first flush these transfers were in a way advantageo... to British businessmen who generally control their ... in this country through the Agency Houses. Wi... fraction of the shares in their hands, these Agents ... in a position to arrogate the lion's share of the profi... It was not a very bad proposition for them to reap ... harvest while the Indians supplied the capital.

The domination of industries in India through ... Agency Houses is not now considered fully safe. Anxie... is felt as to how far this domination can be maintained with the bulk of capital in Indian hands. The *Evening Standard* of London gives an indication that this question is engaging the attention of the London heads of Indian firms. The city editor of the *Evening Standard* writes that the directors of some of the large Indian tea companies are seriously considering altering the articles of association of their companies in order to prevent control passing from England to India. He states that during the past twelve months Indian investors and speculators have obtained control of a number of smaller private tea estates and have paid anything between £175 to £225 an acre for them, or more than double the actual capitalisation of the estates concerned. Now they are buying the shares of better known public companies in the London market. The buying movement has increased steadily during the past few months and a recent analysis of share transactions by one management company showed that seven out of ten transfers were on Indian account.

British Education Act

Education has had the honour of being the first big measure of British post-war legislative planning. Housing and health programmes are still in the preliminary stage. The Education Act is the most ambitious and comprehensive Education Bill that has ever been passed by the Parliament. The Act is a bold measure. It builds up on what is old, it seeks to fulfil and not to destroy. It is essentially socialist in character because it provides for equality of opportunity for all in the matter of education. The aim is clear, the Government propose "to secure for children a happier childhood and better start in life, to provide a fuller measure of educational opportunity for young people and to provide means for all of developing the various talents with which they are endowed and so to enrich the inheritance of the country whose citizens they are." The basic aim is to improve the content of education. The Act is based on the principle of retaining diversity of choice for the individual child within a co-ordinated system of education in progressive stages from the Nursery to the Advanced Adult stage.

The main features and the significance of the Bill have been summarised by Mr. G. Sundaram in the *Hindu* :

> *Pre-School Education* : The value of Pre-School Education is recognised and provision is made for a generous supply of Nursery Schools. It is pointed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

out that these schools are specially needed by children of poorer classes who require a suitable environment. These will be provided by local authorities.

Compulsory School Age : The most striking feature is to take the first step in the programme of raising the school-leaving age. The Fisher Act had brought it to 14 but now it has been raised to 16. Education is regarded as a continuous process—Primary, Secondary and Further—from 5 up to the age of 18.

Primary Stage : Primary schools will give instruction to pupils from the age of 5 to 11. At 11 + they will be diverted to different types of schools. There will be no public examination at this stage as its effect on the child and the curriculum will be cramping. But the diversion will be guided by a study of individual aptitudes as reveals from school records and intelligence tests as well as by parents' wishes regarding the future careers of their children.

Secondary Stage : At 11 + the pupils will have to turn to Grammar Schools, Technical Schools or Modern Schools and they will stay there till 15 or 16. At 16, there will be an internal examination. Those who desire to take to University Education will have to pass the Entrance Tests.

Higher Education : Another remarkable feature is the establishment of Young Peoples' Colleges. Therein the students will have to continue their education till 18. These will give instruction for one day a week.

Health of Children : Government regard the care of children's health as a basic factor in the scheme of education. Medical Inspection followed by medical treatment will be absolutely free. Provision of nourishing meals and milk for all is part of the Health programme.

Free Education : The Act abolishes fees in all schools wholly maintained by educational authorities, whether primary or secondary. Thus equality of opportunity has been provided for all. In aided private schools a number of free places will be available.

Inspection : There will be compulsory inspection of all private schools, which will be guided by the advice of inspecting officers.

Religious Instruction : Religious instruction is regarded as an essential element of education. It is laid down that the school day should begin with a corporate act of worship. Instruction on agreed syllabus will be given though parents have the liberty to withdraw their children from religious classes.

Administrative Charges : The Minister will have full power to control the whole field of education, not merely to guide, supervise and advise as before. He will appoint Advisory Councils which he will consult from time to time. The estimated cost will be £200,000,000 in a normal year and two-third will be met from Central Taxation.

Teacher Supply : The problem of adequate Teacher Supply is visualised. The Training Colleges and Schools will have to double up their output. The ban on employment of married women teachers has been removed. While a separate committee has thoroughly gone into the question, it is realised that conditions of parity with Civil Service will have to be established so that teaching service may attract and keep men and women of talent, ability and ambition.

The British Education Act of 1944 is a pointer to statesmen and publicists in all countries and especially in a country like India, which has been educationally backward owing to political servitude. Mr. Butler calls upon the Indian statesmen to place first things first in the Scheme of Nation-building. The provision of a comprehensive system of Education run by capable teachers whose supply is uninterrupted because of proper conditions of service and prospects of adequate rewards will have to be regarded as the first step in National Reconstruction in free India. The Indian national leaders have yet to learn that education, in the words of the Conservative Party Report, is "a basic activity and that it conditions the future character of the entire community." Will our leaders keep in mind the truth of the statement that introduced Butlers' Bill ?—"Upon the education of a people, the fate of a nation depends."

Conditions in our country stand a lamentable comparison. The Congress Governments have just begun to liberalise education but their powers and resources are too limited to redress the bad effects of the planned denial of education that has been so far the official policy. In non-Congress provinces education is still neglected and in Bengal a measure *for further curtailment of educational facilities is on the legislative anvil.*

Indo-Russian Trade Prospects

Alfred Wagg, Special Representative of the *Chicago Tribune* has thrown light on the possibilities of the development of Indo-Russian trade. He says that Indian business is expecting to bring a minimum number of one thousand translators during the coming year. Wagg claims that this has been revealed to him by a spokesman for one of India's largest textile, sugar, jute concerns who indicated that his firm had already made handsome offers to the students of Russian language, who may be able to translate into English or Hindustani, if they come to India for assisting to secure liason with Russian business, eventually attempting the replacement of the United States as an outside influence in competition with British India. When questioned how the idea of developing trade with Russia was conceived, the spokesman said, "Members of the Russian film industry who came to India four years ago contributed many suggestions concerning the exchange of business knowledge."

The representative stated the reason for the need of Indo-Russian co-operation in commercial spheres, firstly, the need to introduce into India a check against rising British prices; secondly, to hedge against inflation on present business ; thirdly, to develop facilities of Afghanistan-Russia-India border in view of the possibility of building railroads from India to Russia as soon as British political control relaxes and also o improve air, road and other transport facilities for connections with Russia ; fourthly, the need for cheaper products from Czechoslovakia and small European countries where Russian aid is helpful, such as Latvia and Estonia. He also stated : "India needed Russian equipment and machinery" and stated that Russian influence was welcomed by his firm and that already many

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

European engineers, consultants were advising his firm on the prospects of trade.

In view of the third world war, it is but natural that India will begin to think of her trade relations in terms of land routes instead of depending for the supply of essential commodities on vulnerable sea routes. Opening up of land communications between Russia, China and India can easily develop Asia into the strongest economic and military unit of the world.

Foreign Possessions in India

There are a few French and Portuguese possessions in India reminding us of the foreign adventurers who set their foot on our soil three centuries ago. It is time that they should be amalgamated with the whole of India. Their foreign rulers should now be asked to quit. A long step forward has been taken in this direction by the people of French India. In electing for a member to the French Constitutional Assembly, they voted for one who pledged himself to support the move for an amalgamation of French India with the rest of the country. Movement in the Portuguese possessions has also started and Goa has been for some time in the limelight. But this Goanese struggle is still a struggle for civil liberties. Quit Goa struggle has not yet begun.

The foreign possessions may be minor principles but they are pimples that disfigure the face of India and should be cured at the earliest possible opportunity. Their foreign owners would also gain a far greater amount in amity with Indians than they would lose in cash.

Asiatic Society of Bengal

What are things coming to at the Asiatic Society of Bengal? Judging from recent tendencies it is more than apparent that the last decade's history is going to be repeated there. Only in 1939, the Society had set up a Re-organisation Committee to investigate thoroughly into the causes that had led to the decline in its cultural activities under a paid European General Secretary. After a thorough scrutiny the Society, on the recommendation of the Reorganisation Committee resolved to abolish the post of a paid Secretary and it was decided to appoint two Assistant Secretaries, one for administrative and the other for academic purposes. The Assistant Secretaries would be under an elected Honorary General Secretary. For financial reasons, only one Assistant Secretary could be appointed. Since 1943 even this post has remained vacant.

In 1943, with the election of Dr. S. P. Mookerjee as President and Dr. Kalidas Nag, as General Secretary, the academic and cultural activities of the Society were greatly stimulated. Dr. R. C. Majumdar took up the herculean task of reorganising the Library which had been almost in a hopeless mess. Printed books, manuscripts of great rarity and value were lying practically unattended. There was no catalogue worth the name. On enquiry, many of the rare books were found to be untraceable. A suitable Librarian worthy of the Society's Library was badly needed, and such a scholar, a Lecturer of the Calcutta University, was found and appointed. So long both the Library and the publications were managed by the Society's clerks whose academic interests and abilities fell far short of the standard that was required there. On appointment of the Librarian on a contract service for three years, immediate attention was paid to cataloguing of all books on a modern scientific basis and to putting an end to the mysterious disappearance of valuable books. The old clerical system of running the library having been found unsatisfactory, the entire library in all its sections was placed under the new librarian. Since then a very large portion of the printed books has been catalogued. Out of a total of 26,000 manuscripts in the Sanskrit section, 15,000 remained totally unnoticed, uncatalogued and even unlisted. A brief catalogue of this entire lot has been prepared and sent to the press. In the Islamic section also, a considerable number of the unlisted manuscripts have been catalogued. Of the Tibetan Xylography, the entire Tan Gyur section, consisting of nearly 3,500 works, have been catalogued. Under the clerical system there was practically no attempt to add to the stock of the Library with due attention to its high standard and as a result additions consisted mostly of automatic accessions the average for the year being about 150. Under the new Librarian, great care was taken in the selection of books and accessions improved in standard and the number rose to an annual average of 750. With these new arrangements, the library attracted larger number of scholars and members. The publications of the Society were found to have been in an equally hopeless state. The renowned Bibliotheca Indica series was at a standstill, very few books having been published during the last three decades; the Memoirs had stopped and the journal was late in its appearance by years. Some of the books started half a century ago remained unfinished. The standard of the Journal had greatly declined because it failed to attract first class papers due to delay in publication. Dr. Nag paid special attention to the publications and succeeded in a great measure to stimulate it. A new publications officer was brought in to fill a vacant post. He held the M.A. degree in six subjects, had previous experience in press and publication work and was therefore eminently suited for the task. He reorganised the entire publications section, prepared a new catalogue, brought the Journal up-to-date and completed many of the books left unfinished half a century ago in the Bibliotheca Indica series. The whole stock position was ascertained when it was discovered for the first time that almost half of the Society's saleable books were tending to become dead stock. Pages of several books had become brittle to touch. Schemes were then devised to mobilise this stock and a great measure of success was achieved. The annual sales of the Society was sought to be stabilised at Rs. 10,000 where the former annual average was barely Rs. 3,000.

Since the present President began to interest himself in the Society's activities, its dignity as a centre of research began to be ignored. He is responsible for the introduction of a series of weekly lectures for the entertainment of Allied troops, whose standard has now come down to the discussion of "advertisement and quack remedies" and the "history of a thorough-bred race horse." Barring a few talks given by eminent scholars, most of the lectures that were read out were mere school-boy essays. Under the garb of providing amenities to members it is now being attempted to turn the Society into a club room. The Society is known all over through its publications and its library. The present authorities, in complete disregard of this vital fact, have turned their full attention to the recruitment of new members, most of whom are now drawn from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ranks having little connection with academic activities. The consequence of having such a clientele is a natural and inevitable decline in the standard of the Society's activities and neglect of its vital branches.

The present council of the Society is dominated by the President with the help of some merchants and high government officials. Scholars on the council belonging to the University are being quietly eliminated. The latest tendency has been to go back to pre-1939 conditions and appoint a salaried Secretary in clear violation of the Society's verdict delivered in that year after a thorough scrutiny. Applications have been invited for the post of a paid Secretary with a thousand rupee salary. Arrangements for interviewing British applicants in London have already been made and in spite of the fact of having received an application from an eminently suitable Bengali scholar who happens to be a University professor, applications from London are being awaited. The Selection Committee is composed of several gentlemen with little pretensions to scholarship. Persons intimately connected with the Society for a very long time, like Sir Jadunath Sarkar, Dr. Meghnad Saha, Dr. Ramesh Chandra Majumdar, Dr. S. P. Mookerjee and Dr. Hora are not on this Selection Committee which consists of four persons, in addition to the President, Secretary and Treasurer of the Society, who are virtually new-comers to the Society and cannot claim to possess any knowledge of either its needs or its working.

This, in short, is the present position. Dr. S. P. Mookerjee and Dr. M. N. Saha, who had been mainly responsible for revitalising the Society, have retired. The new publications officer left as he found it difficult to work under conditions that was coming to a head. The Librarian has also left after his contract period was over and to provide for the salary of the Secretary, it has been decided not to fill up either of the posts. In spite of a Secretary being provided for, who will also be the Librarian, the Library for administrative purposes as well as the publications, has been placed under the old clerical regime which was responsible for all the mess.

Arrangements for furnishing the Club Rooms of the Society are being made. It is high time now that the present tendencies of the Society are checked and another attempt made to revitalise it before it sinks to its former position once again. Atmosphere and amenities of the Society ought to be such as invite scholars and not mere members. Its main purpose always was to function as a centre of research, and not merely to attract larger number of men with a promise for the provision of club-like amenities. Scholastic reputation and not popularity had ever been the aim of this august body which has functioned as the torch bearer of Asiatic culture for the past one hundred and sixty years. The Society cannot be allowed to flounder on the rock of cheap popularity.

Grow More Food Campaign in Bengal

During the past few years, the Government of Bengal have sanctioned huge sums of money on the Grow More Food account. The crores of rupees provided for the purpose have literally been wasted. Rice, vegetables, fish and meat—everything is in short supply. New branches were opened under the Agricultural department for research, seed store, manure supply, goat multiplication, and what not, all with easy money destined for a fathomless pit. Attention was devoted solely towards expenditure of all available cash. No attempt was made to increase the area under food. Writing in the *India*, a Calcutta monthly, on "Food and Freedom," Mr. T. M. Pillai drew attention to the vital fact that the Defence of India Rules 80/B and the Bengal Food Crops Production Control Order 1944 issued by the Government of Bengal under the said Rule as per notification No. 1384-Agr., published in the *Calcutta Gazette*, dated May 4, 1944, had been brought into force and two years had elapsed since their promulgation. We are glad to find that this revelation has not been allowed to sink into oblivion. A European member of the Bengal Legislative Council, Mr. T. B. Nimmo, asked, on the very opening day of the new session of the Legislature :

> Will the Minister-in-Charge of Agriculture, Forests and Fisheries be pleased to state—
>
> (*a*) in what areas and from what dates, the Bengal Food Crops Production Control Order 1944 has been brought into force ;
>
> (*b*) whether lists of waste lands and arable lands not under cultivation have been published in terms of the said Order ; and
>
> (*c*) what area of waste lands and arable lands, not under cultivation, has been brought under food and fodder crops as a result of the said Order ?

The Minister having replied that nothing had been, the following interpellations took place :

> Mr. T. B. Nimmo : Will the Hon'ble Minister be pleased to state why this Control Order has not been brought into force ?
>
> The Hon'ble Mr. Ahmed Hossain : It is under the examination of Government.
>
> Mr. T. B. Nimmo : Will the Hon'ble Minister be pleased to say if it is a fact that there are large areas of unculturable land in Bengal ? If so, whether Government will take steps to bring all those plots under cultivation ?
>
> The Hon'ble Mr. Ahmed Hossain : Government will take the matter into consideration.
>
> Mr. Hamidul Huq Chowdhury : What are the terms of this Bengal Food Crops Production Control Order, 1944 ?
>
> The Hon'ble Mr. Ahmed Hossain : It is difficult to say what the Order contains.
>
> Mr. Biren Roy : The Control Order dates as far back as 1944. Two years have already elapsed. How long Government will take to bring it into force ?
>
> The Hon'ble Mr. Ahmed Hossain : The new Ministry has come into office and they are examining the matter.
>
> Mr. Humayun Kabir : Will the Hon'ble Minister please state why this Bengal Food Production Control Order, 1944 was at all promulgated if it was not intended to be brought into force ?
>
> Mr. Humayun Kabir : My question was—will the Hon'ble Minister be pleased to state why this particular Order was at all promulgated if the Government have not found it possible to bring it into force even though more than two years have elapsed !
>
> The Hon'vle Mr. Ahmed Hossain : Government does not say that it is impossible to bring it into force. The new Government is examining it.
>
> Mr. Humayun Kabir : Are we to take it from the Hon'ble Minister that the examination of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

last two years has so far produced no results at all ?

The Hon'ble Mr. Ahmed Hossain : I have nothing further to add.

Mr. Humayun Kabir : Will the Hon'ble Minister give us some indications as to how long it will take the present Government to make up their mind one way or the other with regard to this particular Order ?

The Hon'ble Mr. Ahmed Hossain : As a matter of fact, this Control Order is going to cease on the 30th of September. So . .

Mr. Hamidul Huq Chowdhury : Will the Hon'ble Minister be pleased to state whether Government will bring in legislation incorporating the provisions of this Order ?—(No reply).

Mr. Nagendra Nath Moholanabish : Will the Hon'ble Minister be pleased to state why after the promulgation of that order it was not so long brought into force and if he has very recently come into power whether he has been able to ascertain from Government records as to the reasons for this inordinate delay ?

The Hon'ble Mr. Ahmed Hossain : I have already answered and I have nothing further to add.

Mr. Humayun Kabir : Will the Hon'ble Minister be pleased to give us any indication as to what proposals, if any, Government have made for the preparation and introduction of any Bill on the lines of the provisions laid down in the said Bengal Food Crops Production Control Order, 1944.

The Hon'ble Mr. Ahmed Hossain : Will the hon'ble member kindly repeat his question ?

Mr. Humayun Kabir : The Hon'ble Minister said some time ago that it was under examination and my question is, will he be pleased to give some indication to this House as to what measures they propose to adopt whether in the form of any Bill or in any other manner in order to carry out the principles which were embodied in this Control Order of 1944 ?

The Hon'ble Mr. Ahmed Hossain : Government is examining the Control Order and if it is feasible to enforce the provisions of the Control Order, Government will bring in legislation accordingly.

Mr. Humayun Kabir : We have been told that the Government is examining it. Will they give us some indication as to the lines on which the Government want to proceed. The Hon'ble Minister has just now told us that he is examining whether it is feasible at all. Are we to take it that, in his opinion, the Bengal Food Crops Production Control Order was not a feasible proposition and the whole thing was a huge joke ?

The Hon'ble Mr. Ahmed Hossain : I have nothing more to add.

While the food production, procurement and distribution policies of provinces like Bombay, Madras, and U.P. have earned the praise and admiration of all observers both Indian and foreign, disinterested observers had only hard words for the methods followed in Bengal. The un-official Food Mission had opportunities to see for themselves how the food problem was being tackled in the differences. Their admiration for the Congress Governments and their strong criticism in respect of Bengal are already on record. During all the war years, production, procurement and distribution of food have all remained in the same hopeless and muddled condition. The nature and extent of callous disregard to the vital points of food administration will be apparent from the interpellations given above. Only in one respect, the Bengal Ministers and officials have never lacked in enthusiam, and that is in placing crores and crores of tax-payers' hard-earned money in the hands of utterly inefficient—and very often corrupt—men in the administration, in order to enrich a few favoured people.

Village Industry Affected by Railway Priority Rules

"Can stupidity go further ?" asks Prof. J. C. Kumarappa in the current issue of the *Gram Udyog Patrika,* discussing typical cases of abuse of authority in regard to railway priorities. Mr. Kumarappa writes :

> "The Railway Priority Rules have been used to kill village industries. The interpretation of Priority Rules will be amusing were not the results so tragic. For months on end we have not been able to send out equipment for village industries such as paddy husking, flour grinding, oil pressing, bee keeping, paper making, etc. because of the ludicurous ideas Railway servants have. As our implements are made of wood they refuse to classify them as 'machinery and its parts or tools.' According to them, machines, etc., are always of steel or iron. So we cannot be placed under Class VI 'Maintenance of Industrial Production.' Hence the *ghani* is classified as 'civilian furniture ! which is class IV and even the ghani models, about 1-foot in height, are so classified. Stone chakkis are classified as personal luggage.
>
> It is interesting to note that cigarettes, liquors, empty bottles, etc., got a priority over us as they are placed in class V.
>
> The clause provides for the transport of paper from Mills. The Railway refuse to book hand-made paper because we do not call ourselves a 'Mill.' The Chief Traffic Manager writes that 'paper cutting is considered as raw material, only when consigned to paper mills' and that as we are not a 'Mill' it cannot be booked for us as 'raw materials.' Can stupidity go further ? Or is it a wanton attempt to destroy artisans ? Because these are not the whims of an ignorant 'goods clerk' but the obduracy of high-placed officials at headquarters."

Students of the economics of Indian railways will support the learned Professor's second view. Discriminating railway rates and the priority rules have been combined to crush Indian enterprise. The smaller and the more indigenous the industry, the heavier is the blow. We cannot afford to forget that during the crucial war years, a British merchant was planted at the head of the Railway department. Even a British civilian could not be trusted because he was not expected to be fully conversant of the needs and working of the British business machinery. Priority Rules framed for them are still in force and the village industries are feeling the brunt of them.

GERMANY AND WORLD POLITICS OF TO-MORROW

By TARAKNATH DAS, Ph.D.

I

When the Treaty of Versailles was signed, after the conclusion of the World War I, it was hoped by many statesmen of the victorious Allied Powers that Germany, disarmed, deprived of her navy and merchant-marine, colonies and also the sources of raw materials at Ruhr and partitioned in the East by the establishment of a Polish corridor, would not be able to play any decisive role in world politics in near future. Although it was understood by some far-sighted statesmen that a vigorous nation of more than 60,000,000 most industrious and highly educated and scientifically trained men could never be kept permanently under subjection, unless she was completely isolated in world politics. To carry out this complete isolation of Germany in world politics, the makers of Versailles Treaty virtually secured control over German economy, national defense and foreign affairs. The League of Nations was made a part of the Treaty of Versailles. This League was a league of victors and a kind of grand alliance of the victors—the big Five with their satellites—to maintain *status quo* of the territorial disposition made by the treaty and have a united front of all the members of the league against any possible move by Germany and her former allies to violate the provisions of the treaty.

But this programme did not work, because, the World War I, which ended with the destruction of the Ottoman Empire, the Tsarist Russian Empire, the Austrian Empire as well as the German Empire, created a new situation in the world politics, *up-setting the balance of power*; and in this new situation of new international rivalry there could not be created a new balance of power without Germany, a strong Germany as a balance among the three rivals—Britain, France, and later on Soviet Russia. Thus within a few years, with the growth of Anglo-French rivalry or Anglo-Russian rivalry, German support, at least neutrality, was sought after by all the great powers and German statesmen utilised this situation to the maximum to bring about recovery of Germany to the position of the most dominant power in the world.

II

After the signing of the treaty of Versailles, which was at first rejected by all Germans of all parties, the German statesmen began to undo the treaty and to do that, *the first and foremost thing that was necessary was to break Germany's isolation in world politics*. The first step towards gaining the objective was possible because the Allied Powers did not wish to take Soviet Russia within their council and even wanted to overthrow Soviet Russian Government by promoting civil war in Russia. Thus Soviet Russia while fighting a Civil War at home and foreign intervention in every field of her national life also needed at least German neutrality, if not support. It was the common interest of both nations —Germany and Soviet Russia—in the fields of economy, military power and diplomatic support. Hitler worked national defense and international relations that led to *de facto* Soviet Russian-German alliance, which was signed at Rapplo in 1921. This happened when both Russia and Germany were debarred from becoming members of the League of Nations. *In this connection, one thing should not be forgotten by students of world politics that the ideological issue of "Communism" versus "Capitalism" did not prevent Communist Russia from signing a virtual treaty of alliance with capitalist Germany.* In fact Communist Russia agreed to support capitalist German national economy by supplying raw materials and opening Russian markets for German goods, while German scientists and military experts began to extend their services to build up Russian industries and a *military machine* which later on became so formidable.

After securing Russo-German understanding, in line of Bismarckian foreign policy, German nationalist statesmen began to seek support of Britain against France or to do their best to break up the then existing Anglo-French solidarity. This was not a very easy task and it was not accomplished without much manouvering —and lack of space will not permit me to go into details. The attempt to break up Anglo-French solidarity against Germany led to the occupation of the Ruhr by the French ; and the Germans who hoped active British opposition to French policy was disappointed. Then came the German success in securing Anglo-American financial support regarding the solution of German reparation problems. After the Ruhr occupation, German statesmen of the type of Dr. Stresseman, became convinced that revision of the Versailles treaty cannot be secured without some kind of Franco-German understanding. When M. Briand and Dr. Stresseman began to take active steps to cement Franco-German understanding through economic collaboration between the two nations and also mutual political understanding, then Britain, to prevent any possible formation of a Franco-German-Russian bloc took up the side of Germany ; and through various steps Versailles Treaty was revised and the Locarno Pact was signed, and the alien army of occupation left Germany five years before the time set by the Treaty of Versailles.

While Germans were courting both France and Britain to gain their support, they also succeeded to bring about better understanding with Japan and Italy and they began to spread their economic and political activities in China and India. Germany was no more isolated and in actuality Versailles Treaty was broken at many points. The German nation was gaining consciousness of their power and was most anxious to re-assert their old position of dominance in Central Europe, if not in the world. It was under this situation Hitler appeared on the German scene. Hitler was the product of German national aspirations to reassert and to take revenge.

Hitler realised that to recover German territories and to destroy Polish corridor, it was necessary to have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

against partition of Germany and took active steps that all Germanic people—in Austria, in Czechoslovakia and in Poland etc.—must be united and this must be achieved without a war, if that was possible. But at the same time Hitler knew rightly that without strong military backing, Germany will never be able to accomplish the objective. Thus Germany secured British support to introduce conscription and continued secret arming. The British did not object to this; because they were anxious to have a strong Germany as a balance between a strong France and the growing power of Soviet Russia. The British policy for a time was to have an Anglo-German understanding to prevent any possibility of a German-Russian-French understanding or a German-French understanding or a German-Russian understanding which would be injurious to British interests. In short British policy during the governments of Baldwin, Ramsay MacDonald and Neville Chamberlain was to follow the policy of Disraeli who used German support to further British interests. Thus Britain signed the Munich agreement and made concessions to Germany so that the latter would reach eastward which would be a menace to Soviet Russia.

When Soviet Russia became convinced that Germany with the support of Britain and her western allies might start eastward expansion even menacing Russian Ukrain and towards the Caucasus, then Stalin to preserve Soviet Russian National interest, signed a virtual alliance with Hitler, divided up the whole of the Central Europe as their spheres of influence, destroying the very existence of Polish state with which Soviet Russia was in alliance. This led to Hitler's attack on Poland and which led to the World War II. Germany within fifteen years after signing the treaty of Versailles, not only overcame all the restrictions that were imposed upon her, but became the most powerful single state in Europe. It was the greatest blunder on the part of German Nazi leaders to plunge their country into wars hoping that they would be able to gain territories by defeating their enemies. *Germany lost the war because she brought about the combination of Great Britain, America, Soviet Russia and other Powers against her and also because the Axis Power did not follow a common Foreign Policy and common Defense Policy.*

III

Because Germany has lost the war, the defeated country is being partitioned. Poland and Soviet Russia have occupied large sections of East Prussia, the heart of Germanism—German industries have been dismantled and machines of all kinds have been taken to Soviet Russia and other countries. Millions of Germans are being used as virtual slave labourers to rebuild Soviet Russian devastated territories. American, Russian, French and British armies of occupation are policing occupied Germany divided into four zones. There are demands that in the West, German Rhur and Rhineland should also be detached from Germany and there should be international control of German industries. But at the same time there are also protests from the British—such men as Churchill and others have raised their voice against deportation of millions of Germans by the Russians. There are also warnings by American military authorities that there must be centralised German government and four separate zones of occupation should be substituted by one and to be policed by combined forces of occupation. We also find in Russian zone, the authorities have divided up great estates among the masses and also are doing their best to bring about consolidation of Socialist and Communist parties into one pro-Russian party. In the recent elections in the American and British zones, Communists have been overwhelmingly defeated by the Christian democrats or all those who are opposed to pro-Russian policies of the German Communists. Today in Germany, there is a tug of war betyeen the Russians on the one hand, the Anglo-American Powers and their allies on the other for getting support of the German people in the growing rivalry among these powers.

German scientists are being sought and hired by these Powers and in the United States a very large number of German scientists are carrying on highly secret researches in the field of perfecting war weapons. In Russia today German scientists are used for Atomic researches and Great Britain is also pursuing the same policy.

IV

During the present session of the Foreign Ministers Conference at Paris, United States Secretary of State, Byrnes has made the proposal that the Four Powers—Anglo-American-France-Russian Powers—should form an alliance for twenty-five years and there should be a Four-Power Commission appointed which will have the full authority to carry out complete disarmament of Germany. It is interesting that Russia is violently opposed to any such proposition and Britain is not anxious to see any such development. This is a very significant development—Russia does not wish to see complete disarmament of Germany nor is Great Britain in favour of any such proposition. But they are in favour of a Germany which will be in their favour in the future alignment of Powers in world politics.

The role of Germany in the World Polities of tomorrow will be as significant as it was during the post-Versailles days. In spite of the existence of the United Nations Organization, all nations are arming feverishly and they are creating political blocs and it is only a question of time when Germany a nation of sixty-five millions (in spite of being partitioned) will be sought as an ally by rival blocs. Germany will use the situation to her advantage. *It is safe to say that Germany will go with that bloc of powers which will wipe out the present existing condition of dismemberment and also afford equal opportunity for economic development in world markets for her recovery.* It seems that Soviet Russia cannot support a movement for a United Germany which will be again dominant in Central Europe; on the other hand, to check Soviet control of the Balkans, the Danubian States and Soviet expansion in various regions undermining the position of Anglo-American powers, the latter powers will be willing to make adequate compensation to a rejuvenated Germany. Thus it is quite probable that within a few years there will be rejuvenation of Germany under the direction of Anglo-American Powers; and the only way Soviet Russia would be able to prevent such a development is to create a strong German communist bloc which will bring about a Civil War in Germany, as it exists today in China. In any case Germany's role in the world politics of to-morrow will be decisive in the coming re-alignment of powers.

THE STATES AND THE NEW CONSTITUTION

By S. M. BOSE, M.A., LL.B. (Cantab), Barrister-at-Law

One of the most important questions that will have to be solved under the New Constitution envisaged by the Cabinet Delegation Plan regarding the post-war political status of India is the position of Indian States and their relation with British India (to use an old phrase which needs modification with the withdrawal of the British). No satisfactory solution of the intricacies of the coming New Constitution is possible without dealing with this vital problem—what is to be the position of, the part to be played by, the Indian States, and the relation between them and British India. What part can the great Indian Rulers play in shaping the future of India? What is to be their position in the future Indian polity?

The present position of the States as envisaged by the Government of India Act, 1935 will first be examined.

There are 109 States, the Rulers of which are entitled to a salute of more than eleven guns and as such, are entitled to be members of the Chamber of Princes in their own right; 127 States, the Rulers of which are represented in groups in the Chamber by 12 members elected by themselves; and 327 petty estates and jagirs, etc., who have no such representation.

These 563 States differ considerably in area, population, internal administration and importance; but they are all alike in that they are under the personal rule of the Prince who has the final voice over legislation and the administration of justice. They are also alike in that they are not part, or governed by the law, of British India.

The States stand in a peculiar relationship to the British Crown as Paramount Power in India. This relationship, which is *sui generis*, is not governed either by international or municipal law. The Paramount Power—the Crown acting through the Secretary of State for India and the Governor-General in Council—has its relations with the States based upon treaties, engagements and *Sanads*, supplemented by usage and sufferance and political practice. The relationship of the Paramount Power with the States, is not merely a contractual relationship, but a living, growing relationship shaped by circumstances and policy, as the Butler Committee put it; it is not fixed, rigid or static, but adaptable, mobile or dynamic in character. As Lord Reading bluntly but forcibly expressed it in 1926, the sovereignty of the British Crown in India is supreme in India and no Ruler of an Indian State can justifiably claim to negotiate with the British Government on an equal footing and it is the right and privilege of the Paramount Power to decide all disputes that may arise between the States or between one of the States and itself. Where Imperial interests are concerned, or the general welfare of the people of a State is seriously affected by the action of its government, it is with the Paramount Power that the ultimate responsibility of bringing remedial action, if necessary, must lie. Thus, as explained by Lord Reading, the Crown has, independently of treaties, the right by usage, to take all the steps it thinks fit, to ensure the safety of the British Empire, the interest of India as a whole, or the interest of any particular State.

State Rulers enjoy varying degrees of internal sovereignty. Even this qualified sovereignty may be over-ruled by the Crown in cases of mismanagement by the Ruler. No Ruler of a State can enter directly into relations with any foreign power or even with another State. Thus it follows that a State has no international status, as being fully sovereign neither in its internal nor in its external relations, though no doubt principles of natural justice must be taken to guide such relations. Relations between a State and the Crown further lie outside the sphere of municipal law. Briefly such relationship comes under the prerogative of the Crown—that portion of it which may be called Paramountcy.

The Cabinet Delegation's proposal for the abolition of Paramountcy has greatly improved the position and status of the Indian States. Under the new constitution as envisaged by the Cabinet Delegation, new arrangements will have to be entered into by the States with British India, but what these arrangements are to be, has not been outlined. Solution of the various intricate questions regarding the new relation between the two must be attempted. Suggestions are here put forward to help such a solution.

First, the relation between the State Ruler and the subjects must be determined. Hitherto the State subjects have been at the mercy of the Rulers who refused to recognise that their subjects could have any claim to rights and privileges—such as those enjoyed by their brothers in British India. The Rulers have been naturally, like their British counterpart, very unwilling to part with their autocratic right and privilege, and they have been against the spread of democratic feeling among their subjects. Recently, however, there has been a welcome change in their attitude. But this change must be carried out into practice. Their subjects have greatly lagged behind their brethren across the border and there is, therefore, a considerable leeway to make up. But the difficulty must be frankly faced and immediate steps should be taken to start real representative institutions in the States, where the subjects are given a real voice in matters affecting their interest. The Rulers must fully and cordially co-operate with their subjects and voluntarily relinquish the privileges they so long enjoyed as Autocratic Heads. This is a *sine qua non*, essential to the building up of a United India. So it is suggested that the Rulers should by a Charter of Freedom, given to their subjects, grant political rights as enjoyed by British Indian subjects, and considerably modify their position.

Next, if the States are to get their rights recognised, there must be union among them. Instead of about 600 different entities, there must be a much smaller number, united and strong. So follows the principle of merger and union between various states, which have common ties of race, tradition and culture. This grouping of various small States with larger, will be followed by a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

greater union among the large States, till there arises a kind of Federation or Union of Indian States. So from amalgamation of the smaller States with the larger, there may be grouping together in important blocs, or amalgamations. Sir Sultan Ahmed in his thought-provoking pamphlet on "A Treaty between India and the United Kingdom," has suggested the following blocs: (1) Kashmir and the Punjab States; (2) Kathiawar and Rajputana States; (3) Central India and Eastern States; (4) Mysore, Travancore and Cochin; and (5) Hyderabad. In the interest of the States themselves, such a Union is eminently desirable so that they may enter into the Federation of India, to include both the States and British India. The exact nature of this relationship between the Union of Indian States and the Union of British India will be dealt with later on.

So the suggestion is that all the States should realise that for their security and useful existence, there must be a Union among all of them, to be settled by them by mutual agreement, or if they so prefer, by arbitration by some disinterested authority. The five great State blocs mentioned above may think it desirable to have a form of Federation among themselves, as among the British Provinces now.

Finally, the nature of the future relationship between the Union of Indian States, as advocated above, and the Union of British India, has to be now considered.

This may be of two kinds: (1) a Federation of the States with British India, somewhat on the lines of the Government of India Act, 1935, but more flexible in character; or (2) the creation of a common authority over British India and the States, charged only with the problems of defence and security of India as a whole, on the lines of the scheme of Lionel Curtis.

The first scheme envisages a federated union between the groups of Indian States with the British Indian Provinces, both the Units being represented in the Central Legislature on a joint basis of population and income, the powers of the Central Legislature over each of the two Units being carefully defined by statutory safeguards. Such a Federation will be on lines somewhat similar to those laid down in the Constitution Act, with necessary modifications, one of these being that every one of the States must form part of the Federation, without any so-called right of secession. This is essential; no State should keep out of the Federated Union, not only in the interest of India as a whole but also in its own interest. Separation between a State and British India is impossible; for it is not possible to build an impassable wall between them. Different parts of the Indian Sub-continent cannot get beyond the reach of each other. There is one common unity pervading the whole and a water-tight partition is out of the question.

The other alternative form of Union would be one in which each of the parties, the States on the one hand, and British India on the other, preserves its separate entity on all matters except those of common defence and security; for these specific purposes only, there is to be set up a Common Authority charged with the task of creating such forces by land, sea and air as may be required to secure India as a whole, from attack. This Authority is, by agreement between the Units, to have the power to take all necessary measures for the defence and the security of what may be called the Commonwealth of India, and to levy the cost of such measures from the various members of the Commonwealth. The Commonwealth will be empowered to make its common security from war, a first charge on all the resources of the component units; it will frame estimates for defence, showing the total sum required for the purpose. These estimates will be submitted to a Commonwealth Legislature elected by the citizens of all the component parts of the Commonwealth,—the British Indian Provinces and the States.

In other words, the second scheme is based on there being two component parts—the States Union and the Union of the British Provinces, with separate existence and separate legislatures; but only for purposes of defence and security of India as a whole, there is to be set up the Commonwealth Authority above them, whose function will be to create and maintain such forces by land, sea and air as may be necessary to secure the various component parts of the Union from attack. This Authority thus, will have two branches—the Commonwealth Executive and the Commonwealth Legislature. The former will frame the necessary Budget for the common purposes of security and defence and lay this Budget before the Commonwealth Legislature. The amount of the estimates, when passed by this Legislature, will be apportioned among the members of the Commonwealth of India, in the ratio of their taxable capacity, as assessed by a commission of financial experts. The Commonwealth Authority will also be empowered to enter into negotiations with other members of the United Nations Organisation, regarding matters of defence and security in which all the members of the U.N.O. are equally interested. For this is *One World,* and anything which affects the security of any part thereof, affects the security of the whole.

A comparison of the two schemes may be useful: the first scheme—which may be called the Federation of India scheme, envisages a union between the British Indian Provinces and the States, with a common legislature—somewhat on the lines of the Government of India Act, 1935; State subjects and British Indian subjects will be more or less on equal footing and enjoy similar privileges. But this Federation would, to a material extent, merge the States with British India.

The second scheme may be called the Commonwealth of India scheme, envisages the separate existence of the Union of States and of the Union of British Indian Provinces; but for certain common purposes only, for defence and security—there will be a supreme Commonwealth Authority above them, to deal with the task of creating and maintaining forces essential for the security of India as a whole. In this scheme, the States preserve their identity, and only unite with British India for the sole purpose of defence and security. This scheme is on the lines of the Dumberton Oaks proposals on a small scale.

Whatever be the scheme adopted, it is evident that very careful investigations will have to be made to settle the actual details of the arrangement between the States and British India.

In the first scheme referred to above and the Federation of Indian Scheme (Scheme A), the following matters will require to be settled in detail:

(*a*) *Defence*: It is advisable that the various State armies should be amalgamated into one and this State Army should be trained and equipped like the British United National Indian Army can fight as one if necessary, against a common foe. Air and naval forces which are very costly should, if

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

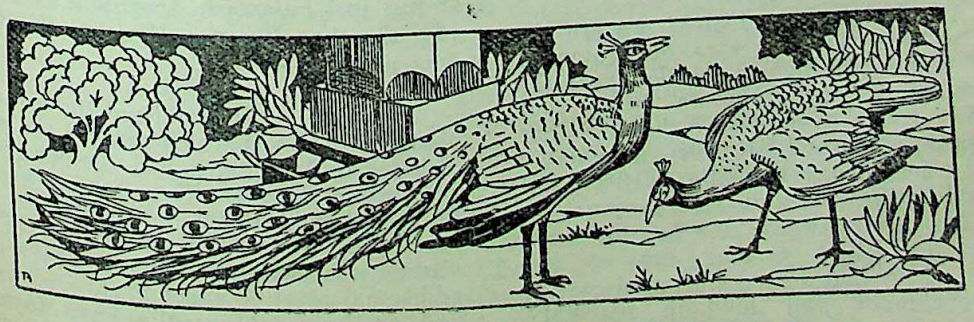
possible, be united under one common head. In the matter of security and defence, no doubt the Federation will seek co-operation with other members of the U.N.O.

(*b*) *The vexed question of tributes* : The States at present pay tribute to the Crown, which forms part of the central revenues. The amount varies from Rs. 24½ lakhs payable now by Mysore to Rs. 3 by a small State named Ravasan in Bombay. The tributes are payable in terms of treaties on which territories were at one time exchanged or restored or on adjustment of claims between the Government of India and the State. In many cases, tributes are paid in full discharge of obligations to maintain or supply troops. The total of these tributes amounts to a little over 72 lakhs. The Joint Parliamentary Committee recommended the gradual remission over a period of years (corresponding to the period during which it is proposed to defer the full assignment to the Provinces of a share of the income tax) of any contributions paid by a State in excess of the value of privileges or immunities enjoyed. For relief should be given to the States because it is anomalous that some units of the proposed Federation alone should be making payments of this description.

(*c*) Some States have ceded territory in return for protection and the Act also recognises the claims of such States to some relief as in the case of States now paying tributes, because the origin of tributes and of ceded territories is the same. Under this head the amount involved is about Rupees one crore.

(*d*) Some States have been enjoying privileges or immunities—(*i*) in respect of levy of their own customs duty by some States and immunity from contribution to the Central Customs revenue ; (*ii*) some States manufacture their own salt and are immune from contribution to the Central Salt revenue (total about Rs. 46 lakhs) ; (*iii*) immunities in respect of posts and telegraphs : some States enjoy the privilege of having their official correspondence carried free by the Indian Postal Department ; some States get free annual grant of service stamps ; some States like Gwalior and Patiala maintain their separate postal system under convention with the Government of India ; some others like Hyderabad, Travancore and Cochin have this without any such convention ; (*iv*) Hyderabad has the right to issue its own currency notes.

The Act (Secs. 146-147) contemplates the remission by instalments of tributes or "cash contributions" in excess of the value of privilege or immunity enjoyed by the State.



How is this matter to be determined under the new constitution ? The proposed abolition of paramountcy ought not to mean abolition in *toto* of cash contributions for these form part of the Central revenues. The Government of the British Indian Union will be the successor of the present Government of India and as such, should inherit the rights of the latter in this respect until varied by mutual consent.

In the second scheme referred to above as the Commonwealth of India Scheme (Scheme B), where the Union of States join the British India Union only, for the limited purpose of security and defence, similar questions regarding tributes, privileges and immunity will arise. These matters along with other Commonwealth relations must be laid down by treaty between the parties. To settle the terms of the Treaty or Treaties, there must be a Tribunal of Arbitrators composed of representatives from the States and from British India, with an impartial Chairman, preferably from the U.S.A. The findings of this Tribunal will be binding on both the parties and will be embodied in the Treaty or Treaties, the terms whereof might be altered or amended by agreement between the parties at stated intervals.

So, whatever be the scheme adopted—Scheme A or Scheme B—there must be a Treaty or Treaties between the States or group of States on the one hand, and British India on the other hand ; and it is clear that the withdrawal of British power from British India must be contemporaneous with the withdrawal of paramountcy over the States. There can be no hiatus.

The above consideration will show the great need of caution and careful study before the relation between the States and British India under the New Constitution can be settled.

So, whatever be the scheme adopted, there is no doubt that some form of close union and co-operation among all the parts of India is essential. Notwithstanding differences in religion and outlook, there is beyond doubt an underlying unity, both geographical and racial, in India, a cultural heritage that runs like a golden thread uniting all parts of India. Recent events have only stressed more strongly the need for unity. The days of self-sufficiency, of isolationism, are over. The principle of self-determination was in the nineteenth century, an integrating force for bringing unity among various small warring units, making them into a single state. In the twentieth century, this principle has unfortunately become a disintegrating force which leads to anarchy. As Walter Lippmann has truly remarked, to make the principle of self-determination the supreme law of international life now is to invite sheer anarchy. The principle rejects the ideal of a State within which diverse peoples find justice and liberty under equal laws and become a commonwealth. Self-determination is very different from self-government ; and by sanctioning secession, it encourages majorities and minorities to be intransigent and irreconcilable.

RACK AND RUIN

A Study of Bengal Finances, 1937-1947

By BIMAL CHANDRA SINHA, M.A., M.L.A.

In an article written a few years ago, I tried to draw public attention to the fact that the Government, by adopting wrong and perverse methods of war finance, can inflict untold sufferings on the people, specially the lower income-groups. But what is more important is that wrong methods of war finance can permanently alter the economic structure mostly to the disadvantage of the masses and the poorer classes. War finance as an instrument of redistribution of public income has assumed great force. This is so because during present global wars the whole of the nation's resources has to be placed at the command of the Government. But matters become far more serious when, in addition to the ordinary potentiality of mischief, there arises the question of colonial exploitation. During crises in capitalist development—and wars are the actuest form of such crises—colonial exploitation assumes ruthless intensity. Bengal is a case in point. She was compelled to pay tribute to Imperialism in the shape of millions of human lives and the complete disruption of her social and economic equilibrium.

The problem raises a thousand questions, but here we shall confine ourselves only to the financial aspect and try to show how, step by step, Bengal has been led to rack and ruin. In fact, there are reasons to believe that special injustice has been done to Bengal and unless special efforts are made to lift her out of the abysmal depths she is in, it will not be possible for her to begin recovery through ordinary methods. Let us first try to have a rapid resume of events since 1937.

(A) The Picture Since 1937

When the new constitution began to work, Bengal was, on the whole, a surplus province. The actual accounts for the year 1937-38 stood as follows :

Revenue	Rs. 1,300 lakhs	
Expenditure	„ 1,183	„
Surplus	„ 117	„

Commenting on this in his Budget speech for the year 1939-40, Hon'ble Mr. N. R. Sarker, the then Finance Minister, said :

"In taking our last look at 1937-38 we are reminded that this was the first year of Provincial Autonomy. We find in the figures for that year the financial position as it was when we began our stewardship. We took over from the previous administration both assets and liabilities. A valuable asset was the absence of any budgetary deficits and the receipt of substantial additions to revenue on account of the Niemeyer Award. Another fortunate circumstance was the lifting at that time of the world depression which had forced our predecessors to resort to retrenchment and hold up necessary expenditure. But an onerous liability was the large accumulation of undischarged obligations to the people of this province which we inherited from the past."

Rhetoric apart, it may be well assumed that at the beginning of the working of the new constitution, Bengal started fairly well and with a good working surplus.

The following table gives the financial position as it developed from year to year :

Table I

Bengal Finances (In lakhs of Rupees) (Actuals)

	1937-38	1938-39	1939-40	1940-41	1941-42
Revenue	1300	1277	1432	1355	1494
Expenditure	1183	1277	1371	1445	1550
Surplus or Deficit	+117	Nil	+61	—90	—56

Table I—*Contd.*

	1942-43	1943-44	1944-45	1945-46 *Revised*	1946-47 *Estimated*
Revenue	1646	2372	3939	3581	4119
Expenditure	1679	2675	4412	4327	5065
Surplus or Deficit	—33	—303	—472	—745	—946

These years fall into three distinct periods. The first period extends from 1937-38 to 1939-40, the pre-war years. The second period extends from 1940-41 to 1942-43 and the third period covers the rest. During the first period we consumed up our surplus ; during the second period we ran into deficit ; during the third period, matters went beyond all control and in spite of doubling and trebling of revenue (and necessarily of taxes), the deficit went up higher and higher, leading Bengal to absolute ruin and destitution. Let us analyse these periods in greater detail.

1) *The First Period (1937-38 to 1939-40) : Exhaustion of the Surplus*

It will be seen that by 1938-39, the huge surplus of 1937-38 was completely exhausted and the Budget that year was just balanced. According to Mr. H. S. Suhrawardy, the then Finance Minister, this was due to two factors mainly :

"It will be obvious from the accounts of 1938-39, that the opulence which marked the opening year of Provincial Autonomy had disappeared at the close of the second year. Thus against a revenue surplus of a crore and 18 lakhs in 1937-38, there was no surplus at all on revenue account in 1938-39. This change was partly due to the heavy programme of additional revenue expenditure undertaken in 1938-39 and partly to abnormally large payments of loans to agriculturists on account of damages caused by floods."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It is undoubtedly true that the year 1939-40 was a surplus year. But the surplus of Rs. 61 lakhs was not the result of any careful planning, nor did it reflect the long-term trend of events. It was more or less an accident. As a matter of fact, even the Revised Estimate for that year apprehended a deficit of Rs. 14 lakhs on Revenue Account. But in actual working, there was an improvement of Rs. 74 lakhs, with the result that this estimated deficit of Rs. 14 lakhs was turned into an actual surplus of Rs. 61 lakhs. What was this due to? This was brought about by an increase of Rs. 29 lakhs in receipts and a reduction of Rs. 45 lakhs in expenditure. The increase in receipt was recorded mainly under the following heads: (1) Jute Duty (Rs. 22 lakhs); (2) Land Revenue (Rs. 8 lakhs); (3) Excise (Rs. 5 lakhs); (4) Other Taxes & Duties (Rs. 4 lakhs) and (5) Extraordinary Receipts (Rs. 7 lakhs). But this increase was partly set off by a decline of Rs. 8 lakhs under Stamps and Rs. 9 lakhs under Administration of Justice. The decrease in expenditure was due to decrease mainly under the head 'Miscellaneous' (Rs. 21½ lakhs). It will thus be seen that the surplus of Rs. 61 lakhs was more in the nature of a windfall than a real reflection of the true situation in Bengal. In fact, the Finance Member issued a warning that very year:

"To other provinces the war has brought comparative affluence. In Bengal, the effect has been just the opposite; and the reason is not far to seek. The loss of the continental markets has been a serious blow to the Jute trade and the life-blood of this province's economy is jute. It is not only that we expect to receive in a normal year rather more than 2 crores from the export duty on Jute but that all our main revenue heads, Land Revenue, Stamps, Excise, depend in a greater or lesser degree upon Jute and the circumstances of the growers of jute."

It did not take long for the tide to turn; from the next year we began our plunge into the ever-deepening gulf of deficits.

2) *Second Period (1940-41 to 1942-43)*: *Years of Small Deficit*

It will be seen from the table given above that from a surplus of Rs. 61 lakhs in 1939-40, there was a deficit of Rs. 90 lakhs in 1940-41. What was the reason behind this deterioration in the financial position? The main reason was the impact of the War.

Let us try to analyse the situation year by year. The year 1940-41 entailed heavy expenditure on many items but the notable feature was the additional burden due to the War. This was more clearly felt in 1941-42 when, after the declaration of war by Japan, Bengal had to shoulder a heavy financial burden. According to the indications given in 1942 by Dr. S. P. Mookerjee, the then Finance Minister, the deterioration was due to the following factors:

"Two out of our main heads of revenue have been effected by the war in opposite directions. Income-tax receipts have improved . . . on the other hand, the yield from the export duty on jute has gone down considerably."

The effects of the war were more marked on the expenditure side.

"By far the most serious effect of the war on the provincial budget however relates to the expenditure on A.R.P. and kindred emergency measures booked under the head 'Extraordinary charges in India.' The expenditure amounted to Rs. 3 lakhs in 1939-40 and Rs. 7 lakhs in 1940-41 and the Central Government agreed to meet these charges in their entirety. Early this year, however, it became evident that expenditure on A.R.P. was likely to reach a very much higher figure and the Centre advised the Provinces that the growing scale of expenditure on A.R.P. measures combined with a deterioration in the financial position of the Centre as compared with that of the Provinces no longer justified the promised measure of liberality and the Centre found itself compelled to call on the Provinces to shoulder the major portion of 'defence measures falling within the provincial field'."

Then began a long wrangling between the Province and the Centre, but the results were not satisfactory, the major portion of the burden falling on the Province. What was called "defence measures falling within the provincial field" was by no stretch of imagination a provincial affair; the war was not the Province's choice, nor was it any fault of Bengal that she lay close to the War Zone. It was really a part of Imperial Defence and the money should have come from the British Exchequer. But not even the Government of India undertook this responsibility. The gross injustice of the arrangement becomes still clearer if we take into consideration the fact that while other provinces more or less profited as a result of the War, the case of Bengal was just the opposite. To make Bengal responsible for financing what was, by no means, her responsibility, was, to say the least, the height of injustice. But that was what actually happened. In the Revised Estimates for 1941-42 expenditure on Famine Relief went as high as Rs. 30 lakhs and that on 'Extraordinary Charges' Rs. 78 lakhs. These are some of the measures of the economic exploitation of Bengal during the War.

The year 1942-43, the year in which the Progressive Coalition Ministry was in office, was the year of smallest deficit in recent years. But this year also was a year of very heavy stress and strain. The war had come inside Bengal's borders and air-raids were taking place. Burma had fallen and all food supplies from Burma cut off. Bengal's economic life was violently disturbed; the Denial Policy was tearing up the agricultural classes from their roots in the soil; military demands dislocated her trade and communications. The Province was in political ferment; the August movement had begun. On the other hand, the shadow of Famine was already deepening; prices were shooting up and there was also a physical shortage. The Cyclone had ravaged the surplus districts of Bengal in the middle of October 1942. And the exploitation of war was going on in an ever-increasing tempo. The small deficit was due mainly to a large Ways and Means Advance from the Government of India to the extent of Rs. 2½ crores. But in spite of this smallness of deficit, Bengal had to face greater devastation this year. The increase in expenditure (which was more than a crore over the previous year) was accounted for by *increase* under the following main heads: Famine Relief (about Rs. 50 lakhs), Extraordinary charges due to War (about Rs. 32 lakhs), Dearness Allowance (about Rs. 20 lakhs) and Police (about Rs. 12 lakhs). As usual, the nation-building Departments were the casualties of the war. To quote from the Budget Speech of the then Finance Minister, Mr. Fazlul Huq, "the heads which are responsible for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the more substantial reductions (in expenditure) are, Civil Works, Education and Public Health."

Thus ended the second period.

3) *Third Period (1943-44 to 1946-47): The Mad Whirlpool*

Then began an era in which matters went beyond all control and we were caught in a mad financial whirlpool in which we lost everything. We have already described how the stage was set for devastation by war, famine and cyclone and how an impossible burden was placed on Bengal from the year 1942-43. But the combined effect of all these was so devastating that all principles of Budgeting and all canons of taxation were thrown to the wind and Bengal was hurled towards rack and ruin. The Budgets also have fully reflected the mad and fantastic atmosphere that has prevailed since then. Let us begin with the year 1943-44. Revenue receipts stood at Rs. 2,372 lakhs, expenditure at Rs. 2,675 lakhs, the deficit being Rs. 303 lakhs. Two important points deserve notice. First, there was a huge increase in revenue receipts this year. In the previous year, receipts stood at Rs. 1,646 lakhs ; the increase, thus, was to the tune of Rs. 726 lakhs. But the increase in expenditure far outstripped the increase in income. The deficit, thus, became nine times as high, compared to the deficit of Rs. 33 lakhs in the previous year. What does this signify ? It signifies that Bengal did not spare herself and made an extreme effort to bridge the gap, but even the last drops squeezed out of her could not satiate the thirst of war and Imperialism.

It is not necessary to go through every detail of this sorry and sordid tale of exploitation and corruption. But it is interesting to remember that just after the great famine of 1773, Warren Hastings, the then Governor-General, did not hesitate to rack-rent the province, so much so that Revenue receipts were higher that year than revenue receipts in any previous year. Commenting on this, Romesh Dutt remarked that this would possibly be cited as an instance of "the recuperative power of India." The sad story again repeated itself. When Bengal needed help to nurse her sores, she was squeezed to yeild more and more money and revenue receipts increased by 50 per cent in a single year. But for what purpose the sum was spent ? We mention only the important items ; the expenditure on Civil Defence, finally debitable to provincial revenues for 1943-44, came up to Rs. 100 lakhs but even this burden coupled with the shrinkage in our share of the Jute Export Duty and increase in Dearness Allowances, looked very small alongside the staggering burdens imposed by the famine. The cost of the Civil Supplies Department during 1943-44 amounted to Rs. 100 lakhs, excluding losses on the Department's trading operations, which accounted for another Rs. 350 lakhs. Relief operations amounted to Rs. 566 lakhs, of which Rs. 350 lakhs were chargeable to gratuitous relief and Rs. 125 lakhs to test works. A further sum of Rs. 135 lakhs was thrown away on the Grow More Food Campaign. But even such huge sums, most of which was misspent if not misappropriated, were small in the context of actual need and the result was the loss of millions of human lives which fell victim to hunger and disease.

What did the Government of India do when conditions were at the worst and the need for help was the greatest ? As usual, they took advantage of the helpless condition of Bengal and made it an occasion for throwing greater financial burden on her. To quote from the Budget speech of Mr. T. C. Goswami, the then Finance Minister :

> "In the early months of the year (1943-44) we relied mainly on the Central Government for the necessary accommodation and between June and October last (in 1943) we received loans and advances totalling 12 crores. Later, however, the Government of India indicated that they desired the Provincial Government to make their own arrangements to raise funds in the open market and through normal trade channels."—(*Budget Speech*, 18.2.44).

It has been stated how in 1941-42, when the impact of the war fell with full blast on Bengal, the Centre asked the Province to shoulder the major portion of defence, which, by no means, was Bengal's task. Again, when two years later, the disastrous war policy of the Government of India as also of the British Government had thrown Bengal into the throes of hunger and death, rack and ruin, the Government of India conveniently stood aside and asked the Bengal Government to get out of the woods as best as they could.

The picture has not changed since then. Two features are noticeable. The over-all figures of receipts and expenditure are becoming bigger and bigger, yet the deficit also is becoming bigger and bigger. Revenue receipts in 1946-47 have been estimated to be Rs. 4,119 lakhs as compared to Rs. 1,300 lakhs in 1937-38. That is to say, revenue receipts have more than trebled in these ten years. But expenditure has increased at a much faster rate. The estimated expenditure in 1946-47 will be Rs. 5,065 lakhs as compared to Rs. 1,183 lakhs in 1937-38. The increase has been more than four and a half times. The deficit, consequently, has become unbelievably high. The deficit in 1946-47 has been estimated in the Governor's Budget to be Rs. 946 lakhs, whereas in ordinary times the Bengal Budget was based on revenue receipts of about Rs. 900 to 1,000 lakhs. The reasons for this deplorable state of affairs are not far to seek : it is the same old story of Imperial exploitation, indigenuous corruption, absolute mismanagement and careless waste of good public money.

(B) Basic Trends and Implications

We have given above a picture of Bengal Finances since 1937. The picture is a sad and dismal one. It shows how, day by day, year by year, Bengal has been squeezed and squeezed dry, yet all the money has flown into this bottomless pit that Bengal is today. We prefaced this essay by drawing attention to the fact that a wrong policy of war finance will not only adversely affect the economic structure for the present but it will leave a permanent stamp on the economic structure, twisting and distorting it beyond repair, and making the country a permanent financial cripple. That is exactly what has happened. Let us try to assess the extent to which Bengal is a financial cripple now.

(1) Comparatively speaking, Bengal has been hit hardest by the war among all the Indian provinces. In fact, other provinces have, generally speaking, profited as a result of the War, but the case of Bengal has been just the reverse. Bengal's Finance Ministers have repeatedly made this complaint and have pleaded for special help for Bengal, but without success. The following table gives a comparative statement of income and expenditure from the year 1938-39 to the year 1945-46 :

It will be seen that in the year 1940-41, the year when the impact of the War first burst with full blast, the only province that had a deficit was Bengal, all the other provinces reaping good surpluses. In 1943-44, all the provinces, except Bengal and Bihar had surpluses, some of them very huge surpluses, such as the Punjab getting Rs. 436 lakhs, Bombay Rs. 371 lakhs, and Sind Rs. 401 lakhs. In recent years, the majority of the provinces had surplus budgets and even for those provinces which had to face deficits, the deficit was small. If we add up the surplus and subtract the deficits and thus calculate the net gain or loss during the war for the different provinces we get the following results :

TABLE III

Balance of Surplus or Deficit (1938-39 to 1946-47)
(*In lakhs of Rupees*)

Madras	+457
Bombay	+900
Bengal	−4362
U. P.	+47
Punjab	+1000
Bihar	+661
C. P.	+179
Assam	+53
N.-W. F. P.	+9
Orissa	−1
Sind	+512

The only province which had to face real deficit is Bengal. Even the North-West Frontier Province, which is, because of its strategic position, a deficit province normally, reaped a surplus. The only province which had to face real deficit is Bengal—so much so that *all* the surplus gained by *all* the other provinces during *all* these years taken together (Rs. 3817 lakhs) is more than set off by the very heavy deficit (Rs. 4362 lakhs) Bengal had to bear.

This is one measure of the extremely heavy burden put on Bengal.

(2) But this over-all deficit, though it is some indication of the very heavy pressure put on Bengal, does not bring out the real situation. It is much more important to realise that not only the deficit has been high, but it has been high in spite of the increasing height of revenue figures. We have already commented on the fact that revenue receipts now have become more than three times than what it was ten years before. This is a measure of the sacrifice made by Bengal to meet the demands of War. In the explanatory memoranda attached to the Bengal Budget for 1946-47 (see *Calcutta Gazette*, 28.3.46) the following table, indicating the yield from certain taxes at the beginning of the war and at present, has been given. The table reveals the effort made by Bengal to reduce the gap :

TABLE IV

Comparative Yield from Provincial taxes in the first and in the last year of the war
(*In lakhs of Rupees*)

	1939-40 *Actuals*	1945-46 *Revised*
1. Agricultural Income Tax	..	60·00
2. Land Revenue	386·10	395·55
3. Excise	165·28	799·86
4. Stamps	256·44	360·00
5. Registration	27·31	64·00

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

6.	Other Taxes and Duties—		
(*i*)	Entertainment Tax	8·01	55·00
(*ii*)	Betting Tax	11·33	80·00
(*iii*)	Electricity Duty	20·24	55·00
(*iv*)	Taxes on Professions, callings, etc.	7·03	10·34
(*v*)	Sales Tax	..	300·00
(*vi*)	Motor Spirit Sales Tax	..	200·00
(*vii*)	Raw Jute Tax	..	40·00
	Receipts under Motor Vehicles Acts	21·31	23·02
	Total	903·05	2442·77

The Table yields very peculiar results. It shows, first of all, the extent of sacrifice Bengal has made. From 9 crores to 24½ crores is no small a jump. It demonstrates, in the second place, that the increase of income has been possible mainly by taxing the poorer classes. The increase in the yield of those taxes which affect the lower income-group has been most marked. The increased yields from the Sales Tax and from Excise Duties are cases in point. The income from Agricultural Income Tax has not been earmarked, as recommended by the Floud Commission, for agricultural improvement, but has been frittered away. Money anyhow was the sole guide to financial policy and for that purpose the Government did not hesitate even to encourage indirectly Betting if it was a source of income. It was utter bankruptcy not only financially but also in statesmanship and high principles.

(3) But this is not all. As on the income side, we find the Bengal Government acting on the sole principle of getting money and more money, so also on the expenditure side, money was spent without any sobriety or discretion. As we have already indicated, the Nation-building Departments were the first casualties and money was poured in for meeting mainly what has been termed "Extraordinary charges in India due to War." The following figures, collected from the Budget speech of Hon'ble Mr. T. C. Goswami in 1945, are most revealing :

TABLE V

Statement of expenditure necessitated by war conditions and the famine and its aftermath.
(*In lakhs of Rupees*)

		1943-44 *Actuals*	1944-45 *Revised*	1945-46 *Budget*
I.	War	762·50	2115·00	1366·00
II.	Famine	560·00	681·00	367·00
III.	Grow More Food Campaign	100·00	112·00	77·00
		1422·50	2908·00	1810·00

No comment is necessary. Suffice it to say that in 1943-44, the total income on revenue account was Rs. 2372 lakhs and the total expenditure Rs. 2675 lakhs. An expenditure of Rs. 1442·5 lakhs on 'Extraordinary charges due to War' means we had to spend, that year, 59·9 per cent of our income to meet the demands of war and 53·1 per cent of our total expenditure went for that purpose. The corresponding figures for 1944-45 and 1945-46 are, respectively, 81·6 per cent and 61·9 per cent and 62·9 per cent and 48·2 per cent.

Let us now have a look at the total picture as it presents itself. The above study of the Bengal Budget reveals that Bengal ruined herself financially to meet to demands of the war. While the other provinces were benefiting as a result of the war. Bengal's was just the opposite case. Yet she had to make the biggest effort to raise money through increased taxation and spend that away on no constructive programme but purely for war purpose. What outside help she received during this period ? The Reserve Bank *Report on Currency & Finance* for the year 1944-45 gives the information that Bengal received only Rs. 3 crores and Rs. 7 crores in 1943-44 and 1944-45 respectively from the centre as *ex-gratia* grants for famine-relief. One might well say that this parade of generosity does more discredit than credit to the Central Government and gives us an idea of their callousness to our vital problems such as famine, which were more the result of the war policy of the Central Government than of anybody else.

(C) INCOME REDISTRIBUTION THROUGH WAR FINANCE

What will be the long-term effect of this disastrous policy of war finance ? Its first effect will be on the income-groupings and the alteration of income distribution in precisely the wrong way. The proper method of war finance should obviously be to tax the upper grades of income and not to penalise those at the marginal or the sub-marginal level. Such a policy ultimately leads to a redistribution of income in favour of the poor and tends to mitigate, though in a small degree, social inequity. Analysing the effects of the financial policy on Great Britain's social and economic structure during the last war, Professor Bowley wrote in his *Economic Consequences of the War* that

> "In summary we may say that great progress has been made towards the extinction of remediable poverty, considerable inroads have been made on excessive wealth, and generally income is less unequally distributed than it was ten years ago."

The effects of such a policy have been much more marked during this war. The British tax-system, this time, tried to be socially equitable by becoming progressive very rapidly with the increase in income. "War-time taxation," write Shirras and Rostas in their *Burden of British Taxation*, "as has been shown from the data for 1941-42, has eliminated the light treatment of the middle incomes. The distribution of the tax-burden is noticeably progressive from incomes of £250 per annum upwards." What has been the result ? The result has been that though the war has put the severest strain on the financial resources of the country, it has still acted as an engine of social equality and justice to some extent and has effected marked redistribution of wealth from the richer to the poorer income groups.

It is true that in presenting the Bengal Budget for the year 1944-45, Hon'ble Mr. T. C. Goswami, the then Finance Minister, also asserted that "in looking forward to the building-up of a better world for ourselves and for our children we must be fortified by the spirit of the celebrated dictum, that taxation is an engine of social and national reform." But how hollow this claim here is, is proved at once if we examine the highly regressive and extremely reactionary financial policy that has been followed by the Government of India as also by the Government of Bengal in financing the War. An analysis of the Bengal taxes will show that the main

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

increase in income of the Bengal Government during the war has taken place under the heads, Agricultural Income Tax, Stamps and Registration, Entertainment Tax, Betting Tax, Electricity Duty, Sales Tax, Motor Spirit Sales Tax, Raw Jute Tax and to some extent Excise Duties. It is obvious that all these taxes are either taxes on the poor people or taxes undesirable from the social point of view. The Bengal Government, thus, have fought their part of the war by taxing and penalising the poor and not the rich. They have literally frittered away money, but with negative results. Every item of their budget, *e.g.*, Grow More Food Campaign, Famine Relief, etc., has been nothing but a colossal waste of money.

That this has been the fact is proved by the results of her financial policy. We examine the position of two provinces, the Punjab and Bengal, side by side. The Punjab shows how a skilful financial policy of the provincial Government can, even within the imperial framework, benefit the poorer classes and mitigate social inequity. From a study on the *Impact of Rising Prices on Various Social Strata in the Punjab* (Publication No. 82 of the Board of Economic Enquiry, Punjab, 1944) we find that

"The impact of rising prices on various social strata in the Punjab has been to transfer wealth from the fixed-income groups to soldiers, and agriculturists. The only group which has suffered very seriously under rising prices in the Punjab is the fixed income group. Farmers and most entrepreneurs have made modest gains. Some farmers, some entrepreneurs and soldiers have made considerable gains."

Thus it becomes clear that the transference of wealth has been to the peasantry, who forms the bulk of the population. But how has the Bengal peasantry fared during these years? It had to face famine and death, disease and pestilence, economic ruin and social disruption. The impact of rising prices led to their total destruction. The following facts, gathered from *A Sample Survey of After-effects of the Bengal Famine of 1943* by Professor P. C. Mahalanobis, F.R.S., and others, speak for themselves:

"During the period of April 1943 to April 1944, 9·2 lakhs of families sold their paddy land in full or in part out of whom 2·6 lakhs had sold their land in full and had lost their only or chief means of livelihood; 6·7 lakhs of families mortgaged their paddy land. In other words, nearly 15 lakhs of families (about one-fourth of the number who had owned paddy land before the famine) had either sold in full or in part or mortgaged their paddy land during the famine period. The most important point to note is that, during the famine, 2·6 lakhs of families (out of 65 lakhs owning paddy land) had totally lost their holdings and were thus reduced to the rank of landless labour. Another fact is worth noting. Out of the total of 7·1 lakhs of acres of paddy land sold during the famine, only 2·9 lakhs of acres had been purchased back in the villages. Roughly 4·2 lakhs of acres of paddy land had thus passed to outsiders, possibly 'non-cultivating owners' residing in urban areas. The net loss of plough cattle was about 10 or 11 lakhs (about 13 per cent) during the famine period which must seriously affect agricultural operations in future. Only about one-fourth of the loss (3·5 lakhs) were replaced by purchase. About 3 lakhs or 8·5 per cent of families of rural Bengal had probably lost all the cattle they had before the famine making it difficult or practically impossible for them to carry on normal agricultural operations. Adopting 5·4 as the average size of the family the total number of persons whose economic position had deteriorated was about 38 lakhs. About destitution, the sample estimate shows that 4·8 lakhs of persons had been rendered destitutes under war and famine conditions in Bengal."

This is a picture of complete destitution and ruin. This is how Bengal has been led, step by step, into this disaster through a wrong and perverse policy of war finance.

Wealth and Taxable Capacity

But it is not merely a question of redistribution of wealth and its transference in Bengal from the lower income groups to higher income groups. It is also a question of absolute financial exhaustion. Two things are clear. Bengal would require, in the first place, huge sums for her programme of post-war reconstuction and expansion and whatever help she receives from the Centre it is certain that the major portion of the necessary amount will have to be raised from Bengal. That will mean fresh loans and taxes. But, on the other hand, almost all the sections of Bengal have been, as a result of this ruthless taxation, financially exhausted and no further taxation will be possible without absolutely ruining them. Fresh sources of finance are, therefore, extremely limited; except the war-profiteers and black-marketeers who have made piles of money, as also a few richer sections of the society, there cannot be imposed any more tax-burden, specially on the common people of Bengal. In fact, it seems almost fantastic how the Bengal Government managed to squander away so huge sums of money in such a short period. For instance, the Agricultural Income-tax has been yielding Rs. 60 lakhs annually, but instead of earmarking it for the improvement of agriculture, as was suggested by the Floud Commission, this sum of Rs. 60 lakhs per year has been frittered away. Even no hesitation has been felt to dope the Province for getting higher returns from Excise and during these years the yield has more than quadrupled itself. Sales Tax has now been yielding Rs. 3 crores annually, yet not only has this sum gone to the bottomless pit that Bengal today is but there was actually an effort to increase the rate still more in spite of the fact that the poorer consumers are groaning under its load. Nothing is unfair or unjust in the eyes of the Bengal Government if it begets money and even such immoral taxes as the Betting Tax have been allowed to exist on the plea of more money. The situation is terrible; Bengal is being squeezed to the last drop of her blood only to feed more officers and a few parasitic sections of our society while the vast majority is facing absolute ruin and destruction.

Remedies

It is not possible here to draw up a complete blueprint for Bengal's post-war financial reconstruction. But the main lines of reform become clear from the analysis of Bengal finances during the war. It is essential that any post-war financial reform in Bengal must be based on at least three cardinal principles. They are: (1) There must be a system of taxation and borrowing that will benefit the masses by penalising the richer sections who have grown fat on their blood and it would be necessary for this purpose to reverse completely the present tendencies of the tax- and loan-system. (2) Adequate financial help from outside must be obtained to launch upon a programme of post-war reconstruction. The Government of India had, during the war, no justi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fication whatsoever of throwing the major burden on Bengal while they themselves stood aside whenever there arose any crisis that was, by no stretch of imagination, Bengal's creation. That was sheer exploitation on any showing. Now it is high time for the Central Government to make amends, though very belated amends; they cannot escape their obligation of rebuilding Bengal that has been devastated by conditions of their creation. (3) There must be a truly national policy of financial reconstruction and a truly national executive to carry out that policy. All corruption must cease; and with that, all red-tapism and the old-world ideas of official callousness and snobbery and the obsolete methods of slow and ineffective work.

———:O:———

THE MOVEMENT OF PROFITS AND WAGES IN INDIA DURING THE WAR

By Prof. GOBINDA CHANDRA MANDAL

War brings about considerable changes in the economic positions of different classes of the society in relation to each other. The extent of such changes, as will be evident afterwards, depends upon how far a controlled economy is in actual operation. Strictly speaking a war does not inflict any money-cost on the society. There is no such thing as money-cost for the society as a whole, though there is an enormous increase in taxation on account of the war. What government expenditure out of taxation often actually means is simply a transfer of purchasing power from one section of people to others.

But the society may have to bear a real cost. This real cost consists in resources or services actually forgone by it for their utilization in the war. Thus "the real cost involved in the maintenance of the army consists in the services of the soldiers themselves who are withdrawn by war from civilian consumption."[1] For the present we are not so much concerned with the real cost as with the transference of money. It is evident even to a superficial observer that war favours particularly those classes who are engaged in war-production or war-services and causes a transference of money to them from those classes who are not engaged in war production or war services.

But in a totalitarian war like that of the present age every productive activity is an activity for the war; because there is nothing which it does not demand. Such a huge demand tends to create a general scarcity leading to a general rise in the Price-level and money-incomes. But there are differences in the degree of scarcity of different goods and services. Some goods or services are much more scarce than others, in relation to their respective demands; hence the prices of the former rise much more than those of the latter. But by a system of control and rationing the tendency of prices to rise can be checked. Rationing is a twofold affair. First, it means a direct transference of a portion of the national resources from the civilian to the military sector; and secondly, it means an equitable distribution among the people of what remains for their consumption at reasonably controlled prices. Under a system of rationing the quota of goods going to a person is fixed not by the amount of purchasing power which he possesses but by his requirement. Actually what happens is a restriction of civilian consumption in a planned way. Obviously greater the degree of control and rationing the less is the extent of rise in prices. The condition of scarcity often impels a government to resort to inflation. And once it is started, it goes on working cumulatively. It is difficult to bring it under restraint. Inflation is the process of issuing money more than in proportion to the increase in productive activity. In the case of Absolute Inflation conceived by Keynes the productivity does not increase at all, but the prices and money-incomes go on increasing in the same proportion as the volume of money.[2] In India the controlled economy was introduced very late. Actually the Control came when inflation had already started and the situation had gone beyond control. A characteristic feature of inflation is that the volume of newly created money is not evenly distributed among different classes of producers or among different factors engaged in a particular productive activity. Exactly this has been the result of inflation in India during the recent war.

Speaking in a general way the industrial and trading concerns made enormous profits. Even many petty merchants, through contract-business, were able to promote themselves to the position of big capitalists. The land-owners who receive large amounts of rent in kind and big farmers could increase their incomes manifold by selling their crops at abnormally high prices. But the landless agricultural workers having little bargaining power could not raise their incomes appreciably, rather their position deteriorated. It is mostly they who were the victims of the famine of 1943. The technicians, engineers and skilled labourers, because of their relative scarcity, could earn a great deal. Men in the legal and teaching professions could increase their incomes only slightly. Many of them came down nearly to the position of ordinary workers. The ordinary mill-workers' wages lagged much behind the profits of their employers. In short the class-differentiation during the recent war has been intensified. First, there has been a considerable gap between those who directly or indirectly could link up their services with the war and those who could not do so. Secondly, there has been an enormous gap between those who could not earn anything except by selling their labour-power and those who could earn mainly by virtue of ownership.

Statistics relating to incomes of different classes, *e.g.*, wages, salaries, rents, profits and interest in India are not available to any satisfactory extent. A few that have been collected can be furnished here to give a quantitative estimate of the changing relation between the industrial profits and the earnings of workers. The following table is given to show the average increase in profits of some of the big industries:[3]

1. Pigou, *A Study in Public Finance* (1928), p. 19.

2. Keynes, *General Theory of Employment, Interest and Money.*

3. Report on the Trade of India in 1941-42 (published January, 1945).

Digitized by Arya Samaj Foundation Chennai and eGangotri

Index Numbers of Profits, 1928=100

Industry	1938	1939	1940	1941	1942
Iron & Steel	316·7	289·3	300·7	387·3	403·3
Cotton mill	208·3	154·6	220·1	489·1	760·7
Tea	73·9	96·2	95·4	141·3	219·5
Paper	172·1	151·8	358·7	432·2	488·4
Sugar	157·7	179·4	180·0	247·3	219·8

No. of Companies Considered

Industry	1938	1939	1940	1941	1942
Iron & Steel	3	4	4	4	3
Cotton mill	57	61	63	60	75
Tea	127	127	127	127	128
Paper	4	4	8	8	8
Sugar	—	26	27	28	28

It is to be noted that the level of profits for the iron and steel industry was already very high ; it was in 1938 more than thrice as much as it was in 1928. Then in 1942 there was nearly 27 per cent increase over the level of 1938. The profits of the tea industry increased from 73·9 in 1938 to 219·5 in 1942 by 197 per cent approximately. The profits of the cotton mill industry rose from 208·3 in 1938 to 760·7 in 1942 by nearly 265 per cent. The profits of the paper industry rose from 172·1 in 1938 to 488·4 in 1942, the increase being nearly 183 per cent. The rise in profits of the sugar industry was approximately 39 per cent.

Another table is given below setting out index numbers of production in the industries of iron and steel, cotton manufacture, paper and sugar during the years from 1938 to 1944.[4]

Index Numbers of Production, 1938-39=100

Industry	1938-39	1939-40	1940-41	1941-42	1942-43	1943-44
Iron & Steel	100	110	125	150	200	200
Cotton-manufacture	100	94	100	153	92	113
Paper	100	118	149	159	112	126
Sugar	100	191	168	120	163	184

Reading the index numbers of profits and production together we can easily realise that the increase in profits was much more than proportionate to the increase in production except in the case of iron and steel. Thus while in 1941-42 there was 20 per cent increase in the production of sugar over 1938, profits during the same period increased by 39 per cent. While in 1941-42 the production of paper increased by 59 per cent over 1938, profits rose by 183 per cent. During this period while the production of cotton manufacture rose by 53 per cent, profits rose by 265 per cent. So there is no ground for believing that larger profits were caused by larger production. In fact it was a monetary inflation and a condition of scarcity which led to an inflation of profits. Of course, against this must be set the war-time increase in taxation of incomes. But it should not be forgotten at the same time that there has been evasion of taxation on a large scale, though it is impossible to give a quantitative estimate of such evasion. The swelling of bank-deposits on private account may be taken as an evidence of evasion.

Now let us compare profits with the earnings of the industrial workers. The following table gives out average annual earnings of workers in different industries in British India.[5]

Industry	Average annual earnings in rupees			Percentage increase in 1943 over 1939
	1944	1943	1939	
Textiles	633·6	571·5	293·5	95·0
Engineering	589·8	529·0	263·5	100·0
Minerals and metals	573·5	502·1	457·2	10·0
Chemicals and dyes	484·6	398·0	244·8	62·0
Paper and printing	474·1	414·0	332·7	24·0
Wood, stone and glass	368·4	303·1	194·2	56·0
Skins and hides	532·1	411·0	285·8	44·0
Ordnance	546·8	527·4	361·9	46·0
Mints	695·2	574·4	397·4	44·0
Miscellaneous	513·8	392·0	281·2	39·0

Actually the increase in earnings of labourers was much less than the increase in profits. Thus before a 265 per cent increase in profits of the cotton mill industry the 95 per cent increase in incomes of the textile workers in 1943 over the level of 1939 is insignificant.[6] While there was a 183 per cent increase in profits of the paper industry, the earnings of the workers engaged in the paper and printing industry rose in 1943 over 1939 by 24 per cent only. The average increase in earnings of the industrial workers in British India was only 45 per cent. Again even this increase in the incomes of the workers will turn out to be completely fictitious, if they are measured in terms of real goods and comforts. This is obvious from a comparison between the increase in earnings and the increase in cost of living of the workers as shown by the following table.[7]

Cost of Living Indices

	Bombay	Madras	Cawnpore	Jamshedpore
	1934=100	1936=100	1939=100	1914=100
1939	106	100	100	107
1940	112	107	111	117
1941	124	112	122	134
1942	157	133	180	191
1943 March	208	170	248	265

While the money-incomes of the workers increased on the average by 45·0 per cent, the cost of living increased in 1943 over 1939 by 96·0 per cent or 70·0 per cent, or 148·0 per cent approximately. Thus in fact there was considerable diminution in the real wages of the workers in India. But the real wages in countries like the U.S.A., Great Britain, Canada, etc., actually increased in sharp contrast with those in India. This is shown by the following table :[8]

4. L. C. Jain, *Indian Economy during the War* (1946), p. 31.
5. *Indian Labour Gazette*, New Delhi, May, 1946.
6. Index numbers of profits are available now only up to 1942. Hence for comparison the increase in labour-earnings in 1943 is considered here instead of 1944.
7. *Review of the Trade of India in* 1941-42.
8. *International Labour Review*, January-February, 1946.

Index Numbers of Real Wages in Industries

Year	*U.S.A. Weekly (Industries) 1929=100*	*Canada Weekly (Mining, transport, commerce and services)*	*Great Britain Weekly (Mining, industries, transport and commerce)*
1938	108	—	100
1939	118	—	—
1940	123	—	108
1941	138	100	113
1942	154	104	125
1943	171	110	138
1944	180	113	139

The increase in real wages in these countries is explained by the fact that there was slight inflation and considerable expansion of consumable goods, while in India there was an enormous inflation accompanied by a slight increase in the production of those goods.

In respect of capital-accumulation also the small co-operative institutions made much less progress than the big commercial ones. Thus while the demand and time liabilities of the Scheduled Banks taken together increased from Rs. 306 crores in 1941-42 to Rs. 410 crores in 1942-43, the total working capital of the Agricultural Societies decreased from Rs. 26,55,61,496 to Rs. 25,39,88,574 during the same period.[9] This also indicates that small incomes out of which savings are generally deposited with small local institutions were not increasing at all or so much as the big incomes. Thus the differentiation between small and big business institutions has been sharpened.

In India there was already a very high degree of inequality in the distribution of incomes among her people. "If we take the urban classes, nearly one half of their total income belongs to less than one-tenth of their total number."[10] From the statistics given here it appears that this already existing inequality has been increased at least three-fold during the war.

Therefore no plan of post-war reconstruction in India can be complete, if it does not aim at removing at least the war-time increase in inequality of incomes. Industrialization for India is not so much a post-war programme as a programme for all times. This was overdue even long before this war and must not be further delayed. But apart from this the removal of the war-time inequality in incomes must be one of the main tasks of reconstruction in India.

—:o:—

THE TEMPLE OF VARGABHIMA AT TAMLUK

By Swami JAGADISWARANANDA

The Temple of Vargabhima at Tamluk, a subdivisional town in the district of Midnapur, is a very ancient monument of Bengal, nay of whole India. Though it is situated about forty miles away from Calcutta and is reachable in a few hours by train or steamer, it has not yet attracted as much attention of the historians as it deserves.

Tamluk known in ancient records as Tamralipta was once an important port on the Bay of Bengal, and the capital of a kingdom bearing the same name. Trade of Tamluk spread throughout the then civilised world. Hunter in his *Orissa* (Vol. I, p. 313) observes that indigo, mulberry, the costly products of Bengal and Orissa form the traditional articles of export from ancient Tamluk. Prince Vijay Singh, son of King Singhabahu of Bengal, occupied Ceylon in the very year in which Lord Buddha passed away. At that time ships were built at Tamluk and Singhabahu went to Ceylon with the ships made there. According to Mahavamsa, a Buddhist scripture[1], the coastal city of Tamralipta was well-known in 307 B.C. as a famous sea-port from where the Bodhidruma, the Tree sacred to the Buddhists, was sent to Ceylon. An unknown Greek merchant writes in the first century A.D. in *Periplus of the Erithrian* that Tamralipta was in those days a world-known trading centre of India. In the first century the Greeks sailed from this port to the Archipelago in the Indian Ocean and colonised in them. In the Buddhist age, the central Buddhist monastery of the Tamralipta kingdom was established at Tamluk. In the eighties and nineties of the fifth century B.C. Tamralipta was a very important place of the Buddhists as evident from the Buddhist records in which Tamralipta is mentioned a number of times. An Asoka Pillar was planted at Tamralipta and the same was seen by the Chinese traveller, Yuan Chwang in the seventh century A.D. Prince Mahendra, son of Emperor Asoka, went to Ceylon in 243 A.D. at the request of King Tissa of that island from Tamralipta with a multitude of Buddhist monks. It is learnt from *Pilgrimage* of Fa-Hian (Chap. XXVIII, p. 53) that Tamralipta was then the only harbour of India wherefrom sea-voyages were undertaken to Ceylon, China, Japan and other foreign countries. Some of the ancient coins discovered in the ancient site of Tamluk are preserved in the Asiatic Society of Bengal, Calcutta. Epigraphists aver that some of them were current in the fourth or fifth century B.C. One of them is a copper coin of Kaniska I, on one side of which is engraven the royal figure and on the other are the name and designations of the King.[2] Another is a gold coin of the Gupta Emperor, Kumargupta I, on whose obverse and reverse are the figures of the goddess Lakshmi, seated on a lotus and the emperor on horse-

back respectively. One gold coin of the Gupta emperor Skanda Gupta unearthed at Tamluk contains both the figures of Lakshmi and the emperor on the same side.[3]

During the reign of the Gupta Kings several Chinese travellers visited India. From their records very many things are known about the ancient city of Tamralipta which was still the chief sea-port of ancient India. During the reign of Chandragupta II, Fa-Hian was engaged in a tour of Aryavarta and spent the last two years of his travel—from 411 to 412 A.D.—at Tamralipta in the preparation of copies of Buddhist Sacred Books and paintings. Fa-Hian saw there 24 Buddhist monasteries wherein learned Buddhist monks lived and taught. And the Chinese traveller sailed for Ceylon from there. In 526 A.D. Acharya Bodhidharma went to Canton in China by sea-route from this port. Bodhidharma was a renowned Bengali Buddhist monk and was invited to the court of the Chinese emperor. His ochred robe and begging bowl were preserved for a pretty long time in the Ikrun monastery of Japan. He took from Bengal two Sanskrit Buddhist scriptures named *Pragnaparamita Hridayasutra* and *Usnishvijaya-dharini* written in the old Bengali script which have been discovered from the famous Horiyuji monastery of Japan. According to Samuel Beal's *Buddhist Records of the Western World* (Vol. II, pp. 200-201), Yuan Chwang who visited India in 629 A.D. writes in his Chinese work that the kingdom of Tamralipta had then spread to a circumference of 1400 li and its capital city up to 10 li. The internal and external trade of the kingdom was carried on through both land and water routes. He was surprised at its flourishing and extensive trade. The famous Chinese traveller saw at Tamralipta ten Buddhist monasteries and more than a thousand Buddhist monks, as well as fifty Hindu temples. It is a thousand pities that no record of the Hindu temples, of which the temple of Vargabhima is certainly one, have ever been traced in the accounts of the travellers or historians. It is Yuan Chwang who saw in a suburb of the city an Asoka pillar 200 feet high with a stair-case on one side of it. Yuan Chwang[4] says that the city was severely flooded by the overflowing sea-water in 635. After Yuan Chwang who had arrived in 673 came It-Sing from the Chinese town of Kang Chow and reached Tamralipta by the sea-route. From Tamralipta he went to Nalanda where he passed several years in the study of Sanskrit and returned to Tamralipta and went to the South from here.[5] It-Sing saw at Tamralipta a Varaha Temple wherein an image of the goddess Hariti was worshipped. Samuel Beal thinks that this ancient temple was built sometime between 635 to 673 A.D. by one of the Chalukya kings who like some other dynasties of the Deccan prided in calling themselves the children of the goddess Hariti and the Varaha figure was the national symbol of the Chalukya kings. Thus came Taolin on his way to Java and Nicobar islands, Tang Chang-terg from Ceylon and lived in the Varaha monastery at Tamralipta, Huilun from Korea, Uching from the island of Lanka and a number of other Chinese travellers.

Tamluk became a subdivision of Midnapur in 1852 and is situated in the east of the district on the western bank of the Rupnarain river. The subdivision has an area of 749 square miles. From Calcutta to Tamluk there is a through steamer service. From Howrah one goes only 44 miles by train (B. N. Railway) to Paskura station and thence 16 miles by bus reaches Tamluk. How the word Tamralipta which is the Sanskrit name of Tamluk has originated is given in *Digvijaya Prakash*, a Sanskrit work on geography. In the Persian work, *Ain-i-Akbari*, Tamralipta is mentioned. Mm. Haraprasad Sastri has got a Sanskrit work on geography named *Deshavali Vivriti*, written by Pandit Jagamohan before 1648 A.D., according to which the whole land to the west of Adiganga flowing by Calcutta was called Tamluk. In the view of the Greek ambassador Megasthenes Tamluk in the third century B.C. was well-known as a sea-port lying on the seashore. When Yuan Chwang, the Chinese traveller visited India in the seventh century, the sea was about eight miles away from Tamluk, but now the sea has receded to a distance of thirty miles. Haraprasad Sastri thinks that ancient Tamluk is the original Home of the Tamils. Kanakasabai Pillai, a Tamil scholar in his learned work *Tamils Eighteen Hundred Years Ago* (pp. 46, 236) remarks as follows :

> "Most of the Mongolian tribes emigrated to South India from Tamalitti (Pali name of Tamralipta) the great emporium of trade at the mouth of the Ganges and this accounts for the name Tamils by which they were collectively known among the most ancient inhabitants of the Deccan. The name 'Tamil' appears to be, therefore, an abbreviation of the word 'Tamalitti'."
>
> "The Tamils are alluded to along with the Kosals and Odras as the inhabitants of Bengal and the adjoining sea-coast in the Vayu Purana and Vishnu Purana. They were known as Tamils most probably because they had emigrated from Tamalitti (Tamralipti) the great sea port at the mouth of the Ganges."

Dr. Radhakumud Mukherjee in his celebrated book *Indian Shipping* accepts Kanakasabai Pillai's opinion as authoritative. Durgadas Lahiri also corroborates this view saying that as Ceylon has derived its name from the Bengali discoverer Bijaya Sinha, so it is quite probable that the Tamils have got their name from Tamralipti, once capital of Bengal. Tamralipta is mentioned several times in the Mahabharat. In the Adiparva of the Mahabharata it is said the king of Tamralipta was present in the Sayambar-Sabha to pierce the target. In the Sabhaparva of the great epic we read that the said king was defeated by Bhima, and that the former at the time of the Rajasuya sacrifice of Yudhistir gained admittance into the council of kings by offering one thousand big trained elephants. Tamralipta is also referred to in the Drona Parva and Karna Parva. In the Bhisma Parva we find that Sanjaya while describing the sacred places of India mentions Tamralipta. It is guessed by the scholars that the village of Ek Chakra where the Pandavas lived for some time and which was owned by the demon named Baka was in the Midnapore district of which Tamluk is now a subdivision. In the Aswamedha Parva of Jaimini Bharat it is written that Prince Tamradhwaja, son of the King Mayurdhwaja defeated the Pandavas. There is a tradition prevalent at Tamluk and the surrounding places that King Gurudadhwaja of this dynasty[6] built the temple of Vargabhima. Tamluk was the capital of this King and his kingdom. From this it can be taken for granted

that Tamluk is at least as old as the Mahabharata. But the Mahabharata being about five thousand years old, it may be taken for granted that Tamluk is about fifty centuries old. From Jain Kalpa Sutra, it is learnt that Tirthankar Parsanath came to Tamralipta and preached his religion there in the eighth century before Christ.

Rai Bahadur Ramaprasad Chanda, a notable historian of Bengal, has rightly said that Tamluk is a seat of the ancient glories of Bengal. In olden days Tamluk was a sacred place to the Buddhists and Hindus alike. Even now it is looked upon as a sacred place by the Hindus. In Brahma Purana, Matsya Purana, Padma Purana, Markandeya Purana and other Hindu scriptures, Tamralipta is mentioned many times. The following anecdote about the sacredness of Tamluk is found in the Brahma Purana : In bygone ages Lord Shiva had killed Daksha, Brahma's son, at the sacrifice of the latter. On account of the sin for killing a Brahmin, Daksha's head, separated from the trunk, got fastened with Shiva's hands. But he could not by any means detach his hands from the head and went on a pilgrimage to get rid of it. But having visited almost all *tirthas* of the world he could not wash off his sin. He went for guidance to Lord Vishnu who told him of a holy place where the sinners can be free from their sins easily. So saying he said :

> "There is a very sacred place in the great city named Tamralipta lying in the south of India. Those who take bath in its holy water go to Vaikuntha. So you please go on a pilgrimage to that Tirtharaja (the King of holy places)*

On hearing this, Lord Shiva came to Tamralipta and as soon as he bathed in the holy water there, Daksha's head dropped from his hands. From that day the sacred pond was called 'Kapalamochan' (destroyer of ill luck) and Tamralipta was regarded as a very holy place (*tirtha*). In many Hindu scriptures Kapalamochan Pond is named but unfortunately it no longer exists. In course of time, the currents of the Rupnarain river have destroyed it. But the tradition of the *tirtha* still survives. Every year the devout people remember its holiness and take plunge at the time of Varuni Bath in the river that flows by the foot of the Vargabhima Temple. On the occasion of Makar Sankranti, Maghipurnima, Mahavisuva Sankranti and Akshaya Tritiya, huge fairs are held at Tamluk and a large concourse of people from different parts of Midnapore district and outside congregate there.

The name of Vargabhima Devi of Tamluk is found in many ancient records. But it is now impossible to ascertain how old is this image or who, exactly was its founder. As regards the manifestation of the Goddess Vargabhima, there are three traditions current in this part. One of them is as follows as described in a Bengali book on Tamluk old and new. King Tamradhwaja (or Gurudadhwaja, according to others) appointed a fisherwoman to supply fish daily to his royal family. On the way to the palace, she had to pass through a jungle path and there used to sprinkle water from a natural well on the fish to make them appear fresh. She had to bring living fish daily to the palace. But one day she could not get living fish in spite of her best efforts. So quite helpless she took the necessary quantity of dead fish and as usual sprinkled water over them from the same pond. That day the sprinkling of water proved a miracle ! No sooner she sprinkled water than the dead fish became living ! The wonderful news reached in time the royal ears and the King Tamradhwaja accompanied by the fisher-woman visited the well and found there to his astonishment an altar and on it a stone image of the Vargabhima. Others are of opinion that Kalu Bhuniya, founder of the Mahisya dynasty of Tamralipta, had established the image. Soon after Kalu became the king of Tamralipta, he had this image made and established as a token of his devotion to the Goddess. Hunter in his *Statistical Account of Bengal* mentions the following tradition equally strong about the Temple of the Goddess Vargabhima :

> "A merchant named Dhanapati, bound for Ceylon for the purposes of trade, came to Tamralipta. During his short stay there he met a local man carrying a golden pot in hand. On being enquired as to how he got this valuable pot made of gold, he narrated that in a forest nearby there is a strange pond whose water is endowed with the miraculous property of turning into gold utensils of copper and other metals. Dhanapati purchased a huge quantity of metal wares in the market and when he dipped them in the said well, they all turned into gold. Dhanapati took them to Ceylon and selling them there amassed huge wealth. When he returned home, he halted at Tamluk and had built the Temple of Vargabhima on a grand scale at his own expense in gratitude to the goddess."

The story of Dhanapati on a different setting is found in old Bengali books named *Chandimangal*. Discussing all these three traditions about the manifestation of Vargabhima, Hunter in his *Orissa* observes that similar traditions are current about the manifestation of Lord Jagannath of Puri, with nominal differences inevitable on account of different localities. For instance, the image of Jagannath which was also found in a wood is of wood but that of Vargabhima is of stone. Trailokyanath Rakshit in his Bengali history of Tamluk writes :

> "The image of Vargabhima is engraved on a large block of stone. Such figures engraved on stones are not generally found this side. It resembles that of goddess Ugratara. Meditation and ritual worship of this goddess are according to the Yogini Tantra and Nila Tantra."

The temple of Vargabhima at Tamluk is maintained by the income of the landed property donated by the Government. From very old times Vargabhima is adored by thousands as a living goddess. It is said the Muslim vandal, Kalapahar, desirous of conquering Orissa while passing through Tamluk with countless Muslim soldiers was curious enough to see the image and was very pleased with its living aroma. He has left in the Persian a document which is still carefully preserved by the worshippers of the goddess and is called by them *Badshahi Panja* (Imperial almanac). Even the notorious Maharastra looters, the Vargi soldiers exhibited great devotion to this deity. Far from doing any injury to

Tamluk they worshipped the goddess with great devotion and sufficient wealth and decorated Her with valuable ornaments.

Though the Vargabhima Temple is not one of the fifty-one Pithasthanas (celebrated seats of mother-cult) it is looked upon as such in a limited area. In the land surrounded by Payaratungi Canal in the north, Rupnarayan river in the east, Sankar Ara Canal in the south and Garh Maricha Canal in the west, the worship of Durga, Kali, Jagadhatri, Basanti, Ratanti and other goddesses are forbidden. All offer their worship to Vargabhima. Those who wish to worship any goddess in an earthen image has got to perform it outside this area. The temple of Vargabhima is an ancient monument of the ancient glories of Bengal. From the wonderful architecture of the temple, people are led to imagine that it was made by the divine architect, Viswakarma. No trustworthy proof about the date or maker of this temple is now available. Though the exterior of the temple is like those of the Orissan temples, yet its interior is like that of a Buddhist Bihar. Trailokyanath Rakshit mentioned above says that it resembles in many points the world-renowned temple at Buddha Gaya. In the front of the entrance door there is a small Bihar in imitation of the central Bihar. From this it is guessed that there were Bihars on other sides now extinct. Possibly in the central Bihar, the High Priest used to live and teach and the surrounding Bihars were occupied by his disciples. Archaeologists remark that when Buddhism disappeared from its birth-place the Bihars deserted by the Buddhists were converted by the Hindus into Hindu temples. This may be the case with the temple of Vargabhima. Jogesh Chandra Basu, learned author of *History of Midnapore* (in Bengali) writes that this temple may have some connection with the temple of Goddess Hariti founded by the Chalukya dynasty in the south.

The temple of Vargabhima stands on a high place. The foundation of the temple has been made thirty feet high by placing first large logs of wood and then bricks and stones. On this foundation runs a high wall nine-feet broad and sixty feet high with a large dome made of stones. When one enters the temple, first of all it strikes one that the temple has been made out of a large marble block of stone and then walled around with bricks. Pointings of the building are so fine and excellent that it appears like one whole block and this has enhanced the beauty of the building immensely. Just in front of the main temple there is a Yajna Mandir (temple of sacrifice) which is smaller than the former and seems to be built much later. They say that an old woman had this temple built with the money she saved with great difficulty by spinning with her own hands by life-long labour. Both the temples are joined by a corridor which is named Jagamohan. Besides, there is in front of the Yajna Mandir, a Nata Mandir (Hall for performances) where Yatras (theatres) are held and animal sacrifices are offered. Before this, is the Nahabat-khana (music tower) and to the north of the temple there is a pond. There is Bhutnath Bhairab (Shiva) figure within the stairs below the altar of the

The Temple of Vargabhima at Tamluk

goddess. There are no hills near Tamluk. In those days there were no such improved system of conveyance by steamer or train as now. How large pieces of stones were brought from a distance in order to build this temple is no doubt an object of astonishment and certainly indicates a high-water mark of engineering. Archaeologists like Hunter and Rajendralal Mitra, historians like Romesh Chandra Dutt have unanimously praised the marvellous architecture of the temple and have called it a very ancient monument of which Bengal may justly be proud.

Thus every ancient temple of our holy land is a mute chapter of our age-old annals written in stones and bricks and should now be deciphered and put in black and white for the enlightenment of the present generation and prosterity.

THE ART TREASURES AT AJANTA

By VIJAY KRISHNA

Although much has been said about those magnificently adorned caves at Ajanta by visitors and art-connoisseurs, yet they impress every visitor in some new way, with something original. Thus, every account provides to the reader always some new material.

A panoramic view of some of the Ajanta Caves

These caves, though situated in a beautiful glade far-off from habitation, are now no longer secluded or inaccessible. The Nizam's government has made probably the best arrangement of their conservation, maintenance, protection and for their study. The headquarters of the officer-in-charge is located at Fardapur, a village at about 3 miles distance from the caves. A good metallic road connects the caves with this place and here only bullock-carts are available. It is nearly 60 miles north of Aurangabad and is daily served by motor-buses of the Nizam's State Railway. There is a well-furnished Dak Bungalow and a State Guest House also, at this place.

The caves are in a perpendicular rock, about 250 ft. high and in a single series, presenting horse-shoe appearance but varying much in level. Below them, there flows the tinkling stream of Waghora. The natural scenery is superb. The entire valley with its surroundings, is full of the luxuriant growth of *Parijata*, which when in autumn blooms in profusion all over the valley the place becomes very fragrant and inviting. No ancient remains in India exhibit such an admirable combination of architecture, sculpture and painting surrounded by such an elegant phenomena of nature as these caves, which represent every stage of ancient Indian Art from the first century B.C. to the middle of the seventh century A.C. The frescoes illustrate the development of a great school of painting in India which exercised its influence not only on the culture of the East but also of the West.

There are 29 caves in all, 5 of which are Chaityas (Cathedrals) and the remainder—Viharas (Monasteries), all belonging to the Mahayana school of Buddhism.

Cave III is considerably higher while Cave XVIII is the lowest, and the level gradually rises towards each end. The first five with the last seven caves comprise the largest series. They are the latest and seem to have been finished within the seventh century. Another group comprises caves VI to VIII and XV to XX, ranging in date from fifth to the sixth centuries. Two Chaitya caves—IX and X, and two Viharas—XII and XIII are the earliest and seem to have been excavated before the Christian Era. All these caves have some distinctive features of their own. Among them the most prominent are described below.

Cave I is the most handsomely ornamented Vihara. It is a twenty-pillared hall with numerous cells inside and outside. The sculptures on the capitals of the pillars are remarkable for their variety and spirit.

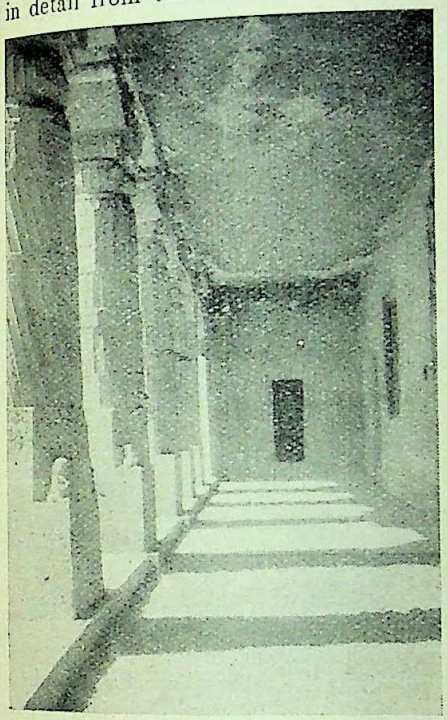
Cave IV is one of the largest Viharas (about 85 ft. wide by 87 ft. deep with 93 ft. long front). It is unfinished and only a few pillars have some carvings. Yet the large main entrance is more elaborately sculptured than other cave-doors at Ajanta.

Cave VI has two storeys with a large and plain lower hall which contains sixteen plain pillars in groups of four each. Around the image in the shrine is a passage of circumambulation. The walls and sides of the upper storey are full of sculptures and carvings.

The magnificent facade of Cave XIX, Ajanta

Cave X has the simplest facade among the large Chaitya Caves. Inside, the paintings on the two side-walls are of much earlier date than the numerous figures of Buddha on the pillars.

Cave XIII is very plain and primitive, and is regarded as the oldest of them. Its perfectly smooth walls indicate that they were not intended to be plastered



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

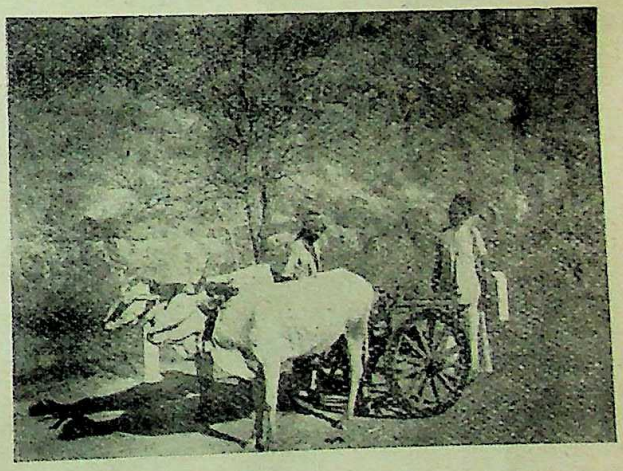
Digitized by Arya Samaj Foundation Chennai and eGangotri

or even be covered with paintings. Provision of stone-beds in the cells and the absence of pillars in the hall, are other indications of it being the earliest hewn cave at Ajanta.

Cave XV, another earlier cave has the earliest type of Buddha's image—without attendant and with the soles of his feet turned up.

Cave XIX also is very richly sculptured. It is lighted by a great horse-shoe arch, to both sides of which are corpulent figures with regal head-dress. The triforium is occupied by panels of arabasques, each differing in detail from the rest.

The stately verandah of Cave I, Ajanta



Cave XXVI has an excessive multiplication of figures of Buddha; of every size and in every attitude, almost to the exclusion of every other ornament.

The Ajanta Caves are remarkable for the richness of decoration and very careful and patient execution of that tremendous task. The doorways of the later group of Viharas alone are elegant specimens of doorway decoration in India. The sculptures are life-like and full of action and expression. The frescoes too, which have gained world-wide fame and favour, are visual records of contemporary life in still-pictures, besides they illustrate the life of Buddha. In them the woman has been drawn in clear perspective of her all beautifying capacity and here, perhaps it is her chief function to radiate happiness. The artist-monks have nowhere degraded her from the proud and prominent position she holds. Even, they did not find the necessity of removing her more than a few inches from Buddha. It is probable that because all beauty was one for them just as all life was one, they did not observe a very great distinction between physical and moral beauty. Thus, in these frescoes they have introduced women on every possible occasion and they are always unconventional. Not only that, in fact, these paintings on the whole present a vast drama moving before our eyes—a drama played by princes, sages, and heroes, by men and women of every condition in a setting of a marvellously varied scene, among forests and gardens, in courts and cities, on wide plains and in deep jungles, while above—the messengers of heaven move swiftly across the sky.

Though the inside walls, ceiling and pillars of nearly all the later caves appear to have been adorned with paintings, yet remains of them are found only in thirteen caves and of which caves I, II, IX, X, XVI and XVII are of special interest. They have adequate arrangement of electric light as well.

For the first time in the history of India, these caves were discovered in 1819 by some British soldiers who were passing through the jungles in connection with the Maratha War. They reported the matter to their headquarters. In 1829, the Royal Asiatic Society published the first account of these caves. Since then several accounts were read before the Society or were published by it. Copies of the frescoes were attempted and the result was displayed in the Crystal Palace Exhibition in 1866 but the whole lot was destroyed in the terrible fire.

Again in 1870, Mr. Griffith was appointed to copy the frescoes. In ten years' labour what he prepared was again exhibited at South Kensington in 1885, but that too was destroyed by another fire on the 12th June, 1885. In 1906, Lady Harringham visited the caves and during 1909-10, with the help of a band of Indian artists, she prepared another set of copies which were published in 1915, by the India Society (now, Royal India Society), London, in a magnificent portfolio form under the title *Ajanta Frescoes*.

Perambulator-like tiny bullock-carts convey visitors to the Ajanta Caves

After the first Great War, a number of illustrated articles appeared in various periodicals and magazines which created a sensation in India and abroad. Thereafter H. E. H. the Nizam's Government undertook publicity of these caves. Its memorable move in this direction was the restoration of the frescoes by some Italian experts and then publishing in sumptuous volumes large-sized natural-colour photographs in full colours. For the benefit of the tourists and students various guide-books and card-sets also have been published by the archaeological department of the State.

GUNS—THE MAKER OF NATIONS

By SUNIL PROKASH SHOME

Whatever the United Nations Organization or the World Trusteeship Committee may say about the World Charter of Freedom or the World Peace, guns will always have to engage guns in settling disputes between countries. As it is, guns in modern warfare have established a distinct superiority on one side or the other. Progress in science and the improvement of air arms may give the atomic bomb a temporary or relative advantage, but it appears fair to assume that the use of guns can never be less effective than that of present-day bombs, so long as the human vision and the natural features of modern warfare remain unchanged.

An Indian mountain gun in action

When fortresses are taken a regular siege train or collection of guns and howitzers of varying sizes and weights are attached to an Army. The military operations in the case of a siege have a distinctive character of their own and are carried out in their main features by the artillery and engineer-arms alone, the infantry, cavalry, and the air force being used in the battles or attacks incidental to the peculiar nature of the warfare.

A group of heavy guns ready for action

A gun is a metal tube, closed at one end and open at the other, from which a projectile can be thrown to a considerable distance by the explosive effect of a propellant (gunpowder or cordite) in the bore.

In the construction of a gun certain general principles are observed: (1) It must possess an ample margin of strength. (2) The bore has to be made of a material capable of withstanding the wear and tear of a large number of rounds. (3) The total weight should be as small as possible consistent with strength and the work to be done, also the destructive effect on the carriage due to a light gun must be considered. The material should be arranged so that there is no waste of powder, and that every part may perform its due share in withstanding the pressure from within.

When a gun is fired, the conversion of the propellant into a large volume of gas causes great pressure to take place in every direction at the seat of the charge. As the charge is enclosed on all sides, the effect of the explosion will be to eject the projectile from the muzzle of the gun.

As soon as the projectile begins to move to the bore it leaves more space for the gas, and the pressure is lessened, and continues to decrease as the projectile approaches the muzzle. The powder chamber of a gun has consequently to be made stronger than the muzzle end, and all guns are accordingly more or less, conical in form.

The pressure in the bore will vary with the amount of resistance to be overcome in throwing out the projectile, and with the quantity and quality of the propellant. In a rifled gun (such as all modern field guns) the projectile is elongated, and therefore heavier than a round shot of equal calibre, and moreover, it is forced with increasing rapidity as it travels through the bore. The increased work being done on the pro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

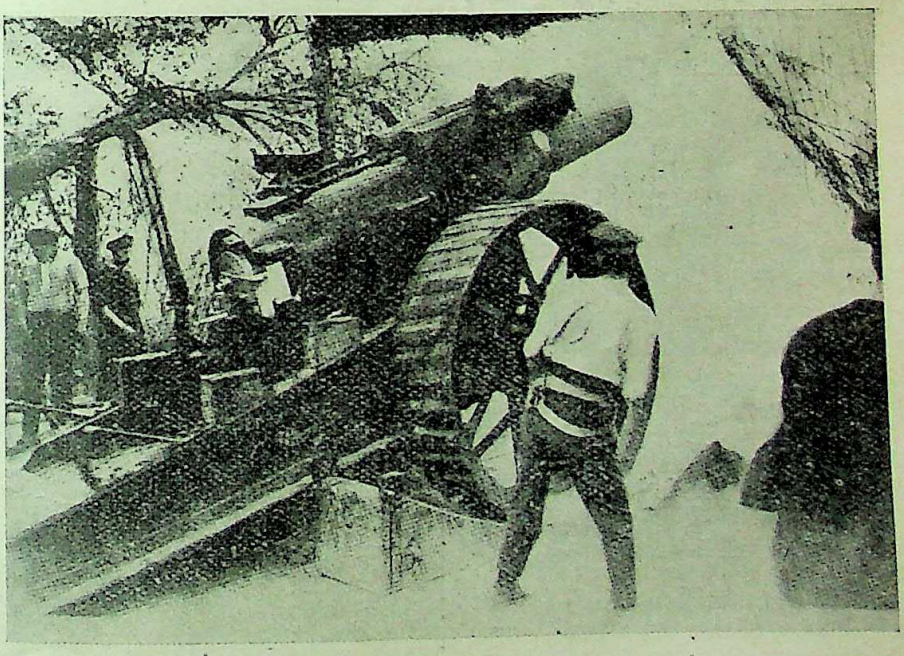
Digitized by Arya Samaj Foundation Chennai and eGangotri

jectile and the higher velocities now in vogue necessitate guns of the modern type to be made exceptionally strong.

The ordinary service guns are made of two kinds : (1) the field guns, (2) the mountain guns. Both guns are made of an inner tube of steel and an outer jacket of steel. The steel used in making these guns is a malleable alloy of iron containing a much smaller pro-

A heavy mortar in action

portion of carbon than exists in cast iron. It is undoubtedly far stronger in every way than wrought iron, and has been for years used in the American and British munition factories as the best metal for guns. The steel made in India was at first found to be too uncertain in quality to be deemed safe to employ by itself. Within the last few years, however, great improvements have been made in its manufacture. The steel at present used in gun construction is manufactured by the 'open-hearth process.' A quantity of pig iron, free from impurities, and malleable scrap is placed on the hearth and melted down by the combustion of 'Producer Gas' and air, both of which are heated previous to burning by passing over heated bricks in chambers called Regenerators, those latter being heated by the waste gases of the furnace. The decarburisation is effected partly by the scrap won, partly by using an oxidising flame, and partly by the addition of pure ore consisting of oxide of iron.



The steel for the wire is made by the crucible process. The ingots thus formed are rolled into rods and then drawn while cold through steel dies of the required shape, the final section of the wire being 0·1 inch thick and ·25 inch wide.

The uncertainties as to the behaviour of the metal are now much reduced, and it can be produced homogeneous in quality, and of the hardness, elasticity, toughness, tenacity, and tensile strength that are required. All guns are now consequently made of steel.

In a rifled gun a definite and very rapid rotation in a known direction is given, which obviates entirely the bad effects of windage and irregularity in weight and form of the projectile. The deviation of a shell from its original direction is constant, and can, therefore, be allowed for, and the accuracy of the gun increased. The rifled-shell, moreover, being gripped, as it were, at the muzzle of the gun, issues from it point foremost in the exact direction to which the gun points, but with a slightly increased elevation due to the jump.

The forces which bring a fired projectile to the ground and limit the range are gravity and the resistance of the air, the first force being always constant, the second, which is proportional to the area of the shot in transverse section, need only be considered.

It is obvious that an elongated shot must have a transverse section much less than that of a round one of the same weight, and therefore meets with less resistance from the air, and will, with

A heavy Howitzer in action

a similar muzzle velocity, range further. The front part of a rifled shell is made of a form the most favourable for passing through the air with the least resistance.

The method adopted for giving rotation to a projectile is different with the fifteen-pounder and twelve-pounder from what it is with the 2·5 inch.

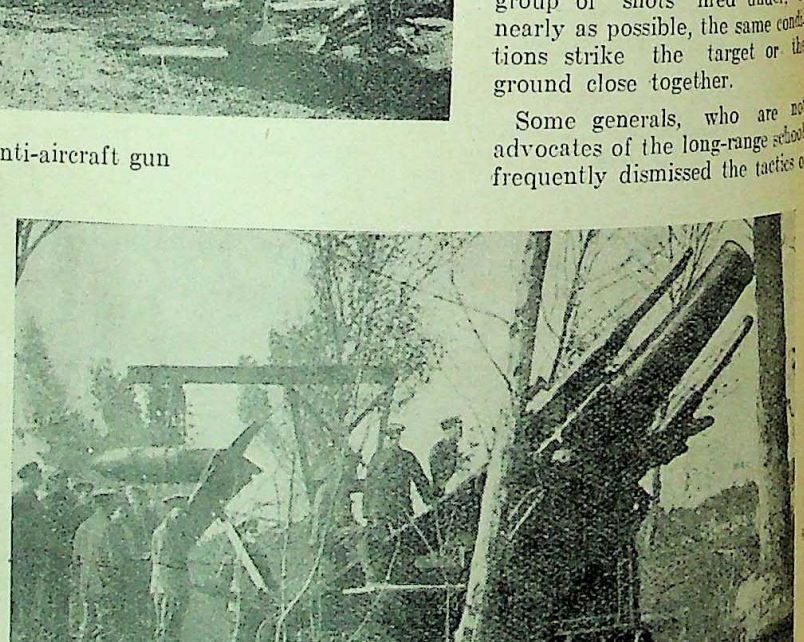
With the latter of heavy guns it is done by means of a soft copper driving band attached round the shell near

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

its base. On the charge being ignited, the first pressure of the gas forces the shell forward and the rifling cuts into the band, then as the pressure on the base of the projectile increases it is forced along the grooves, and thus leaves the bore with a rotating motion.

A French anti-aircraft gun



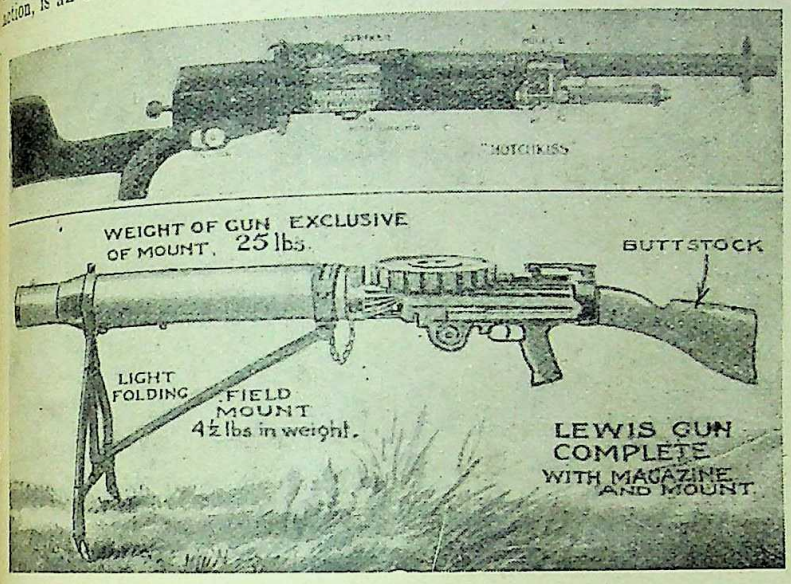
With the 2·5 inch the projectile has a gas check on its base which is forced into the grooves of the gun by the gas generated from the charge, and this gives the required rotation.

The relative advantages of breech and muzzle-loading guns have been much discussed, especially since the war of 1914, in which the Krupp breech-loading guns played such an important part. It is unnecessary, however, to enter into the arguments hitherto held for and against the rival systems, as owing to the great strides made in gun manufacture the conditions have considerably altered. It may, however, be mentioned here that the muzzle-loader is the cheapest and easiest to construct. But the 'power' of the gun, its accuracy, range, and rapidity of fire, in the two systems, may be assumed to be practically identical when using the same charge, and the projectile with its mode of ignition is in construction and effect the same.

The shells fired from guns and howitzers strike the ground in the form of an oval, having their greatest depth in the direction of fire and while the firing guns are being fired, the observer looks through his telescope of the observing gun with his right hand on the deflection screw and his left hand on the tangent screw. The depth diminishes as the range increases, and for short range it is much greater than for long ones. The breadth increases as the distance of the object at which the burst takes place increases. Furthermore, the shells are not uniformly spread over the whole of the oval of dispersion; on the near part of the oval the shells are crowded together, and on the far part, as the shells travel farther, they are more scattered.

Accuracy of fire is of the greatest importance, as without it not only is an unnecessary amount of ammunition required to be expended to produce a certain effect, but also because bad shooting may give encouragement to the enemy. Absolute certainty of hitting the same spot at each round is impossible of attainment as several causes of error exist which cannot be got rid of, even under the most favourable circumstances. Accuracy of fire is therefore, a comparative term and is said to be good when a group of shots fired under, as nearly as possible, the same conditions strike the target or the ground close together.

Some generals, who are not advocates of the long-range school, frequently dismissed the tactics of



A big gun getting ready for action

them as simply an auxiliary to the other arms. Is this somewhat summarily, and looked upon

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

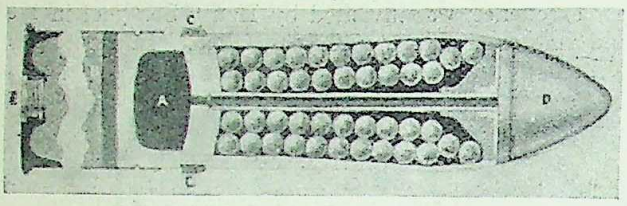
...ow the case? Is it not a fact that guns played a considerable part in gaining victory over the Germans in the last War? The denuding of the centre of a line of battle of all troops but the guns, as in World War II, is surely a recognition of their playing something more than a subsidiary part. The fire from massed batteries, not only at the commencement, but all throughout an action, is an essential feature of the modern warfare.

Hotchkiss and Lewis machine-guns

The great armies of the world at first did not feel the necessity for a regular system of artillery tactics in the field. With progress of science, the actual destructive effect of a shell has increased by alterations in size and explosive power, and by perfected methods of estimating the range and igniting the fuse. The infantry have lost much of their power of manoeuvring, while the cavalry can seldom use their shock action on the field. But the full power of the modern guns is far greater than it has hitherto been and the modern world is only beginning to understand that where rapid firing is essential, the inevitable elements of artillery in the field are more valuable.

When a force awaits attack in position, its guns have to keep down the fire of the hostile artillery, delay as long as possible the forward movement of infantry, protect the flanks from being turned, and aid in counter-attacks. It is not pretended that artillery is the arm that deteriorates the least during the combat, and the one that can be most effectively kept in hand by the general in command. Guns can with rapidity be transferred from one point to another, and by means of their manoeuvring power can most effectively aid in the limited changes of formations practicable on the battlefield. It must, however, be admitted that the guns have to co-operate with the other arms in dealing a final blow to the enemy, following his retreat if victorious, and covering the retirement of their own side in case of defeat.

Modern warfare has established many improvements in the manufacture of munitions for the guns. In a war, where artillery fire goes on almost perpetually and bombs and mine explosions are of constant recurrence, rifle and machine guns crack intermittently and snipers are always busy, no engagement of great size moment takes place without a due supply of guns, shells, and bullets. Although there are many forms of bullets and shells which are intended to destroy men and materials, the invention of shrapnel shell has provided an arrangement which is far greater in proportion of explosive power. Shrapnel, the man-killing weapon par excellence, was invented by Henry Shrapnel in 1784 and improved later by Colonel Boxer. In its original form it was the spherical cast iron shell of the period, having lead bullets mixed with the bursting charge, but it was defective in this respect that bullets were scattered in all directions when the shell burst. Boxer's improvement consisted in placing an iron diaphragm between the charge and the bullets, so that the flight of the latter was directed. When the rifled gun came into use, the shape of shrapnel was changed and it was given an elongated form with an ogival nose. The bursting charge was placed in the base, separated by a diaphragm from the bullets which filled the body, while a tube down the centre conveyed the flash to the charge from the fuse in the nose. Substantially this remains the construction of modern shrapnel. The desideratum that the shell should contain as many bullets as possible while being strong enough to hold together on discharge



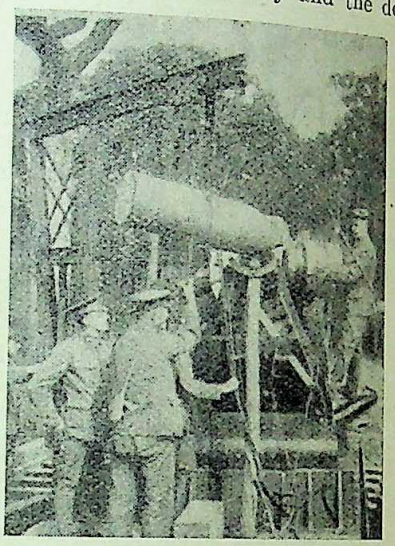
Taking ammunition up to the trenches

and during flight could, however, be better fulfilled when cast iron was displaced by steel, which permitted the walls to be made thinner. The effect of substituting steel for cast iron in shrapnel has been that it has decreased the total weight of the shell by about one-half. In order to render the burst visible some smoke-producing device is employed. One method is to mix black powder with the bullets, and another, adopted in Russia, is to use a mixture of magnesium and antimony sulphide. In Germany, red amorphous phosphorus with gunpowder

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was used with the bullets which gives rise to dense white smoke. The bullets used in shrapnel are half an inch in diameter and usually spherical, though for the U. S. Army they are made with six flat faces with the



The interior of a Shrapnel shell

object of enabling them to be packed more readily in the casing. They are composed of lead hardened with antimony, and may either be cast in iron moulds or struck between dies from a long thick wire fed forward continuously. Any fins that may be formed on the bullets are removed by tumbling them together in a machine, when the rubbing of one upon another renders them quite smooth. Considerable exactitude is required in the manufacture, as 41 of them must weigh 1 lb. with an allowable error of only one dram.

It may be recalled that guns are also fitted in submarines and other battleships. It is believed that the great damage done to some of the larger British and American ships by German submarines in World War II and the short period which elapsed before they sank, were due to the use of an excessively large volume of explosive compound as well as to its particular composition. But, it must be admitted that the destruction of the personnel of a cruiser or a submarine was effected almost entirely by the shrapnel fire of the gun. These guns fold down within the superstructure of battleships and are installed on all sides having practically an all-round fire. The German guns which are of 2·95 inch bore are mounted so that they can be lowered into a recess in the deck of the vessel—between the upper deck and the recess of the hull. It is stated that these guns may be raised and got into position for firing in twenty seconds and that they can be stowed away in a corresponding time.

The gun and the rifle may be improved to any conceivable extent but the whole epoch beginning with Alexander's accession to the Greek throne and extending up to the defeat of Germany and the downfall of

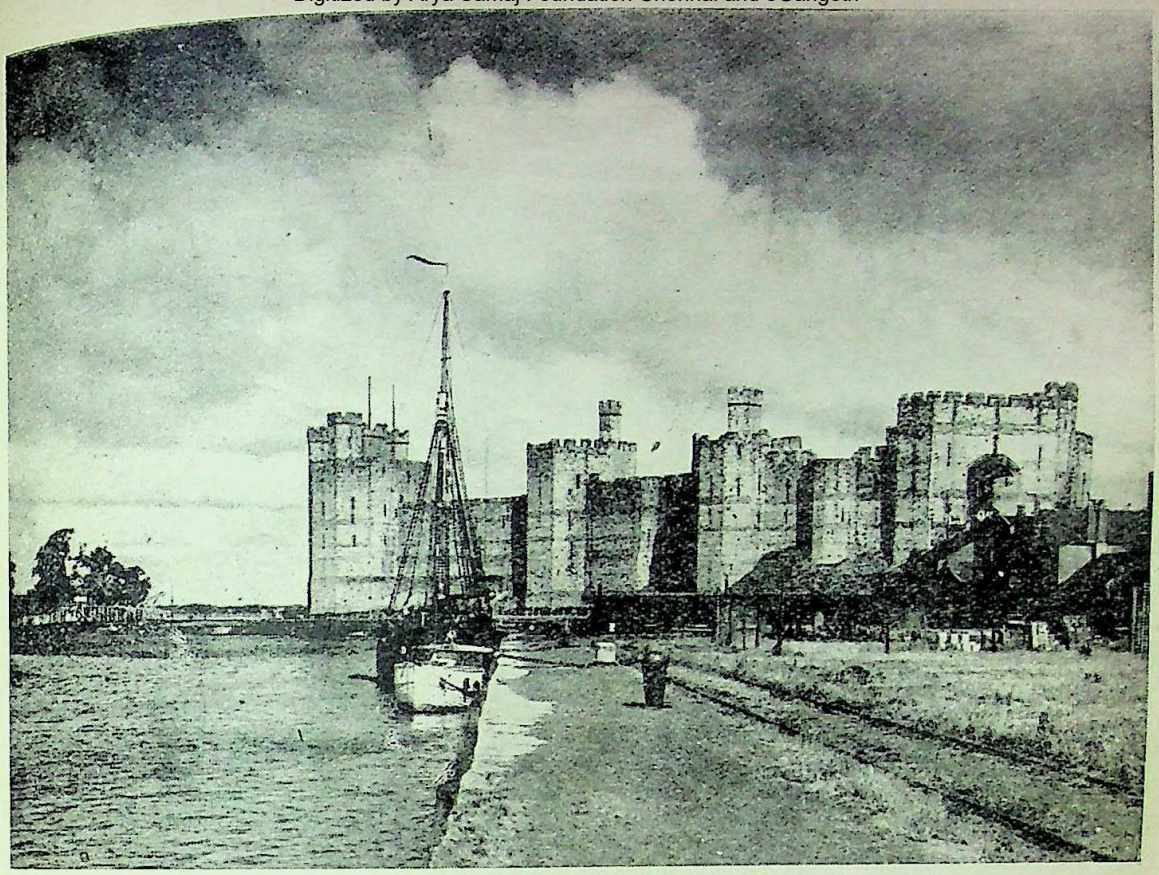
A shell

Hitler will indicate how races of the world in the name of their superior civilization waged wild and awful wars on account of which towns and villages were littered with skeletons and human blood and wildernesses reigned where there had been gardens. It is a tale of the torture, mutilation and extinction of millions of men and women and of sacrifice of all that was best and noblest in many generations.

———:O:———

NORTH WALES

By AUGUSTUS MUIR



The land of Wales stands upon England's western border like a great bastion. From the Irish Sea in the north to the Bristol Channel in the south, its scenery is dominated by the mountains which give that ancient Celtic country its essentially romantic character. Although some of the most densely populated parts of the English Midlands lie upon its eastern boundary, it has retained its intrinsically Welsh atmosphere, and it still has over 50,000 people who speak only the old Welsh language. Most of its soil is drenched with legends of old heroes and of beautiful women from the world of dreams. It is a land remote in many ways from the main current of English history and tradition ; and few will deny that this very remoteness constitutes one of the chief charms of the country.

North and South Wales are divided by a chain of mountains stretching from the rugged peak of Cader Idris near the sea to the Berwyns in the east. Stand upon a peak of that dividing range and you will see the differences in landscape ; the hills of South Wales have rounded outlines compared with those stern peaks to be observed in the north country. The southern valleys are greener than those grey and rocky clefts between the northern hills. Into South Wales there are many gateways from England ; but there are only two on the north, one by the coast and the other through the lovely vale of the River Dee. The old English town of Chester, once a Roman station, lies on the coastal entrance into North Wales, and both road and railway take us up to the Irish Sea along a coastline which has become a holiday resort for the great English industrial towns that lie within the orbit of Liverpool, Leeds and Sheffield.

There is Rhyl at the mouth of the Clwyd, a stream that flows through a broad and fertile valley that is known as the Garden of North Wales. Further along the coast, Colwyn Bay is a holiday resort noted for its gentle winter climate ; and Llandudno has the other advantage of a picturesque situation, with the magnificent cliffs of Great Ormes Head standing high above

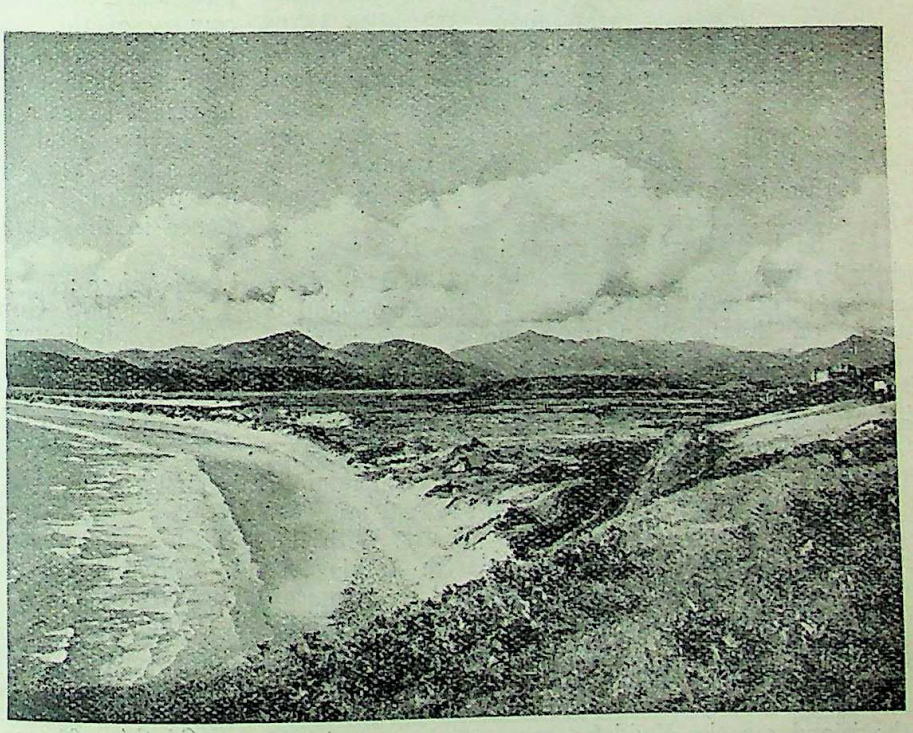
the sea. The wide river to the west was famous for its salmon fisheries before the days of the Romans, and across it is the old walled town of Conway. These walls, built in the thirteenth century, still exist and are among the finest examples of mediaeval fortifications in Europe. Conway Castle, in its time one of the most formidable



A peaceful village in Merionathshire, amidst the Welsh mountains

in Britain, was built by England's great warrior king, Edward I, when he was endeavouring to preserve the peace in the remote corners of his kingdom. Follow the River Conway into the mountains and you will come to a winding vale of uncommon beauty, with the peaks around Snowdon towering in their splendour on the west.

Snowdon sits like a patriarch among its own family of great hills. To find a mountain as high in Britain one must go to the Highlands of Scotland. Snowdon has an awe-inspiring grandeur from whatever angle you may view it; and indeed, on a clear day, you may see it from other peaks both in Scotland and in Ireland. In this throng of mountains, known as Snowdonia, we find scenery of many kinds, towering cliffs, deep lakes, desolate passes, splendid valleys. In the olden days, people referred to the highest peak of Snowdon as "The Tomb": it was here, they said, that a giant was slain by King Arthur, who was the greatest of the fabulous heroes in old Welsh legend. In more recent times, modern industry has invaded Arthur's mythical kingdom, and the great slate quarries of Snowdonia have been prosperous for many years. In the days of peace, thousands of visitors come to this district in search of recreation and health in the pure mountain air; and its high crags and precipices are a rock-climber's paradise.

Descend from Snowdon to the west, and you are at the Menai Straits, which separate the mainland from the green island of Anglesey. Fourteen miles long, these Straits vary in breadth from a few hundred yards to a couple of miles, and Spring tides rush through them at a tremendous speed. On the northernly entrance is the little town of Bangor, an ancient episcopal see, with a cathedral founded in the sixth century; it is a scholastic centre, with a college that is part of the University of Wales. At the southernly end of the Straits is Caernarvon, an old town which grew up beside another of those great mediaeval castles that we find in so many parts of Wales. But Caernarvon is distinctive because it is one of the best preserved of all these strongholds, and beside those grey walls were enacted some of the most critical scenes of Welsh history.

Spanning the Menai Straits is a bridge that carries the north coast railway on its way to Holyhead, the nearest seaport to Ireland. Before the days of railways, one journeyed to Holyhead by coach, and the old coach-road crossed the Menai Straits by the famous suspension bridge built more than a century ago by Telford, one of the greatest roadmakers in British history. The route he chose entered Wales by the gate-

Tremadoc Bay with the Snowdon mountains in the background, North Wales

Digitized by Arya Samaj Foundation Chennai and eGangotri

way of the Dee valley ; and a few miles from its mouth is the busy town of Wrexham. There are collieries in the vicinity, and the smelting of iron-ore ; here, too, are other industries that include the manufacture of bricks and tiles ; and it is an important centre for agricultural produce. Wrexham's fifteenth century church is called one of the "Seven Wonders of Wales"; and here is the tomb of Elihu Yale, who founded Yale University in the United States. The ancient lands of the Yale family are to be found about a dozen miles up among the hills, and are still known as Plas-yn-Yale.

In the Dee valley we come to the little town of Llangollen, with hills towering upon either side. Indeed, every mile of that road in the shadow of the Berwyn Hills, and later by the peaks of the Arenigs, has a changing beauty that lingers long in the memory of a traveller.

Here is some of the loneliest country in Great Britain ; and in the folds of these mountains you will find Welsh people whose forbears for many generations have been brought up on the same farms—or who are following the same rural occupations. These people are deeply religious, with a strong imagination and a speech that is rich with vivid metaphor. They are a race of poets who take pride in reciting their verses in public. They are story-tellers and singers ; creatures of warm impulses, quick to reveal their emotions to each other and even to strangers.

In these hills you will find many Welsh farmhouses that still retain their ancient atmosphere, with the kitchen fireplace and dresser decorated with a multitude of bright brass and china ornaments, and salted meats hanging from the rafters. It is a homely scene, and a Welshman's home is to him the centre of the universe ; and to his home a guest is always welcome. His good manners are instinctive. He may be quick to anger, but is generous after his anger has cooled. He is, above all, a strong individualist with deep self-respect.

It is here among the hills, rather than at the holiday resorts around the coast, that you will find beating most strongly the true heart of Wales. Here the old legends are still repeated around the firesides, and the old traditions kept alive by people whose roots are deep in the ancient soil.

———:O:———

CEYLON : THE ECONOMIC BACKGROUND

By Dr. KRISHNA PRASANNA MUKERJI, M.A., D.Phil.,
University of Ceylon

Ceylon is a mango-shaped island of 25,481 square miles with the flat end at the bottom (*i.e.*, on the south). The maximum distance from north to south is about 270 miles and from east to west about 140 miles. Lying within 60 miles of the southernmost point of India, the distance is nearly bridged by the islands of Manar and Rameswaram. The northern half of the island is an extensive plain. The central part is generally rocky and constitutes a plateau of about 4,000 square miles which is the home of the plantations. The highest peak is over 8000 feet high.

Ceylon has a luxuriant vegetation so that it may rightly be compared to an emerald pendant studded on the shapphire bosom of the mother sea. The island is situated on the monsoon route and as such receives showers of benediction both from the summer and the winter monsoon. Owing to its proximity to the mountains the south-western part of the island, however, attracts most of the rains and forms the wet zone. The northern part is a rather dry zone of insufficient rainfall.

The island has a population of over 6 millions, which is, however, not homogeneous racially. With the exception of the Moslems who came from Arabia and Malaya, and the Burghers who are the descendants of the Dutch invaders, the vast majority of the island's population however are descendants of invaders or emigrants from India—an apt illustration of the influence of Geography on History. The oldest inhabitants of the island are the Veddahs, some of the survivors being still extant in the forest areas. They are believed to have migrated from India in some pre-historic epoch when Ceylon was still linked with India by the Adam's Bridge. By far the major part of the inhabitants who are known as Sinhalese came from north India about 500 B.C. and adopted Buddhism a couple of centuries later. From the eleventh century A.D. hordes of south Indian invaders came to the island and gradually conquered the northern part while the Ceylonese kings were obliged to push back their capital (from Anuradhapura and Pollannaruwa) to Kandy, in the mountainous country of the south-central region. Their descendants are known as Ceylon Tamils and they constitute today the most influential minority community in the island. In recent times a large number of south Indian labourers have come to Ceylon who mainly work on the plantations. They are known as the Indian Tamils. The mixed composition of the population may be seen at a glance in the table below :*

1. *Sinhalese* :		
Low Country		2,596,000
Kandyan		1,467,000
2. *Tamils* :		
Ceylon		697,000
Indian (Estate Workers) ..		650,000
Others		162,000
3. *Muslims* :		
Moors		380,000
Malays		18,000
4. *Burghers* :		30,000
5. *Europeans* :		10,000
6. *Others* :		50,000
Total		6,060,000

Of this 61 per cent are Buddhists, 22 per cent Hindus, 10 per cent Christians and 7 per cent Muslims.

As in India, the population of Ceylon is mostly rural. The common man is the small cultivator of insufficient means with little initiative and a limited outlook. Political uncertainty, which was a chronic feature

* Figures cited in this article are mostly from the *Soulbury Commission Report.*

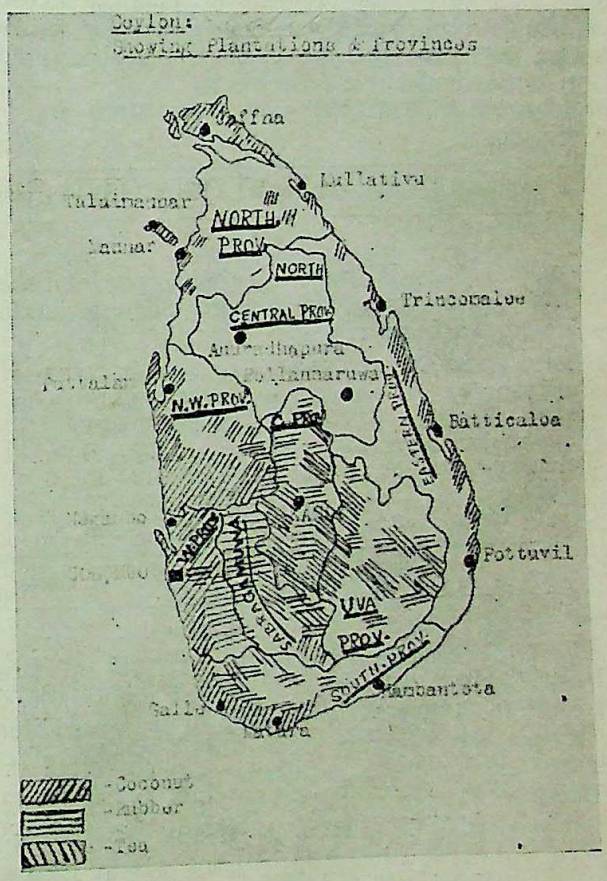
until 1802 (when the island became a British crown colony) also was responsible for the apathy and lack of initiative in the people. The first half-a-century of British rule was devoid of any substantial material and moral progress owing mainly to the lack of revenue and the resultant deficits. In consequence roads, railways, harbours, hospitals, schools and industries had to be neglected. The State then functioned only as a police force.



This tragic financial situation, however, improved with the introduction of British capital in 1855 with the help of which the Coffee industry was started. This resulted in providing an annual surplus and gradually "Ceylon became one of the wealthiest and most prosperous of the crown colonies." As a result roads and railways were constructed and the irrigation works, which had fallen into decay, were restored partially. Health, sanitation, education and other social services came to be included among the functions of the State from the beginning of the present century. It would indeed be interesting to prepare a list of nation-building activities undertaken by the government. But before doing so it would be proper to enquire into the causes which enabled the island of deficits to be transformed into an island of surpluses. This will be provided by the story of the growth of plantations in the island, specially coffee, tea and rubber.

The chronic deficits in the island's budget set the administrators of Ceylon to think seriously about the possibilities of fresher source of revenue (after quelling the Kandian revolt of 1818). The then Governor, Sir Edward Barnes, found that coffee could be grown in the mountainous regions with profit only if there were sufficient capital to start the plantations and roads to carry the coffee to the ports. For the one he "tried to interest the Europeans" (who alone then had the capital to invest) in the coffee industry and for the other he constructed three to four hundred miles of roads linking the upcountry towns to Colombo. Improved methods were introduced and the industry developed rapidly. The result was that "by the middle fifties it was so large that road transport was unable to cope with it." Accordingly, the first railway project (from Colombo to Kandy) was undertaken by the Ceylon government and completed in 1875. The lines were extended to other parts later on. The blight of 1868-82 ruined the coffee estates and they had to be replaced by tea plantations. The tea industry made rapid progress between 1880 and 1887. It was, however, not till 1903 that it reached security and stability as a permanent industry of the island. Today it is the most important and valued export of Ceylon, rubber and coconut occupying the second and third places in order of importance.

The eagerness to evade the danger of depending on a *single crop* was largely responsible for the introduction of rubber plantations in Ceylon which was encouraged by the rapid development of motor industry (specially in the U.S.A.) whose demand for rubber could not be satisfied solely by the Brazilian supply. The fact that expensive machinery is not needed for making latex was equally influential in popularising rubber cultivation as it enabled many Ceylonese with small capital to invest in rubber gardens. In this way the dependence of revenue on one crop was avoided and the commercial importance of Ceylon products (specially tea, rubber, coconut) added to the prosperity of the country considerably. The following table shows the approximate acreage under various crops :

Arecanuts	..	69,000
Cacao	..	34,000
Cardamoms	..	6,000
Cinnamon	..	26,000
Citronella	..	23,000
Coconut	..	1,238,000
Cotton	..	2,000
Palmyra	..	50,000
Sugarcane	..	1,000
*Rubber	..	657,145
*Tea	..	550,571
Tobacco	..	14,000
Paddy	..	645 000 (Maha season 1944)
		409,000 (Yala season 1944)

As an island which depends for balancing her budget on the export of the products of her soil the statistics of Ceylon's foreign trade is of special interest : The

Ceylon—showing plantations and provinces

annual value of her *imports* in 1939 was Rs. 240,930,697 as against Rs. 414,458,245 of 1943. The annual values of her *exports* for the same years were Rs. 308,417,749 and Rs. 539,306,294 respectively. The island has to depend on foreign imports for some of the essential necessities of life, specially food-stuffs and textiles. On the export side coconut, tea, rubber and plumbago are the chief items. She imports from India (foodstuffs and textiles), Britain (machinery and textiles) and Burma (rice). Her main customers in the export trade are Britain (tea, rubber and coconut products), U.S.A. (rubber and cinnamon) and Canada (coconut products).

* It is of interest to note that 40 per cent of Rubber and 70 per cent of Tea plantations are owned by Europeans.

Digitized by Arya Samaj Foundation Chennai and eGangotri

On the basis of the figures for 1939† the following are the percentages of the value of her imports and exports (exclusive of postal articles, ships' stores and specie) :

	Imports	*Exports*
United Kingdom	18·78	49·03
British Possessions	46·67	18·68
	(Of this imports from India alone was 27 p.c.)	
Foreign Countries	34·55	32·29
		(Of this exports to U.S.A. alone was 25 p.c.)

The total revenue of Ceylon for the year 1939-40 was Rs. 123,130,498—93 cents (as against Rs. 200,006,747—39 cents of 1942-43). Of this revenue the income from *taxation* alone was as follows :

	1939-40 Rs.	1942-43 Rs.
Customs	59,877,595—48 cents	77,925,046—92 cents
Excise	8,337,136—11 ,,	13,538,499—38 ,,
Income tax	18,794,723—91 ,,	59,227,070—66 ,,
Licences, etd.	1,299,201—79 ,,	753,241—84 ,,
Export duties under Medical wants Ordinance	1,768,978—63 ,,	2,159,326—04 ,,
Total	90,077,635—92 cents	153,603,184—84 cents

Ceylon has several ports and the *income from these ports* form an important single source of State income, which is shown below :

Port	*Income in Rs. in 1939-40*
Colombo	6,076,152—18 cents
Galle	66,956—71 ,,
Trincomalee	16,702—09 ,,
Jaffna	20,512—15 ,,
Batticaloa	1,650—79 ,,
Other Ports	34,407—45 ,,
Total	6,216,381—37 cents

The total expenditure for the year 1939-40 amounted to Rs. 122,356,249—03 cents (as against Rs. 185,006,506—65 cents for 1942-43). A scrutiny of the expenditure side reveals the following scale of expenditure on different items on the basis of the figures for 1939 :

Education 14 per cent, Defence 10·2 per cent, Pension 10 per cent, Medical and Health Services 9·9 per cent, Administration 8·7 per cent, Debt Charges 7 per cent, Public Works 5·9 per cent, Courts and Police 5·8 per cent, Agriculture and Irrigation 3·6 per cent and the remainder is spent on social services such as Co-operative Societies, Forest Preservation, Protection of Labour, etc.

A few noteworthy facts emerge out of a critical study of the public finance of the island. In the first place we find that the major part of the revenue (over 75 per cent) is derived from *taxation*. Secondly, a substantial portion of the revenue from taxation (about 60 per cent of total taxes paid) is derived from British planters and businessmen (as Income-tax, Export and Import duties and Estate duties). Thirdly, as a result of investment of capital in a number of commercial crops (like tea, rubber and coconut) the island is able, at present, to command an annual surplus, which is being utilised for social services and nation-building works some of which are described below :

Education : The most remarkable fact about the economic policy of the island is the progressive increase in expenditure on Education (from 12 million rupees in 1931 to 34 million rupees in 1945). The State is pursuing a policy of free education and the most noteworthy feature of this policy is to be seen in the enormous increase in the number of vernacular schools and the introduction of school-meals to children. About 50 per cent of the children of school-going age are receiving instructions. It is, however, regrettable that owing to an over-emphasis on academic education vocational training has not made the progress which would have maximised national efficiency and as a result an intellectual proletariat class has cropped up. The need of the hour is to divert the flow of students to technical schools.

Medical Service : The Medical and Health Services receive commendable attention from the state in Ceylon. The most prevalent diseases are malaria, enteritis, dysentery and hook-worm. Sometimes cases of small-pox, cholera and plague are also reported. The Government spends some 15 million rupees annually for combating these diseases. Till recently expenditure on this department had been mainly "on the clinical treatment of disease." Gradually (specially since the great malaria epidemic of 1934-35) preventive medicines are being used by the Health Department. The general health and sanitary conditions however still remain a formidable problem. The authors of the Soulbury Commission Report have rightly remarked that "Housing conditions, water supplies and proper nutrition urgently demand attention. The death-rate remains unduly high and the infant mortality rate in particular is being slowly reduced." But the encouraging fact about this department in Ceylon is, that unlike in many Indian Provinces, systematic work has been started and one feels that "things are getting along." Anti-malaria measures were started in 1921, treatment against hook-worm was started as early as 1915 and the Government's anti-small pox measures are so stringent that new-comers to Ceylon are likely to mistake it for a nuisance. "Ceylon has probably the most extensive system of hospitals in the British Colonial Empire." On the basis of 1939 figures the Medical Department has 348 officers and 24 Health officers. There are 120 hospitals (11,137 beds) and 751 dispensaries treating minor cases. In the medical College there are 181 students. There are 96 hospitals and 670 dispensaries in addition in the tea and rubber Estates. Medical researches are carried in the Bacteriological and Pasteur Institute.

Labour : A large number of the labour population in the island is Tamil emigrants from India. It is estimated that in the estates, railways and other departments there are some 700,000 Tamils as against 140,000 Ceylonese labourers. As a result of a series of social legislations the labourers now enjoy the usual protections the more important of which are stated below :

(*a*) Workmen's Compensation Ordinance (1934),

(*b*) Ordinance dealing with the employment of women, young persons and children (1923, 1940 and 1941), in lines laid down by the International Draft Convention;

† Usually figures for 1939 have been shown as indications of more or less normal, pre-war conditions.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(c) Ordinance prohibiting Female labour under ground (1937);

(d) Maternity benefit Ordinance (1939),

(e) Factory Ordinance (1942);

(f) General Wages Board Ordinance (1941 amended in 1943).

Estate labour enjoys even greater safeguards—including a minimum wage-rate, an eight-hour working day, free housing, medical service and free education for children. Old age pensions and maternity benefits are paid by some estates though not required to do so by law.

The Trade Union movement has come to stay and are responsible for bringing about improvements in labour conditions. In 1940 there were 67 unions. The law (Trade Union Ordinance of 1935) requires that all Trade Unions must be registered.

Irrigation and Agriculture: The Soulbury Report rightly observed that *the problem of agriculture in Ceylon is the problem of irrigation*. In ancient times the kings in Ceylon constructed and maintained huge reservoirs and tanks ("some of them covering thousands of acres") out of which water was distributed through canals for irrigation purposes. In course of time the old irrigation system was destroyed and the magnitude of the work ruled out of court any possibility of success through private efforts. The British Government started taking interest in such works as soon as revenue-conditions improved and in 1856 restoration of old tanks was started. The Irrigation Department was established in 1900. By 1931 some 18½ million rupees were spent by government on major construction works and at present some 540,426 acres of land under rice is irrigated. As a result of all this a vast tract of irrigated land has become available for agricultural purposes. The present policy of the Government is to induce peasants from the over-crowded wet (southern) zone to come to live and colonise the irrigated land in the dry (northern) zone. With this end in view the Department of Agriculture has formulated an extensive *scheme of colonisation and land development*. Experimental stations and demonstration farms have been established. The Executive Committee of Agriculture recently approved the proposal of spending 3 million rupees in next year's budget for the purpose of giving assistance to farmers settling down in the "colonies" established by the Ministry of Agriculture. According to the latest available report (*Ceylon Daily News*, May 10, 1946), the following facilities are proposed to be given to the colonists:

i. A paddy farm of about 5 acres (to each colonist),

ii. A high land allotment of about 3 acres (to each colonist). This is for the purpose of encouraging mixed farming (rice and fruits), with a view to remove the dependance of cultivators on rice crop only,

iii. A house of standard pattern (to each colonist),

iv. Each colonisation area is to be provided with medical and educational facilities, community centres and other social amenities essential for planned development.

Already 100 allotments under the Minipe Ela Scheme and 100 allotments under the Kaagama Extension Scheme have been made. Five thousand acres of irrigable land under the Parakrama Samudra Scheme has been dealt with so far and the remainder (about 15,000 acres) is to be dealt with in the next financial year.

In conclusion we surmise that the main economic problems of Ceylon are two: (1) *The dependance of the island for foodstuffs on foreign countries.* This is neither desirable nor inevitable. The Ministry in choosing to follow a vigorous policy with regard to agricultural development (with a view to secure self-sufficiency in food-supply) has chosen the wisest course. It is hoped that ere long Ceylon will attain complete self-sufficiency in this respect.

(2) *The lack of Industries* and the consequential dependance solely on Plantation economy. In this connection the dependance of the island on outside supply of textiles is specially noteworthy. To what extent it will be possible to start textile industry in Ceylon is a question to be decided by expert opinion but the present position of a supplier of raw materials must come to an end and indigenous industries must be started before there can be any possibility of raising the standard of living of the common man. In this connection the prospect of manufacturing rubber goods appears to be promising and therefore worth giving a trial or at least a consideration. To encourage optimum industrialisition benefits, technical and vocational education should also be encouraged.

It is an unsatisfactory state of affairs that of the total taxes some 60 per cent are paid by a handful of Europeans. This can be changed only by progressive transference of control of industry to Ceylonese hands, which is possible only when Ceylon produces her own captains of industry. Foreign capital may be *borrowed* if capital is lacking but not foreign *initiative* without detriment to the economic welfare and growth of political consciousness of the people:*

—:0:—

HENRY HANDEL RICHARDSON

By NETTIE PALMER, Australia

Henry Handel Richardson, the great woman novelist who has just died at her home in Sussex, was Australian born; and as an Australian she lived and worked to her last days. It is true that she was absent from her country since the age of seventeen—except for one visit with a special literary object—but it is more important that in character and interests she never wholly left it. In recent years, her books have been out of print, temporarily; but the ending of the war has promised a revival of them: revivals in English, American and Australian editions. We can talk of them now as if they were safely homing to our shelves.

Henry Handel Richardson early became an accomplished European in her mind and her writing. Her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

first book, *Maurice Guest,* (1908) was built, as she once said, 'on European lines.' It showed none of a beginner's hesitations, and has never ceased to be recognised both by the public and by other writers of international repute ; its name occurs as a landmark in books of literary experiences. In it she found her way straight to the core of artistic realities in Europe as well as to her basic theme, that of human relations. Thus from the beginning Henry Handel Richardson was established as a major novelist in the eyes of the small world that takes notice of such valuations, and *Maurice Guest* was republished quietly from time to time.

It is important to record this now, when people are apt to remember only that in 1929 her completed masterpiece, *The Fortunes of Richard Mahony,* gave her a sudden wider fame. If she had never written anything after *Maurice Guest,* she would still have lived as a novelist—but not, you will say, as an Australian novelist. *Maurice Guest,* indeed, was embedded in the life of Leipzig music students in the nineties, aware of cosmopolitan art and its seriousness ; how different from the life of any new country ! Yet, how is it that the heroine, the enigmatic, temperamental, difficult Louise Dufrayer, is a young woman from Australia ? Wasn't it that Henry Handel Richardson, herself an exile from a very new country, felt that a girl from Australia would be the most completely exotic type she could name in a European environment ? I suggest that it was her instinct also in some way to mark her books, that belonged to the world, with the sign of the country of their true origin. This she did with each of her few novels in turn, subtly, as in *Maurice Guest,* in others quite plainly, until she came to her last *The Young Cosima,* of 1939. In this case it would have been impossible, her subject being a group of historic German musical personalities ; besides, if the question were then to be raised, she had already been known, time and again, as the Australian novelist : Australia's most distinguished literary representative abroad.

The book that very soon followed *Maurice Guest, The Getting of Wisdom,* was 'marked' plainly enough by being set in a Melbourne school—and one described with almost autobiographical intimacy. I have often wondered how it was that the critics who accepted the author of *Maurice Guest* as a man were not more openly surprised that this girls' school story could also be produced by him. But perhaps in those years—it appeared in 1910—there was a familiarity with George Moore's novels set inside women's institutions, and that kind of tour de force was accepted from the psychologist Mr. H. H. Richardson had already shown himself to be.

After *The Getting of Wisdom* there was a break of seven years, and the next novel appeared in the middle of the war, in 1917. The first volume of what was to be her trilogy had a heavy title, suggesting sequels : *The Chronicle of the Fortunes of Richard Mahony,* with a sub-heading *Australia Felix.* In American editions much later, this volume, if not the three volumes together, bore the name *Australia Felix.* This title kept the author's hint of irony that runs through Richard Mahony's 'fortunes,' as in *The Way Home* (for a man by nature homeless on the earth) and finally *Ultima Thule,* in which Richard sends his soul through the invisible.

Here it is curious, looking back, to notice that the first volume of *Richard Mahony,* concerned though it was with nothing but Australia, did not in itself mark its author as Australian for those who had not the clue already. Readers were confronted with its brilliant reconstruction of Early Ballarat and Melbourne by some novelist called Richardson, and with his group of characters centring in Mahony, restless, complex, exasperating and credible. The author, giving such a full, objective presentation of Richard's outlook on the Australian scene, seemed to accept Richard's values. To Richard, as a storekeeper doctor on Ballarat in 54, conservative and self-centred in temperament, law-abiding in habit, the famous Eureka Stockade is only an annoyance on the horizon : so are most of the interests of men on the diggings. The volume ends with Richard's departure from Australia, it seems for good. He has shaken off the dust of it—how he detested 'colonial' dust !—and set sail for England, which he, though Irish-born, regards as his spiritual and appropriate home. Is it to be wondered if readers took Mr. H. H. Richardson for an English novelist, remarkably well-read in Australian social history, who after one volume brought back his hero to England for closer observation ?

Again it was seven years before a volume appeared : *The Way Home,* the second in the trilogy. Though the title was, purposely, enigmatic, the author's personal knowledge of Mahony's Australian background now stood revealed. It is true that for half the book the scene is in England, where we are shown the attempts of Mahony to set up a practice, and his amazement to find himself rejected as a colonial—after all his resistance to the colonial environment ! But henceforth Mahony's life is to be Australian. It was to Australia that he found his 'way home'; and his *'Ultima Thule'*—this being first the facetiously learned name he gave to the expensive house he built himself in an outer suburb, afterwards the title of the last volume in the trilogy, in which Mahony was to journey to the Ultima Thule of mental and spiritual agony. This inner agony is inseparable from external detail, remorselessly presented, pressing like fierce sunlight on a head that cannot tolerate it.

Henry Handel Richardson, then, describing Mahony, describes Australia also through his eyes. This was what some readers could not understand. Carried on the wave of enthusiasm for her work that arose when *Ultima Thule* at last appeared (1929), they abandoned themselves to a book more tragic than any they had read before, but then, resenting their own surrender, protested sometimes timidly, even to the point of suggesting that the book was a bad advertisement for Australia. As if the arrival of a masterpiece could lower a country's reputation ! 'But Australia is not like that!' said these readers. 'Mahony had no eyes for its beauty of landscape or for the warmth and character of our people !'

Exactly : but you could only understand Richard Mahony by seeing how life appeared to him. Moreover, Richard was an extreme instance of a type : the unhappy new settler who saw no colour or beauty in the strange new sky or earth. 'Only those born of the soil,' says Henry Handel Richardson, 'only those can love the soil.' She counted herself among the later generations who have drunk in with their mothers' milk a love of sunlight and space. 'In the trilogy,' she said, 'I speak entirely for the generation of whom the books are written. All the old settlers term the landscape colourless. Idiotic. Brutish. And for the time being their standpoint had to be mine.'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'For the time being' had meant nearly twenty years, during which the chronicler of Mahony worked to express truth, 'as it was given'. All that time, she had kept clearly in mind Mahony's inevitable end. In facing it, she faced more than the story of Mahony himself and ended by creating one of the symbolic figures in world literature.

After 1929, when so many had read her trilogy, often backwards, beginning with *Ultima Thule* and then feeling out for the predecessors that made its base, all her books were published again, in England and America. Some were translated, especially into Scandinavian languages.

A book of her collected short stories and sketches next appeared, *The End of Childhood*, the long name-story connected with Mahony, while several of the sketches of young girls in Australia stemmed from *The Getting of Wisdom*. Her chief books were again brought out in large American editions for Readers' Clubs and Unions, and these called for new prefaces. Notable is one by Sinclair Lewis to an edition of Mahony as recent as 1941. Emphatically he asserts his belief that this author was before her time—and that the time to begin reading Henry Handel Richardson is now. The time will always be now. Australia is fortunate to have such a literary representative in future.

———:O:———

THE FAIRY

BY RABINDRANATH TAGORE

Said Kusmi, "You tell a lot of made-up stories. Tell me a true story, won't you ?"

"There are two sorts of stuff in the world," I said. "One is the True, and one is the Super-true. My business is with the Super-true."

"Dada-Mashai, everyone says that they can't understand what you say."

"That's true," I said, "but when they don't understand it's their own fault."

"What do you mean by Super-true ? Do tell me."

"Well, this for example. Everyone knows that you are Kusmi. That's quite *true*. It can be proved a thousand times over. But I have discovered that you're a fairy from fairyland. And that is Super-true."

Kusmi was pleased. "Very good. How did you find out ?"

Said I, "The other day you had an examination, and you were sitting on your bed learning your geography by heart ; at last your head dropped on the pillow and you fell asleep. It was full moon night. Through the window the moonlight fell full on your face and on your sky-blue sari. Then I saw quite clearly that it was a messenger from the king of fairyland come for news of their runaway fairy. He came close to my window, his white scarf fluttered into the middle of the room. The messenger looked you up and down, but he didn't know whether you were their truant fairy or not. He thought perhaps you were a fairy of this world, and that it would be no easy job for them to carry you off from the lap of earth. It would be too weighty for them, in fact. Gradually the moon rose higher, darkness fell inside the room, and the messenger, shaking his head, vanished into the shadow of the *sishu* tree. That day I found out that you are a fairy from fairyland who have got yourself held captive by the weight of this world."

"But Dada-Mashai," said Kusmi, "how did I come from fairyland ?"

"One day, there in the *Parijat* forests you were flying up and down on the back of a butterfly. Suddenly your eye fell on a ferry-boat lying by the landing-steps of the horizon. It was made of white clouds, it was rocking in the wind. On the spur of the moment you got into that boat. Away it floated, and came to rest at the landing-steps of the earth, and your mother picked you up."

Kusmi was delighted, and clapped her hands. "Dada-Mashai," she said, "is it really true ?"

"True " I said. "Who says it's true ? Do I care about what's true ? It's Super-true."

Kusmi said, "Well then, shall I be able to go back to fairyland ?"

"Perhaps you may," said I, "if the winds of fairyland fill the sails of your dreams."

"Then if they do, which way must I go ? Which road ? Is it a *very* long way ?"

"It's very near," I said.

"How near ?"

"As near as you are to me. You won't even have to leave that bed. Just see, the next time the moonlight comes into the room, you look outside, and you'll have no more doubt about it. You'll see that cloud ferry-boat coming down the river of the moonlight. But you've become an earth fairy now, so that boat won't do for you. Now you'll have to leave your body behind when you go wandering and have only your mind for your companion. Your 'True' will stay behind here on earth but your Super-true will be off and away, and none of us will be able to catch up with it."

Kusmi said, "All right then, when full moon night comes I'll be watching the sky. Will you take my hand and go with me, Dada-Mashai ?"

"I can show you the way sitting here," I replied. "That's in my power, because I'm a dealer in the Super-true."

CONTRIBUTION OF BENGAL TO SANSKRIT LITERATURE

By Prof. J. B. CHOWDHURI, ph.D. (London), F.R.A.S. (London)

Sanskrit Poetry

Bengal poets headed by Satanananda, Gauda-Abhinanda, Sandhyakara Nandin, Jayadeva, Govardhan, Dhoyi, Sridharadasa, Rupa Gosvamin and Kavi Karnapura have contributed substantially to all branches of Sanskrit poetry, *viz.*, Mahakavyas, Kavyas, Khandakavyas, Dutakavyas and Subhasitas. The contribution of Bengal to Lyrical Literature and anthology is superb in every respect. Jayadeva's *Gitagovinda*, Govardhana's *Aryasaptasati*, Dhoyi's *Pavanaduta*, Vishnudasa's *Manoduta*, Krishnanatha's *Padamkaduta*, Rupa-Gosvami's *Hamsaduta* and *Uddhvaduta* are some of the best lyrical gems in Sanskrit. As a matter of fact, the *Gitagovinda* is simply unparallelled in the whole range of Sanskrit lyrical literature. Bengal has again contributed to the anthological literature the best work namely, *viz.*, the *Saduktikarnamrita* of Sridharadasa. Rupa-Gosvamin's *Padyavali* and Jagannath Misra's *Sabhataranga*, too, are excellent works.

Sanskrit Dramatical Literature

Bhattanarayana, author of the *Venisamhara* ; Rupagosvamin, author of the *Vidagdha-Madhava* and *Lalita-Madhava* ; Ramananda Ray, author of *Jagannathavallabha-natak* ; Jagadisvara Tarkalamkara Bhattacharya, author of the *Hasyarnava*, etc., are very powerful writers. The contribution of Bengal to Sanskrit Dramatical Literature is by no means small. Rupagosvamin introduced into literature Bhakti or Devotion as a sentiment and consequently there was a thorough change in general outlook of scholars towards all works of the Bhakti school.

Sanskrit Prose-Poetry Literature

Whereas Bengal has contributed little to Sanskrit Prose Literature, Mediaeval Bengal made solid contributions to Sanskrit Prose-Poetry Literature, *viz.*, the Champu and Virud literature. The *Gopala-champu* of Jiva Gosvamin is not only the most voluminous of all Sanskrit Champus but decidedly one of the best contributions to the Bhakti school of Indian philosophy and thought. In subject-matter as well as form, our Bengal Viruds are quite different from the stereotyped Viruds described in the rhetorical literature.

Regarding the rhetorical and metrical literature, Bengal made some of the best contributions, *viz.*, the *Bhakti-rasamrita-Sindhu, Ujjvala-nilamani* and *Natakachandrika* of Rupa-Gosvamin, the *Alamkara-Kaustubha* of Kavikarnapura, etc. The *Chhandomanjari* of Gangadas is the best metrical work in Sanskrit.

Special mention must be made regarding our contribution to Sanskrit Biographical Literature. Headed by Murari Gupta and Kavikarnapura's *Chaitanya-Charitamrita*, this literature is really very rich in quality as well as quantity. Regarding our Kavya commentaries, *Bharata Mallika* is certainly the best. He excels Mallinath in his own way ; but it is only unfortunate that none of his commentaries except that on the *Bhattikavya* has as yet been published.

Sanskrit Grammar

The only Sanskrit Grammar for grammarians, and not for beginners, is the *Prayoga-ratnamala* of Purusottama and this work was composed by a Bengali scholar at Cooch Behar. It is absolutely undeniable, on the evidence of the MSS. materials in particular, that Bengal made the most substantial contributions to Sanskrit grammatical literature. Bengal is solely responsible for the gradual development of the Kalapa school, and she may really be very proud of her contribution to the gradual development of the Mugdhabodha school as well. Out of the fourteen important commentaries of the Mugdhabodha, thirteen were contributed by Bengal alone. The *Rasavati Vritti* by Kayastha Jumara Nandin on the Samkshiptasara Vyakarana and the Nyasa commentary of Jinendrabuddhi on the *Kashika Vritti* of Vamana and Jayaditya exhibit the real brain-power of Bengali scholars.

Smriti

Our earliest Smarta is Gautama the Sutrakara. Navya-smriti flourished in our part of the country. Our Smartas headed by Brihaspati, Halayudha, Jimutavahana, Sulapani, Raghunandana, Govindananda, etc., are the best mediaeval India ever produced. Regarding the Prachina-Smriti, Kulluka Bhatta of Bengal is regarded to be the best commentator on the Manavadharma-Sastra. Bengal may boast of more than 500 Smartas who have contributed substantially to Smriti Literature.

Purana and Jyotisa

In these two branches as well, we have contributed not a little. Raghavananda Chakrabarti, Rajnarayan Vidyabhusana, Gauda Bhattacharya, Chiranjiva Bhattacharya and many others of Bengal are regarded as leading Jyotishins.

Indian Philosophy

Regarding Indian philosophy, it may be stated at the very outset that Navya Nyaya is the special forte of Bengal. Besides this, Bengal contributed most substantially to Uttaramimamsa, Purvamimamsa, Samkhya and Vaisesika as well. Sridhara, Bhavadeva Bhatta and Madhusudan Sarasvati of Bengal—to mention only a few—are rightly acclaimed as some of the most outstanding figures in the whole range of Indian philosophy.

Ayurveda

Bengal has not produced Charaka and Susruta but their best commentators flourished in Bengal. Madhavakara, Vijaya Rakshita, Srikantha Datta, Bhattara Harichandra, Chakrapanidatta, etc., are the greatest authorities on our Ayurvedic Science and they all flourished in Bengal. The importance of Chakradatta, Vangasena and Madhava-Nidana can hardly be overrated.

Sutrakara Palakapya, the greatest authority on Hasty-ayurveda, flourished in Bengal.

Regarding musical science, the *Ragamala* and the Sanskrit commentary of the Bengali work *Padamritasamudra* may be acclaimed as important contributions of Bengal to this subject.

It is now high time to make a thorough and systematic investigation into the contributions of Bengal to Sanskrit literature. Right-thinking Bengalees must realise that they have not only been pioneers in many branches of Sanskrit learning but also contributed most substantially to a number of them and not a little to almost all the branches. Educational authorities of Bengal today must, therefore, devise ways and means for the continuation of the same tradition in our part of the country.

AMERICA DELIVERS THE GOODS

By PROBODH CHANDRA BANDYOPADHYAYA

INSULAR America stepped out before the world during the clash of arms and became possibly amazed at its dormant resources. She was the Allies' hope in the war and she has now much material reason for hope in the future. America's prodigious production landed first at the North African deserts had changed the course of the war and a recent 'Atlantic' report of the Middle East says, the call of the desert has become strong within them (a new generation of pioneers heading not towards west but east). American business has suddenly become acutely conscious of the Middle East. It is the call of the desert in which have been discovered fabulous deposits of oil. It is the romance of a market left intact in the war-ravaged world. Arab countries are hungry for American goods. The prolific and tantalising shipments of these goods for use of the American personnel have shown what amenities people should have. Tractors, agricultural machinery and fertilizers are naturally in heavy demand in an area that lives by agriculture. The climate claims refrigeration and air-conditioning. The Egyptian air-lines want planes, and Palestinian industry is desperately in need of machinery. Private automobiles which have undergone normal usage—there has been no rationing of petrol—are in demand for replacement. To name a few lesser items, radios, household electrical appliances, office equipment, paint, fountain pens, lighters, lipsticks and insecticides are the things the Middle East is looking for early delivery from America. This is a random list given by the *Atlantic Observer*.

Britain has not been able to promise early attention to these demands of an uncertain market. Britain has known the oil dividends but Arab countries have had very few demands for the general necessities of life. They lived a different life in the deserts. But the army camps have infiltrated new ideas.

While the beginning of this year found the U.S. Committee for Economic Development proudly estimating that 52,000,000 Americans have been back to civilian jobs with only 2 000,000 unemployed and that reconversion is 90 per cent complete in many parts of the country, the Leader of the British House of Commons, Herbert Morrison, was possibly bewildered and declared:

"We have not properly got used to (place) and often have to think twice when an automobile in low gear makes a noise like a siren . . . We still can't afford to light show windows at night or allow electricity to be used for advertising signs."

But American enthusiasm has its brakes. There are the sterling bloc restrictions but this barrier cannot but last for a short term. The long-term impediment is the low economic level of the countries. The people are unable to earn sufficient dollar exchange for the goods they want to purchase. Iran and Saudi Arabia are only free from exchange controls. Syria and Lebanon are under French dollar pool. Palestine, Trans-Jordan are British mandates and Egypt, Anglo-Egyptian Sudan and Iraq have sterling backing in international transactions. The Middle East market has always accounted for only a small proportion of Britain's export trade, because it was not in a position to pay for all that it should need. And when the sterling restrictions will be abolished, it is estimated that the Middle Eastern countries will be actually left with less dollar exchange than they are at present receiving from London. Granting of credit facilities will be no solution. The exporter will, of course, get paid but out of the pocket of the American tax-payer. There is no immediate possibility of increasing imports to United States to balance the United States exports. The present ratio is 1 : 3. Even then, Westinghouse, the electrical manufacturer, has created an import department and other concerns are opening offices to explore what items could be marketed more extensively in America. In order to balance the ratio, the dollar must be earned by the people and the only course is to employ the natives of the soil in industries and projects to be financed by U.S. businessmen.

American oil holdings in the Middle East are virtually in the development stage. In Iraq, the Americans have substantial interests in the oil-fields and the oil concession in Bahrein is all American, and Aramco (American Arabian Oil Company) owns the sole right to exploit the enormous oil resources of Saudi Arabia. Americans will set up refineries in Tripoli. Local labour and materials will be used for construction works and then the wages will also aid the purchasing power of the people.

Then there are the America-owned international air lines. Lines will pass through the Middle East. The U.S. Air Transport Command in fulfilment of wartime duties has finished primary work for opening up the Middle East to commercial aviation. The travel lines will be another potential source of dollar exchange for the area in the form of expenditures on construction work, wages to local labour and a new avenue, namely, expanded tourist trade. The Egyptian air line, the Misr Airways Corporation is likely to secure the monopoly right to pick up and land intermediate traffic—passengers from Cairo to Jerusalem, for example, but the overwhelming air superiority of U.S. will give her a sort of monopoly for traffic in the sky.

American Banks instead of going *via* British Banks to handle their Middle East business, are opening their own agencies. Idle American capital will be soon invested in sound indigenous concerns which will buy equipment in America and may serve as a channel for import of raw or half-processed materials. This lesson they appear to have learnt from the British merchants.

And this is the Middle East business and the background of the wire-pullings in the political doldrum in that area. Syria and Lebanon have now long U.S. envoy plenipotentiaries and other apparently diplomatic relations established meanwhile have not yet become news. Potsdam decided to make German foreign properties available for reparations and at the same time to ensure that such concealed interests as the I. G. Farbenundustire cannot later serve as a source of new aggression. But the authority of Russell Nixon, acting U.S. member of the German external property Commission, the U.S. State department, had tried to exclude the Russian from search and seizure in South-East Europe, the area specified to her, to exempt all Western Hemisphere including Argentine from the plan to seize German assets, to be lukewarm in its demands against neutrals, notably Spain. Four years of efforts to destroy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

German interests in Latin America have met with best results in two countries, Brazil and Mexico, and worst in Argentine. 'Legal' grounds have stood in support of the State Department's slow movement. From Sweden has come demands for "satisfactory legal claims." These German assets with great potential energy for production are estimated at $5 billion. U.S. State Department says they amount to $1½ billion. America expands in the Middle East and hopes to get a good slice of the German resources still thriving for recovery from the shock of the war and giving full employment to the people.

CHANHU-DARO EXCAVATIONS, 1935-36

By G. F. LAKHANI, B.A. (Bom.), Dip., in Ed., Ph.D. (Edin.)

The excavations made at Mohenjo-Daro in Sind, twenty years ago, had revolutionised the ancient history of India. We came to know for the first time that prior to the coming in of the Aryans after 2000 B.C., India was not inhabited by wild people, but there flourished an advanced civilization on the banks of the Indus, which has come to be known as Indus Valley Civilization or Harappa Culture. But the intervening period of nearly 1000 years in the Indian history, (C. 2500 to 1500 B.C.) between the Indus Valley civilization and the coming in of the Aryans, has up till recently remained a mystery. No doubt the archaeologist's spade can throw a great light on this period, but unfortunately further excavations have not been undertaken on a large scale.

During 1935-36, however, Dr. Ernest Mackey, an eminent American archaeologist, already known to the Indian public as author of *The Indus Civilization*, with the permission of the Government of India, carried out some excavations at Chanhu-Daro in Sind, on behalf of the American school of Indic and Iranian studies and the Boston Museum of Fine Arts. Dr. Mackey's expedition was the first American archaeological expedition to India. The results of his work are embodied in the book which bears the same name which has been given to this article.

The Site

Chanhu-Daro which has not been fully excavated so far, lies a little over half a mile south of the modern village of Jamal Kirio near the town of Sakrand in Nawabshah District. The mounds are three in number and cover an area of 9 acres though their extent is considerably greater beneath the alluvium. They lie on the east bank of the Indus which flows at a distance of 12 miles now, although there is an ancient river-bed only 3 miles away. Mohenjo-Daro is situated on the west bank of the river and is 80 miles to the north-west of Chanhu-Daro. Thus 5000 years ago, both sides of the river harboured a civilization which has stirred the imagination of people all over the world.

The Jhangar and Jhukar Cultures

The largest and the loftiest mound at Chanhu-Daro has been excavated up to 17 feet and altogether four occupations have been unearthed. The uppermost stratum revealed hand-made pottery, made by some primitive wandering Gypsy community at an uncertain date. It was similar to the one found by Mr. Majumdar at Jhangar (43 miles, north-west of Chanhu-Daro) before. The second stratum revealed what has come to be called "Jhukar Culture," after the village of Jhukar near the town of Larkana in Sind where pottery similar to one found at this level at Chanhu, was first discovered. The third and the fourth occupations were similar to the Harappa Culture. In order to test what might be revealed at a still lower level, a large pit was dug in the side of the mound that had partly been cleared, till water level had been reached. In addition to the four occupations already referred to, three more occupations were revealed and according to Dr. Mackey "it appears not unlikely that the lowest will prove on further examination to antedate the earliest occupations reached at Mohenjo-Daro." It was also found that it was due to the floods that the towns had been deserted.

The people responsible for the Jhangar and Jhukar cultures were alien to those of the Harappa culture and to one another. The discovery of the former two cultures has been hailed as "a first step towards bridging the gap (C 2500-1500 B.C.) in the history of India before the coming of the Aryans."

Jhukar Culture

The people of the Jhukar culture arrived soon after the site was deserted by those of the Harappa Culture and they in turn had to leave the town as it was threatened by the river. It appears that these people entered India through north-west and wares similar to theirs have been found in Baluchistan. Among the things found are pottery, steel amulets and other handicrafts. As regards their houses, they were built of burnt bricks or matting.

Harappa Culture

It appears that during the Harappa period, Chanhu-Daro was a great bead-manufacturing centre. A large number of them in all stages of manufacture, and varying from the agate and carnelian nodules to completed beads are to be found there. Some of the beads found are exceedingly small; some of them when kept end to end run 40 to an inch. Their holes are so tiny that they could only have been threaded on a hair. It is a marvel how these beads were made.

Other articles found in abundance are toys, e.g. fairly decorated pottery rattles, whistles shaped like hens, model carts of pottery of various shapes with humped oxen that drew them, etc. Two charming carts discovered are not very different from those used in India today. Like beads the carts are so common that it appears that the city not only satisfied the needs of Mohenjo-Daro and the area round about but used them for export also.

Chanhu-Daro was favourably situated for trade both by sea and land. It lay close to the once important

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trade-route across the Khirthar Range only 37 miles away from the mound, very near to the modern town of Sehwan, to Baluchistan and it is quite reasonable to assume that the products went that way. The discovery of beads similar to those found in Chanhu-Daro, in Ur, Kish and other Sumerian towns, but in very small numbers, also suggests that they were exported there from the Indus Valley.

Other interesting articles found in plenty were copper and bronze objects, *e.g.*, utensils, adzes, aces, knives, chisels, daggers, hair-pins, razors and some female figurines. Quite a large number of weights which had been locally made, have been found. They have the same ratios as the weights at Mohenjo-Daro and Harappa.

The sanitation of the town was as good as at Mohenjo-Daro. Houses which were strongly built had a well-planned system of latrines, bath-rooms and drains made out of pottery drain pipes. At the second Harappa level from the top a "hammam" or bath with a hypocaust beneath and a row of five openings has been discovered.

The absence of war-like weapons or any fortifications shows that like the people of Mohenjo-Daro, the people lived in peace with one another and with their neighbours. Their chief enemy then, as now with the Sindhis, was the changing river which turned out people from their hearths and homes several times and ultimately from the site itself.

The people of Chanhu-Daro were not so well-off as at Mohenjo-Daro ; they had also less of leisure. Whilst at Mohenjo-Daro, a large number of gamesmen and dice have been discovered. their number is very small at Chanhu-Daro.

The discovery of a number of Kohl-jars containing paint for the eyes throws some sidelight on the customs of these people. Kohl was possibly used by both sexes for its medicinal and other qualities. There were also little pottery toilet stands with four short legs for feminine use. Among the other articles of toilet found was "a small stick of rouge with one end levelled by much use." An Indian maiden, 5000 years ago, was not after all an altogether different creature from her counterpart in the Indus Valley today.

———:O:———

GORAKHNATH AND HIS PHILOSOPHY

By Prof. R. L. AHUJA, M.A.

Gorakhnath, the legendary Yogi-Saint of the Punjab, whom tradition has described as the saviour of Puran Bhagat, has only recently been rescued from medieval obscurity by historical and religious research. His personality is still wrapped up in a shroud of medieval mystery, and it has, so far, been found next to impossible to discover any facts of his life or to ascertain even approximately the date of his birth or death. He was a commoner, it is said, who sprang from a low class and inherited the disabilities of his birth, but by sheer force of high character and Yogic culture he stirred up the masses from "Assam to Baluchistan and from Ujjain to Afghanistan and beyond." While Briggs, and Cunningham on the authority of Mohsin Fani, the author of *Dabistan,* believe that Gorakhnath flourished not later than 1200 A.D. or probably a century earlier, Dr. Mohan Singh, for better and more convincing reasons, asserts that the Yogi-Saint lived and preached in the 9th and 10th centuries, probably during the early days of the Pratihara paramountcy (725). According to the latter authority, he was a Punjabi ; or at least, he adopted the Punjab, the land of his beloved followers, as his domicile and left it the mantle of his Yoga as well as his ashes and bones.

Gorakhnath came in the wake of Sri Sankaracharya (688-728), about half a century later, more as a follower, than a pioneer, but a follower who had the genius of a pioneer. Both were opposed to the cold formalism and ritualism of the Brahmans ; both stood for the revival of Upanishadic Hinduism among the ascetic orders ; both were learned enthusiasts and adept Yogis ; both were like Charakas, the wandering scholars and educators, mentioned in Brihad Upanishad, (III, 3, 1) and Shata-Bra., (VI, 2, 4, 3). Both were peripatetic teachers of religion, who in those days of slow means of communication, travelled in every part of India preaching their missions through the length and breadth of the country ; both organised, after the manner of the Buddha, bands of monks and founded monasteries thus establishing their missions on a firm footing. Both were philosophers and poets, mystics and religious reformers, though Sankar was a great master logician and a great controversialist. Both laid emphasis on knowledge, contemplation and devotion as the three essentials of self-realization, though Gorakhnath regarded Yoga also as the fourth *sine qua non* of the attainment. But while Sankar was a Nambudri Brahman of Malabar, born among the aristocracy of Sanskrit learning and culture, and addressed himself to the learned audiences of highly educated Brahmans throughout the country using Sanskrit as the vehicle of his sermons and religious propaganda, Gorakhnath, who had risen from the ranks, made his appeal to the masses and spoke to them in Devnagari, the *lingua franca* of those days, in accents which came home to their business and bosom. Following, further, the ancient tradition rather rigidly, Sankar excluded women from the body of his ordained monks, but Gorakhnath followed the Buddhist tradition and admitted widows or wives of his followers as female Yogis though they were not allowed to live in monasteries.

The teachings of Gorakhnath were simpler and easier to follow than the abstract philosophy of Vedanta and had, therefore, a greater hold on the masses, particularly on the Buddhists of Nepal and the common people of the north-west, wherein he won an extraordinary degree of popularity. Numerous shrines of Gorakhnath and the saints of several orders organised under his aegis are found in the Punjab hills ; in Kangra, Chamba and in the Submontane districts of Hoshiarpur, Gurdaspur, Rawalpindi, and Sialkot. He is believed to have been born somewhere in this hilly region, and to have lived for some time at Peshawar. He is, further, believed to have been buried at Tilla,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

25 miles north-west of the Jhelum on the highest point of an isolated line of hills in the Salt Range tract in the Punjab. There is a very old monastery there, the head of which is in possession of a deed granted by Akbar confirming earlier grants. The Nath Yogis of the monastery trace their spiritual lineage direct to Gorakhnath himself.

Gorakhnath himself spent twelve years at the feet of his Guru Machhendar Nath and drank deep at the fountain of the religion and philosophy of ages and emerged out as a great Yogi, and mystic. In the words of Cunningham, Gorakhnath taught that mental abstraction would etheralize the body of even the lowliest and gradually unite his spirit with the all-pervading soul of the world. He popularized Yoga among the masses as well as among the kings.

Gorakhnath attempted poetry in several metres and ragas as well as in *Gorakh Boddh* or "the Enlightenment of Gorakh." His literary influence was tremendous and a popular *genre* of Yoga literature both in Sanskrit and Hindi appeared in the wake of his *Boddh*. With its thought and imagery, reminiscent of Upanishads, and its vocabulary and verse forms, the *Gorakh Boddh* created a vogue and a tradition which continued down to comparatively modern times. The book is in the form of a dialogue between Gorakhnath and his Guru, which reminds one of similar dialogues in Upanishads and of the dialogue between Arjuna and Krishna. Even Guru Nanak, eight centuries later, came under its magic influence. The Guru visited Achal Vatala, in Gurdaspur district, where he had a long conversation with the followers of the Siddh order of Gorakhnath. In his *Siddh Goshta*, *Ratan Mala* and *Pran Sangli*, the influence of the *Gorakh Boddh* is clearly evident. Other books of the *genre* are *Kabir-Gorakh Gosht*, *Kabir-Ramanand Gosht*, *Ismail Boddh*, *Kabir-Boddh*, *Bhatrihari Gorakh Samvad*, *Dattatreya-Gorakh Samvad*, *Siva-Gorakh Samvad* and *Ramanand-Gorakh Samvad*.

His Philosophy

The philosophy of Gorakhnath is fairly comprehensive and a happy reconciliation of realism and idealism. Its approach to reality is characteristically simple and plain. It says, to begin with, that, apart from the bare needs of existence to keep body and soul together, flesh has its own appetites or cravings, the gratification of which brings it pleasures or comforts. It seeks, therefore, the means of their gratification by employing the mind and several senses or organs of the body as its willing agents or tools. Asceticism of Gorakhnath, like that of the Buddha or Sankaracharya, consisted in the first place, in denying the flesh these appetites and cravings, which, by their very nature, are distracting and as such make contemplation or meditation rather difficult. The gratification of these cravings, moreover, affects the body and the mind in such a way as to render them addicts which are no longer capable of any intellectual or spiritual attainments :

(*i*) "From the desire rose hunger ; from hunger, food ; from food, sleep ; from sleep, death."—*G. B.*, 84.

(*ii*) "The man of the world lies low engrossed in the objects of the senses, while the Sannyasi rises high in the unknowable fortress." Gorakh says, "O ascetic, I have attained consciousness of the formless one."—*Ragu Bhairau.*

Further :

(*iii*) "He is a *sati* who conquers death ; he is a *jati* who keeps ever young and retains the innocence of childhood in himself ; I eat easily digestible food and in little quantity," says Gorakh, "such is my body."—*Saloku.*

Food or diet forms an essential part of a person's physical or mental health and determines either. The control of body and mind must therefore begin with the control of diet :

(*iv*) "By eating sour things one loses one's vital elan ; by eating spicy things one grows old ; by eating sweet things various diseases crop up." Gorakh says, "O Siddhas, you should eat and drink properly and with great discrimination."—*Rag.*

Continence is another form of self-restraint and a very important means of attaining strength of character.

(*v*) "The tree by the river bank and the man by the side of woman, verily they cannot expect to last long. The restlessness, the unfettered activity of mind causes the back-bone to wear away and the body perishes.—*Saloku in Jog Ram Kali.*

This mortification of flesh consists not merely in a negative act of self-denial or self-suppression but is chiefly concerned with the very elimination of such desires, and could be attempted in two ways. Asceticism advocated from the very outset an attitude of negation which regarded the world with its events and objects as petty, low, ephemeral and vain, when contrasted with the eternal verities of life. The two cardinal virtues of this asceticism were, therefore, one positive, *contentment* and one negative, *non-attachment* :

(*vi*) "Contentment is the posture ; contemplation is the knowledge ; he (the young disciple) should try to rise above his physical being in his meditation."—*G. B.*, 98.

But the question is how to have contentment and contemplation and meditation that go beyond the physical, and further, how to bend the mind towards them.

(*vii*) "Contentment comes from fearlessness ; contemplation, from avoidance of attachment ; he (the young disciple) should meditate within his body to rise above the body ; by turning to the Guru one can bend one's mind to them."—*G. B.*, 100.

Further :

(*viii*) "By becoming unattached one can become fearless."—*G. B.*, 101.

Lastly,

(*ix*) "The mind is the Yogi ; let him live in self-transcendence ; the great elixir will come to him and he will enjoy all his pleasures ; the word of the Guru secures the patience to suffer pain."—*G. B.*, 126.

The other measure to eliminate desires is the adoption of a mode of life, a regimen of daily routine which subjected the body as well as the mind to a rigorous course of discipline. The ideal which was placed before the young disciple was :

(*x*) "Let the unattached live at the monastery or be on the road, resting in the shadow of the trees ; he should renounce lust, anger, greed, attachment, and the great illusion of the world, that is, *Kam*, *Krodh*, *Lobh*, *Moha* and *Ahankar* ; he should hold the converse with himself and contemplate the unknowable, he should eat little and sleep less."—*G. B.*, 2.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The second aspect of Gorakhnath's asceticism is secure, and holds a very great place, indeed. It is Yoga, the end of which is consciousness, awakening or self-realisation.

(*xi*) "He that thinks that the highest goal is the control of breath ; he, that tries to know reality without self-realisation, are both ignorant persons."—*Saloku in Jog Ram Kali*, (III, IV).

On the other hand :

(*xii*) "The consciousness of awakening is the home of knowledge; and realisation is the door of the void."

(*xiii*) "When I got news of the home, the palace, I succeeded in purifying and controlling the vital air. I acquired the vision. I realised, my wanderings ceased. Without the medium of the idol I glimpsed the unseeable, the unknowable, the unmeasurable as the Formless One."—*Ragu Bhairau*, (III).

Yoga is another name for mental discipline or a metaphysical type of intellectual culture.

It has four elements : word, attention, discrimination and contemplation :

(*xiv*) (*a*) "Word is the Guru, attention is the disciple."—*G. B.*, 8.

"By another metaphor : Knowledge is the lamp; the word is the light ; contentment is the wick in which oil resides."—*G. B.* 122.

Or

"The word is the seed, intellect is the soil, attention is ears ; discrimination is the eyes ; light is liberation ; refulgence, the salvation."—*Ibid.*, 10.

(*b*) "One (the young disciple), should sit, walk, speak and meet others with his *attention* controlled."—*Ibid.*, 92.

But what is attention ? And what is discrimination ? And their functions ?

(*c*) "Right awareness is attention ; independence is discrimination."—*Ibid.*, 94.

(*d*) "*Attention* can hear without ears ; discrimination can see without eyes ; and contemplation can tread without feet."—*Ibid.*, 96.

Next to 'word' comes 'attention' or concentration which is a difficult process to acquire.

(*e*) "Patience goes slow ; evil desire goes fast ; attention revolves and truth is the find."—*Ibid.*, 124.

The young person who enters the trance or Samadhi has to encounter disturbance from without and evil desires from within ; and according to Gorakhnath :

(*f*) "He gets rid of disturbance through the air."—*Ibid.*, 68.

(*g*) "Through the recitation of the unrecited and unrecitable the mind gets rid of evil desires."—*Ibid.*, 102.

The Yogi, according to Gorakhnath, is one :

(*h*) "Who controls the mind and the air, who does not allow himself to be soiled by evil or lose himself through pride of virtue."—*Ibid.*, 132.

Meditation serves further a two-fold function :

(*i*) "Meditation is purification ; right thinking or discrimination leads to right action.—*Ibid.*, 102.

(*j*) "He, that burns away his body," says Gorakhnath, "without the fire of meditation, is an ignoramus !"

'Discrimination' or 'right thinking' born of independence, is necessary for right conduct which is based on the correct estimate of the values of life and on the correct estimate of the motives and conduct of others : Pride perverts judgment of oneself, and ignorance, that of others :

(*k*) "He, who calls himself a Yogi just because he has left his home and hearth;

"He, who does not look into the inner objective of a person ;

"He, who calls himself a knower just because he has read a few books ;

"He, who calls himself great, because he has accumulated wealth ;

"He who thinks the poor fit for enslavement ;

"He, who gives up a part of his possessions and proudly calls himself a charitable person ;

"He, who calls a man old just because his body has worn out or has suffered from age ;

"He, who claims greatness, because of his strong body ;

"He, who travels the path of discipleship with a delicate constitution ;

"He, who does not seek to realise the supreme Truth, Essence ;

"He, who has resorted to silence not because he has become intoxicated with true knowledge :—verily, says Gorakh, all these err in judgment and live in self-deception.

—*Saloku in Jog Ram Kali.*

Speaking of *pilgrimage* to holy places Gorakhnath said :

(*l*) "Wander not, O Siddha, to other places ; within the body resides the Essence, the Truth, seek the one who speaks.

. . . . . .

Gorakhnath was a mystic too. He interpreted the physical and metaphysical verities in a picturesque style which was later popularised by Guru Nanak :

(*i*) "As oil is in seed ; fire is in wood ; odour is in flower ; so does the spirit reside in the body. —*G. B.*, 54.

(*ii*) "The void is the temple ; the word (*Shabda*) is the door, the light is the idol ; the flame is the Unfathomable."—*G. B.*, 120.

Speaking of the self, Gorakhnath says :

(*iii*) "The air-self comes and goes ; the mind-self is absorbed in the void, and the knowledge-self resides unchanged in three worlds."—*Ibid.* 128.

This is a metaphysical expression ; the one that follows is mystical :

(*iv*) "The moon is the mind ; the sun is the air ; in the void Time plays on the musical instrument (*tur*) ; and in the house of knowledge the five elements reside in equipoise."—*Ibid.*, 16.

And the vision of the Yogi is transcendental *par excellence* :

"Inside the Topmost, the music sounds ; age and disease and death have vanished ; with the Void has the cord of music got linked ; the Truth, the Reality, the Essence is now revealed as the sounding of the Divine Music !"

SOME ASPECTS OF SOCIO-ECONOMIC CONSEQUENCES OF THE BENGAL FAMINE OF 1943

By Prof. KARUNAMOY MUKERJEE, M.A.

The famine took a heavy toll of human lives. The writer's Sample Survey in five villages* in Bengal records high figures of mortality. The all-district (Faridpur) figuers of birth and death in 1943 are also very revealing. The vital statistics covering the district for five years from 1939 onwards are given below :—

Vital Statistics of the District of Faridpur

Year	Total birth	Total death	Deaths due to—			
			Malaria	Cholera	Small pox	Other causes
1939	80214	48311	13763	1984	244	20848
1940	87514	59080	20965	1622	83	20907
1941	80175	70374	29443	5483	370	20536
1942	64107	80174	36674	8322	97	23044
1943	53786	100117	50532	7778	586	31409

From the above table, it is clear that from 1941 onwards the birth rate continued to fall, and it reached the bottom in 1943, when, however, the death rate mounted the highest. Barring the figures of death from Cholera in 1942, the famine year of 1943 reveals the highest number of deaths due to each one of the causes of mortality in all other years from 1939 onwards.

In the five sample villages, the writer covered 592 families consisting of 2915 members in all, who were alive on the 1st of January, 1943. In course of one year, *i.e.*, by the 1st January, 1944, as many as 446 persons died. They constitute 15·3 per cent of pre-famine total. Death occurred in 268 out of the said number of families, *i.e.*, 592. Of 446 persons dead, 256 died of starvation pure and simple ; this means that they died through gradual devitalisation due to continuous fasting over months. While they lived, some of them had their negligible share of that filthy substance called *Gruel* ; but a temporary and inadequate sustenance was more often sought to be derived from wild fruits and roots and weeds and all sorts of non-edibles which, however, in the end, were all exhausted. This is how 256 persons were *starved* to death after growing emaciated and rickety. Then, again, 146 persons died of various diseases resulting from starvation, in addition to two cases of suicide apparently caused by pangs of starvation. The diseases that were commonly associated with fasting were Dropsy, Beri-beri, Diarrhoea, Dysentery, etc. The following chart will indicate the causes of deaths :

Starvation	256
Dropsy or Beri-beri	74
Diarrhoea and Dysentery	50
Cholera and Small-pox	20
Suicide	2
Total	402

There were, however, 44 more deaths in the year caused by natural diseases, that is, diseases not so peculiarly associated with famine and fasting as in the cases enumerated above. The classification of these diseases is as follows :

Pneumonia	1
Kal'a Zar	6
Malaria	21
Others	16
Total	44

Regarding desertion, it may be observed that in some cases some individuals singly deserted the native village obviously in search of food elsewhere, the family being left behind. In other cases the whole family as a unit trekked away after some of its members had died and when all attempts at procuring food failed through. So, in all, 204 persons deserted their native villages and had not returned when the enquiry was held during the summer of 1944. What is more striking is that in course of one year (1.1.43 to 1.1.44), 90 families out of a total of 592 were wiped off. This was due to the death as well as desertion resulting from famine conditions. Of these families that got extinct, 20 per cent were agricultural and 80 per cent non-agricultural. It may, therefore, be said that in those five villages, the rural landless labour class suffered more than the peasants.

Disease and Epidemic

The district-wise figures as well as the figures obtained through our Sample Survey serve to record an abnormal state of public health in Faridpur in the famine year of 1943. The epidemic of Malaria broke out towards the end of the year ; other diseases overtook the people right from the middle of the year. The following figures would indicate that Malaria and Kal'azar cases continued to increase in the year following the famine, while Cholera attack subsided remarkably in 1944 :

Number of Cholera attack and of Malaria and Kal'azar cases treated in Treatment Centres and Charitable Dispensaries in Faridpur District

Year	Cases of Cholera attack	Death from Cholera	Total cases treated :	
			Malaria	Kal'azar
1939	2841	1984	78147	7044
1940	2460	1571	147302	8535
1941	9920	5394	342057	15615
1942	9600	8117	272112	13260
1943	10083	7479	338754	9689
1944	1948	1803	956205	13251

In some of the annual reports of the District Board Charitable Dispensaries, the following overall stereotyped remark is entered :

"Malaria was prevalent in 1942, 1943 and 1944, probably due to insufficient drainage as a result of silting up of rivers and accumulation of water-hyacinth in this area."

* Dist. Faridpur, Thana Kotwali, Villages—(1) Tambulkhana, (2) Betberia, (3) Rankali, (4) Gredo, (5) Ishan-Gopalpur.

Digitized by Arya Samaj Foundation Chennai and eGangotri

This explanation can be only partially true. No official, full explanation is available. An expert medical opinion reveals that previous to 1941 (since when Malaria became very widespread), microscopic examination of blood gave out only 5 per cent to 10 per cent Malignant Tertian (M.T.) Malaria parasites; the rest consisted of the Benign Tertian type. But during 1941 to 1943 period it was found that there were 50 per cent to 60 per cent M.T. infection due to reasons unknown (for, how Anopheles bred and spread was not investigated). This, its was contended, was the reason for the sudden increase in the number of Malarial patients. As to the very high figures of Malaria in 1944, they may be taken to indicate the after-math of the famine, the inevitable result of famine-time devitalisation.

In the villages of our Sample, the diseases common in 1943 have been already named. More specifically, these are (1) Starvation fever, *i.e.*, fever due to unusual fasting and malnutrition, (2) Dropsy or Beri-beri, (3) Diarrhoea, (4) Dysentery, (5) Scabies, (6) Cholera and (7) Small-pox. The last two did not break out in any virulent epidemic form in the villages of our Sample, although, of course, they covered 4·4 per cent of the total deaths (excluding deaths from natural causes). All told, 2583 persons or 88·6 per cent of the total population on the 1st January, 1943, fell ill during 1943, only 332 or 11·4 per cent remaining free from illness. The period of illness for each of those falling ill was counted in course of the investigation. The total period equalled 15948½ months for all the persons that fell ill in 1943. Thus the average period of illness for each of the sick persons consisted of 6·1 months as against the normal period of probably two months in the pre-famine malarial season per annum.

Economic Loss Sustained

(*a*) *House and Movable Property* : In January 1943, all the 592 families had their own houses,—some made of corrugated tins, most others made of mud and straw; only 6 families had brick-built houses. By January, 1944, 103 families or 17·4 per cent of the total, were turned homeless. Out of the total of 592 families, 30 sold out the whole of their houses; 73 families entirely lost their houses due partly to selling and partly to inclemency of weather coupled with lack of repair-work. Apart from these 73 families, 6 others also sold part of their houses without, however, being rendered homeless. The total number of rooms or sheds sold was 141 against a total cash value of Rs. 5668-8 in the place of an estimated fair market price amounting to Rs. 14170. Again, nearly 99 per cent of the families that had any movable property, sold or mortgaged either the whole or part of their bed-steads, utensils, ornaments and other items. The total cash-value realised and the probable fair price of the things sold, came up to Rs. 7320 and Rs. 22000 respectively. The economic loss in this connection is measurable by Rs. 14680, which amount was presumably pocketed by middlemen or buyers themselves. The number of families that were entirely stripped of all their movable property was 576 out of 592. No account, of land sale or mortgage or lease, etc., is given here.

(*b*) *Live-stock* : The cultivators' plight will, however, be somewhat realised from a study of the following figures: On the 1st of January, 1943, all the 592 families taken together, had 647 bullocks, 361 cows, 235 calves and 9 horses; during the next twelve months 288 bullocks, 128 cows, 71 calves and 6 horses were sold out with a view to tide over the distress. The respective sale prices were Rs. 10462, Rs. 4128, Rs. 945 and Rs. 141. The prevailing market prices ought to have fetched in all, Rs. 25000, Rs. 12000, Rs. 2700 and Rs. 400 respectively. Their eagerness to sell coupled with a weak bargaining power obviously made them agree to accept such low prices.

(*c*) *Plough and Plough-cattle* : Out of 592 families, nearly 398 families lived on agriculture. Altogether, they owned 282 wooden ploughs of which 42 were sold in 1943 at a price of Rs. 49-8. Thus at the beginning of 1944, there were 240 ploughs against a total number of 359 bullocks, which showed a shortage of 121 bullocks, the ratio being 2 bullocks to each plough. It was found that the shortage was sought to be partially covered by utilising milch-cows for tilling the land in the spring of 1944. Milch-cows, however, were no equal substitutes for bullocks. The result of such an experiment (at least in 16 families) proved disastrous on two counts: first, the tilling of the land was perfunctory, as by habit or strength or stamina, the cow is usually no match for a bullock for purposes of cultivation; the prospect of a good harvest could, therefore, naturally be put at a discount. Secondly, under the severe strain of pulling the plough, harrow, etc., milch-cows, so employed, ceased to produce milk as before. This partly aggravated the growing scarcity of milk in those areas in 1944.

(*d*) *Indebtedness* : Debts incurred by the villagers in 1943 will not be discussed here in all their details. Suffice it to say that their indebtedness mounted high in the year under review. The figures of total debts contracted in 1943 solely to cope with wants came up to Rs. 28510 in all. All the 592 families did not, of course, have to borrow. Still, however, averaging on the basis of the total number of families, the amount of debts per family was equal to Rs. 48-8. The burden per each indebted family obviously, therefore, was much heavier than Rs. 48-8 can indicate. In January, 1943, the total debts for all the families stood at Rs. 20951. Thus, indebtedness more than doubled itself in 1943, and that due to the famine alone. Rent and tax dues for 1943 have not been included in the figures given in this paragraph.

Economic Condition of the People as a Whole

Major J. C. Jack, I.C.S., Settlement Officer of Faridpur between 1906-1910, who conducted economic investigation on an extecsive scale covering the whole of the district, has, while discussing the results of his inquiries in his book called the *Economic Life of a Bengal District*, classified families according to their condition as it appeared to the naked eye of the investigator. The classification was a four-fold one and was as follows: (1) In comfort, (2) Below comfort, (3) Above starvation and (4) In starvation. To the naked eye of the present investigator it appeared that out of 592 families surveyed, 28 were in comfort, 35 below comfort, 102 above starvation and 427 in starvation, the families that were wiped off having been placed in the last category.

The standard adopted by Mr. Jack was this: *Comfort*, according to him, implied a condition in which the material necessities of life could be fully satisfied.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

According to this standard, none of the 592 families, except six, could be said to be living in *Comfort* in 1943 or in 1944. Still, however, the number of families found to be living in *Comfort* has been quoted as 28, simply because the present investigator, in making the classification, had to bear in mind the then background, namely, the devastating famine. Thus, a condition in which the material necessities of life could be "fully" satisfied would be impossible of attainment during abnormal times like the year 1943 or 1944. Therefore, a certain leniency had to be observed for placing such families in the class of *comfort* as had their material necessities a little more than "barely" satisfied.

Starvation, want or indigence, according to Mr. Jack, implied a condition in which, the family had "just sufficient to keep itself alive and no more." If one were to follow this definition of starvation, then, in that case, not less than 90 per cent of the families should have been classed as living in starvation. For, about 90 per cent of the families in the villages surveyed were, even as late as June 1944 (not to speak of the year 1943 as a whole), unable to make their both ends meet. But, the figure for *starvation* families has been quoted so low, namely, 427 or 72·1 per cent. This is done in view of the fact that *Starvation* of Jack's definition and starvation that was actually experienced by the people in 1943 in those villages, meant altogether different things: the latter meant actual fasting or living on roots and weeds and other things that can never be normally edible. When, therefore, it was found that a family was getting at least one meal a day (which was, of course, not "just sufficient" to keep itself "alive", but "just sufficient" to make it steadily get "ruined"), it was placed in the class of "starvation".

According to Mr. Jack, *below comfort* implied a state in which the income and material condition approximated more nearly to those of families living in comfort than to those families living in indigence; and *above starvation, want, or indigence,* implied a condition in which the income and material condition approximated more nearly to those families living in *starvation, want or indigence.*

The findings of this writer reveal the following percentages of classifications on the basis of the above definitions:

(i)	In comfort	4·7 p.c.
(ii)	Below comfort	5·9 p.c.
(iii)	Above starvation (want)	17·22 p.c.
(iv)	In starvation (want)	72·1 p.c.

The respective percentages calculated by Mr. Jack were 49·5, 28·5, 18 and 4 for cultivators, and 47, 27, 20·4 and 5·6 for non-cultivators.

Combining the percentage classifications made by the present writer and by Mr. Jack with those made by the new Settlement Officer (1940-42) in Faridpur district, we get the following table:

Classifications	1904-1910 Mr. Jack (cultivators)	New Settlement (1940-42)	1943-44 Present writer
(i) In comfort	49·5%	27·8%	4·7%
(ii) Below comfort	28·5%	28·2%	5·9%
(iii) Above starvation (want)	18·0%	20·6%	17·22%
(iv) In starvation (want)	4·0%	23·4%	72·1%

From the above table it becomes obvious that the economic condition of the people in the district of Faridpur has progressively deteriorated during the last 40 years. But one thing should be borne in mind, the result of the present writer's investigations as given in the table above, concerns only 592 families inhabiting 5 villages in the district, which may or may not be true of the district as a whole during the famine year of 1943. This remains to be examined subsequently.

———:O:———

FOLK-SONGS OF DANGI BHILS

By Dr. D. P. KHANAPURKAR, M.A., Ph.D.

The wild, hilly country of Dangs shelters "the most savage of the Bheel clans, the Bheelas of Dangs."[1] Though situated between the fertile lands of Gujarat and hills of Khandesh, "the Dangi Bheels are the most uncivilized of all the wild tribes."[2] Due to isolation from the modern influences, "the Dangees represent an unadulterated race."[3]

In spite of the above characteristics, the Dangi Bhils have at least one thing in common with other aboriginal tribes. And that is their love for dancing and singing. They are so much fond of it that they spend most of their moonlit nights, dancing to the tune of *kahali* and *tur*. It is a grand sight to see them keeping tune to the *kahali* music, bending forward and backward, while wheeling round the players in an irregular circle. In some of the special dances like *Thakrya* dance, performed in the monsoon the dancers imitate the movements of a peacock that dances with joy at the sight of rain. At each refrain the dances move forward and then backward like a peacock, while the players sing:

(1)

Deathless is your body, oh, peacock!
I bow to Mother Earth.
Deathless is your body, oh, peacock!
I bow to Mother cow.
Deathless is your body, oh, peacock!
I bow to Mother Kanasari (corn-spirit).
Deathless is your body, oh, peacock!
I bow to the Sun and Moon.
Deathless is your body, oh, peacock!
I bow to the shining stars.
Deathless is your body, oh, peacock!
I bow to the Morning Star.
Deathless is your body, oh, peacock!
I bow to the clouds.
Deathless is your body, oh, peacock!
I bow to Hanaman.
Deathless is your body, oh, peacock!
I bow to Buffalo-god.
Deathless is your body, oh, peacock!
I bow to father and mother.

The Bhils love to recite with zeal and passion, the deeds of valour, performed by their forefathers, who were branded as dacoits and plunderers by the government. Their exploits have found a place of honour in the hearts of Bhils. They never miss an opportunity of singing such ballads, when an occasion arises. One such ballad is given below :

(2)

Oh, boy, Cimana !
Where were you born ?
You were born in Kocargaon village.
The boy Cimana wanders
Like a blazing torch.
He started a rebellion
On the boundary of Bhendavad village.
Bhendavad was encircled,
The sowcar was caught,
On his chest was placed the foot.
His nose was cut and ears too.
Sahib came to know.
He took out troops
Cimana ran away
To the corner of Bhendabad village he went.
He became friendly with the *Patil* of Bhendabad
Cimana was enticed with wine.
The Sahib came
The house was encircled.
The boy Cimana was caught
Handcuffs were put on him
His feet were tied
He was taken to Nasik city
And shut up in the prison.
The Sahib imprisoned
The boy Cimana
But a day arose
When Cimana fled away.

It is not always that the Bhils are serious. They have got a lighter vein too, though it becomes pungent, when describing an officer who is always a calamity to them. They express their open disdain for the officers, even in the songs :

(3)

Patil has gone to office
He has gone to office.
In comes a government servant
He demands a fowl immediately
He turns arrogant and abusive.
Patil is not at home
He has gone to office.
In comes the government officer
He demands the rations immediately
He becomes arrogant and abusive.
Patil is not at home
He has gone to office.

(4)

Build a bungalow !
Oh, sepoy ! Build a bungalow for me.
Make windows in that bungalow
Oh, sepoy ! Make windows for me.
Make a passage for air
Oh, sepoy ! make a passage for air.
Place a chair in the bungalow
Oh, sepoy ! place a chair for me.
Bring cup and saucer in the bungalow
Oh, sepoy ! bring a cup and saucer for me
Have a mirror in the bungalow
Oh, sepoy ! have a mirror for me.
Let me see my face (in the mirror)
Oh, sepoy ! let me see my beautiful face.
And all the above things are executed by the sepoy, at the cost of poor Bhils. It is really they who carry out the orders of the Sahib through the agency of the sepoy.

The following song enumearates the divisions of Dangs and the important persons staying therein :

(5)

Whose abode is *Zavada* division ?
Zavada division is the tax-collector's abode.
Whose abode is *Vaghai* division ?
Vaghai division is the Dewan's abode.
Whose abode is *Pipri* division ?
Pipri division is the Chief's abode.
Whose abode is *Ahawa* division ?
Ahawa division is Sahib's abode.

The songs play an important part in social functions like marriages. No Bhil marriage procession wends its way through the forest without the accompaniment of songs. No marriage is celebrated without the songs in which the bride's party demands something, and is courteously refused with humorous excuses by the bridegroom's party. The following songs are a few specimens :

(6)

Beat the drum
Let somebody beat the drum.
Tie the queen-brand rupee in your torn cloth.
We shall walk a couple of miles, a couple of miles.
We shall wed the daughter of a big man.
Beat the drum
Do beat the drum.

(7)

In the home of *Ambadya,*
Pipal tree makes a rustling noise.
Go, tell your father and mother
To build a bungalow.
Whom does it become ?
It becomes officers.
In the house of *Ambadya*
Pipal tree makes a rustling noise.
Tell *Rajabhau,* to decorate the village
Tell *Rajabhau,* to get ready *kahali* (band).
Whom does it become ?
It becomes big men and officers.
In the house of *Ambadya*
Pipal tree makes a rustling noise.

(8)

Why is there not a car
In the bridegroom's house ?
There was a car
But he got tired of it.
Why is there not a horse
In the bridegroom's house ?
There was a horse
But a sepoy with impudence took it away.

(9)

Oh, brother ! why am I married
In a stranger's land ?
You are married in a stranger's land
Because there are nice *sarees.*
Oh, mother ! why am I married
In a stranger's land ?
You are married in a stranger's land
Because there is a big house.
Oh, sister-in-law, why am I married
In a stranger's land ?
You are married in a stranger's land
Because there are vast fields.

The first two songs, given above, describe a marriage procession and reception to the bridal party. The third song offers excuses for not possessing a car and a horse. The last song points out motives, underlying the selection of a bridegroom, belonging to a distant place.

These are but a few specimens from a vast store of folk-songs current among the Dangi Bhils.

ARE THE BENGALI HINDUS GETTING POORER ?—YES

An Analysis of the Number of Assembly Voters During 1920-1945

By JATINDRA MOHAN DATTA, M.Sc., F.R.S.S.

The main qualifications of electors or voters in Bengal for the territorial constituencies of the Indian Legislative Assembly (under the Montague Constitution) are the payment of cesses or union-rates or municipal taxes of Rs. 60 in Calcutta, Rs. 10 in Howrah, Rs. 5 in other municipalities, Rs. 5 as union-rates or cesses ; or assessment to income-tax on not less than Rs. 5,000.*

* See *Indian Legislative Assembly Electoral Rules*, Schedule II, Part III—Bengal.

These qualifications are much higher than those of the (now defunct) Bengal Legislative Council under the 1919 Reforms. The corresponding qualifications for the *old* Bengal Legislative Council were payment of Rs. 24 in Calcutta, Rs. 3 in Howrah, Re. 1-8 as in other municipalities as municipal taxes ; and Rs. 2 as union-rates and payment of income-tax on any amount.

The Southborough Committee on Franchise estimated in February 1919, the number of the Bengal Council electorate to be as follows (see p. 55) :

Urban	
Non-Muhammadan (11 seats)	88,000
Muhammadan (6 seats)	18,000
Rural	
Non-Muhammadan (30 seats)	700,000
Muhammadan (28 seats)	422,000
	12,28,000

The non-Muhammadan electorate was estimated to reach a total of 788,000 ; and the Muhammadan a total of 440,000. The actual numbers of electors as registered on the rolls were, however, as follows :

In	*Non-Muhammadan Males*	*Females*	*Total*
1920	541,189	..	..
1923	557,914	..	..
1926	593,414	29,803	623,217
1929	647,001	32,087	679,088
In	*Muhammadan Males*	*Females*	*Total*
1920	465,127	..	..
1923	463 386	..	..
1926	522,892	7.103	529,995
1929	628,560	8,884	637,444

It will thus be seen that the estimate made by the Southborough Franchise Committee was a slight *under*-estimate (about 6 per cent) as regards Muhammadans ; and a considerable *over*-estimate (about 4 per cent) as regards non-Muhammadans (mainly Hindus). The estimate of 788,000 was not even reached ten years later even by including the newly enfranchised female voters.

The relative growth of the two electorates is best expressed as increase or decrease in percentages over the figures of the previous roll. They are as follows :

	Non-Muhammadan Males	*Females*	*Muhammadan Males*	*Females*
1920-23	+3·1	..	—0·4	..
1923-26	+6·2	..	+13·0	..
1926-29	+9·1	+7·7	+20·3	+25·3
Total	+19·6	+7·7	+35·3	+25·3

The growth of the Indian Legislative Assembly electorate in absolute numbers during the last 25 years from 1920 to 1945 has been as follows :

In	*Non-Muhammadan Males*	*Females*	*Total*
1920	128,004	..	..
1923	134,877	..	..
1926	145,147	12,319	157,466
1929	157,361	13,436	170,797
1934	163,585	16,107	179,692
1945	172,772	17,774	190,546
In	*Muhammadan Males*	*Females*	*Total*
1920	53,935	..	..
1923	45,401	..	..
1926	60,844	2,447	63,291
1929	73,396	2,854	76,250
1934	86,223	4,094	90,317
1945	135,750	8,059	143,809

The comparative growth of the two electorates is expressed in the table below as increase or decrease in percentages over the figures of the previous electoral roll :

During	*Non-Muhammadan Males*	*Females*	*Muhammadan Males*	*Females*
1920-23	+5·4	..	—15·9	..
1923-26	+7·6	..	+36·0	..
1926-29	+8·4	+3·0	+20·6	+5·4
1929-34	+4·0	+20·0	+17·6	+45·5
1934-45	+5·6	+9·9	+57·4	+96·8
Total	+35·0	+44·8	+152·2	+235·8

Part of the increase noticed is due to the growth of the respective populations of the non-Muhammadans and the Muhammadans. Let us try to eliminate the effect of this first. The actual population strengths of the non-Muhammadans and the Muhammadans at the different censuses during the relevant period have been as follows :

Census year	Bengal *Non-Muhammadans*	*Muhammadans*
1921	21,492,900	25,210,802
1931	22,617,924	27,497,624
1941	27,301,091	33,005,434

From the above absolute figures we calculate the percentage increases :

During	*Persentage increase of— Non-Muhammadans*	*Muhammadans*
1921-31	5·1	9·1
1931-41	20·8	20·0
1921-41	26·9	30·9

As the electoral rolls are based on payments of qualifying taxes "during and for the previous year," there is a time lag between the electoral roll and the actual population. Thus the electoral roll of 1920 represents the state affairs as on the 31st March, 1919.†

On account of the high mortality during the Influenza epidemics of 1918 and 1919 there was actual decrease of population in some large areas. So we

†See in this connection the writer's *Use of Vote*, pp. 5-6.

Digitized by Arya Samaj Foundation Chennai and eGangotri

would assume that the increase of population since 1919 is better represented by the rate of increase during 1921-31 than by that during 1911-21. The over-all increase or decrease during 1911-21 is made up of (*i*) increase during 1911-17, (*ii*) decrease during 1918 and 1919, and (*iii*) increase during 1919-21. We would further assume that during 1941 and 1942 the rate of increase has been the same as between 1931 and 1941 ; and that during 1943 and 1944 there has been no growth of population. This later assumption is in favour of the Muhammadans. For according to the Bengal Government publication *A Plea for the Rehabilitation of Bengal's Rural and Industrial Economy 1944* of the fourteen subdivisions *very severely affected* by famine, as many as twelve are Muhammadan majority (over 70 per cent) ones ; of the twenty-five *severely affected* by famine, eighteen are Muhammadan majority ones. The number of famine deaths amongst the Muhammadans is, it is feared, *thrice* that of the Hindus. There have been numerous famine deaths and deaths due to after-effects of famine ; but we believe that among the economic class from which the Indian Assembly electors are recruited there have been fewer deaths. For our limited present purpose we, therefore, take that the normal growth of population during the years 1943 and 1944 has been completely neutralised by the effects of famine. Of course, this is an assumption, but an assumption which is largely in favour of the Muhammadans.

The estimated population growth of the Non-Muhammadans and the Muhammadans is, therefore, estimated to be as is shown in the table below.

The method of estimate is this : During 1921-1931, the Non-Muhammadans have increased by 5·1 per cent; so each year they have increased by 0·5 per cent and during the *three* years 1919-1922 they must have increased by 1·5 per cent on the assumption that the rate of growth after the Influenza epidemic is the same as that recorded between 1921 and 1931. Similarly for the periods 1922-25 and 1925-28. The growth during 1928-33 has been estimated in two stages ; that during 1928-31 is taken to be $3 \times 0{\cdot}5\% = 1{\cdot}5$ per cent, and that during 1931-33 is taken to be $2 \times 20{\cdot}8/10\% = 2 \times 2{\cdot}1\% = 4{\cdot}2\%$; and the total is shown as $(1{\cdot}5 + 4{\cdot}2) = 5{\cdot}7\%$. The growth during 1933-1944 also has been estimated in two stages : that during 1933-1942 is taken as $9 \times 20{\cdot}8/10 = 9 \times 2{\cdot}1 = 18{\cdot}9$ or 18·7 more accurately ; and that during 1943 and 1944 as *zero* on the assumptions we have made.

Similarly the rate of growth of the Muhammadans has been estimated for the inter-electoral rolls revision periods. As there is time-lag of about one year between the electoral roll and the population, we have taken the population as it was one year earlier than the roll and estimated the population growth accordingly.

During	*Estimated growth of*—	
	Non-Muhammadans	*Muhammadans*
1919-22	1·5%	2·7%
1922-25	1·5%	2·7%
1925-28	1·5%	2·7%
1928-33	5·7%	6·7%
1933-44	18·7%	18·0%
1919-44	31·2%	35·0%

Deducting these percentages from the percentage growth of the respective electorates, we get the following ing figures of "Net growth" of the electorates due to causes economic and otherwise other than that due to mere population growth. The electorates shown below are the *old* Bengal Legislative Council and the Indian Legislative Assembly electorates.

COUNCIL

Percentage growth of the Non-Muhammadan

	Electorate		Population	Net growth	
	Male	Female		Male	Female
1920-23	+3·1	..	1·5	+1·6	..
1923-26	+6·2	..	1·5	+4·7	..
1926-29	+9·1	+7·7	1·5	+7·6	+6·2
1920-29	+19·6	—	4·5	+15·1	—
1926-29	—	+7·7	1·5	—	+6·2

Percentage growth of the Muhammadan

	Electorate		Population	Net growth	
	Male	Female		Male	Female
1920-23	−0·4	..	2·7	−3·1	..
1923-26	+13·0	..	2·7	+10·3	..
1926-29	+20·3	+25·3	2·7	+17·6	+22·6
1920-29	+35·3	—	8·1	+27·2	—
1926-29	—	+25·3	2·7	—	+22·6

ASSEMBLY

Percentage growth of the Non-Muhammadan

	Electorate		Population	Net growth	
	Male	Female		Male	Female
1920-23	+5·4	..	1·5	+3·9	..
1923-26	+7·6	..	1·5	+6·1	..
1926-29	+8·4	+3·0	1·5	+6·9	+1·5
1929-34	+4·0	+20·0	5·7	−1·7	+14·3
1934-45	+5·6	+9·9	18·7	−13·1	−8·8
1920-45	+35·0	—	31·2	+3·8	—
1926-45	—	+44·8	28·2	—	+16·6

Percentage growth of the Muhammadan

	Electorate		Population	Net growth	
	Male	Female		Male	Female
1920-23	−15·9	..	2·7	−18·6	..
1923-26	+36·0	..	2·7	+33·3	..
1926-29	+20·6	+5·4	2·7	+17·9	+2·7
1929-34	+17·6	+45·5	6·7	+10·9	+38·8
1934-45	+57·4	−96·8	18·0	+39·4	+78·8
1920-45	+152·2	—	+35·0	+117·2	—
1926-45	—	+235·8	+29·5	—	+206·3

If we now consider the figures of "Net growth" of the two electorates obtained after eliminating the growth to the increase of respective populations, we find that between 1920 and 1929 the Non-Muhammadan electorates for both the old Bengal Council and the Assembly have been *increasing* ; and that after 1929 the Assembly electorate (the figures for the Council are wanting) has been *decreasing*. In the case of the Muhammadans, barring the first period of 1920-23, the electorates have been *increasing* and increasing *at a much greater rate* than the corresponding Non-Muhammadan ones.

Let us analyse the figures of "Net Growth" further. The following tables are self-explanatory :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Period	Net growth of Muhammadans: Males	Net growth of Muhammadans: Females	Net growth of Non-Muhammadans: Males	Net growth of Non-Muhammadans: Females	Advantage (+), or disadvantage (—) in favour of Muhammadans: Males	Advantage (+), or disadvantage (—) in favour of Muhammadans: Females	Rate per year: Male	Rate per year: Female
Council								
1920-23	—3·1	..	+1·6	..	—4·7	..	—1·6	..
1923-26	+10·3	..	+4·7	..	+5·6	..	+1·9	..
1926-29	+17·6	+22·6	+7·6	+6·2	+10·0	+16·4	+3·3	+5·5
1920-29	+27·2		+15·1		+12·1		+1·3	+1·4
Assembly								
1920-23	—18·6	..	+3·9	..	—22·5	..	—7·9	..
1923-26	+33·3	..	+6·1	..	+27·2	..	+9·1	..
1926-29	+17·9	+2·7	+6·9	+1·5	+11·0	+1·2	+3·7	+0·4
1929-34	+10·9	+38·8	—1·7	+14·3	+12·6	+24·5	+2·5	+4·9
1934-45	+39·4	+78·8	—13·1	—8·8	+52·5	+87·6	+4·8	+11·0
1920-45	+117·2	—	+3·8	—	+113·4	—	+4·5	—
1926-45	—	+206·3	—	+16·6	—	+189·7	—	+10·0

The decrease in the number of Muhammadan electors in 1923, both to the Council and to the Indian Assembly, cannot now be accounted for. The Bengal Government in their Memorandum before the Simon Commission could not account for this decrease. Assuming, therefore, the decrease to have been *accidental*, if we combine the figures for the periods 1920-23 and 1923-26 we may get a truer perspective. We then get the following table :

Rate of Advantage +, or Disadvantage —, per year in favour of the Muhammadans over the Non-Muhammadans in—

Period	Council: Males	Council: Females	Assembly: Males	Assembly: Females
1920-26	+0·2	..	+0·8	..
1926-29	+3·3	+5·5	+3·7	+0·4
1929-34	..	..	+2·5	+4·9
1934-45	..	..	+4·8	+11·0

A consideration of the above table shows that the advantage is not only in favour of the Muhammadans, but that it is increasing rapidly. Not only more Muhammadans are becoming rich or attaining such economic status as to come within the electoral ambit or either the Council or Assembly as the case may be, but the *pace* of becoming rich is increasing rapidly. The slight decrease in the pace between 1929 and 1934 may be accounted for by the world-wide economic depression of the early thirties. The above table only proves that the Muhammadans are becoming richer ; it does not demonstrate that the Non-Muhammadans, mostly Hindus, are becoming poorer.

A closer study, however, of the last but one table shows that the "Net growth" of the non-Muhammadans had been *positive* for both Males and Females up to 1929. In between 1929 and 1934, it became *negative* for non-Muhammadan Males only ; and in the period 1934-1945, it became so for both Males and Females. This means that the non-Muhammadans, mostly Hindus, are becoming poorer. We give below a portion of the above table, and calculate the rate of becoming poorer or richer :

Period	Net growth of Non-Muhammadans: Males	Net growth of Non-Muhammadans: Females	Rate per year: Males	Rate per year: Females
1920-23	+3·9	..	+1·3	..
1923-26	+6·1	..	+2·0	..
1926-29	+6·9	+1·5	+2·3	+0·5
1929-34	—1·7	+14·3	—0·3	+2·9
1934-45	—13·1	—8·8	—1·2	—0·8

The figures obtained for 'rate per year' prove that the non-Muhammadans, mostly Hindus, are not only becoming *poorer*, but the pace of becoming *poorer* has increased from —0·3 to —1·2 *i.e.*, the pace has increased *four* times. The sudden rise in the case of females between 1929 and 1934 may be explained by *benami* transfers in favour of females during the world-wide economic depression of the early thirties. On the other hand, the decrease among the Males cannot be explained by any hypothesis of *benami* transfers from males to females. The total non-Muhammadan electorate in 1929 was 1,70,797 and in 1934 it was 1,79,692—an increase of 5·3 per cent. During the same period the population has increased by 5·7 per cent ; so the over-all "Net Growth" for both males and females is —0·4 per cent. The Non-Muhammadans as a whole must have been becoming poorer during this period.

In our above discussion we have used the term Non-Muhammadan as synonymous with the Hindus ; as the Hindus form 97 per cent of the non-Muhammadans.

The advantage which both the Muhammadan males and females have over the non-Muhammadans in the matter of "Net Growth" is generally greater in the case of females. At first sight it may seem that this is due to their more liberal law of succession ; for among the Muhammadans both sons and daughters inherit, while among the Hindus sons only inherit. But we are inclined to think that is due to something else than that difference between the two laws of succession. Of course we do not want to be dogmatic in this matter. Analysing the statistics given above, we get the following table :

Proportion of female voters to every 1,000 male voters

Year	Non-Muhammadan	Muhammadan	Difference
Council			
1926	50·2	13·6	36·6
1929	49·6	14·1	35·5
	—1·2%	+1·0%	44·8
Assembly			
1926	84·9	40·1	46·5
1929	85·9	39·1	50·6
1934	98·2	59·3	42·4
1945	102·7		
	+17·8%	+19·2%	

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ordinarily one would expect the proportion of females to increase with the lower property qualifications. But the facts are otherwise. For among the non-Muhammadans, mostly Hindus, the proportion is about 50 per mille for the Council and 85 for the Assembly level; among the Muhammadans, the corresponding proportions are 14 and 40 respectively. The difference between the two levels seems to be constant for each of the communities as is illustrated by the following figures:

Proportion of female voters to every 1,000 male voters

	Non-Muhammadans		
	Council	*Assembly*	*Difference*
Year			
1926	50·2	84·9	34·7
1929	49·6	85·6	36·0
	Muhammadans		
	Council	*Assembly*	*Difference*
Year			
1926	13·6	40·1	26·5
1929	14·1	39·1	25·0

At the higher level the proportion is greater among both the non-Muhammadans and the Muhammadans. This is not likely to be due to any peculiarity in their laws of succession.

On the other hand, the differences in proportion between the two communities as noticed in the last but one table, both at the Council and at the Assembly levels, tend to remain more or less constant. This fact points out that there is something basically different between the two communities. The increase in the proportion of female voters to male voters during the last 20 years from 1926 to 1945 in the two communities is almost the same, being 17·8 per cent in the case of the Hindus and 19·8 per cent in the case of the Muhammadans. To what this is due we do not know. Is it due to the increasing habit of holding property *benami* in the name of female members of the family to avoid the operation of income-tax and other taxing statutes? Is it due to avoid the operation of insolvency laws? This point requires closer and further investigation.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

—EDITOR, *The Modern Review*.

ENGLISH

AHIMSA or SHRIMAN-MOHAN-GITA: *By Prof. Indra, M.A. The Minerva Bookshop, Anarkali, Lahore. 1945. Pp. viii + 166.*

Prof. Indra has chosen a distinctly original method for the presentation of Gandhiji's teachings. He has taken the Bhagavadgita as his model, and composed his book in the form of an imaginary discourse between Rabindranath and Andrews on the one hand, and Rajendarprasad and Gandhiji on the other. The Sanskrit verses are arranged in eighteen chapters; and the subjects dealt with are Non-Violence, Truth, Fasting, The Conception of God, Alleviation of the Misery of Ignorance, Disease, Poverty, Untouchability and so forth. The last chapter contains an exposition of Gandhiji's ideal social order or Ramrajya. The Sanskrit used is simple, and can be easily committed to memory by the average reader. The English rendering by Surendra Devi is clear and accurate.

The essentials of Gandhiji's teachings have been, on the whole, chosen with discrimination; but there are just a few points to which the reviewer feels called upon to draw the attention of the author by way of suggestion. Where Gandhiji speaks, the phrase *Sri Bhagabanukacha* has been used. Now this jars upon one's ears; and would hurt Gandhiji himself more than anyone else. It would have been much better to use the simple proper name.

In describing the technique of non-co-operation, it has been rightly said that Satyagraha becomes fully successful when a change of heart has been effected in the adversary (VI-8). But it has also been said elsewhere that the purpose of withdrawing co-operation from one's adversary is to punish him, or treat him with contempt. 'The boycott of an aggressor is the severest silent punishment to him,' (III-14), or The meanest of aggressors can be struck down on earth by the application of non-violence' (III-17). We believe there must be something wrong here. As far as we have understood Gandhiji, his call is for non-co-operation with evil and not with the evil-doer; and the purpose of the non-co-operation is to evoke the best in him so that the Satyagraha may afterwards give him his hearty co-operation. He, therefore, refuses to be party to a wrong, and bears with fortitude all the punishment which the evil-doer can today shower upon him in his blindness. His object is never to 'punish' the wrong-doer into submission by the withdrawal of co-operation.

Then again, with regard to the economics of self-sufficiency, it has been stated that villages should be self-sufficient and self-reliant. That is all right; but with regard to India Gandhiji has been made to say, 'Taking in view the plenty of my country, I see no justification for its dependence on other countries.' (XIV-33). So far as we are aware, Gandhiji has never thought in terms of narrow nationalism. Of course, he wants every small economic unit to be self-sufficient with regard to the production of the vital necessaries of life; but he also knows, and approves of the fact, that the world is progressing towards voluntary interdependence between state and state. Only, that interdependence, in order to be really beneficial, should be based, not on force, but on willing effort of units which all enjoy an equal status. Gandhiji has never thought of the welfare of India apart from the welfare of humanity taken as a whole; and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

he has claimed that India should be free so that she can place her moral, as well as *material*, resources at the service of humanity. Now, that is a part of his teachings which needs more emphasis than is usually accorded to it.

We sincerely hope that the learned author will take into consideration these two suggestions when a revision of the work is duly called for. We feel however confident that the book will form a very good and useful introduction to the ideas of Gandhiji. Some improvement is called for with regard to the printing in future.

THE PARDHANS OF THE UPPER NARBADA VALLEY : *By Shamrao Hivale. With a Foreword by Verrier Elwin. Published for "Man in India" by Geoffrey Cumberlege at the Oxford University Press, 1946. Pp. xvi + 230. Twelve plates and twenty-seven figures. Price Rs. 12-8.*

By profession, the Pardhans are story-tellers, musicians and entertainers, who live in a sort of symbiotic relationship with the Gonds of Central India. Shri Shamrao Hivale has spent thirteen years of his life among them, not as a disinterested observer, but as one who has shared the life of the tribe fully, employing his talents in order to understand them as well as help them towards a better life as far as possible. This has given him an insight which is denied to more formal students of Anthropology.

The book is divided into eight chapters bearing the following titles : Introduction, The Tribal Organization of the Pardhans, The Pardhan at Home, The Pardhan's Profession, The Pardhan as Priest and Prophet, The Pardhan as Lover and Poet, The Pardhan in Life and Death, The Pardhan and his Family. Students of Cultural Anthropology may be inclined to complain that sufficient details are not available in the book for use in connection with problems of Diffusion, Contact or Historical Reconstruction, although such details are not wanting where the author deals with social organization or ceremonial life. But they should not overlook the fact that the present book belongs to the new school in which cultural facts are examined principally in their functional relation to the physical and spiritual needs of a people. From that point of view, Hivale's book will undoubtedly remain a very valuable addition to current ethnographic literature in India.

NIRMAL KUMAR BOSE

SARAT CHANDRA : MAN AND ARTIST : *By Dr. S. C. Sen Gupta. Published by Saraswaty Library, C 18/19 College Street Market, Calcutta. Price Rs. 5.*

It is an exceedingly well-written book presenting a homogeneous account of Sarat Chandra's life and work and weaving in the appropriate biographical details to show their mutual interactions.

The arrangement of the shorter stories is both original and illuminating, bringing out clearly the subtler variations from story to story in the treatment of the one major problem, the retarding factors at work in some of them and the degree of success attained as the author succumbed to or triumphed over these obstacles. I particularly appreciate author's observations on *Grihadaha*, embodying Sarat Chandra's half-bewildered perception of the last enigma in feminine love, the last web of self-delusive sophistry in the soul of a woman who does not know herself aright. To my mind, however, it seems that the balance between Mahim and Suresh has hardly been held even, Achala's relations with Suresh never reach even momentary stage of stable equilibrium, never the phase of acceptance ; it has always been represented as an uneasy and unreconciled surrender to necessity. The real reason why she kept house with Suresh seems to be her conviction of the inexorability of Mahim's character. She never shows any interest in the domestic arrangements and seems not to have a single taste in common with her partner ; not a word of tenderness escapes her lips even on the eve of the last farewell. Her one night's surrender may have been facilitated by an unconscious core of desire and acquiescence ; but it was not led up to by a latent streak of tenderness in their mutual relations. Excepting for one brief moment when Achala asks Suresh to take her away from her village home, she never made any positive appeal to him. The source of her love for Mahim remains equally inexplicable, a parade of her fidelity to the plighted word is the motive force that binds them together. All these thoughts generate in me a doubt that Achala was incapable of love, her rigidity and undemonstrativeness had a strange spell of fascination, but her life with either Mahim or Suresh is curiously bleak and negative. Her wavering suspense between her two lovers and her failure to respond to either seems more the result of a core of icy frigidity in her soul which not even the most impetuous tenderness can touch and melt than that of genuine passion poised so precariously between opposite attractions as to condemn itself to frustration and immobility.

The concluding chapter is also very well-written, as also the interpretation of the character of Jibananda in its curious combination of unbridled sexuality and philosophic detachment. He seems to me to have a strange affinity to Villon, the rascally poet of the French Renaissance, with the difference that Jibananda is a philosopher and not an artist. The present work is a notable contribution to our study and appreciation of Sarat Chandra and some of Dr. Sen Gupta's conclusion will rank as definitive judgments.

SRIKUMAR BANERJI

POST-WAR BANKING IN INDIA AND A CASE FOR LEGISLATION : *By Mr. R. M. Mitra, B.A., A.I.I.B. Published by Messrs. A. Mukherjee & Co., Calcutta. Pages 172. Price Rs. 3-8.*

The author has discussed the growth of banking in England and has compared it with the slow growth of banking in this country under peculiar circumstances. Influence of war and inflation on Indian Banking have also been dealt with. The author admits that legislation is necessary to give right direction to the banking business that has made some headway during recent years, particularly during the war. But the proposed Bill for controlling Banking business does not get full support from him and he gives his reasons for it. He apprehends that unless the proposed bill is sufficiently altered in certain respects, the banking of the country is likely to suffer rather than flourish. He is an advocate of the principles of guidance, warning and protection so far as the banking legislation is concerned and as such he considers the proposed Bill as a bit too stiff. While admitting some of the contentions of the author, we have to opine that time has come for a drastic legislation to regulate banking and to protect the depositors' money and any further delay is fraught with consequences which no lover of the country's prosperity through Banking will desire. Both the Bank Bills, 1944 and 1946, are given in the Appendices with observations of the author for certain modifications.

This is a timely publication which contains the views of a practical banker, who is not only acquainted with the routine of day to day administration but has an outlook for the future.

A. B. DUTTA

THOUGHTS ON THE GREAT QUEST : *By Heramba Ch. Maitra. Published by Asok Kumar Maitra 65, Harrison Road, Calcutta. To be had of General Printers and Publishers, Ltd., 119, Dhurrumtolla Street, Calcutta. Cloth-bound. Pp. 121. Price Rs. 5.*

This is a collection of essays written and published by Principal Heramba Chandra Maitra at different times. This is the first collection and is necessarily small. The publisher holds out the hope that a second and fuller collection of Principal Maitra's writings will follow soon.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

As Principal and as professor, Maitra occupied a unique position in the academic world of his day. The present reviewer was one of his many pupils during the last decade of the present century and still remembers the great veneration with which Principal Maitra was looked upon by his pupils, his colleagues and the public at large. The integrity of his character, the high moral principles which he inculcated and followed in practice and his scrupulous and extensive scholarship won for him this high place in the educational world. Time has not abated the respect for him of those who ever came into personal contact with him.

The essays published here reveal the moral teacher in their author and show a religious fervour which was characteristic of him. But it is religion leavened with spiritual insight and philosophical acumen. Such a book will probably be a little out of tune with the type of literature that is flooding the market now. Yet it has a permanent value and deserves the attention of the thinking public and should be held in the same high esteem which its author enjoyed in his lifetime.

U. C. Bhattacharjee

STUDIES IN SRI AUROVINDO'S PHILOSOPHY: *By Dr. S. K. Maitra, M.A., Ph.D. Published by Benares Hindu University. Pp. 160. Price Rs. 3.*

The growing literature on Sri Aurovindo's Philosophy is a proof that it has caught the imagination, not only of the students of philosophy, but also of their professors. The book, under review, is a notable addition, and contains a series of six learned studies contributed to some leading periodicals by Dr. Maitra, who is the head of the department of philosophy in the Benares Hindu University. These studies faithfully interpret Sri Aurovindo's views on religion of the future, problem of evil, conception of intuition, prophet or the Superman and the status of man. The first study makes an interesting comparison between Aurovindo and Bergson.

The author is a staunch admirer of Sri Aurovindo; but his appreciation, we are afraid, lapses into exaggeration when he does not hesitate to call the celebrated yogi of Pondichery, the most creative thinker of the present-day East, as the latter, in Dr. Maitra's view, has the same prophetic vision like Manu, Yajnavalkya or Vyasa. Dr. Maitra further asserts that, if the bridge of thoughts and sighs, which spans the history of Aryan culture has its first arch in the Veda, it has its last in Sri Aurovindo's *Life Divine*. In this connection we are constrained to observe that one, having even a nodding acquaintance with the Vedic thought, will decline to express such an unrestrained appreciation. Dr. Maitra's assertion that Aurovindo's philosophy is in full accord with the Vedas and Upanishads is far from true ; for, he himself points out that in the former, matter as well as spirit are regarded as real. According to Aurovindo, even matter is Brahman. This doubtlessly shows that Aurovindo's philosophy has a definite pragmatic bent, in contradistinction to the Upanishadic thought which reveals the purest form of Brahmavada and the illusoriness of the sense-world.

Sri Aurovindo has been very unfair to Samkar when he remarks : "Samkar's wordless, inactive self and his *Maya* of many names and forms are equally disparate and irreconcilable entities." "The real monism, the real Advaita," reiterates Aurovindo "is that which admits all things as the one Brahman and does not seek to bisect Its existence into two incompatible entities, an eternal truth and an eternal falsehood, Brahman and not-Brahman, Self and not-Self, a real Self and an unreal, yet perpetual Maya." It is regretted that the Advaita is misunderstood as Mayavada by an original thinker like Aurovindo. We humbly submit that the Advaita is emphatically Brahmavada and it never teaches maya as an entity as Aurovindo wrongly thinks. According to Vedanta, the knower sees Brahman only, and not the mayik show as held by Goudapada. But to the ignorant, who do see the phenomenal appearance and not Brahman out of nescience, the theory of maya is advanced, not as an explanation, but as a statement of facts. This is admitted by Aurovindo's interpreters in a way when they say that Samkar's characteristic note is one-sided affirmation of the Spirit. We do not lag behind any of Aurovindo's admirers in genuine appreciation of Aurovindo and his original contribution to philosophical thought; but that does not deter us from pointing out the glaring limitations of his philosophy and his wide differences from Samkar, the foremost exponent of the Advaitavada. To a critical and unbiased student, Sri Aurovindo's philosophy is, at best, an amalgam of Indian and European thought with a distinct pragmatic leaning. In this age when world-thought tends to mingle together, it is a unique attempt at harmonisation.

Swami Jagadiswarananda

FAMOUS LETTERS & ULTIMATUMS TO THE BRITISH GOVERNMENT : *Edited and compiled by Durbab Singh. The Hero Publications, 6, Lower Mall, Lahore. Pp. 204. Price Rs. 3-12.*

This is a collection of seventeen famous letters written by our public men to different Viceroys and Governors, etc. It contains Tagore's letter to the Viceroy renouncing his Knighthood, Gandhi's open letter to Lord Reading, Syamaprasad's letter to the Governor, etc. The Editor, in short notes, has explained the background of each of the letters. This has enhanced the value of the collection many times. The printing and get-up is well.

PRINCIPLES AND PRACTICE OF AUDITING: *By R. B. Bose, M.A., B.Sc., B.Com. Published by A. Mukherjea and Co., 2, College Square, Calcutta. Pp. 167. Price Rs. 3-12.*

With the growing industrial development of India, joint-stock companies are going to play an important part; and auditing as a profession is becoming more and more important. This is a handy book containing all that an average Indian student should know on the subject from the very first principles right up to the implications of the Indian Companies Act. It should be in the hands of all students. One suggestion we have to make : the author should have given the references to various law reports in the Table of Legal decisions.

J. M. Datta

BENGALI

SASWATA PIPASA : *Published by Katyani Book Stall, 203 Cornwallis Street, Calcutta. Pp. 331. Price Rs. 4.*

MAYAJAL : *Published by Romesh Ghosal, 35 Badur Bagan Row, Calcutta. Pp. 260. Price Rs. 4.*

The two novels by Rampada Mukherji are taken together for review, as both of them form parts of the same story, the latter being complementary to the former.

The titles of the books signify respectively *The Eternal Thirst* and *The Bond of Delusion*, which bind us subtly to hold on to our everyday life with fond affection for mother Earth and to play our mortal parts well in our assigned spheres of life, not only ungrudgingly but cheerfully amidst the trials and tribulations of life, without any thought of escapism. If we read the story in this context, it will unfold itself in all its charm and beauty ; otherwise a casual reader may miss much of the inherent charm underlying the story, for he will find in it no grand romance of a love-story, no attempt at analysing or solving any social or political problems of life nor is there any artistic handling of the story so as to create tense dramatic situations or un-

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri

Digitized by Arya Samaj Foundation Chennai and eGangotri

solved problematic triangles, which are the general characteristics of a great novel. Still the two novels are classic in their own way, just as the *Pather Panchali* of another great novelist, Bibhuti Banerji, rightly claims to be one of the best novels in Bengali literature.

Regarding the particular aspect of the story, it depicts in *Saswata Pipasa* a vivid and glowing picture of the social life that existed in our Bengal village in the last decades of the nineteenth century. The simple joys and sorrows, the quiet and peaceful surroundings of village life, the unostentatious but intense life enjoyed by the villagers are portrayed with the minutest details and painted in a graceful halo of colour. With the beginning of the twentieth century the quiet and placid domestic and social life of the village is disturbed by the advent of new ideas and customs and the transition period ushering in the hectic days of Swadeshi movement spreading through the innermost recesses of the country is described in *Mayajal* skilfully, as reflected in the characters of the new generation.

The story has been narrated by the author picturesquely, characters are all drawn in a living manner and the style is limpid and delightful.

B. K. SEAL

HINDI

PRITAM KI GALI MEN : *By Rajaji Maharaj Gurdasram Sahab. Pustaka Bhandar, Patna. Pp. 80. Price Re. 1.*

This is a "litany" of love of the Lord consisting of thirty-one "stanzas." Though written in prose, they have the *passion* of poetry. The style has the vividness of the Vaishnavite singer-*cum*-saint of the Middle Ages. Love is luminosity of the soul,—this is the strain of the author's ecstatic song. *Pritam Ki Gali Men* is a mystical manual, which every devotee of the Divine would like to have on his shelf.

G. M.

RUPAYE KI KAHANI : *By D. D. Birla and P. N. Sinha. Published by Sasta Sahitya Mandal, New Delhi. Pp. 304. Price Rs. 2-8.*

This informative and interesting story of the Rupee, written in simple Hindi, is divided into two parts : the first written by Mr. Birla, deals with the various forms of currency, exchange, inflation, its value and devaluation, etc., and the other, written by Mr. Sinha, deals with the history and development of the currency-system. The book is ably written and is, perhaps, the first of its kind in Hindi and is useful equally for the layman as well as the professional.

M. S. SENGAR

MARATHI

RAJYOGINI : *By Purshuttam Mahadeva Vaidya. Navaras Karyalaya, Indore City. Pp. 76. Price Re. 1.*

This is a short play, in two Acts, dealing with the heroic deeds of the patriot-queen, Ahalyabai Holkar, of Indore, who is the heroine of every Hindu student of Indian history. It is replete with historical events (as against imaginations and inferences, as so often is the practice of some playwrights) and historionic effects. It can serve easily, therefore, the purpose of a primer in the passion and philosophy of patriotism, with its multicoloured skein of sentiments and sacrifice.

G. M.

KANNADA

BENDRE VANGMAYA DARSHANA : *Edited by H. G. Joshi Esq., B.A. (Hons.), Galgali. Published by Ramacharya Kakhandiki. Editor, "Nirbhaya," Jamkhandi. Pp. 4+2+89. Price Re. 1-4.*

DATTA SAHITYA : *Editor Shri Shimpi Linganna. Published by M. Gopal Krishna Rao of Kalyuga for Sadhana Press, Dharwar. Pp. 95. Price Re. 1-8.*

The two books under review are two laudable attempts at the critical and constructive appreciation of Mr. Bendre's poetical works and other literary productions. Shri Bendre by his unswerving loyalty and steadfast devotion to Kannada muse for over two decades has succeeded in carving out for himself a niche in the galaxy of the great. The Editors of the two booklets in question availed themselves of the occasion of Shri Bendre's fiftieth Birthday celebration to pay their humble tribute to the poet of their choice. Without putting forth any audacious and pretentious claim of having seen and presented all about Bendre, the Editors have done well in glancing over the few striking aspects of Bendre's works. Of the two books, the latter contains a more elaborate and detailed review of Shri Bendre's various literary productions. Pandit Keshava Sharma of Galgali, has given us a beautiful analysis of Bendre's poetic inspiration in Bendre's *Pratibhavilas*—an essay contributed by him to the *Bendre Vangmaya Darshana*. The books in question are indeed very helpful additions to the spate of critical reviews of Bendre's poetry that have appeared in recent weeks.

V. B. NAIK

GUJARATI

MADHUP : *By Raj Hans. Printed at the Raichura Golden Jubilee Printing Works, Baroda. 1944. Cloth-bound. Pp. 170. Price Rs. 3-4.*

Madhup has fought as a Lieutenant in the Indian Army in North Africa in Auchinlec's Army. He has returned to India on leave. His real name is Kirtu Kumar. As a Madhup (Bee), he has sucked the juice of many flowers, but a flower called Mrinalini makes him fall really in love. She tries her best to keep him at arm's length but at last succumbs. Their repartees are full of vigour. The whole atmosphere of the story is, however, unreal and the society amongst whom this love story is placed is something alien to the ordinary Hindu society, thoroughly Anglicised ; what else could there be when the characters are aristocrats and race-goers ?

NITYA PRIYA : *By Raj Hans, Printed at the Raichura Golden Jubilee Printing Works, Baroda. 1944. Cloth-bound. Illustrated. Pp. 196. Price Rs. 3.*

The friction as to the ideals of marriage, between old and new *i.e.*, East and West, is emphasised in this story by means of incidents which when stated plainly look very ugly. A girl marries a rich husband, so that her costly artistic tastes may be satisfied. After some years' happy married life, the husband meets with an accident resulting in loss of virility. The wife is yet young and beautiful. They, therefore, decide to go their own way, and as if, that was not enough, the husband acts as a pimp to his wife, so that her sex-hunger may be gratified. The wife too like a butterfly, flies from flower to flower promising to remain constant in love in her heart or mind to one, but allowing her body to be used by others too. As a contrast, another girl constant in love, both in body and mind, is presented who marries one of the lovers of the inconstant girl, and becomes happy. The stilted, artificial life led by these society people, is graphically described when the reader is allowed to glimpse into the bath-room of the unfaithful wife, a bath-room which is a thorough Anglicised contraption, and rarely to be found anywhere else except in the house of millionaires. The intimate knowledge shown by the author of the details of the life lived by the rich in Bombay at the Taj Mahal Hotel or on the Race-course, Bombay and Poona, or in places where they go for changes, Nasik or Deolali, strikes one to be almost first-hand.

THE MIRACLE MAN WITH UNRIVALLED POWER

India's Greatest Astrologer & Tantrik-Yogi

RAJ JYOTISHI, JYOTISH-SHIROMANI PANDIT RAMESH CHANDRA BHATTACHARYYA, JYOTISHARNAV, M.R.A.S. (London) of International fame, President—World-Renowned All-India Astrological & Astronomical Society. (ESTD. 1907 A.D.)

He is the only Astrologer in India who first predicted the Allies Victory in the present world war on 3rd. Sept., 1939 within 4 hours the very day of the declaration of war which was duly communicated to and acknowledged by the Secretary of State for India, the Viceroy and the Governor of Bengal and who is also the consulting Astrologer of the **Eighteen Ruling Chiefs of India.**

It is well-known that the Astrological predictions of this great scholar, his wonderful methods of redressing the pernicious influence of evil stars, his power to bring success in complicated law-suits and also to cure incurable diseases are really uncommon.

Many Ruling Chiefs of India, High Court Judges, Commissioners of Divisions, Advocate-Generals, Nawabs, Rajas, Maharajas, etc., and also many reputed personalities of the world (of **England, America, Australia, Africa, China, Japan,** etc.) have given many unsolicited testimonials of the great Pandit's wonderful powers.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji. He is a great Tantrik." **Her Highness The Dowager 6th Maharani Saheba of Tripura State** says :—"I am feeling wonder at the marvellous Tantrik work and excellent efficacy of his Kavachas. He is no doubt a great personage with miraculous power. **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt.,** says :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son."...**The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt.,** says :—On seeing my son, his prophecy about my future is true to words. He is really a great Astrologer with extraordinary power." **The Honourable Justice Mr. B. K. Roy of Patna High Court** says :—"At a glance on me, he began to disclose my mental thoughts and he predicted marvellously many things. He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot** says :—"The wonderful power of calculation and Tantrik activities of Panditji on several occasions have struck me with greatest astonishment. Really he is unique in his line." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court,** says :—"Panditji has bestowed the life of my dead son. I have never seen in my life such a great Tantrik-Yogi." **Mr. J. A. Lawrence, Osaka, Japan,** writes :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2724, Popular Ave., Chicago, Illinois, U. S. America :**—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mrs. F. W. Gillespie, Detroit, Mich., U. S. America :**—"I am wearing your special Dhanada Talisman and so far my luck has been with me a great deal better than in the past." **Mr. K. Ruchpaul, Shanghai, China :**—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Eita, Govt. Clerk & Interpreter in Deschang, West Africa :**—"I had orderd some Talismans from you that had rendered me wonderful service." **Mr. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon :**—"I got marvellous effects from your Kavachas. I have had transactions with you almost every year for the last 20 years for about Rupees three thousand." Etc., etc. and many others.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. It will give even a beggar the wealth of a king (as written in Tantra). **Price Rs. 7-10.** Special and capable of giving immediate effects **Rs. 29-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special and capable of giving immediate effects **Rs. 34-2. (The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha).**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-8.** Special **Rs. 34-2.**

ALL-INDIA ASTROLOGICAL & ASTRONOMICAL SOCIETY (Regd.)

(The Biggest, Most Reliable and Oldest Astrological Society in India and the Far East).

INDIAN PERIODICALS

Modern Poetry

Rabindranath Tagore's original Bengali article on modern poetry has been translated into English by Indira Devi Chaudhurani and published in *The Visva-Bharati Quarterly*. The first part of the article is given below :

I have been asked to write something about modern English poets. It is by no means an easy task. For who will define the limit of the modern age with reference to the almanac ?—It is not so much a question of time as of spirit.

After flowing straight on for a time, the river takes a sudden turn. Literature likewise does not always follow the straight path. When it takes a turn, the turn must be called modern. Let us call it *adhunik* in Bengali. The modernity depends not upon time but upon temperament.

The poetry to which I was introduced in my boyhood might have been classed as modern in those days. Poetry had taken a new turn, beginning from the Poet Burns. The same urge had brought forth many other great poets, such as Wordsworth, Coleridge, Shelley, Keats.

The manners and customs prevalent in society are known as social usage. In some countries these social customs completely suppress all the freedom and variety of individual taste. There man becomes a puppet, his conduct conforms meticulously to social etiquette. It is this traditional and habitual way of life that society appreciates. Sometimes literature also falls into a groove for long periods ; and whosoever wears the sacred marks of perfect literary style, is looked upon as a saintly person. During the age of English poetry that followed Burns, the barriers of style were broken down, and temperament made its debut. "The lake adorned with lotus and the lily" is a lake seen through the special hole of official blinkers fashioned in the classic workshop. When a daring writer removes those blinkers and catch-pharses and looks upon the lake with open eyes, he also opens up a path through which the lake assumes manifold aspects to many eyes and various fancies. But classic judgment cries "fie for shame" on him.

When we began to read English poetry, this unconventional individualistic mood had already been acknowledged in literature, and the clamour raised by the *Edinburgh Review* had died down. Be that as it may, that period of our life was a new era of modernism.

In those days, the hall-mark of modernism in poetry was the individual's measure of delight. Wordsworth expressed in his own style the spirit of delight that he realised in Nature. Shelley's was a Platonic contemplation accompanied by a spirit of revolt against every kind of obstacle, political, religious or otherwise. Keats' poetry is wrought of the meditation of creation of beauty. In that age, the stream of poetry took a turn from outwardness to inwardness.

The deepest feelings of a poet's heart strive to attain immortality by assuming a lovely form in language. Love adorns itself. It seeks to prove its inward joy by its outward beauty. There was a time when humanity in its moments of leisure sought to bind up in various ways that portion of the universe with which it came into contact. This outer adornment was the expression of its inner love. Where there is love, there can be no indifference. In those ways, in the exuberance of his sense of beauty man began to decorate the common articles of daily use. His inner inspiration lent creative power to his fingers. In every land and every village household utensils and the adornment of the home and person bound the heart of man, in colour and form, to these outward insignia of life. Many were the ceremonies evolved by man for adding zest to social life ; many the new melodies, new arts and crafts in wood and metal, clay and stone, silk, wool and cotton. In that age, the husband designated his wife as his "beloved disciple in the fine arts." Then it was not the bank-balance that constituted the principal asset for the married couple in the work of setting up house,—the arts were a more necessary item. Flower-garlands must not be woven anyhow, young women knew how to paint the ends of their *saris* of China silk, skill in the art of dancing was especially taught, and was accompanied by lessons in the *vina*, the flute and singing. There was spiritual beauty then in human intercourse.

The English poets with whom we came into contact in my early youth, saw the universe with their own mind's eye ; it had become as it were their personal property. Not only did their own imagination, opinions and tastes humanise and intellectualise the universe, but they moulded it according to the heart's desire of each individual poet. The universe of Wordsworth was specially Wordsworthian, of Shelley Shelleyan, of Byron Byronic. By force of creative magic it became the reader's universe also. The joy that we felt in that particular poet's world, was the joy of taste in the hospitality of that particular world's aroma. The flower sends its invitation to the bee through its distinctive scent and colour, and sweet is that note of invitation. The Poet's invitation also possessed that spontaneous charm. In the days when the chief bond between man and the universe was one of individuality, the personal touch in the invitation had to be fostered with care, a sort of competition had to be set up in dress and ornament and manners so as to show oneself off to the best advantage.

Thus we find that in the beginning of the nineteenth century, the tradition which held priority in self-poetry of the previous age had given place to expression of the individual. And this is what was called modernism in those days.

But nowadays that modernism is dubbed Mid-Victorian senility and made to recline on an easy-chair in the next room. Now is the day of the harsh modernism of lopped skirts and lopped hair. Not that powder is not frequently applied to the cheeks and rouge to the lips, but it is done in public, with unashamed bravado. It is proclaimed that the days of illusion are over. There is illusion at every step of the Creator's creation, and it is the variety of that illusion which plays so many tunes through so many forms. But science has thoroughly examined its every pulse-beat, and declares that at the root of things there is no illusion ; there is carbon and nitrogen, there is physiology and psychology. We old-fashioned poets had taken illusion to be the main thing and these to be the by-products. And, therefore, we must confess we had striven to compete with the Creator in spreading the snare of illusions through rhyme

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and rhythm, language and style. In our allusions and suggestions there was some play of hide-and-seek, we were unable to cast aside that veil of modesty which adorns the truth, while it does not contradict it. In the coloured light that filtered through its filmy haze, the forms and evenings appeared to us in a beauty that was as tender as that of a new bride. The modern Draupadi, engaged in disrobing publicly Dushshasan, engaged in disrobing publicly Draupadi the universe, is a sight we are not accustomed to. Is it mere force of habit that makes us feel uncomfortable? Is there no truth behind this sense of shame? Does not Beauty become bankrupt when divested of the veil which conceals not but reveals?

But the modern age is in a hurry, and has no time. Livelihood has gained the upper hand of life. Man has to race through his work and rush through his pleasures in the midst of a crowd of accelerating machines. The human being who used to create his own intimate world, in leisure, now delegate his duties to a factory and gets up some sort of provisional affair on the spur of the moment to suit his needs, according to some official standard. Feasts are gone out of fashion, only meals remain. There is no urge to consider whether life is in harmony with the mind or not, for the mind of man is engaged along with the crowd, in pulling the rope of the huge Juggernaut car of livelihood. Instead of music, there issue from his throat hoarse shouts of "Push, boys, push". He has to spend most of his time in the company of the crowd, not in the world of his own fellows. His mentality is the mentality of the hustler. In the midst of all this bustle he has not the will power left to bypass ugliness unadorned.

Which path must poetry now follow then, and what is to be her destination. It is not possible nowdays to follow one's own taste, to select, to arrange. Science does not select, it accepts whatever there is as existing; it does not appraise it by the standard of personal taste nor embellish it with the eagerness of personal attachment. The chief delight of the scientific mind consists in curiosity, not in forming ties of relationship. It does not regard what I want as the main point, but what the thing in itself exactly is, leaving me out of the question; and without me, the preparation of illusion is unnecessary.

Therefore, in the process of economising that is being carried out in the department of poetry in this scientific age, it is adornment that has suffered the biggest cut. Finicky selectiveness in the matter of rhyme, rhythm and words is now become almost absolute. And the change is not taking place smoothly, but in order to break the spell of the past, it has become the fashion to repudiate it aggressively. It is like trying to set bits of broken glass on the top in an uncouth and ugly manner, lest the selective faculty by force of habit should enter the house by jumping over the garden-wall. A poet writes: "I am the greatest laugher of all, greater than the sun, than the oak-tree, than the frog and Apollo." "Than the frog and Apollo," this is where the bits of broken glass come in. For fear someone should think that the poet is arranging his words sweetly, prettily. If the word "sea" were used instead of "frog," the modernists might object to it as regular poetising. That may be so, but mentioning the frog is by a long way much more regular poetising of the opposite kind. That is to say it is not introduced naturally, but is like treading on your toes intentionally. That is the modern fashion.

But the fact of the matter is, the days are gone when it was generally accepted that the frog could not be admitted into gentle poetry on the same footing as other creatures. In the category of reality, the frog belongs to a higher class than Apollo. Nor do I wish to regard the frog with contempt. What is more, in an appropriate context, the croaking laugh of the frog might be juxtaposed with the laugh of the poet's beloved, even if she objected. But even according to the most ultra-scientific theory of equality, the laugh that is the sun's, that is the oak-tree's, that is Appollo's, is not that of the frog. Here it has been dragged in by force, in order to destroy the illusion.

Indians in South Africa

Perhaps in no other part of the world is the racial problem so profoundly disturbing as it is in the Union of South Africa. Race dominates every aspect of life there. Dr. Prakash Chandra writes in *The Calcutta Review*:

The Europeans, Asiatics and Negroes live side by side but they have failed to evolve a common meeting ground and the differences between them are most striking. The population is nearly ten millions and a half. Of this, 70 per cent are Negroes, the Europeans number 21 per cent and Indians whose total strength is 2,10,000 barely 2·5 per cent.

A wide chasm separates the Europeans from the non-Europeans. The former enjoy many social privileges, social services, and educational facilities which are denied to the coloured peoples. All political power rests in their hands. So far as Indians are concerned, they do not possess even elementary civic rights. As Sir Zafarullah Khan said, "Indians in South Africa are almost in the position of being a stateless people. They cannot vote. They have to live in defined residential areas. They can hold property only on a restricted basis. Their children cannot attend normal South African schools. And they are not admitted as citizens, although many of the families have been settled there for generations." A more elaborate picture was drawn by Sir Shafaat Ahmad Khan, a former High Commissioner in South Africa, who stated that the Indian community in that country was "deprived of representation in local bodies and public services, in Parliament as well as in the Universities, denied admission even to hotels, cinemas, theatres, places of culture no less than of amusements, and subjected to a colour bar for which neither modern nor ancient history affords any precedent whatever." While European children receive free education, no provision exists for the teaching of 20,000 Indiin children of school-going age, let alone tuition-free instruction. Indians contribute as much to the finance of the country as the white residents but do not figure on the rolls as municipal or parliamentary voters. Apparently, the theory of 'no taxation without representation' has only a limited validity.

Leaving aside the Orange Free State, where the Indian population is negligible, the position in the rest of the three provinces of the Union is as follows. In Natal, where the Indians are most numerous—five-sixth

of their number is confined to this area—they exercise at present neither the municipal nor the provincial franchise. The latter was withdrawn just fifty years ago; the former comparatively recently. In the Transvaal, Indians have never enjoyed any franchise at all, municipal or provincial. They possess both in the Cape Colony and have the right there of being represented on the municipality by a Fellow-Indian. As for the right of electing candidates for the Senate or the House of Assembly of the Union Parliament, it is conspicuous by its absence. The laws expressly require that the voters must be British subjects of European descent.

It is not only that political rights have been held back from the Indians. Repeated efforts have been made to dislodge them from their economic position.

The latest measure of this kind is the Asiatic Land Tenure and Indian Representation Bill which has received its second reading only recently. This bill is to replace the notorious Pegging Act which was due to expire at the end of March, 1946, and whose object was to segregate the Indians from the Europan population. In a sense, the new bill is worse than the old. Whereas the Pegging Act applied only to Durban, the new legislation extends to the whole territories of Natal and the Transvaal. Indians are being prohibited from exercising the right of acquiring property either for residential or investment purposes in these regions, except in certain areas set aside for them. Apart from the social stigma implicit in the bill, it will have serious economic consequences. Indians living in demarcated zones outside towns and cities will tend to get isolated from the European and the native populations. This will affect their means of livelihood and will lead in course of time to their economic extinction.

The obnoxious bill has been sugar-coated with the gift of an illusory franchise. South African Indians are to be accorded the right of electing representatives to the Union Parliament and the Natal and Transvaal Provincial Councils. But the franchise is worthless because it suffers from three grave defects. First, the qualification is high. Secondly, Indians are to be registered on a separate roll instead of sharing the common roll with the Europeans. Finally, and this is the most preposterous feature of the provisions, though Indians may vote, they cannot stand for election and must be represented by Europeans. The last stipulation places the Indians on a par with the Bantus who though eight million strong are represented on the South African legislature by three gentlemen with the whitest skin. It is thus clear that the bill offers a mythical political status in exchange for substantial economic rights which are taken away.

It is amazing that Indians should be subjected to discriminatory treatment in what happens to be a part of the British Empire but it has been a characteristic policy of the Dominions to be fairer in their dealings with the Whites, though belonging to a different nationality, than with the coloured races. While they have received European immigrants, all of them, with the exception of Newfoundland, have excluded Orientals by one means or another. In some of the States of the Commonwealth of Australia, Asiatics are disqualified from voting and from obtaining leases in certain irrigated lands. The same continent is anxious to increase her population by the importation of 70,000 immigrants yearly but they must be British, Scandinavians, Swiss or French and not Indians, Chinese and the Javanese. In Canada, too, in British Columbia, Asiatics are denied the franchise. The late Srinivasa Sastri explained how on one occasion his appeals to the fair name of the Empire drew the impatient remark from the Prime Minister of that province that he had no use for it if it involved the surrender of any privilege. But the discriminations are most far-reaching and flagrant in the Union of South Africa. India and South Africa have made common sacrifices on battlefields for ostensibly common ideals but as Mr. Polak asked in a letter to the *Manchester Guardian*, "Is not the race and colour bar is not the policy of racial segregation, more reminiscent of the Nazi-Fascist doctrine of super-race than the ideals of the United Nations?"

It would be interesting to discuss the origin of the bill against the background of local conditions.

First of all there is the social factor. The Indians and the Europeans belong to two different civilizations and speak languages utterly divorced from each other. Superimposed is the political fact that the Whites have ruled coloured peoples for the last two centuries. This gives them an air of superiority which any autocrat would bear towards his subjects, regardless of race. The economic factor is even more important. Indians went to South Africa not because they were themselves eager but because their presence was felt to be in the interests of South Africa. It seemed to be impossible to exploit fully the Natal coast-belt without indentured labour. The Government of India was opposed to the arrangement but was eventually prevailed upon to sanction the emigration. So the Indians went and brought prosperity to Natal. Many remained and others followed, both free and indentured labourers. Their work on the sugar and tea plantations yielded magnificent results so that Natal today is known as the Garden Colony of South Africa. But in due course, the Indian with his lower standard of living, began to threaten the European in some of the occupations of which he had previously a monopoly. It was then that Indians came to be regarded in Lord Milner's phrase as, "strangers forcing themselves upon a community reluctant to receive them." More recently Indians have been thoughtless in their business dealings. They were obviously imprudent in buying up European property during the war in the heart of Durban. Finally, the racial and political set-up of the country has to be taken into account.

Most of the Whites in South Africa are Boers, the descendants of Dutch farmers who employed Negro slaves from West Africa to till their fields and watch their herds.

They are the people who never yielded when the British came but preferred to trek into the interior as national groups in order to safeguard their independence. Intensely self-conscious, they have not the capacity of developing feelings of appreciation and friendliness towards the people springing from a different racial stock. The mass of the British inhabitants are English as in Australia—not Scotch as in Canada and New Zealand—and the English are well-known for their reserve and insularity.

The principal political parties are the United party, the Nationalist party and the Dominion party. None of the three represents a liberal outlook on the racial question. But the two foremost leaders of the United party, Premier Smuts, and Mr. J. H. Hofmeyr, Minister of Finance, are personally sympathetic towards Indians. The latter has made no secret of his disgust with the colour bar. Dealing with the relations between Europeans and Asiatics in South Africa, he once observed, "It is hardly a matter for argument that in this field our record, when judged in the light of Christian principles, scarcely bears examination. The self-interest of the European brought the Indian to South Africa, self-interest has sought to get rid of him from the country; self-interest, in so far as this cannot be achieved, is determined to keep him in what is regarded with their followers and the opposition parties.

Nationalists led by Dr. Malan are openly hostile to Indians and the Dominion party has affiliations with the Natal Europeans who are really responsible for anti-Indian legislation.

The delicacy of Field Marshal Smuts' position is obvious from the speeches made over the second reading of the bill. He was almost apologetic in defending the hotch-potch character of his bill. "Now when land rights of Natal Indians were being limited," he stated, "it was only fair that they should be given some political status." He made no attempt to defend the representation of Indians by Europeans but explained that the communal franchise had been modelled on the Indian pattern. "I think, therefore, that it does not lie in the mouth of Indians to say," he asserted, "that the separate electoral system of South Africa will be an insult to them." Here is warning to the champions of retrograde devices that what they do here in India may recoil on their heads elsewhere. In spite of the insistence of Field Marshal Smuts that the bill should be passed as a whole, Col. Stallard, the leader of the Dominion party, suggested that the two parts should be moved separately. He expressed himself in favour of the land-tenure restrictions but opposed the grant of franchise to Indians. Their admission to the Assembly, he pleaded, would endanger the structure of South African society. Similar was the line taken by Dr. Malan. While accepting the principle of segregation, he tried to shelve the franchise issue by seeking to make the Government to agree to the appointment of a joint committee to which the racial problem in all its aspects was to be referred.

The Indian community in South Africa is naturally upset and is doing all that it can to prevent the implementation of the Act.

In its endeavours, it has the fullest support of the High Commissioner, the Government of India, and all the political parties in this country. But the interest which India takes is bitterly resented as interference in the internal affairs of the Union. In an angry article, an African newspaper writes, "The Indians in the Union behave like citizens of India and seek consolation and support there. Good, then let us send them back to their home—India." The real fact is that in spite of their being settled in South Africa for over eighty years, Indians are not yet recognised as citizens of South Africa and that so long as they are treated as aliens in the land of their birth and adoption, they have a perfect right of appeal to India as their protector. Indeed, the effort to clothe them with a fictitious franchise is itself motivated by a desire to prevent the Government of India from interceding on their behalf. It is realised that India will soon be strong and independent, when her nationals abroad could be unfairly treated by a foreign Government only at its peril.

When Sir Shafaat Ahmad laid down his office, Indian public opinion demanded that no successor should be appointed. Failure to fill the post would, it was hoped, open the eyes of the world to the atrocious crime which was beng perpetrated in South Africa. The Government of India, however, was more optimistic and Mr. R. M. Deshmukh was sent out. He has been unable to improve the situation. The reasonable proposal of the Government of India that a round table conference should be held between the representatives of India and South Africa to find a settlement has been rejected by Field Marshal Smuts on the specious plea that the matter is a domestic concern and it is improper to call in the aid of another Government in solving it. Driven to extremity, the Government of India has given notice of the termination of its trade agreement with South Africa and is seriously considering the recall of the High Commissioner. Meanwhile there remains one final remedy, and that is an appeal to the United Nations Organisation.

The demands of the South African Indians are the demands for elementary democratic rights which should be enjoyed by all living in democratic countries. All that they are asking for is the franchise, not the truncated but the real thing, the opening up of provincial barriers and freedom to buy property and live wherever they like. If these are not granted, they are determined to resort to passive resistance, and as the late Srinivasa Sastri pointed out, they will be fully justified in seeking honourable suicide in preference to ignominous surrender.

Indo-American Amity

America will have a much higher appreciation of India when the million American soldiers and Red Cross girls return; they are bound to take back a better impression of India than most Americans have had in the past. Judith Ames Appasamy writes in *The Aryan Path* :

There has not been much cultural contact between America and India in the past, due probably to America's great distance, to the lack of good literature on India, and also perhaps to the fact that India was a subject nation of another great power. Missions and missionaries have been one great link, but their primary purpose has been to impose their culture, not to absorb Eastern culture. Their presentation of India in America has not always been fair. But they have done some good. They have started social reform to improve educational facilities among Indian women, who are now taking part in the nation's politics, forming clubs and societies for the uplift of Indian women. Women can usually be depended upon to take the lead once they are made conscious of ther importance in the scheme of things. The greatness of a country depends upon the treatment of its women. That is why the co-educational system in America is the best in the world. Travancore is a good illustration of this. It is the only state in India which has tried the co-educational system ; with the result that one finds women from Travancore all over India, holding very high positions.

There has never been any exceptionally good book written on India, at least not in English. *The Rains Came, Indigo* and *A Passage to India* are about the best so far ; but nowhere nearly as good as Dr. Lin Yutang's or Pearl Buck's books on China. Most writers on India in the past spent so much time looking for the rubbish or the bizarre, that they entirely overlooked the really beautiful and charming pattern of India. There is no book which brings out the joint-family system of India nor is there any good novel of school or college life in India, of the type of *Tom Brown's School Days*. Any

American who is a total stranger to India and who wants to know something about this great land could not do better than read *Introduction to India* by Moraes and Stimson (an Oxford University Press publication), or *My India, My America* by Dr. Shridharani. It is a pity that one or both of these books could not be made compulsory in every American school.

If, like the Rhodes Scholarships, which take American and other students to England, or like the Boxer Indemnity Fund which takes a large number of Chinese students to America, some such set of scholarships could be founded for Indian students, it would make for much better amity between India and America. Some of the reasons why Indian students have not gone to America in the past are the great distance and the huge outlay required to go there ; also the fact that the United States is a very costly place in which to live. Students have been rather encouraged to go to Great Britain, partly due to the specialised educational system prevailing in India and also because Indian students have come back from America with revolutionary ideas. This war has changed a great deal of that. Another great factor that has kept Indian students from going to America has been her unfriendly immigration laws, which have never been fair to Asiatics. Her excuse, of course, has always been that their standard of living is lower. In this matter, the Americans who are sojourning in India could and should help change or modify these laws.

Indian students should be encouraged to go to America for their higher education.

The American system of education is much better than that which prevails in India and which only fits the students for routine desk work. It has a freer interplay of ideas between the teacher and the students. And it brings out the best in every student and fits him for taking his place in a democratic world. One great contribution that the American educational system could make to India is teaching the "dignity of labour." There is in America no snobbery or looking down on a poor student who has to work his way through college. On the contrary, he is praised and honoured for it, (a system of self-help is being tried in some American-managed Indian colleges, but it is not quite the success that it is in America). India has a lot to learn from America's realistic outlook, her attitude towards progress and her giving an opportunity for everyone to rise or to develop towards self-realisation. India, on the other hand, has all her vast experience to give in exchange for speed and scientific research.

But India and America have much in common. They are both great countries of vast distances, varied climates and equally varied racial characteristics. The peoples of both countries have an intense love for democracy and independence. It begins to look as if India is on her way to getting her independence and she needs America's help more than ever to get firmly established and to make a success of it. America can help India organise herself. India is composed of four hundred millon individuals who have no idea of co-operation. Team work, as we understand it in the West, is completely foreign to Indian ideas.

Americans find it extremely difficult to understand the caste system in India. One of their stock phrases is "How can India expect to get her independence as long as she has the caste system ?" Every country since the dawn of creation has had and still has a caste system, though not always called by that name. It is known in the West as "colour prejudice" or "racial prejudice." The Rev. J. C. Heinrich in his book, *The Psychology of a Suppressed People*, says, in writing on untouchability in India. "The problem has striking parallels to the Negro problem in the United States."

At present there is no central bureau which can arrange for exchange professorships in America ; we would be only too glad of the chance to spend a few years in India. The same could be said of several men who are teaching in India. As there is Yale in China, if we could have a Harvard or a Columbia in India it would be very good for both countries. An exchange of cultures is greatly needed. More good-will missions are also needed between America and India.

Leonardo da Vinci

Leonardo da Vinci is undoubtedly one of the greatest geniuses which our humanity has produced. C. Jinarajadasa observes in *The Theosophist* :

All in Europe and America know that he is one of the supreme painters of the Italian School. But he was more than a painter ; he was also a sculptor, an architect, a musician, a mechanician who planned flying craft, an engineer who built castles and canals, and a deep inquirer in the spirit of modern science into all aspects of Nature.

There are many great painters and sculptors who have expressed themselves with another aspect of their character. Michael Angelo was not only a sculptor and painter, but also a poet. William Blake is better known as one of the great mystic poets than as painter. Giordano Bruno, the philosophical revolutionary, has written some of the finest sonnets in the Italian language.

But in Leonardo we have the unique combination of an artist and a scientist who was profoundly imbued with the idea that it was necessary to know Nature in all her varied manifestations, in order that he might be a truly great painter and sculptor. Hence his study of the anatomy of the muscles, bones, etc., not only of human beings, but of birds, insects and other creatures. All the time he desired to know Nature "as she is," before he reproduced her in painting or sculpture. His

ONE STEP FORWARD

From the Twenty-second Annual Report of the **Western India Life** it becomes quite clear that in 1945 this trusted Life Company has gone one step forward on its path of progress. Sound financial position, efficient management, dutiful service to policy-holders, and a number of other things become clear from the report. Call for a free copy and be convinced.

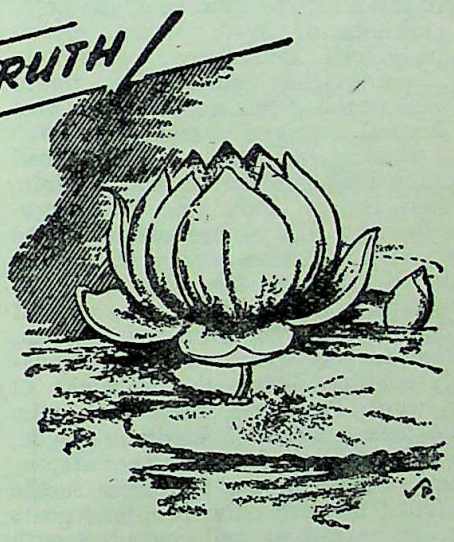
many notebooks, wherein he drew all he observed, are scattered now in the Royal Palace at Windsor, the University of Oxford, the British Museum, and in various collections of Europe and America. But through-out them all he insists upon the fact that there must be rigid truth to Nature.

"From his earliest days he had flung himself upon that study with an unprecedented ardour of delight and curiosity. In drawing from life he had early found the way to unite precision with freedom and fire—the subtlest accuracy of expressive definition with vital movement and rhythm of line—as no draughtsman had been able to unite them before. He was the first painter to recognize the play of light and shade as among the most significant and attractive of the world's appear-ances, the earlier schools having with one consent subordinated light and shade to colour and outline. Nor was he a student of the broad, usual, patent appearances only of the world; its fugitive, fantastic, unaccustomed appearances attracted him most of all. Strange shapes of hills and rocks, rare plants and animals, unusual faces and figures of men, questionable smiles and expressions, whether beautiful or grotesque, far-fetched objects and curiosities, were things he loved to pore upon and keep in memory. Neither did he stop at mere appearances of any kind, but, having stamped the image of things upon his brain, went on indefatigably to probe their hidden laws and causes." (*Encyclopaedia Britannica.*)



Leonardo is different from Hindu sculptors and painters of the past and of today. The attempt of the Indian artist is to reveal the "idea," and he pays very little attention to "form."

One characteristic of the best type of Greek Art was, especially in sculpture in which it was famous, to embody a great Divine Idea. Thus, all the great artists in their statues of Pallas Athene or Minerva, though they might model from a girl or a woman, tried to convey Pallas Athene as a Divine Concept of the Archetypal Mind.

The artistic message of Leonardo has influenced all Western artists profoundly. For, fundamentally it was that the form and the life are *one*, and that the more one knows the details of the form, the better one can represent the life, provided of course one has the quality of genius. In Indian philosophy it is known that *Purusha* and *Prakriti*, Spirit and Matter, Life and Form, are interblended and can never be separated. It is since the time of Leonardo that all Western schools of paint-ing and sculpture insist on the student studying anatomy or drawing from a model, so as to see the interplay of light and shade as it should be on a properly moulded limb or face. It *is* possible, as the Greeks attempted, to bring a wonderful inspiration to Art by blending the Idea with the Form, since both are of God.

The Horse and Cow Culture of Aryans
(1600 B.C.-700 A.D.)

Writing about the role of domesticated animals in Indian History in *Science and Culture*, M. S. Randhawa observes :

The Horse :There is no evidence about the presence of the domesticated horse in India prior to the invasion of Aryan Nomads about 1600 B.C. We do not find any figure of horse in the seals of Mohenjo-Daro and Harappa, nor any bones have been recovered.

Peake and Fleure are of opinion that the horse was first tamed in the Steppes of Central Asia and South Russia. This immense grassland runs from Galicia, South Russia around the Caspian Sea, Russian Turkestan, with a narrow extension reaching the Sea of Okhtsk. The west part of this steppe was inhabited by descendants of Solutrean men, while the eastern part, for long uninhabitable due to glaciation, was later on inhabited by Mongols. Probably the horse was tamed by the inhabitants of these steppes, where Erzewalskis horse is still found wild. Though we have no positive evidence of the horse before 2000 B.C., it is inferred that the horse was domesticated before 5000 B.C. along with other animals.

In India the domesticated horse was brought by the Aryan invaders about 1600 B.C. These Kshatriyas or horsed-warriors defeated the elephant-armies of the natives of India. Their advantage lay in superior weapons of warfare, the trained horse and the sword. As Peake and Fleure remark, "The training of the horse for war, and of milch-mares as a source of an exceptionally complete food must have worked an immense advance, giving the herdsman a power over great spaces, and enabling him to organize vast stretches to gratify his ambitions and to meet his needs." After acquiring command over the horse, the Nomad horse-men marched into peripheral fertile lands of Iran, Mesopotamia, Southern Europe, India, and China, probably driven by a drought. The domestication of the horse caused a great crisis in human history which may be compared to the invention of the steamship and later on of the aeroplane in modern times. The ancient civilizations of India and Syria, based on the elephant, buffalo, zebu and the ass, were shaken to their foundations and ultimately crumbled before the onslaught of the horse and the sword. The horse was used by the Aryan Nomads for management of herds of cattle, sheep and goats in the grassland of the southern steppe, and it served a new purpose in the peripheral fertile lands. The Aryans found that not only sheep and goats but subject people can be just as well controlled with the aid of the horse. If a rebellion broke out, it could be more speedily crushed than was possible with the aid of the elephant.

The horse conquered Northern India and finally demonstrated its superiority in warfare over the elephant in 326 B.C. when Alexander invaded the northern Punjab. By the Kushan period about first century A.D., the horse had established his superiority over the elephant as far east as Mathura. On a lintel discovered from Mathura we see a procession of horse with the elephant humbly following behind. However, the acme of the horse period reached in the thirteenth century under the Mongols whose horse empire stretched from the Pacific Ocean to the Black Sea. From fourteenth century onwards we see the importance of land transport decreasing as compared with sea transport with the improvement of the sailing ship. The final military use of the horse was made by the Marathas of Shivaji in the close of the seventeenth century and they played a conspicuous role in the dismemberment of the Moghul empire. From eighteenth century onwards the role of the horse as an empire builder and empire destroyer had ended and the sailing ship and finally the steamship and cannon had placed the future of the world in the hands of the Europeans.

The Ox and the Cow : While the buffalo takes delight in swimming in ponds and wallowing in mud, the ox and the cow have an aversion for water and never bathe in ponds. This indicates their origin in a dry environment and they could not be natives of monsoon jungles of India. The ancestor of present day cattle, *Bos primigenius* Bojanus, roamed all over Europe and Asia excepting the peninsulas of Arabia, Hindustan and Malaya in the Pleistocene. *Bos primigenius* Rutimayer was prominent in the rich Sivalik fauna of Northern India. Slowly the European and the Asiatic members differentiated, the former having forward-pointing horns while the latter had inward pointing horns. Falconer and Cautley found a wild variety of *Bos primigenius* which they named as *Bos nomadicus* of the Indian Pliocene. The cow and the ox were domesticated in the mountainous country of Afghanistan and Central Asia probably earlier than the horse. Peake and Fleure are of opinion that the cow could have been only tamed by people of mild and gentle manners such as those who live in mountains. It may, however, be mentioned that the presentday Afghan living in a dry country is by no means mild, though his ancestors in the comparatively wet phase of their history were certainly milder, otherwise they would not have gone in for Buddhism with so much zeal and ardour. The domestication of the cow must have taken place before 5000 B.C., for we find the existence of a dairy cult at Ur in Mesopotamia at about 4000 B.C.

Humped bulls and cows are frequently seen in the seals of Mohenjo-Daro and Harappa as long ago as 3250-2750 B.C. Baini Prashad is of opinion that the Indus people had domesticated the hamped Zebu. There is no support for this view excepting the fact that domesticated humped cattle were found at Mohenjo-Daro about 3250 B.C. Domestication is a long process and it must have been started two or three thousand years earlier. It might very probably have been done in the mountainous regions of Baluchistan, Iran and Afghanistan. Considering that, according to the work of Vaivlov, this region was one of the centres of origin of cultivated wheats, it is likely that it was also the original centre of domestication of the humped Indian domestic cattle. Its appearance in the Sind Valley two thousand years later appears to be a subsequent event.

The art of food production by means of ox-drawn iron-pointed plough was brought to India along with the horse by Aryans about 1600 B.C. The warrior herdsmen of Central Asia introduced a more efficient method of food production in India, and their dominance over the Elephant and Buffalo civilization of ancient India is as much due to ox-drawn iron-tipped plough as to the horse. It may, however, be mentioned that they did not regard the cow as sacred. and bulls and heifers and horses were sacrificially eaten.

Liberty to Live

Lila Ray presents in an article in *The Aryan Path* Gandhiji's economic solution in its fundamental simplicity and promise :

Lord Acton said that liberty itself was the end of all government. To say that any people is not fit to be free is to say that they choose to go unclothed, to die of starvation and diseases bred of starvation and to see their children naked and dying of starvation and diseases bred of starvation. It is to say they prefer to go without medical aid and without education, that they prefer poverty and death to prosperity and life. Does any one dare say that those who died in their hundreds of thousands in the Bengal famine of 1943 and in the Nazi concentration camps died because they were free to live?

"Your President," said Gandhi to Louis Fischer in 1942, "talks about the Four Freedoms. Do they include the freedom to be free ?"

The problem is to find a form of association which will actually make the free development of each the condition of the free development of all, which, while securing to each that freedom, will defend it and protect him with the whole common force. Such is our world that the obvious, right, simple thing appears to be the most difficult to accomplsh. Tom Paine wrote bluntly, "... make governments what they should be and they will defend themselves." The defence question is much exaggerated. People are easily quietened by it into the acceptance of something less than their due. The atom bomb makes no fundamental difference. It is only a question of degree. The game is the same though the stakes have been raised. Where and when the community is the realisation and fulfilment of the individual liberty of each of its members, men will voluntarily defend it with their lives and brains. Where the community is not that, conscription and a standing army and atom bombs will be necessary.

The community has always represented the liberty of some of its members and they have been its defenders.

Where large armies are needed they provide the commanders. The number has varied with the social pattern, being smallest in despotism and largest in democracy, smaller in aristocracy and larger in oligarchy. In none of the great modern societies do all have liberty. Partial liberty cannot content any people permanently. Monarchy, aristocracy, oligarchy and the rest, where and when they have existed, have been tolerated not because they were good in themselves but because at a historical moment they may have happened to be the lesser of several evils. In their inception they have been arrangements for mutual protection but have hardened into tyrannies on the one hand and slaveries on the other, replacing liberty by licence, duty by privilege.

Democracy, which is the nearest we have got to the solution of our problem, is regarded by many as a failure and other expedients are being sought. Political democracy has not worked as well as expected chiefly because it has been combined with economic plutocracy, having been instituted at a time when people had not become as conscious of the working of economic forces as we are today. Now we know economic plutocracy and political democracy are incompatible. The assumptions behind them are contradictory. The contradiction can be resolved either by the suppression of democracy or the suppression of plutocracy. The first means political retrogression, the second, an economic revolution involving the abolition of capitalism. Fascism rescued capitalism from the dilemma by suppressing democracy and keeping economic relationships unchanged. Communism changed the economic relationships from those of a plutocracy to those of an oligarchy and suppressed political democracy as well. For the dictatorship of the proletariat *is* a dictatorship, the dictatorship of an oligarchy. It was regarded, by both Marx and Lenin, not as a desirable but as unavoidable in the transition to a classless society. They overlooked the fact that no dictatorship ever dare abdicate.

In England socialism is now attempting to pass from a plutocratic to an oligarchic economy while retaining political democracy and social aristocracy.

Another attempt at a solution is being made by Mahatma Gandhi. His approach to the problem, aimed likewise at the supersession of plutocracy, is very different. Reviewing the history of feudalism Lord Acton wrote : "When men found a way of earning their livelihood without depending for it on the good-will of the class that owned the land, the landowner lost much of his importance and it began to pass to the possessors of movable wealth." Now when men find a way of earning their livelihood without depending for it on the good-will of the class or the state that owns the instruments of production, the capitalist and the state will lose much of his and its importance and that importance will begin to pass back to the producers. Gandhi has found it. Lenin, acting on the suggestion of Marx and Engels, converted plutocratic ownership of the means of production into state ownership. But that ownership became important only when instruments of production attained a size and a price that precluded their ownership and operation by individuals or small groups. The capture of the state assumed overwhelming importance when it came to mean the capture of the ownership of the means of production.

Gandhi's procedure is to put into the hands of men instruments of production that are small, light, cheap and as efficient as modern technical knowledge can make them, which they can both operate and own, thus transforming mass production into production by the masses, the proletarian into the independent producer, incidentally abolishing the labour market. This way a point can be reached when capitalists will find themselves with large unprofitable holdings on their hands, and most of their importance gone. The present crisis in world society will have been by-passed. The state will shrink to its normal size, its pathological swelling will subside. Its normal healthy function as the servant, not the master, of man will be restored. This is the "withering away" of the state which Marx desired and Lenin hoped would come to pass, how or when they did not and could not know. One thing is certain. It will be, in the words of Gandhi, "infinitely superior to anything we have now." It is economic democracy. With social and political democracy, it makes a new social arrangement, completing the democratic pattern. Call it "total" democracy if you must. It is not totalitarian. Let us see how much nearer it brings us to our goal, to what extent it can make man, not money or land the measure and master of all things.

FOREIGN PERIODICALS

Palestine—The National Home of the Jews

On reading the article "Squaring the Circle in Palestine" by St. Nihal Singh in the June issue of *The Modern Review* and the one entitled "Is America Fair to Islam," in the Foreign Periodicals section of the July issue, the reader has by now formed a fair idea of the Arab-Jewish controversy over Palestine. With a view to furnish him with further elucidation about the affair we quote below relevant portions of "Hearings of the Inquiry Committee," published in the *Jewish Frontier*, April, 1946, from the speeches of Dr. Chaim Weizmann and David Ben Gurion, who most eloquently and fervently plead before the Inquiry Committee, the justice of the Jewish claim to have a National Home and to establish a Jewish Commonwealth in Palestine :

Testimony of Dr. Chaim Weizmann

Mr. Chairman, and gentlemen of the Committee of Inquiry, needless to say, I feel a very great responsibility resting on me at this moment to try and explain to the Committee as best I can the problem which torments us for so many years, and which is causing considerable difficulty to those who are responsible for helping carry into effect its solution.

Not only the British Government, but all those nations which have been associated with the Government in approving the Mandate, in initiating the policy, in helping it on its way in the first stages, in a sense bear a certain responsibility. The fact that the League of Nations is already dissolved, or about to be dissolved —I don't know whether its final meeting has already taken place—doesn't absolve the nations of that responsibility, and I thought I might most respectfully remind you of it.

As a people, as a race, as a collectivity, the Jews are homeless, and this homelessness and the unchanging attachment of the Jews to Palestine did not begin with Hitler. It existed many, many years, many centuries before Hitler was ever thought of, long before this hideous tragedy had been enacted on us, the tragedy which would seem utterly incredible fifteen or twenty years ago.

About 6,000,000—I needn't go into it, it is sufficiently known to you, Mr. Chairman, and gentlemen—Jews were murdered in cold blood, and the number of Jews was reduced from 17,000,000, roughly, to something like 11,000,000 of whom I believe more than 6,000,000 today inhabit English-speaking countries.

The distribution of Jews today in round figures is, in the United States about 5,500,000, perhaps slightly less ; in the British Empire, 750,000, in the United Kingdom, Canada, South Africa, Australia, and New Zealand. In Palestine it is something in the neighborhood of 600,000. So together it is about 6½ million out of 11 million ; so roughly 60 per cent of the Jews find themselves in English-speaking countries or directly under English administration.

"Historical Connection"

Those statesmen who were responsible for the Mandate and for the Balfour Declaration were not dreamers. They were perhaps among the finest statesmen of that period. Mr. Churchill, Mr. Lloyd George, Clemenceau, President Wilson—all those who took part in the framing of this policy—they reckoned with this peculiar position of the Jews, which I have tried to paint for you, and I'm afraid, much too inadequately. They realized that the Jews have a right to collective self-expression, like everybody else—that the existence of a national home, if and when it is established and well-founded, would give poise and satisfaction and would render the Jew less unstable, even in the countries where he enjoys equality of treatment. He would feel collectively that he has found self-expression in Palestine.

They also realize that Palestine appeals powerfully to the Jews because there was an unbroken connection between the Jews and Palestine—unbroken for thousands of years, not only in the moral and religious sense, but literally a physical bond. With the exception of one or two periods—the period of the Crusades where the Jews were more or less wiped out, and the subsequent Mongol invasion of Palestine—there were always Jewish communities in Palestine and a certain amount of Jewish agriculture in Galilee. These communities were not sterile ; they were communities with a very considerable intellectual activity, which spread far beyond the confines of Palestine. And whenever there was the faintest possibility of going back, there was a movement, a literal physical movement, despite great difficulties. There was a movement from Spain, a movement from Turkey, a movement from Germany, from Poland, from England—always ships were carrying pilgrims to Palestine to come to settle there, to live there, sometimes to die there, and to teach the word of God, which spread far beyond the frontiers of Palestine.

This was realized and this was taken into account and this was embodied in the Mandate for Palestine.

Well, it may interest you that in a handbook published, if you please, by the Foreign Office, which cannot be suspected today of particular Zionist proclivities, in 1920, there is the following statement :

"The Zionism of the Bible is far anterior to the exile of Israel—even the first exile. It dates back to the pre-historic days of Israel in Egypt, and Moses was the first Zionist."

The Jewish Commonwealth

Now I know that I have touched at present on the most difficult problem, in saying that all we shall do in the transition period is merely a means to an end, the end being the Jewish State. I know that at the beginning of this great experiment, with which I had a considerable amount to do, we were told by those who initiated this experiment, by those who prompted it, "Well, we will call it a National Home. It is a somewhat vague term, but if you Jews use the opportunity which is offered to you it will eventually become a Jewish State." That was said to me repeatedly, that was repeated only recently by great British statesmen. And in spite of all that, all of these promises, not by just anybody but by responsible British leaders and statesmen, and American leaders and statesmen, the White Paper stands. We are still illegal immigrants in Palestine, we are hunted out if we come, and we have no free movement in this country.

I recognize quite fully that what I ask for will meet with considerable opposition on the part of the Arabs, and I know there may be Arabs present, opponents or friends or whatever they are ; I think probably opponents, but there is no counsel of perfection in this world, and there is no absolute justice in this world. What you are trying to perform, and what we are all trying in our small way to do is just rough human justice, and I think the decision which I would like this Committee to take, if I dare to say this, would be to move on the line of the least injustice, and injustice there is going to be, and if you weigh up on the one hand how the Arabs have emerged out of this war—I do not begrudge it them—they have emerged with so many kingdoms, at any rate two kingdoms, four republics ; they will have six seats in UNO, one seat in the Security Council. To speak quite frankly, which may be forgiven, and at my age it may be permitted to be frank, I do not know if it is commensurate with what the Arabs did during this war. What is the number of their casualties ? Have they suffered so much ? If you compare it with our sufferings, with our casualties, with our conribution, I say there may be some slight injustice politically if Palestine is made a Jewish State, but individually the Arabs will not suffer. They have not suffered hitherto. On the contrary, economically, culturally, religiously, the Arabs will not be affected, not because we are so good—perhaps something may be said for the character of the Jew who has gone through hell for thousands of years, and it would stultify his own history if when he gets his slight chance he starts persecuting the Arabs. We know what it is to be a minority, we know it only too well. But there is something quite different. The Arabs have a perfect guarantee that, whatever Palestine may be, it will only be an island in an Arab sea, and the Arabs will not need to appeal or to have separate guarantees inserted in the Treaties ; the mere weight of their existence in organized States would prevent any Jew from doing them injustice even if he wanted to, and I am sure he does not want to. The position of the Arabs as a people is secure. Their national sentiments can find full expression, in Damascus, and in Cairo, and in Baghdad, and in all the great countries which will, I hope, some day build up an Arab civilization which will equal the ancient glories of these people. Palestine is to the Jews what Baghdad, Cairo, and Damascus all rolled together are to the Arabs, and I think the line of least injustice demands that we should give Jews their chance, which, when carried out, will, I am sure, eventually lead to an understanding and to harmony between these two races, which are, after all, akin.

Testimony of David Ben Gurion

WHY JEWS COME TO PALESTINE

There are now some 600,000 Jews here, more than one-third born in this country, some of them living here for many centuries, not only in the towns. There are Jewish fellaheen, peasants who have lived here for centuries. . . . But the majority of us were not born in this country ; I am one of them. We came from all parts of the world, from all countries, and we came not only from countries where Jews were persecuted physically, as in Nazi Germany, Poland, Yemen, Morocco, Tzarist Russia, Persia, Fascist Italy. Many of us came from free countries where Jews were treated as citizens, and there was no persecution, like England, the United States of America, Canada, the Argentine, pre-Nazi Germany, Soviet Russia, France, Egypt and other countries. Why did they come ? What is the common denominator which brought all these people, whether from Nazi Germany or from England, whether from Yemen or from Egypt ? That is what I want to tell you.

The first thing which brought them over, all of them, was to escape dependence and discrimination. I do not mean anti-Semitism. There was a great deal of talk in your Commission about anti-Semitism, and many of our people were asked to explain its origin. . . . It is for you gentiles to explain. But I am not concerned with anti-Semitism, it is not our business. I am concerned with the question why Jews have come to this country, and have come not only from countries where they were physically persecuted. They came because they felt it was unendurable to be at the mercy of others. Sometimes the others are excellent people but not always, and there is discrimination, not necessarily legal or political or economic, sometimes it's merely moral discrimination, but they do not like it as human beings with human dignity. They do not like it, and they do not see how they can change the whole world.

THE LOVE OF ZION

That is one reason why we want to come back here ; there is another reason. It is love of Zion, a deep passionate love, the love of Zion. There is no parallel to that in all of human history. It is unique, but it is a fact ; you will see it here. There are 600,000 of us here because of that deep undying love of Zion.

In evidence given to you in America, an American Arab, I believe it was John Hazam, said there was never any Palestine as a political and geographical entity, and another American Arab, a great Arab historian, Dr. Hitti, went even farther and said, and I am quoting him, "There is no such thing as Palestine in history." I agree with him entirely ; there is no such thing in history as Palestine, absolutely, but when Dr. Hitti speaks of history it means Arab history. Arab history was made in Arabia, Syria, Persia, and in Spain and North Africa. You will not find Palestine in that history.

However, Arab history is not the only history ; there is world history and Jewish history, and in those histories there is a country named Judea, or as we call it Eretz Israel, the Land of Israel. We have called it Israel since the days of Joshua, the son of Nun. There was such a country in history, there was and it is still there. It is a little country, a very little country, but that little land made a deep impression on world history, and on our history, because that country made us a people ; our people also made that country. No other people in the world made this country ; this country made no other people in the world. Today we are again beginning to make this country, and again this country is beginning to make us.

This country was the scene of many wars, of Egyptians, Babylonians, Assyrians, Persians, Greeks, Romans, Byzantines and others, but it gained a place in world history, just as in Jewish history, because our people created here, perhaps a limited, but a very great civilization. This country made us a very exclusive people on one side and a universal people on the other ; exclusive in its attachment to its history, to its national and religious tradition ; very universal in its religious, social, and ethical ideas. We were told there is one God in the entire world ; that there is the unity of the human race, because every human being was created in the image of God ; that there ought to be and will be brotherhood and social justice, peace among peoples. These were our ideas ; this was our culture, and because of this, the country took its place in world history. We created here a book many books ; many were lost, many remained only in translation, but a considerable number, some twenty-four, remain in their original language, Hebrew, in the same language, Mr. Chairman, in which I am thinking now, when I am talking to you, and which the Jews in this country speak. We went into exile, we took that book with us, and in that book which was more to us than a book, we took with us our country in our hearts, in our soul, and these three, the land, the book, and the people are one for us for ever. It is an indissoluble bond. There is no material power which can dissolve it, except by destroying us physically.
